No. 346 BROADWAY, NEW YORK. }

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

THE FISH COMMISSION AND THE LAW.

WHEN the United States Commission of Fish and Fisheries was established in 1871 and was put under the direction of Professor Baird, he stipulated that no salary should attach to the office of Commissioner. That great-minded man and devoted public servant strenuously insisted that the position should be one which should have no attractions for the politician. He clearly foresaw and foretold that if the place were a salaried one it would be converted into political spoil. He served as the first Commissioner, doing the work of the office in connection with his other duties in the Smithsonian Institution and the National Museum; and it is known that his arduous devotion to the public service in these three several fields shortened his life. But in course of time, as developed by Professor Baird, the work grew in extent until it could no longer be performed in connection with other duties. Accordingly in 1888 the independent office of Fish Commissioner was established by law, and was made a salaried position to be held by one engaged in no other branch of the public service. Marshal McDonald was the first Commissioner under the new system. He had come into the service under Professor Baird; and he administered the office on the old lines which had been established by his predecessor. Under McDonald the Commission was free from political influences. Following his term came the fate foretold by Professor Baird. The United States Fish Commission is now looked upon as the legitimate spoil of politicians, to be farmed out by the President at the dictation of political bosses.

A crisis has now come in the Commission's affairs. A new head is to be appointed. It had been the hope that the President would intrust the commission to a person competent to administer its affairs on the broad ground of public interest, and without regard to politics; but, as we said last week, it is announced to be the purpose of President McKinley to nominate for the place of United States Fish Commissioner a West Virginia politician named George F. Bowers, who, being ignorant of fish and fisheries, is unqualified for the position and a wholly unfit person to hold it. The selection is made at the dictation of Senator Elkins, who is intent upon rewarding Bowers with a government place in return for services Bowers has rendered him in his political campaigns.

The nomination is one which we trust may not be approved by the Senate Committee on Marine and Fisheries, nor ratified by the Senate. The appointment, if made, will be not only a betrayal of public interest, but a direct violation of law. The revised law providing for a Fish Commissioner was approved by the President Jan. 20, 1888; and reads:

"Be it enacted by the Senate and the House of Representatives of the United States, in Congress assembled, that Section 4395 of the Revised Statutes of the United States be, and the same hereby is, amended to read as follows:

"That there shall be appointed by the President, by and with the advice and consent of the Senate, a person of scientific and practical acquaintance with the fish and fisheries to be a Commissioner of Fish and Fisheries, and he shall receive a salary at the rate of \$5,000 a year, and he shall be removable at the pleasure of the President. Said Commissioner shall not hold any other office or employment under the authority of the United States or any State."

By the statute then the Commissioner is required to be "a person of scientific and practical acquaintance with the fish and fisheries." The appointment of a person not so qualified is a violation of law. Mr. Bowers is not so qualified; his appointment would be a distinct violation of law. It is inconceivable that the Chief Executive should be persuaded by political pressure thus to set at naught the laws he has sworn to uphold and defend. We

cannot believe that the Senate Committee on Marine and Fisheries will sanction such an appointment. There are men now in the Senate and on that Committee whose just pride it is that they had part in creating the Commission and establishing it upon the sure foundation on which in the past it has grown in public usefulness and has merited and received public recognition and confidence. We appeal to them now to defeat, by the withholding of their approval, this scheme to overthrow the Commission and degrade it to political plunder. Such degradation means its ruin. Make the sole test of appointment the personal fitness of the appointee as prescribed by law.

THE NEW YORK ZOOLOGICAL SOCIETY.

ABOUT a month ago the managers of the New York Zoological Society submitted to the Department of Parks the society's plan for the development of its Zoological Park. At the same time, preliminary studies for nine of the most important buildings to be erected at the expense of the society were also submitted to the Park Board. The general and final plan of the Zoological Park showed the locations of the buildings, ranges, dens and other inclosures for animals, together with the rocks, ponds, entrances, walks, roads and pleasure grounds. Other detail papers were shown, more fully amplifying the general scheme as presented on the large plan.

The society states that neither time, labor nor expense has been spared in the effort to make these plans as nearly perfect as human skill and knowledge could make them. In addition to the advice obtained from the best zoological gardens of Europe, the planning of the society's park was carried on with the advice and criticism of no fewer than six expert zoologists, among whom were Mr. Arthur Erwin Brown, of the Philadelphia Zoological Society, and Mr. Carl Hagenbeck, of Hamburg, Germany, whose experience in the precise work under consideration made their recommendations of the greatest value. The purpose originally announced by the society has been always kept clearly in view, so that the keynote of the present plan of development has been the utilization of the natural features of the grounds to the actual wants of the living creatures that are to be furnished with homes there. The development has thus been a work of adaptation rather than of creation. The area of the Park to be devoted to animals has been laid out with special regard to providing for the needs of those species and at the same time to make the collection most easily and comfortably accessible to the public.

Besides the zoological experts who have assisted the society, several most expert landscape architects, engineers, surveyors and architects have been engaged, each in performing some part which should make complete the project in hand. Two surveys have been made, one geographical, in which are located the forest areas, clumps of timber, trees and often rock exposures; and one topographical, in order to arrive at the levels for drainage, water supply, pond excavation and similar work.

Very shortly after the plans had been submitted to the Park Board they were approved without any modification, and the society is now preparing to go to work so soon as it shall have obtained the funds required to enable it to enter upon the work of construction. The society needs to raise the sum of \$250,000 within three years, but when \$100,000 has been secured a city appropriation of \$125,000 becomes at once available for the groundwork of the Park—that is to say, for excavations, preparing walks, lakes, water supply and drain pipes and building of necessary fences. The funds provided by the society itself are to be applied to the erection of buildings and to the purchase of collections. Subscriptions to the fund of the society already amount to about \$65,000, and other contributions are greatly needed, in order that the whole amount may be on hand in ample time so that preparation may be made for beginning the work of improving the Park at the earliest possible moment next spring. A gift of \$5,000 entitles the giver to be called a founder of the society, while a gift of \$1,000 constitutes a patron and \$200 a life member.

Besides such large sums, smaller ones are greatly desired. Annual membership in the Zoological Society costs \$10, and it is on the dues received from these members that the society must depend for its ordinary running expenses. This country should furnish to the New

York Zoological Society many thousand annual members, and these should not be residents of New York city only, but should be scattered over the country at large. The society's work will not be by any means altogether local. Rather it will be for the whole continent.

When it is remembered that the Park of the society will be the largest in the world—four times as large as the largest in Europe—that it will be devoted in large measure to the exhibition and perpetuation of many species of North American large game now threatened with extinction—it would seem to be the pleasure as well as the duty of each patriotic citizen of America who can afford it to contribute his small part by joining the society, and thus forwarding the good work which it has on hand. The list of annual members now numbers 540. It ought to be ten times as large.

The FOREST AND STREAM will take pleasure in furthering the good work to be done by the Zoological Society by supplying to any reader interested in the subject further information in regard to it, together with subscription blanks or any literature that may be desired.

SNAP SHOTS.

It is gratifying to be able to publish the letter which comes to us from Jackson's Hole, with its assurance that the great majority of the residents of the Hole are opposed to the illegal capture of elk in the snow for export to the East, by speculators who, in their eagerness to exploit the live elk industry, have not hesitated to defy and violate the laws of the State. The attitude of opposition of the Jackson's Hole Gun Club and others is most commendable, but what we fail to understand is the existence of the sentiment expressed by Mr. Simpson and at the same time the successful carrying out of such brazen work as that of the Moose Head Ranch export of elk. If the people of the Hole are really opposed to this raiding of their game supply, why do they not prevent and stop it? They have the law on their side, and while the law itself would not amount to much if there were no sentiment to back it up, the combination of the law and public spirit would close the railroads to any more live elk consigned to Eastern speculators.

We publish to-day generous extracts from the report of the New Jersey Fish and Game Commissioners. The document illustrates what can be done by a well organized force actively in earnest in making the game and fish laws of some meaning and effect. No State in the Union presents a better example of reform in this respect than New Jersey. It is not so many years since it was the rule there for everyone to be a law unto himself with respect to gun and rod and seine and dip net. When the commission was reorganized and a force of game wardens provided, and the administration of the service was intrusted to a competent board of commissioners and to a determined and indefatigable chief protector, a tremendous and far-reaching change was wrought. To-day the New Jersey system of protection is being carried on effectively and well. Public opinion is making pace with the new order of things, and protective sentiment is gaining strength continually. The success of the protective work is due in large measure to the intelligent performance of duty by State Fish and Game Protector Charles A. Shriner, of Paterson.

The account of the ascent of Mount Katahdin in Maine is not only an entertaining story of mountain climbing, but is extremely suggestive of the unappreciated and undeveloped mountaineering resources which New England offers. It is, of course, only human nature to neglect home resources and to cross oceans to distant Alps or continents to the Rockies, but where one favored person has the time and means for such undertakings there are thousands of others who might achieve the peaks of the Appalachians, the Alleghanies and the Blue Ridge. If the realm of Pamola were truly appreciated in Boston as it should be, a road would lead from the Hub to the summit of Katahdin as well worn as an elk trail in the Rockies. The Appalachian Club in the East, and the Mazamas in the Northwest, are doing a most commendable work in making known the mountaineering possibilities of America. There is room for a thousand more clubs. Mountain climbing is one of the most exhilarating of outdoor recreations. It is destined to grow in popularity.

The Sportsman Tourist.

Pamola.

An Ascent of Mt. Katahdin, Maine.

PAMOLA, the evil spirit of the mountain, has reigned many old men's ages, and the winds and clouds are his willing servitors at all times. The lightnings crash, and the thunder rolls at his command; great clouds descend from the snow-capped peaks and envelop the unwelcome visitor; stormy gusts assail him, and his wigwam is bombarded with great ice missiles until he flees in terror from the anger of the offended spirit. At night the mountain sides are patrolled by Pamola's dogs, and woe to any unwary traveler who chances to be found there. When the enmity of the master of the mountain is incurred, it were the wiser plan to stand not on the order of going, but to vacate. From the supreme peak of Mt. Katahdin Pamola often hurls great boulders down the mountain side, and the thunder of their mad, hurtling flight can be heard reverberating in the peaceful valleys for a great distance from the mountain. All these things were unknown to us, and from our ignorance we suffered much hardship.

The legend of Pamola is an old one, and has been told around the fires in the homes of the Eastern tribes for many years, yet we children of the pale faces knew it not. And thus it was that we approached Katahdin with laughter and with song, without due reverence to Pamola. With little thought of the hardships and terrors in store for those who fail to bow to the dark master of the mountain, we left Cloud Camp at noon one November day and began our climb up the Russell trail on the north side of Katahdin. Our mountain party was composed of Mr. and Mrs. Madison M. Tracy, of Staceyville, Me.; Miss Sybil Wilson, of Cherryfield, Me.; Miss Alice Young, of Sherman Mills, Me.; Mr. F. J. Tracy and Frank L. Tracy, of Staceyville, and Mr. and Mrs. F. E. Wolfe, of Somerville, Mass.; and our intention was to climb Mt. Katahdin for the beautiful scenery, and incidentally some of us cherished secret hopes of caribou and moose.

For a quarter of a mile the Russell trail is of comparatively easy ascent, then comes a sharp rise, with a brief breathingspell at a flat place a few rods up, and after that just plain climbing. To a good woodsman a 60lb. pack is an easy burden over an ordinary trail path, but one soon feels a 50lb. "tuffet" on a mountain trail. The ladies started bravely, with a small hand-bag and shoulder-strap. One of them volunteered to carry the camera and all started with jackets, and one or two shawls were taken. Before the first half mile was traversed four packs on as many strong pairs of shoulders were augmented by four hand-bags, sundry shawls, coats, and on one a camera and a frying-pan hung harmoniously side by side.

Up the steep trail we climbed, through a forest of black growth—hemlock and spruce predominating. Beside the path grew ferns and arbutuses and mosses, over which the ladies breathed deep encomiums. Across the deep valley and up the side of Turner Mountain was a bright band of sunlight, but the crest was screened by a soft white cloud. We were not yet high enough, however, to get even a glimpse of scenery, excepting the dark green patches on Turner's broad side.

Mountain brooks, purling and cold, crossed our trail at intervals, and the tempting invitation to drink was seldom refused. A brief rest was taken now and then, but it was always followed by the toil up the steep incline. An hour of this work, and the singing and laughter was hushed; there was no surplus energy then. Besides it was chillier, a mist was settling down, and presently a cloud came around the mountain side, and the leaders were swallowed up in its damp folds, and we were momentarily separated from the slower climbers of the party.

This was Pamola's first card: to lose us in a cloud. Ten minutes' climb in silence with the ranks well closed up brought us above the cloud, but owing to the density of the forest we could not see much of the sea of vapor as it floated down below us. There was no more sunlight now, and in a short time a few scattering drops told of the approaching rain.

The wind howled dismally through the trees, and soon the rain came on in dead earnest. We decided that it would be the better plan to make camp and remain for the night. The mountain was so steep that there was no place where we could pitch the tent, had there been an open space to make camp. Therefore we were forced to push on up the trail and make camp at the first place where we should find a good "chance" for wood and water.

Darkness was closing down on the mountain, the rain had turned to sleet, and the gusts of wind carried the icy sheets in our faces with stinging force. The ladies showed signs of exhaustion, but never a word of complaint was uttered.

At a turn in the trail we sighted a clearing ahead, and a few minutes' climb brought us to the open space, which proved to be a "blow-down," where great tree trunks were lying in a giant windrow along the mountain side. It was at once agreed that camp must be made there. Water was sure to be near at hand, and wood was at our feet. It was necessary to scoop out a level space on the slope for the tent. The fire was to be made in front of the small plateau, and in a few minutes we had the tent pitched and a fire feebly spluttering beside an

Dry wood was scarce, but an old hemlock yielded enough splinters to make a cheerful blaze, and soon the big pile of logs heaped on began to burn and give out some warmth.

The storm increased in violence, but the little tent stood firm, and was good protection for the ladies. A bed of boughs was out of the question, for a thick coating of ice covered everything exposed to the storm. The poncho blankets were spread on the wet ground, and the bedding and shawls thrown down on them. Night had fallen now, and our camp-fire cast a ruddy glow on the surrounding forest.

The wind swirled madly though the blow-down, and gathered myriads of sparks from the fire and carried them eddying away across the gloomy space below. But

there was warmth in our camp-fire, and the tent flies were thrown back to catch the full benefit of it. From beneath the wet folds of the tent came the sound of music, and we came to the conclusion that if the ladies could sing about "sunshine" under such conditions as those we would be able to get them over our Chilkoot and to the summit of Katahdin. Preparations were made for supper, and Madison mixed and baked some excellent bread before the fire in the driving storm. Warm bread, tea, broiled partridge, good butter and doughnuts made up our bill of fare, and it was a cheering repast.

After supper the ladies sang more songs. "Tenting out To-night" sounded very pretty, but there was an awful amount of reality crowded into our surroundings that made the song sound different from when it is sung at home by the fireside.

Then Mr. F. J. Tracy, who has been in the vicinity of Katahdin and the Wissattaquoik for many years, and is a very Nestor of woodcraft, told us part of the legend of Pamola, but reserved the whole story until we should be in more pleasant surroundings. He probably feared

KATAHDIN LAKE—MT. KATAHDIN IN THE DISTANCE.

Photo by Mr. F. E. Farnsworth.

the whole story would discourage us. During the partial recitation of the story of Pamola there was an interruption. A small black dog, which had joined the party during the day, had been welcomed as a mascot, and his coming counted as a good omen. The dog had appeared on the southern shore of the Wissattaquoik near the Katahdin Lake trail, and had boldly plunged in the river and swam across to join us. To-night the dog was restless, and at times would utter a low growl and move stealthily away in the darkness. It was during one of these trips that he received a terrible fright and dashed down the trail from above the camp and hid in the tent. After howling piteously, he curled up in the corner and remained there until nearly morning. When asked what had probably frightened the dog, Mr. Tracy said laconically: "Pamola's dogs."

About 3 o'clock in the morning we heard a frightful scream coming from the mountain above. It was a blood-curdling cry, and one to try the strongest nerve. With a blazing brand held aloft and rifle in readiness, our two bravest men ascended the trail, but were unable to locate the origin of the long-drawn-out screams. After daylight the dog was found 100yds. up the trail, his head crushed by a blow and a long ugly gash in his side. He had indeed encountered one of Pamola's "dogs." (Probably a *loup cervier*.)

After listening to the brief sketch of the famous Dakota chieftain's career, some of the ladies evinced a desire to sleep, and wrapped in shawls and blankets the tired ones tried to get some needed rest. It was agreed that we should stand fire watch during the night, as it would be necessary for some one to keep chopping wood and replenishing the fire. None of us got much sleep, however, as the bed clothes and shawls were damp and the ground was cold. The only comfortable position was to sit upright and face the blazing fire. A few stories were told in whispers, but most of the time we sat in silence, gazing into the burning embers beneath the great forelog. There was no abatement of the storm, only the alternating sleet, snow and rain.

The noises in the dark forest were continuous and weird. The wind whistled always a doleful anthem through the tops of the tall hemlocks, and ran from that down the gamut to the shriller shrieks through the spruce and cedar shrubs. Then, as if to make the effect more dramatic, a lull would come in the storm, the sleet beat less fiercely on our fragile house, the wind cease its shrieks for a moment, then a sound like the crash of a cannon, sometimes followed by several similar reports in quick succession, and then silence, heavy and oppressive. Of all the sounds of the forest, that of a tree falling in the night is most impressive. Something deep and subtle in the working of nature. Be the night windy or calm, the trees fall, and to the camper the sound is always an awesome one. We were glad our camp was located where there was no danger from falling trees.

If Pamola sought to frighten us by these demonstra-

tions he must have been disappointed. As the night wore on, a lonely fox from somewhere on the side of Turner barked out his harsh cry, and was answered by a neighbor far away deep down the valley. The sound was weird, and seemed entirely disproportionate to the size of the red marauder.

Toward morning the storm ceased, and the cloud that had hung over us during the night drew away to the south. The wind blew up crisp and cold; the watchers dozed, and the fireman nodded at his post. The gray dawn crept over the mountain, and soon the sunlight tipped Katahdin's peak and crept down toward Camp Comfort.

A shout from Frank brought the drowsy campers from the tent, and a scene of indescribable beauty greeted them. The forest was transformed into a fairyland. Every bough and twig was covered with ice, and the effect was marvelous. From the treetops where the sunlight first touched them a million jewels sparkled and scintillated, their prismatic colors quivering and gleaming from their lofty heights. The trail above and below was a veritable bower of loveliness.

After listening to the exclamation of delight for a minute, Frank interjected: "It's all very nice, but wait till it begins to melt." When it did begin to melt we found that the rain of yesterday was but a shower compared with the water dropping from the trees. We decided to make a trip to the upper spring, where we had intended to camp and take what duff we could with us and return for the ladies in the afternoon.

After spending a couple of hours drying bed clothes and making up our packs for the day, we started up the trail, Mr. Tracy taking the lead, as on the previous day. Our intentions were to clear the trail of serious obstructions, so that the ladies could get through. We began by chopping out a few smaller trees that had fallen across the path, and cutting the limbs from the trunks of larger ones that blocked our way. Half a mile from Camp Comfort we found hundreds of large trees blown across the trail in such a tangle that it was next to impossible for us to get through without an immense amount of chopping. The blow-down reached up the mountain side for nearly a mile, and to have forced our way through would have entailed infinite labor.

Slowly and reluctantly we retraced our path and broke camp. After bidding farewell to Camp Comfort we beat a hurried retreat down the mountain side to our base of supplies at the old deserted McLeod camp. After a brief council we decided to reduce our packs to a minimum weight, leave the tent and start for the South Basin by the McLeod trail. It was real restful to hear the ladies talk about how little they could get along with. They agreed to make one small handbag do for the whole party, and to cut down on all luggage. After making up the new packs and stopping a few minutes to boil tea, we started for the South Basin of Katahdin. As compared with the mountain path of the day previous the going was easy. Through beautiful open woods for a mile, crossing a fine mountain brook on a footlog thrown by some philanthropic woodsman, then we entered the finest growth of spruce in the vicinity of Katahdin. It was a veritable great black forest, carpeted with a soft, velvety moss. Every moss-grown boulder was the jardiniere for ferns of infinite variety, mosses and ground plants that were a delight to the eye.

The sun was high in the southern sky, and here and there where the bright beams sifted down through the treetops the picture was one of exceeding loveliness. All hearts were light now, the trail was easy and the weather superb. Could it be that old Pamola was mollified? We wondered if it would not have been far better to have sacrificed a dog as a peace offering before we attempted the Russell trail. But surely the Great Spirit was smiling on the climbers to-day.

When far up the trail on the mountain side we peered through a rift in the deep green of the treetops and looked on the calm, unruffled surface of Katahdin Lake. It was miles away and thousands of feet beneath us, yet it looked as if a stone might be dropped

into its azure depths. A week before this very forest had looked like a mere stubble field, relieved here and there by a stunted bush. But that was viewed from the lake. How broad and important the blue lake had looked then! How insignificant and small it looked now!

Late in the afternoon the packs had grown heavier and heavier, the sun perched on Pamola's eyrie peak for a brief moment, and then plunged down and left our side of the mountain in the deep shadow. Far away in the east were undulating peaks still tipped with the sun's golden rays, but the valleys had taken on a somber hue of evening. It became evident that we must push on faster or night would overtake us on the mountain side, where it would be impossible to camp.

Wood and water we must have, also fir boughs with which to build a lean-to and make up the "field bed." All were worn and weary from the extraordinary labor of the two days and the lack of rest at Camp Comfort.

Suddenly the shout, "Water ahead!" came from the advance guard, and it was taken up and echoed joyously by the weary toilers in the rear. But the water was not there, to our great disappointment. Instead of the pretty little lake we expected to find there was nothing but a mere puddle in the center of an acre or so of barren rocks, no chance for wood or level space for camp. Signs on every hand showed that at some seasons the whole clearing was covered with water. Here we found our first sample of the famous "pucker brush." A fringe of this remarkable growth surrounded the clear space. A strong breeze was blowing down from off the mountain, and it was easy to see how the wintry gales could bend and gnarl the bushes into a stunted growth. But the remarkably twisted and burl'd limbs and roots were nothing short of wonderful. Trees that in the more protected depths of the forest would have been tall balsam firs were here stunted and dwarfed by the perpetual battle with the elements. Their roots reached far down into the crannies of the rocks and grasped and clung on for life to the little nourishment to be gathered from the sparse earth yards below. Above the limbs blow straight out and flatten down, spreading and matting together in a tangled matted mass. But the "pucker brush" here was but a mere imitation of that to be found on the mountain top, where trees of a century's growth are less than 5 ft. high, and their limbs have grown out over yards of surface and interwoven with limbs of other trees, the whole forming an impenetrable barrier to all who would pass. Even the caribou, that powerful monarch of the mountain, knows the fate that awaits him if he runs into this entangling mass. As has been proven hundreds of times, the caribou prefers to face the death-dealing rifle of the hunter than to try to force a way through the trackless "pucker brush." The only time a caribou has been found there is when he has jumped there to die after receiving a mortal wound.

The light in the clearing showed that we would have an hour more to travel before dark, and after a brief rest the caravan moved on. There was no hard wood there and a good big camp-fire was needed, for the night was a cold one. The deep shadows of the forest were gloomy enough, and we were glad that the trees had "bled" some after they had been spotted by the axe of the pioneer who blazed out the trail, for the white spots were necessary in the semi-darkness. Here we marched with the ranks closed up, and many words of encouragement were necessary, for the ladies were nearly exhausted. Fortunately the trail was comparatively easy as the level of the South Basin was reached, and we were even then inside the lower rim of the immense crater. Silently we plodded on over the soft, velvety carpet of deep moss.

Night had fallen and the outlook was gloomy, but

Around the edges of this bar on the south was a fringe of tall dead grass, while on the north side the forest came down sheer to the edge of the bar.

This was to be the scene of the strangest phenomenon

the basin from the bleak north peak and sang a solemn requiem through the treetops, and from somewhere out in the blackness of the night an owl hooted his slow, melancholy call. Hovering before the new-born camp-

PAMOLA PEAK—SHOWING THE MONUMENT.

Photo by Mr. F. E. Farnsworth.

any of us had ever witnessed. Down through this open space a stream of ice-cold water flowed. At that time the stream was about 2 ft. wide and 4 in. deep. It was afterward recalled that the ladies easily stepped across it. When we crossed the bar and entered the woods we found a fine level spot surrounded by plenty of hard wood. Some old dead stumps would furnish dry wood, and white and yellow birch would go to make a hot

fire the ladies were bundled in shawls and blankets, while over their heads grew a slanting roof of feathery boughs, and soon Dewdrop Inn, as the new camp was called, was an established institution.

A roaring fire grew up around a great root-wadded stump. As the ruddy flames climbed on high so the spirits of the campers rose, and soon the forest was full of the melody of song and an excellent supper was quickly on the fire.

Frank made a great flaring torch of birch bark and by the light of it was throwing trees and cutting them into lengths for the night's fire.

Taking two tin pails and a torch, Madison and I went for water, not forgetting to take a cup along, for we remembered the stream was shallow and narrow. We were greatly surprised to find, instead of the tiny brook we had stepped across, that the bar was nearly covered with water, and already a lake had been formed that covered several acres. In the morning there was fully 4 ft. of water in the clearing and about four acres were submerged. In addition to this a smooth glare of ice covered the unruffled surface of the lake. We named it Lake Mystery, and it still remains a mystery to us, for we made no attempt to find the cause of the strange action of the water. It might have had a commonplace solution, and I didn't propose to spoil a good story by idle investigation.

After supper, when the logs were heaped high on the camp-fire, and everybody had settled down in a comfortable place, we told Mr. Tracy of the transformation of the dry sandbar into a beautiful lake, and asked him for an explanation of the strange occurrence. After a few moments of deep thought this master of woodcraft replied slowly: "I am going to tell you the legend of Pamola, then you can draw your own inferences."

Then, as we sat looking dreamily into the embers at the front of the fire, watching the salamanders of imagination come and go, or idly followed the snakelike darting of the sparks as they rose from the crackling blaze until they faded out in the blackness above, we heard the story of Pamola's wild love; heard how this red Lochinvar of the forest claimed and rode away with his bride; of the wild pursuit and subsequent haunting of the mountain. The weird story was graphically told, and the narrator held his listeners silent and intensely interested to the end.

Briefly sketched and from memory, the legend was this: The chief of a tribe of Penobscots who dwelt in the East was the father of a wonderfully beautiful daughter with whom all the eligible youths of the tribe were desperately in love. Pamola, a young chief from a tribe in the West, said to be Dakotas, came East and was welcomed in the wigwams of the Eastern Indians.

Pamola, the young, handsome Western warrior, met the Penobscot maiden, and succumbed to her charms. The chief's daughter reciprocated, and affairs progressed so smoothly for the Dakota chieftain that great jealousy developed in the breasts of the Penobscot warriors, and at their instigation Pamola was soon banished from the

MT. KATAHDIN FROM NEAR ABOL CARRY.

Photo by Mr. F. E. Farnsworth.

once more from the leader came the shout, "Water ahead!" and a second later the sharp, ringing blows of the axe showed that camp was to be made at once.

Plunging down a sharp incline for 30 ft. we emerged into an oblong clearing of about five acres. It proved to be a sandbar and was nearly level. Across on the other side, at the lower end, was a group of boulders.

fire and warming embers late in the night. Then, too, there were splendid fir balsams near at hand to furnish "feathers" for our bed and broad boughs for the lean-to, and, though it isn't generally known, fir trees, when liberally piled on, make a good fire and give out intense heat.

The night was cold and the wind swept down through

Penobscot grounds. The braves demanded that the chief's daughter should marry one of her father's tribe, and a favored one was finally chosen.

For four days while the marriage ceremony lasted there was much celebrating and feasting. On the evening of the fourth day the consummation was to come, but the proceedings were interrupted by a sound like that of a thousand horses' hoofs beating on a stony mountain trail.

Nearer and nearer came the thunderous noise, when suddenly there bounded in the midst of the revelers a form of giant proportions. It was Pamola in the war dress of his tribe, his gaudy war bonnet falling gracefully over his shoulder and reaching nearly to the ground. Quick as a flash he snatched the bride-to-be from the group of Indian women who surrounded her, and ere the Penobscot braves could recover from their astonishment the Dakota warrior had remounted his waiting charger and, like all Lochinvars of all legends, bore the girl away.

But the Penobscots were not overawed by Pamola's brilliant dash, and they at once started in pursuit. They were astounded, however, to find that but a single warrior had ridden to their camp, for the hoof beats of Pamola's steed had rolled thunderously down the valley until it sounded like a vast number of warriors.

The pursuit was hot, and so furiously did the Western warrior ride that the sparks from under his horses' hoofs blinded his pursuers. Pamola had started straight for the mountain, as if Katahdin had been chosen by him as a safe retreat from his enemies.

When the Penobscots reached the foot of the mountain they were at once confused by the loss of the trail. Suddenly they were assailed by an awful storm. Clouds enveloped them, and they wandered about for days. The chiefs at length decided that Pamola was in league with the evil spirit. Or perhaps Pamola was himself the evil one. The latter thought unnerved them, and the pursuit was abandoned, and the Penobscot maiden was left to her lover, though her loss was mourned by her people for many winters.

Since then Pamola has reigned over the mountain, and the highest southern peak has borne his name. The daughter of the Penobscot chieftain was said to have been seen in the vicinity of the south basin in the attitude of deep mourning. The Indians, it is said, have believed that all manner of evil things happen to those who come to Katahdin, and defy the magi of the mountain. For many years the Indians of the Eastern tribes avoided the mountain and even the lake that bears the same name. When Fly Rod made the ascent of the mountain last summer she took with her Miss Josephine Francis, a full-blood Penobscot, and it was said that Miss Francis, who is the daughter of the famous guide of Debscon-eague, Joe Francis, was the first Indian maiden to go on Katahdin.

During the recital of the legend the wind had blown shower after shower of sparks toward the lean-to, and was now coming in a steady gale from the south. Just as the story was finished our *raconteur* arose, and looking through the treetops at Pamola's towering peak, wrapped in a mantle of snow and glistening in the moonlight, he said: "If the wind holds fair from that quarter a while we shall hear some of Pamola's salutes before morning."

Scarcely had the words been uttered when from the mountain top came a sound like the crack of doom; the roar of mighty artillery, and then a frightful rumbling like that of thunder, crashed nearer and nearer until it seemed that the very earth trembled and recoiled from the coming shock; the crashing of mighty timbers, a splash like the bursting of a waterspout, the hissing and seething sound of boiling waters, and then silence—silence awful and oppressive.

The faces of the women were drawn and pale; the three men to whom the forest is an open book sat silent and unmoved, gazing into the fire. Presently the elder turned toward the inquiring faces and said: "That is the music of the mountain, Pamola's greeting." Then he added, with assumed Nestorian caution, "Never speak disrespectfully of a spook, especially when he has you hemmed in by a wall of water."

The noise that had frightened us tenderfeet was but the displacement of some great boulder near the top of the peak, which for some cause, presumably the warning influence of the south wind on the frozen earth, loosened its grasp and came tumbling down the steep declivity, bringing other large rocks down with irresistible force. Near the bottom of the basin the giant rock had torn through the narrow strip of timber and plunged into the little lake near the base of the south peak.

"And now, my modern children of Israel, let's go and see what manner of a Red Sea these boys are talking about," and taking a brand from the fire our entertainer held it aloft and we marched Indian file down the narrow trail to the lake.

The torch shed a mellow light out on the limpid waters of Lake Mystery, and a murmur of surprise came from the little group on the shore. The water was steadily rising and the bar was already covered. Suddenly the torch was thrown with a whirl. It hissed and sizzled in the cold water of the lake. We turned quickly toward the mountain. It was our first clear view of Katahdin from close proximity, and the snow-clad crests, bathed in the cold white light of the full round moon, made a picture of indescribable grandeur.

Katahdin, old as the earth, calm, cold, immutable. What enduring centuries had that frowning wall of gray stone towered there! What scenes had it witnessed! What of the days, century on century ago—ten, twenty thousand years perhaps—when the crater was not as it is now; when the molten masses were spouted skyward, when those great rocks had been thrown upon the peaks, white with the heat of a million furnaces of that hell below.

But Katahdin of to-night stood in solemn, frigid, austere silence. With the awesome picture indelibly engraved in our memories, we slowly returned to camp. No one spoke; all were too much impressed with the nocturnal mysteries of the mountain.

Several times during the night we were partially awakened by the rolling of great boulders down the mountain side, but the thunder of their trail came to ears dead-

ened by fatigue, and the sounds died away in slumberous echoes down the depths of the great, dark, silent valley below.

Standing fire watch at Camp Crater in the heart of the mountain, surrounded by the primeval forest, and amid such magnificent scenery, was an experience that will not soon be effaced from memory.

When the morning first streaked the eastern sky with a leaden gray, then burnished it into a bright gleam of beaten copper, the snow-white mist rolled down the mountain side as the lazy foam recedes with the ebbing tide. The sun rose clear, and the day bid fair to be the bright one we had hoped for. Not a cloud hung over Katahdin's towering peak. It was the rarest day of the autumn month. A hasty breakfast was prepared, rifles were seen to, cartridge belts were filled, and preparations made for an early start, as there was a great day's work ahead. The ladies voted unanimously not to try the ascent that day, as they needed rest, and the prospect of a hard day's climb 'mid the snow and ice was too much for them.

It was decided that Frank should stay at camp and straighten things out there during the morning, and he was to go down the trail to the base of supplies for several things we had forgotten. This left the climbing party reduced to three: Mr. F. J. Tracy, his son Madison and the writer.

We had seen such an abundance of signs of game since we left the Wissataquoik River that nothing was thought of it, but there was unmistakable evidence that a large moose had come within a few yards of our camp during the night. The whole basin seemed to be full of game. A small sapling, which I took to be "striped maple," near the camp had been stripped of its bark for 3 ft. Madison said it was moose wood, and that a moose had barked the tree during the night. This was within 150 ft. of the camp-fire, which burned brightly all night. Yet they tell us that Mr. Alce Americanus is shy, and will give camp-fires a wide berth.

We found "moose works" in every patch of hard wood in the basin. Hoping we might walk up on a moose before we reached the foot of the slide, we went silently up the little brook. In a few minutes we came into the Appalachian trail. The Appalachian Club camp at the basin lake has entirely disappeared. From the lake the south peaks looked gloomy and cold; the gray walls, towering sheer thousands of feet, were impressive and grand. North Peak, however, was touched by the morning sun, and the snow glistened and sparkled with glowing brilliancy that was but a foretaste of the blinding glare to come when we had reached the summit.

About midway between the extremities of the summit were three long "slides" that reached from the tableland down far into the timber on the mountain side. It was up one of these slides we intended to climb. After following the trail through the woods a few hundred yards we turned abruptly to the right and came to a rocky run, which in the spring time and wet seasons is probably the bed of a roaring mountain-torrent. A hundred yards up this run we struck the first snow, the big rocks being covered with a thin coating of it, and this with the ice made the footing uncertain. Now and then we came to pools of clear, limpid water, ice cold and sparkling. The recollection of a drink from one of the pools at least will be lasting.

No attention was paid to the lapse of time and how long it took to reach the timber line or the tableland is not recorded. Just before the timber line was reached we again turned to the right, left the slide, went through the brush about 75 yds. and came upon a new and much larger slide. Here the earth was of a brighter hue, and the general appearance of the rocks and trees on the edges of the barren track indicated that the avalanche had occurred in recent years. From the top of the mountain, reaching to a hidden point in the forest, was a wide swath of desolation.

The story was easy to read here. Some day in the early summer a few years back, after the snow and ice had melted under the warming rays of the sun, a snail mass of snow, ice and debris away up near the summit let go its grip and started to slide off the face of creation. Then suddenly the mountain echoes had been awakened by the roaring, shrieking, grinding noise of an avalanche moving down in irresistible fury, sweeping all before it. Great rocks had been ground to powder. Trees of scrub growth and giant firs alike went to join in the onrushing mass of booming, howling ruin.

When it was all over and the gray cloud of dust had floated off up the valley there was but a path of naked rocks and bare earth where the great boulders, moss-covered and venerable, and the shady undergrowth had been.

The track of the avalanche was a good stairway now, and up over its rugged steps we clambered. Leaving the timber land far below, we toiled onward and upward, pausing now and then for breath, or to look to the right or left for better footing. A friendly rifle barrel thrust down now and then from above and a firm, steady pull helped over some difficult places.

Just before reaching the top we rested on a flat boulder and took a long look down Sandy Stream Valley. From no point can be had a better or more impressive view of Pamola's peak, grim and gray, than from the slide. At the foot of the declivity nestled the forest of the basin, a half dozen little lakes looked like saucers of water in a bed of evergreen, and from near the center of the group came a thin blue line of smoke curling above the tree-tops at Dewdrop Inn.

A placid sheet of turquoise still further down was the Katahdin Lake; then further over were the familiar peaks and ridges of lesser mountains. Away off in the distance were a dozen dots of white, huddled together in a picturesque group, while to the south of them a tiny black object crawled in sinuous curves onward, slowly and silently like an insidious serpent on its prey. Watching intently through the glass, two vapor-like streams came from the head of the crawling thing, and—*voilà!* Those white dots are a city, and that snake is a railroad train. A Bangor & Aroostook train was rapidly approaching one of the liveliest cities in Penobscot county—Patten—thirty-five miles away. But too much time was being lost there, and a scene of far more grandeur awaited when the summit should be reached. At the top of the slide a hard scramble placed us on the comparatively

level surface of the tableland. About a mile of plateau separates the two high peaks of Katahdin. This space is about half a mile wide and is almost entirely covered with the low tangled growth of "pucker brush."

Near the eastern side is the only trail that runs through this matted mass of limbs, trunks and roots. The trail is but a foot or two wide, and through this pass of death must pass the caribou who is so unfortunate as to be found on the south peak of the mountain when the merciless head hunter comes to Katahdin to kill what he cannot carry away. And through it they will come, though death stares them in the face; they know that the only road off the mountain is through the plateau trail, and they prefer running the gauntlet of rifles to a leap into the impregnable brush that in itself means hopeless entanglement and perhaps death there.

Through the glass we scanned the surface of South Peak. No living object was visible. There were no tracks in the snow, and there were no caribou over on South Peak. The only chance for caribou then was that possibly a herd might be feeding on the side of North Peak. Mr. Tracy started across the tableland toward the South Peak, while we worked around toward the North Peak, keeping a sharp lookout for the game we hoped to find.

We had gone possibly half a mile, clambering over great snow-covered boulders. Sometimes the crust would break and let us down knee deep, again a treacherous skim of ice would give way beneath the foot and the crash that followed was not conducive to perfect still-hunting. It was just after one of these adventures that Mad gave a subdued, warning cry, and before I could arise and extricate rifle from camera he had fired.

Scrambling hastily around from behind a big boulder, I saw just disappearing over the brow of the divide a magnificent bull caribou with a handsome pair of antlers. A hasty snap shot sent a shower of snow and ice about his head as he rounded a big rock and went down the incline. Madison got in a second shot, but with no better luck. It was an exciting moment, and one well worth the climb. Hurrying to the top of the ridge, we waited to get a glimpse of the disappearing game.

"They will come in sight right here," said Mad, pointing to a clear space to the northwest. "There are five of them; three of them with horns, too. They will go off the mountain down there where you see that point of woods."

A few seconds later these three statements were verified by the caribou. With the glass I could easily make out the antlers on three of them when they came in sight where my friend and guide had indicated. They were making straight for the point of woods, and they were still running like mad, so far away as to be invisible to the naked eye.

When the last one had disappeared in the woods over the side of the mountain, I said: "There they go; good luck to them; we never touched a hair."

The woodsman looked inquiringly at me, and it was evident he did not understand the sentiment.

This ended the hunting for the day, and we were at leisure to enjoy the scenery, for the rest of the day was spent in roaming over the mountain top. And such scenery! From our snow-capped height we could see the whole "Sportsman's Paradise" at our feet. The day was still clear, not a cloud to mar the line of vision. Below us lay a colored map of rare beauty. Close to the base of Katahdin the deep rich green of the forest merged off in the distance to lighter hues, which marked the hardwood timber ridges and told of bright autumn leaves and good hunting grounds galore. The myriads of lakes nestling in the forest lay clear cut and blue in their dark settings of trees. The familiar lakes and streams stood out in such bold lines that no difficulty was made in finding and identifying them. From Alleghuash to Jo Mary, from Moosehead to Nicasious, Gosse-lin's Landing to Dacy Dam, the old landmarks were all there.

Large lakes like Chamberlain and Chesuncook were easily distinguished by their shape, but the smaller sheets of water, such as Umbazooksis and Cauquomgormis, Mopang or Sabao, might easily be hidden by some mountain or hill, and be lost to view or merged into the collective topography of the panorama.

Down in that quiet forest below, along the shores of the placid lake, or beside the roaring falls and quick waters of rivers, were the camp-fires of many sportsmen. We could not see the smokes of a hundred camps, but we knew they were there. The great silent forest below on all sides were filled with game, but that, too, was shut out from view. Moose, caribou and deer were there in bog, swamp and timber ridges. We knew that the bears, foxes and the sly *Loup cervier* were there by the score.

But forest, lake or river gave no sign of life; over all hung a peaceful silence that was restful to the soul. One could realize why men came here from the hurry and worry of the commercial world for a period of rest beside some camp-fire far from the busy hum of men.

Before we knew it the sun had swung from south to west, and was casting a broad band of shimmering gold across Moosehead's lower bay preparatory to a glorious departure after a glorious day. To the east of the mountain the sun had long set, and now it was almost dark in the deep valleys there. One more lingering look around and we knew we must hurry from the mountain ere darkness overtook us.

The western sky was a broad band of crimson, blending upward to a delicate pink and on into pale purple. Night was fast creeping over the mountain and by the time we reached the slide it was totally dark.

The moon soon came out and shed her pale rays over the snow-covered furrow down which we were sliding, stumbling and rolling. Camera and rifle quarreled violently here, but bumps were unavoidable. Pamola stood at our right, looking even more austere under the cold white rays of the hunter's moon than under the noon-day's sun.

Half way down the slide before we reached the timber lines Madison leaned his rifle against a rock, and making a trumpet of his hands gave out the prolonged cry of the woodsman. Instantly the echo was thrown sharply back from the south peak, and then it came from the northern side loud, but soft and musical. The sound rolled down to the basin and through the valley to Dew-

drop Inn, where Frank sprang to his rifle and sent a salute roaring back, but it came to us a subdued crack. Then his answering call, clear as a clarion note, rolled up over the treetops to the slide, and it was full of deep melody.

This welcoming cry from beside our own camp-fire served to bring us to the realization that we had been out since early morning. We had had nothing but icicles and frosted snowballs to eat, and even that light diet palls on one after a while. The pangs of hunger spurred us on now, and we speculated as we tumbled down the rugged path on whether or not Frank had brought up a piece of his "vengeance" from the lower camp. But deer meat or dough gods, we wanted to get to it.

"Chaw-dog" or "flippers" would be as good as partridge when we got to camp. Straight down the rugged path of the avalanche we slid. Once into the woods we cut across to a rocky run and decided to follow it down, and Madison was right in saying it would take us near our camp. It was dark in the overhanging woods where the moonlight did not penetrate, and some bad stumbling was our portion there.

Halloos from camp sounded nearer and nearer, until we decided to cross the brook and make a bee line for the Dewdrop lean-to, which was reached after ten minutes' hard scramble through the brush.

Few and short were the stories told around the camp-fire that night. The ladies had not been idle during the day, for there were many more feathery boughs in the bed the second night, and less of the wintry blast whistled through the roof of the lean-to. Besides this they had done some exploring. Sybil had guided the others through the woods to the Appalachian trail, thence to the basin lake, and she had taken her rifle along to protect them. Then, too, she had hopes for a shot at a moose or a bear. But no such good luck attended her. Frank had returned from the lower camp and had a fine lot of wood cut, so that standing fire watch was not such labor as on the previous night; but who stood the watch neither Madison nor myself are able to say.

The morning dawned cloudy and cold. There was no hope of going on the mountain that day, and as events proved, there was not a day in the next ten when the weather would permit a trip to the mountain. We had been fortunate in getting to the basin, and catching the only day in weeks when Old Sol and Pamola smiled in unison.

As the dark clouds swept over the peak and rolled down the valley in smoky wracks they smothered all visions of caribou and blotted out the chance for more pictures.

The thought that a rain was blowing up was an unpleasant one. Dewdrop Inn was not designed for a winter camp. The fir boughs would keep out about as much rain as a lawn tennis net, and even the best lawn tennis net will leak in a heavy rain. We estimated that that roof of fir boughs would leak for four days after the rain had ceased. It was unanimously voted to break camp and go down the mountain to the lower bivouac, where we would be more comfortable when the coming storm should break.

Breaking camp is almost always a sad task, and Dewdrop Inn was no exception. We hurriedly made up our packs, somewhat lightened as to provisions and because we had burned up considerable bedding when the fire watchman slumbered while the flying sparks set the bedclothes on fire, and started down the trail toward Lake Mystery.

Looking back toward the camp-fire, the usual little blue wreath of smoke arose like a hand waving a last farewell to us as we moved slowly away. Frank had swamped out a new trail around Lake Mystery to the north side, and thence turning south struck McLeod trail, over which we retraced our steps down the mountain side.

The dry weather must have had a startling effect on the trail, for it was at least two miles shorter on the down trip.

The waiting for good mountain weather at the base was without incident worth recording here. It is enough to say the fair weather never came. We had been away from Staceyville ten days and were running short of provisions, when we decided to go out of the wilderness. From deserted McLeod Camp we drove down the picturesque valley between the Black Hill and Turner Mountain. We followed the bed of the beautiful South Branch of the Wissataquoik, where were hundreds of pools delightful to the angler's eye, for they are swarming with handsome trout, and further down the river there were salmon over the spawning beds in schools of hundreds.

This is not a game story, nor was it a hunting party; but our hunt at Jim Tracy's camp, near Dacy Dam, was one long to be remembered. It netted four deer, and they made a handsome showing on the back of the buckboards. With a light fall of snow in the lowlands one moose at least would have lost his horns. He is in the woods yet, but to say more would be telling, and he will be bigger and have a finer pair of antlers next fall.

A splendid supper at the Hunt farm, eaten from real white dishes, and a night's rest in a good bed, were events of the return.

With such a brave and patient quartette of the fair sex, who displayed such fortitude under the hardships our ladies experienced, a trip to the mountain could not fail to be a success whether made with or without the approval of Pamola.

FRANK E. WOLFE.

Boston.

A Large Rangeley Trout.

R. N. PARISH, of Montville, has on exhibition in the center window of Porteous & Mitchell's store a mounted brook trout caught by him with a fly in the Upper Dam Pool, in the Rangeley Lakes in Maine. The fish is the largest brook trout ever caught with a fly in the United States, and is a handsome sight. The catch was made by Mr. Parish while on a fishing jaunt Sept. 23, this year. The weight of the trout is 9lbs. 11oz. The fish will be shown at the sportsmen's exhibition at Madison Square Garden in January next, and is sure of a prize.—*Cooley's Weekly, Norwich, Conn.*

Natural History.

Roosevelt's Wapiti.

Cervus Roosevelti, a New Elk from the Olympics.

BY C. HART MERRIAM.

[From the Proceedings of the Biological Society of Washington.]

FOR many years naturalists have known of the presence of elk in the Olympic Mountains and other ranges along the Pacific coast, but until recently no specimen, so far as I am aware, has found its way to any museum. When in the Olympic Mountains last August I arranged with two trappers who had established a winter camp in the deep canyon of Hoh River, at the north foot of Mt. Olympus, to secure specimens as soon as the animals had put on the winter coat. The first of these—a fine old bull with massive antlers—has now arrived and is safely installed in our National Museum.

Dr. J. G. Cooper, in his report on the Mammals of the Forty-seventh and Forty-ninth Parallels, published in 1860, states that the elk was abundant in the dense forests of the Coast Range, and adds: "An intelligent farmer, who formerly hunted elk in New York State, told me that he considered these a different animal, being much larger and having larger and differently formed horns" 1. In the same volume George Gibbs states that "Judge Ford, long a settler in Washington Territory and an enthusiastic hunter, says that the elk of the Pacific coast is not the elk of the plains, but has a larger and coarser head. He has been through life familiar with game and is positive that they are different animals" 2. John Keast Lord, in his "Naturalist in Vancouver Island and British Columbia," published in London in 1866, says: "The Wapiti on the Oregon coast grows much larger and differs in color from the animal found on the inland mountains." Dr. James C. Merrill, Major and Surgeon, U. S. Army, informs me that he also has seen numerous heads and antlers of the Olympic elk, all of which were distinguishable at a glance from the common species.

In the Oregon exhibit of the World's Columbian Exposition at Chicago, in 1893, were several mounted heads of this elk. They were examined by Hon. Theodore Roosevelt, who told me that they differed from those of the Rocky Mountain animal in being black and in having antlers with relatively straight beams and an irregular cluster of points at the tip instead of the usual incurved terminal prong.

Mr. Roosevelt, in his entertaining "Wilderness Hunter," describes the Rocky Mountain elk or wapiti as "not only the most stately and beautiful of American game, but also the noblest of the stag kind throughout the world;" and adds: "Whoever kills him has killed the chief of his race, for he stands far above his brethren of Asia and Europe." These remarks must now be transferred from the common wapiti to the Pacific coast animal.

Last summer, when engaged in field-work in the Puget Sound region, I saw several heads and a few hides of this elk, and was surprised that such a superb species had remained so long undescribed. I deem it a privilege to name this splendid animal Roosevelt's wapiti. It is fitting that the noblest deer of America should perpetuate the name of one who, in the midst of a busy public career, has found time to study our larger mammals in their native haunts, and has written the best accounts we have ever had of their habits and chase.

Cervus Roosevelti sp. nov. Roosevelt's Wapiti.

Type from Mt. Elaine (on ridge between heads of Hoh, Elwah, and Soleduc rivers) near Mt. Olympus, Olympic Mts., State of Washington.

Type No. 91579, male ad., U. S. Nat. Mus., Biological Survey Coll. Collected Oct. 4, 1897, by Hans and Chris Emmet.

General Characters.—Size large; head and legs black (probably only in winter pelage); skull and antlers massive; beams of antlers relatively short and straight, with terminal prong aborted.

Description of type specimen (which has nearly completed the molt from fall to winter pelage).—Face from between eyes to nose-pad, sooty blackish, somewhat grizzled on cheeks with golden brown; eyelids black, surrounded by area of pale fulvous, incomplete anteriorly; rest of head and neck brown, becoming black along median line, and mixed black and reddish on top of head; back and sides a peculiar grayish brown with incomplete dusky stripe along median dorsal line; breast and belly dull reddish chestnut; legs and feet sooty black, with space between hoof and dew claws fulvous, the fulvous reaching up a short distance along median line posteriorly; forelegs abruptly black from body to hoof, with a narrow fulvous patch on inner side of forearm; hindlegs and feet sooty black, the black on inner side of thigh reaching up nearly to groin, and on posterior aspect reaching nearly to rump in a band 40-50mm. wide, which curves slightly outward on each side of lower part of rump patch; rump patch pale dull buffy-fulvous, deepening between thighs to pale tan; throat grizzled black and dark golden brown, becoming darker anteriorly, with a narrow median beard (about 30mm. broad) of pale fulvous, beginning opposite the angle of the mouth and sharply defined anteriorly and latterly by a blackish border, spreading and fading posteriorly; chin and lower lip blackish, with a sharply defined wedge-shaped mark of buffy fulvous on each side of median line, its base at anterior edge of lip, its apex directed posteriorly. Metatarsal gland (situate 160mm. below heel on outer side) a conspicuous oval patch of reddish fulvous about 80mm. in length, inclosing a white central stripe 35mm. in length, and surrounded by the black of the leg and foot.

Cranial Characters.—The skull of *Cervus roosevelti*, compared with that of *C. canadensis* from the Rocky Mountains, is much larger, broader and more massive. The frontals are not only conspicuously broader, but are very much flatter, giving the cranium a different profile. The muzzle is also much broader. The cavities in front of the orbits, on the other hand, are decidedly smaller.

Measurements of Type Specimen.—Total length, measured in flesh, 2490mm. (8ft. 2in.); tail in dry skin about 80mm.; ears in dry skin: from base posteriorly 225mm., from base of opening 208mm.

Antlers: Spread 990mm. (3ft. 3in.); length of left beam from burr to tip 1050 (41¼in.); circumference just above burr 285mm. (11¼in.); least circumference above bez-time 190mm. (7½in.).

Antlers.—The antlers are large, heavy and relatively short, with the terminal prongs aborted, so that the total length from burr to tip is about 500mm. (nearly 20 inches) less than in well-formed antlers of the Rocky Mountain elk. The brow, bez, trez and fourth time are similar to those of the ordinary wapiti, but above the fourth the antler is flattened and sub-palmate and ends in two or three short points, the tips of which reach only slightly above the tip of the fourth prong.

Whether the aborted condition of the terminal part of the antler in Roosevelt's wapiti is the result of long residence in the dense Pacific coast forests, where long antlers would be inconvenient, or is indicative of closer

1. Pacific Railroad Reports, Vol. XII., Pt. II., p. 88, 1860.
2. *Ibid.*, p. 133.

relationship with the stags of Europe and Asia, which normally carry somewhat similar antlers, is an interesting question.

Among some black heads in a taxidermist shop in Victoria I saw one, said to have been killed on Vancouver Island, in which the terminal prong of the antlers is much longer than usual, approaching the normal condition of the Rocky Mountain animal. But it by no means follows that the antlers in question belong to the head on which they were mounted, for many taxidermists have a reprehensible habit of grafting handsome antlers on handsome heads irrespective of zoological or geographical obstacles. During the past three months I have seen more than a dozen mounted heads of elk, deer and antelope bearing horns which the taxidermists admitted were selected from stock in hand, without reference to the heads on which they grew.

Other Specimens.—In the taxidermist shop of L. F. Richolt & Co., at Centralia, Wash., I examined a very beautiful hide of a wapiti killed in winter in Chehalis county. The color of the back and sides was a beautiful clear bluish gray, with a tint suggesting lavender, and the legs where they had been cut off were abruptly black. The amount of black on the head varies considerably in different specimens. Probably part of this variation is due to age and part to season. All of the adult winter heads were black from nose to ears, with more or less black on the neck. Some had the entire neck black, the black reaching back to the breast and nearly to the shoulders. The development of the mane seems to be much as in the Rocky Mountain wapiti.

Geographic Distribution.—Roosevelt's wapiti inhabits the dense coniferous forests of the humid Pacific coast strip from near the northern end of Vancouver Island southward through the coast ranges of Washington and Oregon to northwestern California. In 1860, according to George Gibbs, it followed the coast "all the way down to San Francisco" (Pacific Railroad Reports, Vol. XII., Pt. II., p. 133). This is a very natural distribution, corresponding with that of many other species. Through the agency of man the southern part of the range has now been cut off, but just how far I am unable to say. Mr. Charles H. Townsend, in his important "Field Notes on the Mammals, Birds and Reptiles of Northern California," published in 1887, says that the wapiti "still exists in moderate numbers in Mendocino, Humboldt and Trinity counties, along the upper courses of the Eel, Elk and Trinity rivers. Two large elk were shot in Humboldt county in December, 1885, and brought to Eureka, where I saw them" 3.

But the southern limit of its range is of far less consequence than the eastern limit, for the important question is, Do or do not the ranges of the Rocky Mountain and Pacific coast wapiti come together? Apparently they do not. Some of the old reports state that the Pacific elk formerly inhabited the Cascade range in Washington and Oregon. But even in this case the Cascades are separated, except at the north, by the full breadth of the Great Basin and Plains of the Columbia. North of the Columbia River the forest region of the northern Cascades is practically connected with that of the Rocky Mountains by means of the timber-covered parts of southern British Columbia and the Colville Indian reservation of northern Washington. But this region, so far as I can learn, is not, and never has been, inhabited by elk. Mr. John Fannin, Curator of the Provincial Museum at Victoria, tells me that while elk are common on Vancouver Island they do not occur anywhere in British Columbia except along its eastern border in the Rocky Mountain region.

At the time of my visit to the Olympics the latter part of August the elk had been recently driven out of the upper Hoh and Soleduc canyons by Indians, and the numerous tracks seen were ten days or two weeks old. Well-beaten trails followed the crests of the higher ridges and traversed the principal valleys. Many of these trails, with little labor, can be made available for horses, and afford almost the only means of penetrating the region.

Mr. W. A. Perry has published the following account of the way Indians kill elk in these mountains. He says: "The principal Indian method of hunting the elk in the Olympic range is by driving them over precipices. Selecting a well-known spot on a well-traveled elk trail, they will lie in wait for weeks, until a band appears coming down the mountain. The place usually selected is one where the trail curves around some great rock, just at the edge of a precipice a hundred feet or more in height. A scout, stationed high up the mountain, gives notice of the approach of a band, and then the Indians mass at the lower end of the curve, while others conceal themselves above the curve. As soon as the band passes the latter, they spring to their feet, rush down the trail, yelling and firing guns. The Indians at the lower end of the curve do the same, and the elk, finding themselves surrounded, leap over the cliff and are crushed on the rocks below" 4.

Concerning Compass Points.

Editor Forest and Stream:

I must confess to a good deal of skepticism regarding the rules given for finding the cardinal points when lost in the woods. For in deep evergreen woods the sun has very little chance to affect the growth of moss on the trunks, or to cast a shadow which would promote the growth of ferns or other shadow-loving plants on the north side of the trunks; as for the hardness of gum, that depends on its age; and then how is one to see through the thick roof of the boughs above him in what direction the tops bend, even if authors agree on that.

Some will share my doubts, but many more will not; and now to settle the question, let every believer, who is so situated that he can do so, go out in the middle of a woods so large that the light of the open cannot be seen, accompanied by a friend who will blindfold him and lead him about until he has quite lost all idea of direction, when the blindfold shall be removed and he be left to find his way by the rules laid down. But he shall not have running water nor the known trend of ledges to guide him. Try it and report.

AWAHSSOOS.

The Red Squirrel.

CHARLESTOWN, N. H., Dec. 17.—*Editor Forest and Stream:* Thanks to Mr. Arthur F. Rice for his defense of this merry little fellow, whom he well designates as "the Puck of the Woods," instead of the "devil incarnate," as some people have been disposed to classify him. When I was a boy I used to shoot him, and eat him, too; for although rather small game, three or four fat ones helped to fill up the gaps in a squirrel pie if the requisite number of gray ones were not forthcoming.

Some of your correspondents write of a squirrel "muddle," which may be very good, and probably is; but I never happened to eat one. A "squirrel pie" is made just like a chicken pie, and is full as good, "only more so." Skin and dress your squirrels, quarter them nicely, saving the hearts, livers and kidneys, parboil them properly, season with pepper and salt, a little onion, a little salt pork, and a dash of sweet herbs; put them in a deep baking pan, with both bottom and top crust, and bake till the top is well browned; and the dish is equal to the famed venison pastries of the days of Robin Hood! I will not insult it by comparing it to the productions of a famed New York caterer, of whom hundreds write who never entered his doors.

I admit that the red squirrel sometimes robs birds' nests, so do the crow and bluejay and various other birds, but I do not believe that he ever acts as a veterinary surgeon for the gray ones, though he is a pugnacious little fellow and will claim and hold "the right of way" from the bigger gray one in the woods any day.

That he is a good provider I well know, for I have often seen him hiding nuts, and if it had not been for Stanstead's letter in this week's *FOREST AND STREAM*, I would have sworn to one of them having hidden a half-peck of shelled beech-nuts, which a companion and I once found in a hollow hemlock, more than sixty years ago.

I am inclined to believe yet that it was a squirrel's store, for it was at the base of a steep, rocky knoll of some forty or fifty acres extent, with a fringe of tall pines and hemlocks around its base, while the higher ground was covered with oaks, beeches and chestnuts. It was a great haunt for squirrels of both kinds, and was one of my favorite "happy hunting grounds" in my younger days, as it was only about a mile from the village, though that mile was straight up hill. I used to get lots of gray squirrels there, and one morning shot five before breakfast. After I got to be sufficiently expert to feel sure of getting as many gray ones as I wanted, if it was a good place for them, I let the red ones alone, for I love to see them prank and frolic on the oaks, and hear the saucy chickaree. I cannot hear it now, but I can see them quiver, from the end of the nose to the tip of the tail, and know that the music-box is in operation. They are favored inhabitants of our village street, where they race around among the tall elms and maples, mostly living in some hollow butternut, of which there are many standing back from the street among the houses and barns.

There was a family of them, half a dozen years ago, in an old butternut close to the house in which I then lived, and from which I was turned out in a snow-storm one winter morning; and they used to amuse us very much with their antics. A big elm made a convenient tramway from the butternut to the roof of the house, where there was a hole somewhere by which they got in among the rafters, and they used to bring their nuts in there, and the people who slept in the upper chambers complained bitterly of the racket they made at night.

One year one of them got very tame, and when I sat on the doorstep, smoking, would come within a few feet of me to hide nuts under the plank walk which led from the doorsteps leading down to the gate.

Another year my wife called me to the window one morning to look at one which was stamping and quivering and apparently scolding at a great rate at the mouth of their hole. This kept up for some minutes, when there appeared the head, and then the body, of a very wee one, and at last it came out and joined its mother, who was evidently calling it out for its first lesson in outdoor exercise, and it was not many days before they were racing about in the trees together. You may think this "a great boo for such a small colt," but I love to see the little scamps about, and would not have them exterminated for anything.

Those letters from "that boy," which Mr. Raymond S. Spears sends, are capital, and although I have seldom fired twice at a squirrel, I can appreciate the efforts of a beginner, as I have had much the same experience. I began on squirrels with a rifled pistol, made by Robbins & Laurence, at Windsor, Vt., to which a country wheelwright had fitted a light, crude stock, and although I got to be "sure death" on red squirrels and chipmunks with it, I did not attempt to try it on any bigger game.

It is a number of years since I shot a squirrel now, and I never expect to shoot another, but I have had many a happy day in the woods with them, first with my brother, and then teaching my boys, and if I could only recall the details of the different tramps, I might make quite a chapter of experiences out of it; but the taste and inclination for the sport have gone with the ability to climb the rocky hillsides. In fact, I think they began to go earlier, for almost the last gray squirrel I saw in the woods came up within 10 ft. of me as I sat on a rock, under a young oak in its fall color, which just matched my duck coat, and, keeping one eye on me, ransacked the leaves for nuts till I happened to move, when he was off like a bullet. I had been so interested in his motions that I did not send a charge of shot after him, nor have I pulled trigger on a squirrel since.

VON W.

Foxes or Birds?

MADISON COUNTY, N. Y.—*Editor Forest and Stream:* In your issue for Dec. 4, Mr. Willard H. Sullivan, of Clinton, Me., thinks it is too bad to countenance the trapping of foxes. Does he view the subject from all sides? Has he an over supply of grouse in his neighborhood, enough for the hunters and the foxes too? It seems to me we must choose between the birds and rabbits and the foxes, and I believe the majority of sportsmen would prefer the birds and rabbits. Foxes are protected during the autumn months in this and a few other counties of

this State. If the object of this protection is economy for the farmers in destruction of mice, etc., perhaps it is right; but if it is in the interest of the few fox hunters as against the many bird hunters, I, for one, protest. Mr. Sullivan thinks the foxes will be gone in twenty-five years. I doubt it. They hold their own only too well here.

STEPHEN R. LEONARD.

Game Bag and Gun.

A Nebraska Day.

WYMORE, Neb., Dec. 10.—*Editor Forest and Stream:* I take pleasure in reporting the fact that my old friend Dr. H. A. Given has got his second sight. And as this subject must interest all sportsmen, I am going to tell the story as it was told to me by the Doctor, and as corrected and vouched for by disinterested witnesses.

When I got home from court last Saturday evening I found the following note from the Doctor, which had just arrived:

"DEAR MAC: Now that you are too old to shoot game for yourself, I know you will appreciate having a friend who can shoot it for you. I was out hunting to-day and got thirty-eight quail, forty-six cottontails and one jack rabbit. You and Auntie come down in the morning and stay all day and we will have a feast, and I will tell you all about it.—Doc."

Now I had planned to spend that particular Sunday with Nessmuk and Kego-e-kay. Besides, I felt a little hurt because Doc had gone hunting without me. But I remembered that he always liked best to go hunting with some one that he could beat shooting, and that made me feel a little better; and I could not have gone if he had invited me, because I was in court defending a young man who had promised to marry a young lady on the first Monday after Lent and then had changed his mind. Ordinarily a man who never changes his mind is a fool. But a man who promises to marry a young woman on the first Monday after Lent, and then changes his mind, is a fool, too. And then I thought of the dinner, and then that I should hear Doc tell how it was done. That settled it; we would go.

Sunday came, and this is the story: We had a week of unusually rough weather, and the ground was covered with 5 or 6 in. of snow; but on Friday the weather had begun to moderate, and the prospect was good for a fine day on Saturday. On Friday afternoon Ben Skinner, a young farmer living about four miles from town, had called at the Doctor's office with a box of loaded shells, and it had been arranged that Doc and his son Fred should drive out in the morning and hunt on Ben's farm. They reached the farm about 9 o'clock the next morning. Ben had put the wagon box on the bobsled and had filled the box with hay, and Doc mounted on top. Now, as Doc is about the size and shape of Col. A. G. Courtney, this way of hunting just suited him, and away they went for the fields. Then the fun commenced. They first struck a little patch of unmowed land in a draw, and it was alive with rabbits.

Fred walked to handle the dog Tommy. Ben drove the team. Doc got on his knees so as to handle the gun to advantage, and commenced operations, and in a few minutes twelve rabbits were retrieved and in the sled. Doc allowed his gun to cool; then the team followed a flock of quail that had flushed and scattered in the snow, Tommy worked them up, and Doc saved thirteen of them. Then he rested and let his gun cool again, and they started for another rabbit patch. And to make a long story short, these performances were repeated until the hundred shells that Doc had taken and Ben's twenty-five were exhausted, and Doc was just getting warmed up to his work. They had thirty-eight quail, forty-six rabbits and one jack rabbit. The ammunition being gone, there was nothing left to do but retreat in good order.

Ben announced that he had killed his winter's pork a couple of days before, and that they would go to the house and have dinner. And as they drove along Doc was heard humming an old darky song which sounded something like this:

"You can talk about yer wahtermelon, red as any rose,
With the black seeds a-stickin' in the sides like crows,
With the core a-comin' clean out to de rine,
But oh, I'm longin' for de hog-killin' time."

When they arrived at the house dinner was ready, and in the center of the table was a large platter well filled with pork spare ribs and backbone. Mrs. Skinner told them that the one that could eat the most backbone should have a piece of pumpkin pie, and Ben says Doc ate so much backbone that he didn't want any pie.

Two or three times during the story Doc had said, "I thought of you every minute, Mac, and would have given a dollar if you had been along," and I said as calmly as I could, "Don't mention it; go on with the story."

When dinner was over they hitched up and drove home. The rabbits and quail were all skinned and dressed, and hung in the smokehouse to freeze over night.

Now I hope no one will get the idea that Doc is a game hog; just because he got a well-filled game bag or bobsled; for he is not, and those rabbits and quail, with the exception of enough for our dinner, were all tied up in little bundles and sent where they would do the most good and be appreciated.

A man who will get up at all hours of the night and visit the sick, and furnish the medicine to those not able to buy it, without any prospect or hope of ever being repaid, will never be a game hog nor any other kind of a hog.

The story had been told, and the Doctor's wife called us to dinner. I will not attempt to describe the dinner in detail, but to give a general idea of it may note that we had celery, pickles, and cold slaw, quail and rabbits and rabbits and quail in all the latest styles, from raw on the half-shell to the common every-day fry, and we had mashed potatoes, milk gravy, sweet corn, and coffee and cake and pumpkin pie. There is no other country on

earth where the pumpkin pie grows to the size or has the fine flavor that it does in Nebraska.

After dinner we had the story with variations and more in detail; how sometimes he got two quail at one shot and then one quail at two shots; and how the quail looked as large as turkeys to him, and how all his misses were due to Ben's careless driving, or his gun having a bunch of hay on the end of it, or the quail getting up at the wrong time and the gun shooting too close; how many somersaults some of the rabbits turned when the gun cracked, and how some of the jack rabbits that he did not get ran so fast that the shot just played along behind them; and how in one or two instances he could hear them whizz long after they were out of sight.

Just before starting for home I said to Doc: "I suppose, now that you have your eye again, that you will take part in the Grand American Handicap next spring?"

But Doc said: "No, I will not put my skill against brute force. I saw that shell, 3¼ in. long, that the U. M. C. Co. sent you as a sample of the shell used by Tom Marshall when he won the championship last spring. That shell is the outgrowth of the rule that allows the shooter to put his gun to his eye before he calls 'pull.' First came the rule, then the recoil pad, and then the long shell, and skill don't count for anything now. It is no wonder they find it hard to keep up the interest in trap-shooting. Then, how would I look with my gun to my eye and trying to twist myself up like Fred Gilbert or make a face such as Frank Parmelee makes? No, I shall buy me a new gun with rifle sights, and content myself shooting game for my friends who are too old to shoot it themselves. Take two or three of these tablets with you, in case you should have a touch of indigestion to-night."

And so we said good-night, and noted another red-letter day in memory's calendar.

A. D. McCANDLESS.

Reminiscences of an Old Sportsman.—VIII.

(Continued from Vol. XLIX., page 486.)

MR. ALLIN once told us of a woodcock that he had seen walk out of the cover to a board that lay on the ground near the edge, when the bird deliberately mounted upon it and strutted just like a gobbler, even making the same hissing noise at the finish; and in a few minutes this was repeated, when the bird walked back into the cover. As this was entirely new to both of us, we chaffed him not a little about it, but he stuck to it and solemnly assured us that he had witnessed the performance just as he had described it to us. For my part, I thought that he paraded this woodcock before us as a very good match for the one that we had seen on the fence, but I took no stock in the strut, especially as all the books upon natural history with which I was acquainted were silent upon the subject.

Time went on for a year and a half, and I had nearly forgotten all about Ethan's tale, when I was forcibly and very pleasantly reminded of it by the very same bird, for, owing to the reasons given above, I have my doubts that more than one bird ever performed the feat.

One warm, pleasant day in early April I took my rod and started for a favorite spring-hole at the head of a noted trout stream, thinking that perhaps I might coax a few of its winter residents to accompany me home. Arriving at the place of operation, I limbered up the rod and very carefully crawled to my favorite stump, within easy distance of the pool, where I took my seat and quietly waited until the fish should be over their fright, in case I had disturbed them while picking my way over the shaky bog. I had sat there perhaps ten minutes, when from behind a bog some 50 ft. in front of me Ethan's woodcock proudly stepped out on the strip of wood that bordered a small pool, and marching broadside toward me, with head thrown proudly back, drooping wings and expanded tail, he actually strutted for all the world like a turkey cock. Then he stood still for a few seconds, when he again moved forward and disappeared behind a bog. I was too far away to hear the hissing sound mentioned by Mr. Allin, but I have no doubt that it has been heard by him, as in every other respect the performance was just as he described it. I was deeply interested—in fact, so absorbed was I that I left my rod and went to the spot, approaching it very carefully, hoping to obtain a sight of the bird and again witness the performance, but I failed to find him.

Before glancing at the tracks of the bird in the mud I saw that he had, during the latter part of his parade, scraped the surface of the mud with his drooping wings, for there was a distinctly drawn line in the mud on each side of the footprints more than a foot in length. Now I do not wish it understood that I make any claim of any nature in connection with this matter. I merely describe the occurrence just as I saw it, and as this and the one described by Mr. Allin are the only ones that I have ever seen or heard of, notwithstanding patient search and persistent inquiry, I do not feel like taking the responsibility of stating as a fact that this a habit or instinct of the entire family, nor will I even guess at it, for we already have far too much guesswork in matters of this kind, so I just jot down a description of something that greatly interested me, hoping that some more fortunate observer may be able to penetrate the mystery that surrounds the life of this royal bird and give us the facts in the case without any scientific guesswork.

I was once shooting in the "tan yard" cover in Blandford, Mass., when my dog pointed a woodcock which I flushed, and as I fired it tumbled near a thick-topped pine tree that was about 10 ft. in height. Just at this instant a grouse rose near me and started to fly back, but I whirled and had the satisfaction of seeing it strike the ground some 25 yds. distant; and I started for it first, as it was not quite dead, and I did not wish to have the dog retrieve it. While gathering the bird I was joined by a farmer friend, a thorough sportsman so far as trout were concerned, but not a hunter, although he had been my companion upon several occasions and appeared to enjoy the sport immensely, although he never car-

CHICAGO AND THE WEST.

New Years and Old Years.

CHICAGO, Ill., Dec. 24.—At this holiday season of joy and mirth, when all the world is squaring up accounts and getting ready to tackle another year, when half the world is happy because it thinks the other fellow is going to settle, and the other fellow is laughing because he thinks it a joke that he should be expected to settle—in this time of peace and good will to everybody who has made us a present or who we hope is going to make us one pretty soon, how seemly it is for man to pause and take an inventory of joys!

After all, the chief joy in life is perhaps this: It might have been a lot worse than it was! We can nearly always, if we are in the least philosophical, have this joy with us. It would be much worse if there were no FOREST AND STREAM. The man who is broke is not so bad off as the man who is in debt and broke too. There is always room for joy, if you want to look at it that way. And why isn't that a good way to do? It is only the old plucky doctrine of never-say-die which has put wood on many a wood-pile, and saved many a man from ennui and *Weltschmerz*.

There are a great many things to give any sort of man *Weltschmerz*, except a newspaper man, and it is somewhat the fashion nowadays to think that the new years are not as good as the old years. I confess that I now and then at this season of the year wish I were a boy again, with red mittens and copper-toed boots, and just setting out for a rabbit hunt such as we used to take in the old years. It is pretty bad to be shut up in the city, with only a vacation every week or so, but it might be worse. The snow we see nowadays, more especially in the city, is pretty dingy, but it might be worse. I saw some rabbits piled up in front of a store this morning, and they looked pretty bad, but they might be worse, though they were priced at five cents each. In short, this world is pretty much the same world it was a long time ago. It still has snow, and rabbits, and boys, and it is by no means so bad as it may be rashly pronounced to be by those who wrongfully think they have come to the end of the world. There isn't any end. She's round, and about alike all the way around, though better in the portions where there are rabbits and snow.

At this season we have few game birds left legal except the rabbit, but what more could we ask? Almost all over the United States the rabbit is to-day ripe and accessible. It is not bad fun to hunt rabbits, but is best when you can borrow a boy with red mittens and copper toes and watch him have the fun. So long as felicity such as that is possible on earth, this globe is no failure, no matter what experts on worlds say about it. Hail! then, to the Rabbit and the Boy, the proper combination for the New Year season, having whom the world is not so bad but it might be very much worse. If, now, there were no rabbits and no boys, how sad and unpleasant would be the winter season.

We used to kick the rabbits out of the snow, where they sat cuddled up in the grassy brush patches, and we shot them as they ran; or Dad did. And if Dad missed, the old bird dog usually managed to retrieve the rabbits anyhow. We had not heard of field trials then, and didn't know it was improper for a dog to retrieve. We always encouraged the dog in such laudable endeavors, and this made life a continual source of pleasure to the dog when he was out rabbit-hunting with us. When it began to snow he would come into the house and look at the gun and ask to be taken out rabbit-hunting. When the old gun was taken down, and the ramrod rattled in the pipes, how the old dog would leap and howl! He was a very rude, improper dog, untrained and coarse, I fear, and not gentlemanly and calm and meek, as I am told a dog should be now; yet as I look back, and again look around at the dogs of to-day, I am disposed almost to say that there might be worse dogs than those of the past!

In those days we never heard of a ferret, and indeed I may say that I never got down to ferreting yet, for, bad as I am, I might be worse. Yet I hear that of late years and in poor rabbit country, where the law of supply and demand is in sway to the detriment of the rabbit supply, some folks use ferrets. More than that, I learn that this fall a man up in Wisconsin has invented a sort of rabbit scarer which is worse than a ferret. He simply takes a long piece of wire cable, less than an inch thick, and fixes to it a carpenter's bitstock, so that the cable can be insinuated and revolved into the uttermost ends of a rabbit's burrow. On the end of the wire is a bulb in which a nice little fire of sulphur and brimstone can be fixed up for the rabbit if he isn't scared enough in the first place. How far is all this from the days of red mittens and copper toes and the muzzle-loader and retrieving dog! Let us not be too curious to examine more into such devices. I fear they will next exterminate the Boy. Such thoughts do not appertain to this season of optimism.

Rabbits and Food.

Some six or more years ago I suggested in the columns of FOREST AND STREAM what was to me at that time at least a new idea in rabbits, and more especially jack rabbits; namely, that some of the big rabbit drives of California or elsewhere should ship their rabbits to the poor of the large cities. Since then the same idea has been put in force, and "Parson Uzzell's" annual jack rabbit hunt in Colorado, with its consequent shipment of thousands of the big rabbits to the cities, has become one of the Western fixtures. This year the sixth annual hunt was held at Lamar, Colo., and 130 men were registered for it at \$1 a head. It is comment on the side of human nature which loves to kill, when it is noted that men came from Boston, New York and other Eastern points, all the way to Colorado, to help kill jacks "for the poor." The annual charity ball at Lamar was a great success, 4,756 jack rabbits being killed. The weather was cold, 6 below zero, but this did not chill the proceedings.

At Las Animas, Colo., they also had a big battue this month, and slew their thousands, many of the rabbits finding their way to the cities. It seems also that Gov. Leedy, of Kansas, has got the jack rabbit food idea, and

has offered to send any number on to New York city to feed the poor, provided that some one will pay the freight. Sumner county, Kansas, paid a 3-cent bounty on jacks this fall, and counted 11,000 scalps in a month. Some 200 persons held a drive in that county and killed 600 in one afternoon, using hounds and clubs and guns. It is well nigh impossible to exaggerate the numbers of jack rabbits slaughtered in such drives, and it is stated that the big battues are a necessity if farmers are to save their farms. How colossal such operations, compared to the red-mitten days! Then we killed a little bit of a creature, and if we got two dozen a day we were happy. Had we at that time heard of a party going out and killing 4,000 or 5,000 rabbits, each as big as a half dozen of ours, we might have been polite, but I fear we would have been incredulous. Had I told my father I had read such things, I think he would have given me double duty on Sunday school for a while. Yet here they are, true! Not that I would exchange the rabbits of the old years for those of the new, but simply to call attention to the fact that the world is not retrograding in the size or number of its rabbits to any alarming extent. And perhaps there were boys with red mittens on that Colorado hunt, boys who shot guns loaded with what I have known a daily reporter to call "nitrous" powder. In the old days our powder made a most delectable roar and shed a pall of gloom athwart the landscape; and at night, when we washed out the old gun in the basin in the kitchen, what an odor there was to the "cleanin's!" Let us cease such reminiscences, and again evade comparisons, the more especially as reminiscencing makes people grow old!

Vindicated.

Denver newspapers have come out with page reports from the committee appointed to look into the killing of the Ute Indians by game wardens in Lily Park, which affair made so much stir at the time last fall. The committee reports that the wardens are entirely vindicated. Of course. The press agent of the Utes has not yet been heard from.

Woman Warden in Colorado.

Miss Annie Metcalf, of Denver, Colo., has been appointed a game warden by Commissioner Swan. This makes two women wardens in the United States, Mrs. Warren Neal, of Michigan, being the first thus appointed. A woman warden should be harmless if properly treated, but if things do not suit her, beware! This is an extract from Kant's "Critique of Pure Reason," but is not offered as empirically established.

Results of a Side-Hunt.

The *Sentinel*, of Monroe, Wis., has the following little story of the results of a side-hunt lately seen in that part of the State:

"A great hunting match was pulled off at Oregon and vicinity recently, in which forty-six men, twenty-three on a side, headed by Captains Will Pritchard and Will Lamont, took part. Two hundred rabbits and a lot of other game was captured. Lamont's side won out by a great margin. The other side tried to get even by shooting the sparrows that cluster about the stock yards. One hunter shot at a rabbit and killed his dog, etc."

This is art. Observe the suspended interest which hangs about the little word "etc." What was it that was killed in that "etc."? What sort of a gun is it that kills a dog and an "etc." at one shot? Methinks this is weird.

A Clear Game Law.

It seems they are having trouble over their game law in South Dakota, the main trouble with it being, so far as I can discover, that it doesn't allow everybody to kill everything all the time. Regarding this I read:

"The statute passed in 1893 was practically the re-enactment of sections 2,379 and 2,384, inclusive, of the compiled laws, and all other statutes in conflict were repealed. In this re-enactment the Legislature absolutely prohibited the killing of large game up to the 1st day of September, 1896, and after that date there was no prohibition upon the killing of large game. In the enactment of last winter one of the provisions was intended to make every fifth year a closed year, and the first year so set was 1900. The rest of the provisions of the law bear directly on the manner under which large game may be killed in the open years after 1900, but only apply to the years preceding that time by implication, and do not bear directly on the years before 1900. After that date, though, the statute is very explicit, and hunters in this part of the State take the position that the law does not affect them at the present time."

I trust this is all perfectly clear.

Lead-Poisoned Ducks.

Out in Oregon they have this month discovered a number of mallard ducks which have met death by lead poisoning, they having swallowed shot picked up in their feeding on such much-shot waters as Foley and Jewett lakes. One man found shot on the gizzards of five out of six ducks that he examined. The *Oregonian* exploits the discovery. It is not news. The first publication of this was made in the columns of FOREST AND STREAM some years ago. It was first pointed out to me by Billy Griggs, a noted market shooter at Galveston, Tex., and it was later discovered independently by one of the members of the Forest and Stream Publishing Co. at Currituck waters, N. C. The matter received editorial mention at the time.

Good Railroad.

The Southern Pacific Railroad refused to ship a consignment of illegal deer-hides sent by the Southern Oregon Pork Packing Co. to Kahn Bros., of Portland, Ore. The latter sued to recover value of the goods, and the railroad set up in defense illegal killing of the game from which the skins were taken, stating that the goods were falsely labeled as furs, but were discovered to be hides. As soon as the nature of the consignment was known it was declined. The Court upheld the railroad against the cheeky firm which had asked it to break the laws to its commercial advantage. If we had a few more

ried a gun. After a cordial greeting he gladly accepted an invitation to join me and we started in the direction of the woodcock, but I had not mentioned that I had killed it. When we came near the place I motioned the dog on and she came to a point near the foot of the pine tree that I have mentioned, when my friend at once started to go around, as he had been accustomed to do, in order to flush the bird for me, and was nearly under the pine and I had opened my mouth to tell him that the bird was dead, when out from the top of the tree fluttered my bird, which was only slightly wing-tipped and could fly fairly well; so I again drew a bead on it and again brought it down amid his exclamations of surprise that we should find woodcock in trees and that the dog could point them just as well as when they were on the ground. I was also not a little surprised, as this was the first instance of the kind that I had ever seen. After I had explained the case to him he soundly rated me for spoiling so good a story as this would have been, and said that he had more than half a mind to ignore everything in connection with the affair, except just the simple facts just as I had seen them. But I had no fear of this, as he was one of the most honest and truthful men that I ever met; and I have always felt pleased with myself in that I resisted the very strong impulse to keep silence, as such a tale told by a man of his character might have reached wrong ears and ere this, in cold type, have stared me in the face as a new fact in natural history.

I learned, however, through the landlord, that he did so far pander to the depravity as to tell the tale just as it appeared to him, and then, after listening to the comments of the wondering crowd, he would give the explanation to the disappointment of all and the disgust of those who "had often seen the same thing."

I was in this case one day with Mr. Coe of Worcester, when my dog came to a point not ten rods from the pine tree mentioned above, and as it was my turn to shoot I walked in front and flushed a woodcock and had it covered and was about to pull, when a grouse rose near, and as I saw that soft would put him safe behind a thicket I swung the gun onto him and bowled him over just as he was disappearing. Then I again put on to the woodcock and tumbled it also, making a very neat double—a shot, as Mr. Coe said, to think of with pleasure when shooting days were over.

Rather a curious incident occurred the first time that my farmer friend, mentioned above, went out with me. There was a bit of good-looking cover upon his land, and I called at his house and asked permission to shoot there. Cordially granting my request, he remarked that I was the first hunter he had ever heard of who asked permission to shoot on any one's land (this was thirty years ago), as it was the custom for every one to shoot where he pleased. He then asked me to sample his cider, and as I had not the slightest objection he led the way into the house and we were soon on the best of terms, and I am pleased to say that we have been very good friends ever since.

After partaking of the cider I gave him an invitation to accompany me, which he accepted, and we proceeded to explore the bit of cover I have mentioned, but without finding anything, when he proposed going to a birch cover where he had seen both woodcock and grouse; and after a half-mile tramp we arrived at the place, which has since proven to be the very best cover in all that section. The dog being sent on, she was soon on point to a woodcock, which I flushed and killed. My companion had watched the proceedings with deep interest and at the crack of the gun he broke shot, and rushing to the place where the bird had fallen, stooped to pick it up, exclaiming "I've got him!" and actually grabbed a fresh bird that he could have held, but not expecting to find any resistance, somehow it struggled free and with a startled whistle mounted straight in the air; but my second barrel brought it safely down again, and it struck the ground not 10ft. from where it started from. My companion, as soon as the bird doubled up, prepared to spring for it, but as he afterward explained, upon glancing to the ground to see that the footing was all right his eye fell upon the first bird, which he picked up and then made his rush, and securing the other one, was soon at my side with animated countenance and sparkling eyes, asserting that he had never had such fun in his life. After this I began his field training and soon had him steady to wing and shot, and found him to be an excellent companion, but I could never induce him to carry a gun nor to take a shot with mine. He would always shake his head and say that he had had enough of gun to last him as long as he lived. As he evidently disliked the subject, I asked no questions until we had been out together several times, when one day he made an allusion to the matter, and in response to my request for the story he told it in about this style: "You must know by the trees in my yard that I am fond of cherries. When I was a boy we had only one tree, and I usually had my share of the fruit; but the birds used to bother me, and I tried every method that I could think of to keep them away, and succeeded fairly well, except that one pair of robins would pay no heed to the scarecrows I set up, but helped themselves whenever they wished. Well, this went on until the summer that I was fifteen, when these birds built their nest in an apple tree just back of the house; and as the cherries began to ripen they feasted on them pretty much all the time. I was wild over it, but could do nothing, as father thought everything of the birds and would not let me touch them. So I brooded over it in silence until one day, when father went away, I resolved to put an end to my troubles. I took down the old gun, and putting in powder and shot enough to do the business up in good shape, I climbed the apple tree until I was about on a level with the nest, upon which the old bird was sitting, and resting the gun across a limb and taking a good aim at her head, which was about 6ft. from the muzzle, I pulled trigger; and when I came to I found myself hanging by a broken leg in the fork of the tree, with the blood streaming from a deep cut in my cheek and my shoulder so sore that I thought it smashed all to bits; and, worse than all the rest, that blamed robin was perched on the very top of the cherry tree with not a single feather harmed. So you see that I have good reason for refusing to have anything to do with a gun."

SHADOW.

[TO BE CONTINUED.]

railroads like that, the whole question of game supply would be settled for this country in twenty-four hours. If no game were illegally shipped from the Northwest, the Northwest would be a perpetual haven for sportsmen.

On Same Train will do.

The Circuit Court at St. Paul has decided that if the hunter be upon the same train with the carcass of his deer, he is legally "accompanying" it to its destination, and need not be in the presence of the carcass. This is in the case of Phelps against the State Commission of Minnesota. The case will be taken up.

Elk Numerous.

Elk are reported very numerous this winter in the Jackson's Hole country, in spite of great mortality last winter.

In the Sun River country of Montana skin hunters have been butchering large amounts of game for the hides, more especially elk, but some deer and sheep, the latter having been driven down by heavy snows. Plenty of game is reported near the boundary line between Lewis and Clarke and Teton counties. This is just south of the Blackfoot Reservation country, where McChesney and I went in last winter. Many mountain sheep are reported to be in that region now, 3ft. of snow having fallen in the mountains.

Will Test Law in Michigan.

W. O. Holden, of Traverse City, Mich., served venison killed legally, but served after close of the season. He was prosecuted and waived examination and will make a test case. One of the greatest principles of the law as applied to game protection lies under this question. It means that the cold storage man may ply his trade the year round, if Holden may sell his legal-illegal deer. There are legal precedents on both sides. Illinois has the Wagner case, declaring it illegal to have such game in possession after the close of the season. Let us hope Mr. Holden loses his contention.

Along the Mississippi.

A great deal of illegal fishing has been going on along the Mississippi River in this latitude. One lot of 20,000lbs. of illegal fish was taken near La Crosse in two days this month. This week the wardens and county sheriff raided the spear and net fishermen and broke up their shanties. Nine men were arrested, but the justice let them go with a rebuke. This was at La Crosse. At Prairie du Chien, a week earlier, two wardens captured 4,000lbs. of illegal fish and burned two nets, arresting M. Wing, Charles Kimball and D. Sapington.

Calls a Halt on Deer.

Major Baldwin has issued, at Guthrie, I. T., orders forbidding the further hunting of deer in the Kiowa, Comanche and Wichita reservations. Offenders will be prosecuted. A large amount of venison came to Chicago market when this Indian Nation country was invaded by the white hunters, but of late the supply has dwindled very much, and the Territory has been pronounced shot out by many men who formerly found it a superb game region. If the order above noted shall serve to bring back a portion of the old abundance it is a good thing.

Max Middleton's Preserve.

Years ago I reported in *FOREST AND STREAM* a quiet hunt in Indiana, where Fred Donald, of the C. & E. Railroad, took a party of us down to Servia in his special car. We had an awfully good time, and I wish we were all there right now. Our guide at that time was Max Middleton, a tall and hard-walking Hoosier, who took us around and showed us where the birds were and how to get them. Now I read in a local newspaper that Max is going to start a quail preserve down there, putting out about fifty dozen quail, which are to be supplied by E. V. Patterson and C. C. Hess, of Chicago, two sportsmen who have for a long time been shooting about Servia, and who have viewed with dismay the decrease in the supply of birds at that point. Max is going to take charge of the work in hand, and will put a copper band on the leg of each quail, and asks each man who kills one of his copper-fastened craft to report the fact to him so that he may have a notion about the progress of the experiment. The region about Servia is a good natural quail country, and 600 birds added to the native stock ought to make it well supplied within the next two years, unless one of the capricious Indiana winters should make trouble.

Last Thing on Non-Residents.

The last thing on the non-resident shooter question comes from Attica, Ind. Down there the local men are much troubled with outside hunters, who come in to shoot and ship game. An organization has been formed which will ask the next Legislature to make it a misdemeanor for any person to kill game in any county of which he is not a resident. The *Attica Ledger* says in regard to this: "All legislation has thus far been for the professional sportsman, and it is time now for the common people to have a chance."

A great many men will at first thought decry this action of the Attica men, and say they are selfish and only want it all for themselves. Suppose that is true, we are but little better, for we only want it all for ourselves. That is about the situation in all game law matters. We are all striving and scheming to get game laws which will keep the other fellow out and let us in. This Indiana measure, should it ever be put in force, as it of course never will, would be really a good one, and all sportsmen ought to encourage it, not for unselfish but for purely selfish reasons. A great many men want to break into the Yellowstone Park and kill all the game there, but they are not allowed to do so, and the Park remains one of the biggest elk hatcheries in the world. Every posted farm in America is a good thing, and no shooter ought to kick at it. Every posted county is a good thing, and we are foolish if we kick at it. Every posted State is a good thing, and we ought to be wise enough to see it, and selfishly wise at that. The most selfish thing we can do is to make the game laws as strict as possible in every locality possible. The trouble with us all is that we spend too much time herding the grasshoppers off of the other fellow's farm for fear he

will get a shade the best of us in the benefits of nature. It would be better to allow any fellow to hatch more hoppers.

Grizzlies and Buffalo.

Mr. J. W. Schultz writes me from the Blackfoot Reservation that he has struck a snap in bears, grizzlies at that, and moreover the "white grizzly," the sort that Lewis and Clarke describe as having been strictly bad medicine in their time. He says an old trapper has put him on to this locality, and that he thinks it good for several grizzlies before he gets done with it.

Mr. Schultz also advances the striking news that cowboys have seen eight buffalo in the Bad Lands near the Round Butte this summer. The Round Butte is about sixty miles below the mouth of the Musselshell. Nothing is said about any having been killed. This sets me thinking about the statement made by Gokey at Dawson last fall, that he knew where he could find four buffalo. There may be a few such head hidden in the Bad Lands region.

A New Wolf Poison.

Mr. Schultz has a word to say about a new sort of wolf poison, which I think will be a novelty to even the average old-timer. He goes on to say: "Antelope are quite plenty again on the eastern part of the reservation. Wolves are plenty, or perhaps more numerous than ever. Saw three to-day from the house, and yesterday my son saw seven. Every one in the country is getting rid of the hounds—and you know we had as fine ones as were ever bred—and going back to strychnine. A wolver on Cutbank is using a new poison—simply the paper wrapper which comes on dynamite sticks. His brother, a Butte miner, sends him any quantity of them, and he scatters them out around old carcasses, etc. The wolves eagerly eat them, as they are greasy, and soon 'turn up their toes.'"

Big Game from the Bad Lands.

The press dispatches of Dec. 10 announced the discovery in the Bad Lands of Dakota, fifty miles east of Rapid City, of an elothorium, found by Prof. O. C. Farrington, of the Field Columbian Museum, of Chicago. Since that date the head of the elothorium has really been brought to this city by Prof. Farrington, who is preparing it for mounting. The head is about the size of that of a rhinoceros, and the jaws are large, heavy and full of strong, sharp teeth. The eyes are set well back and are large and prominent. The trophy is much valued by the museum. For a long time ranchmen in that part of Dakota have been missing sheep and cattle.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Notes from New Brunswick.

THE hunting season of 1897 in New Brunswick is now on its last legs. Old Father Time has plugged it in the ribs with his .30-30, and it has only eight more days to run.

Dr. Heber Bishop, the well-known American sportsman, founder of the Megantic Club, and friend of the human race, returned to-day from a fortnight's rambling in the region of the Crooked Deadwater. With him came the carcass and head of a large bull moose, which the guide estimated to weight 1,000lbs. For a moose of this size the horns were small, measuring 43in. from tip to tip. One shot from the .30-30 did the business. The weather was moist and clammy all the time the doctor was in the woods, which almost made the snow-shoeing synonymous with profanity. On the last day of his stay at the Deadwater the doctor saw eight moose and started a flock of fifteen. He says the moose were really too plentiful for successful still-hunting, as it was almost impossible to follow a track without running into other tracks and jumping the game right and left. The doctor adds that he has seen as good hunters as Henry Braithwaite, but never as good a woodsman. This makes the fourth party Henry has piloted this fall to gore and glory. The first party secured three moose and wounded another; the second brought out a moose, two caribou and a bear; the third and fourth scored a moose each.

It is reported, but I cannot positively vouch for this, that Fred Pitman, who went hunting with Arthur Pringle in the Northwest country, was summoned home before he had completed his hunt, and that he brought out two fine caribou.

Mr. C. C. Hills, of Cleveland, is still encamped in the White Wilderness, on the headwaters of Tobique River. His guide is Adam Moore, of Scotch Lake, York county. At last accounts Mr. Hills had not scored his moose, but had obtained his full complement of caribou.

On Friday last Donald Loggie, of Newcastle, one of the finest marksmen in Canada (the only man, in fact, who has ever twice carried off the Governor-General's prize at Ottawa), boarded the train at Ludlow in a very cheerful frame of mind. In his hand was the old Martini rifle which had so often led him to victory at the butts; in the baggage car was a big moose and a caribou with antlers like the nest of a fish-hawk. Mr. Loggie had with him as guide Gower Price, of Ludlow.

Eight men with axes and one man with a Winchester rifle stood around a bear den at Scoullar Brook, near Blissfield, the other day. The man with the Winchester rested his nervous system on top of a stump and fired twice into the den. He said he could see the glare of the bear's eyes. This may have been the truth, for the bear soon came out of the den and started nor'-nor'-west. The eight men with axes started to chase the bear when they heard a shout from the man with the Winchester and discovered that another bear had come out of the den and was making for the sunny South. A warm discussion then took place between the man with the Winchester and the eight men with axes as to which bear they ought to chase. That was seventeen days ago. They are still discussing the subject.

John Howie, of Hanwell, found the carcass of a deer in the woods the other day, which had evidently been killed by some wild animal. Thinking the guilty party might return to the scene of the tragedy, Mr. Howie set a steel-trap. The next day he found a lynx in the trap that weighed, after he had been pacified with an axe, 32lbs.

Among the people who are compiling caribou statistics in the Doaktown country are Robert Walcott, of

Cambridge; E. W. Forbes, of Milton, and Richard C. Storey, of Brookline. All of these places are in the region known as Massachusetts.

Mr. Randall Henderson, of New Haven, Conn., who in September last, when camping on Miramichi Lake, performed the almost superhuman feat of failing to find his moose, has come back for a hunt upon the snow. He will make his headquarters at Fullerton's camp on the upper Dungarvon.

Three young men with vigorous imaginations and a grudge against the barber—to wit, Ellis Smith, Coles Dugan and Humboldt Sharp—have just returned from the headwaters of the Tobique and Nepisiguit. They brought out a moose head and report that they saw many moose and caribou. They also brought out 75lbs. of heavy rocks which they say are full of gold. They claim to have been where no white man ever was before, and to have found a mountain about 600ft. high which is very rich in minerals. They intend to return in the spring and commence mining operations.

FRANK H. RISTEEN.

FREDERICTON, Dec. 24.

The Jackson's Hole Elk.

JACKSON HOLE GUN CLUB, Jackson, Wyo., Dec. 10.—*Editor Forest and Stream:* The inclosed clipping is self-explanatory. The questions involved in this elk controversy are just as you state them. The Moose Head syndicate, headed by one Glidden, are thus engaged, and evidently backed up by the State officials. I live in Jackson's Hole and am one of 300 residents, and 99 per cent. of them are against the capture of game or its shipment. The organization to which I belong has done everything possible and has plead with the State officials and those in power, to prevent the capture and shipment of game, but with no effect, and Glidden has said publicly that he obtained his permits (and he claims many of them) by purchase, and these statements of Glidden's are now in the forms of affidavits and will be forwarded to the Governor.

The people of this valley are as a rule against anything tending to destroy the game interests. We have fought by every power the Moose Head Ranch shipments, and shall continue to do so. If we have not any support of the county and State officials, we have the support of a good people at home and the public opinion of the good sportsmen of the whole country is, we believe, with us. These elk, as others in process of probable capture, are so many less of the wild game of Wyoming. I am of the firm opinion that any further capture of game by Glidden or his subordinates will meet with the resistance of all persons in this valley who are opposed, as a matter of principle, to the capture of game, and who are opposed to the legalizing of the unlawful capture of elk, as in the recent case.

FOREST AND STREAM is right in the matter of protest against the capture of wild game for speculative purposes; and your subscribers and friends here give you credit for making the stand you have. We feel confident that you can do great good to the game interests. You voice the sentiment the people of this valley entertain, that the Moose Head Ranch syndicate and Manager Glidden must quit the business of catching elk, even if backed by the State and county officials; and the people of this valley will from now on be heard upon this important principle of game protection.

If it was only the number shipped, it would cut small figure; but it is the hundreds killed by exposure and chasing that threatens the game of the native ranges. To-day, as I look out on the immediate hillsides and see the bands of elk, and feel confident that the people of this valley will not voluntarily disturb them nor fire a shot to kill one of them until another game season comes, I can imagine nothing more unjust than that a special favorite can procure a permit to capture them.

WM. L. SIMPSON.

The clipping referred to by Mr. Simpson is from the *Evanston, Wyo., News-Register* of Nov. 20, and is written from Jackson:

"The Jackson's Hole Gun Club had a business meeting last evening. The balance of the indebtedness, \$269, was paid to the contractors, and the club building, valued at \$850, its cost, now belongs to the gun club. R. E. Miller was duly elected president to fill the vacancy caused by the resignation of Wm. L. Simpson in June last.

"Strong resolutions were recently passed protesting against the recent issuance of a permit to ship elk out of Jackson's Hole, especially after the reading of a copy of a letter to a deputy game warden, which in part is as follows:

"Fred White, deputy game warden, Jackson, Wyo.: Section 15 prohibits the capture of any game animal. I shall not give a permit to any one hereafter to ship animals for any purpose whatever. If the shipping is stopped there will be no object in catching and confining them. You must attend to the party who has confined 150 head of yearlings. If he don't liberate the elk at once, arrest him and prosecute him before the nearest justice of the peace. You can inform the people who are in the shipping business that I will not give any more permits to any one under any circumstances. GUSTAVE SCHNITZER, State Game Warden."

"The question of a reasonable and proper protection of the game has thus received a pretty stiff upper cut from the powers that be. But let it be understood that notwithstanding the setback the greater majority of our people will still continue to hold views which are possible for the game's protection, and as time rolls on we intend to be heard upon this particular subject, and some one will have to explain. We are against legalizing the wanton capture of wild game by the issuance of a permit to sell the same. We think that Jackson Hole affords the nicest, neatest and most compact organization in time to put some views forward, and let it be said now that no one blames a person for pocketing a few thousand dollars out of the game, if the officials will permit it. It's the principle of the thing we contend against, and we say now that until they produce the authority by which they are constituted judges we shall not plead to their jurisdiction. Hence, doubtless, many may conclude we live as honest men."

Quail on the Elkhorn.

It was a glorious day in October, with nature dressed in her richest and ripest colors. November's chill had not yet touched the air, it did not know whether to rain or not, the sun was just shining through a sort of bridal veil of mist, and all nature seemed to be just waiting and resting, when my genial friend Charley Snider, of Oakdale, and I, behind his big iron-gray, started for the Elkhorn bottoms. Muggins, a well-trained Irish setter, was snugly ensconced in the rear of the buggy.

The big iron-gray took us at a lively rate for a few miles, when, as we neared the river, the ground became more broken and was covered with low plum bushes and small, scrubby oak trees, interspersed here and there with tall prairie grass and weeds. We had not uncased our guns and were within a hundred yards of the river, when our conversation was cut short and hopes aroused by that peculiar whirring sound of Bob White when he has company and becomes alarmed for their safety; and there to the right, not 30yds. away from us, were at least three dozen little brown beauties, some of them running like madcaps for the thickets and others standing still in open-eyed wonder and uttering their "chic, chic, choo." It is needless to say we stopped. We hitched to the fence and got Muggins out of the buggy and set him to work. The birds got up quickly and at long range, among the scrub, and we only got one; but they flew only a short distance, and we marked them down the best we could and followed. We were passing through a space a little more open than the rest, when Muggins pointed beautifully, a strong bird got up between us and flew high against the wind; there was one report, but the bird went off unhurt. In the act of reloading we discovered we had both fired at the same instant at the bird and both had missed it.

The birds crossed the Elkhorn and we found an old scow and tried to follow, but could not launch our boat and had to give it up.

We again took to the buggy and soon found other coveys, as they were quite numerous, but the ground was very dry and the dog seemed unable to trail except very fresh scent. We drove over to an old deserted house, where we heard them calling, and killed three almost in the dooryard as they got up from under a big cotton-wood.

The cover for this class of game birds is excellent in the Elkhorn bottoms, and we must have sighted 150 birds, but owing to the dense undergrowth and the necessity for quick shooting—and, I might say, bad shooting—we only got about a dozen. But then we had an excellent four hours' sport, and as we drove home in the dusk of gathering twilight we could hear the familiar call from a dozen little throats in as many thickets, "Bob, Bob White."

EDWARD M. AMES.

PEORIA, ILL.

Montreal Club Dinner.

From the Montreal Witness, Dec. 22, 1897.

THIRTY-NINE years ago, when this Province was teeming with game, a few sportsmen, evidently far-seeing, formed themselves into a club for the protection of this game, and of the fish, determined that as far as lay in their power to prevent it no one should meddle with either out of season, thus guarding against extermination. The club has since worked ahead in a humble way, depending entirely, until recently, upon its membership fees, its whole history being one of wonderful work for limited means. Four years ago a turning point was reached, the Hon. Mr. Flynn becoming so impressed with the amount of work the club was doing that he gave them a subsidy of \$200, which was doubled the following year. The Hon. Mr. Nantel increased the subsidy to \$800, and as much or more was expected from the present Minister of Crown Lands.

The annual dinner of the Fish and Game Protection Club was held last evening, at the St. Lawrence Hall. The dinner was an excellent one, and well served. Those who gathered round the board were Dr. J. T. Finnie, president of the club; Messrs. L. Z. Joncas, Colin Campbell, Dr. Charles McEachran, Dr. C. W. Wilson, Dr. W. H. Drummond, Mr. Duncan Robertson, Dr. D. D. McTaggart, J. P. Roche, Dr. H. M. Robertson, Messrs. Harry K. Martin, Henry W. Atwater, Albert D. Nelson, J. B. Tressider, George E. Drummond, J. Stevenson Brown, J. S. Ibbotson, W. L. Maltby, Major W. C. Trotter, Messrs. James Cochran, W. J. Cleghorn, Albert Laberge, W. E. Bradshaw, George Van Gilder, T. A. Emmans, W. O. Doods, Ansell Leo, Thomas C. Brainerd, Major George Horne, one of the founders of the club; Mr. F. M. Alley and others.

Dr. Finnie gave the toast of "Fish and Game Interests," and explained the objects of the club. Dr. Brainerd, in responding, spoke of how the settlement of Canada and the whole of America was due largely to these interests. He related how the club were striving to enforce existing laws themselves. They had fallen on better times lately in securing the sympathy and co-operation of the Government. Their work was well worth the appreciation of the Ministry, and besides the yearly income of \$25,000 already derived from fish and game, and that might be increased twenty times, there was the large gain to the people in food and pleasure. The present membership of the club was about 200; they had no debts, and they had \$600 in the bank, so that their prospects were never brighter.

The Hon. Mr. Joncas responded to the toast of "Our Guests." He declared that the work of the Fish and Game Protection Club was worth more than the work of all the 150 or 160 game wardens in the Province. Mr. Parent was disposed to do well by them, and while as the latter's representative he could not promise anything, he would say that if it rested in his power the subsidy would not be \$800, but much more than that.

Mr. Joncas said that three-fourths of the suggestions made by the club would be adopted in the new law. For one thing, no company would be allowed to express moose, caribou or deer from one province to another that did not bear the license or tax tag. This should stop the wholesale slaughter. It was suggested to prevent the hunting of woodcock by stopping its sale. Then dealers who had fish or game in their possession would be obliged to offer proof hereafter that such was not

caught out of season. They wanted not to interfere with the trade, but with the poachers. The present Minister of Crown Lands was well disposed, Mr. Joncas said in conclusion, to stand by the club, for the latter could do for \$5 what cost the Government \$50. He didn't want to touch on politics, but it was notorious that where a man caught poaching was represented in Parliament by a Liberal, he not only could get his fines remitted, but sometimes his costs paid as well.

"The Ladies" and "The Press" were also toasted.

It is unnecessary to say that with the talent present there was also an enjoyable programme. Among those who contributed were Dr. Robertson, Dr. McEachran, Dr. C. Wilson, who rendered some of Dr. Drummond's prettiest things, and Dr. Drummond himself, who gave a poem composed for the occasion, the opening verses of which are as follows:

"O, ma ole canoe; w'at's matter wit' you, an' w'y was you be so slow?

Don't I work hard enough on de paddle, an' still you don't seem to go.

No win' at all on de fronte side, an' current she don't be strong, Den w'y are you lak lazy feller, too sleepy for move along?

"I 'member de tam w'en you jump de sam' as deer wit' de wolf behind.

An' brochet on de top of de water, you scare heem mos' off hees min'.

But fish don't care for you just now at all, only jus' mebbe wink de eye.

For he know it's easy git out de way w'en you was a-passin' by.

"An' who's your horse, too, but your ole canoe, an' w'en you feel cole and wet,

Who was your house, w'en 'im upside down an' onder de roof you get?

Wit' rain runnin' down ma back, Bapteme, till I'm gettin' de rheumateez,

An' I never say not'ing at all, moi meme, but let you do jus' you please.

"O, dat's lonesome ti'ng hear de gray owl sing up on de beeg pine tree,

An' many long night she k'ep me wake till sun on de "est" I see. An' den you come down on de morning for start on some more voyage,

An' only t'ing decen' you do all day is carry me on portage."

Boston Sportsmen in Maine.

BOSTON, Dec. 27.—Last week was a dull one for the Maine big game hunters, and the season is likely to close with less of game killed than is usually the case. There has been a lack of fresh snow, while the little on the ground has been covered with a noisy crust. This condition has sent several Boston hunters home empty-handed. No moose have been landed from Maine for more than a week, though Dr. Heber Bishop is back from the Provinces with a handsome one. He is still the champion moose hunter of the country. Only a few deer have come to hand of late, and no caribou. Mr. H. S. Fisher, with his hunting partner, F. Wight, came out of the Maine woods a week or two ago with two deer apiece. They went to Matawamkeag station, on the Bangor & Aroostook Railroad, and thence twelve miles by team to South Moluncus, where they were taken in charge by A. S. Knight, a settler at that point. The hunters are greatly pleased with the treatment they received at Uncle Andrew's. Deer they found to be remarkably plenty. They could easily have got more than their legal quota had they desired to do so. They found Uncle Andrew to be a genuine son of the region, who met them at the station with his team. When nearing his premises the hunters were struck with the appearance of a handsome girl of 17, hauling wood with a fine pair of horses. They called Uncle Andrew's attention to it. "Yes," he said, "she's my daughter, and as good as gold; helps me a great deal." The hunters found that the young lady is noted for handling a team of horses, as well as for good sense and kindness to her father. Doubtless she can shoot, and has taken her legal share of big game this fall.

Florida hunting and fishing parties are the order of the day among sportsmen who can afford it, and have exhausted the season in Maine. Still there are a few parties yet in the Maine camps. Allerton Lodge, Moose-lucmagantic Lake, has been inhabited for a couple of weeks with a party headed by Dr. H. H. Haskell, of Newton. Billy Soule's Cupsuptic Camps have also been full of hunters. His tame deer—the pet of all the guests this summer—has escaped. It was allowed full freedom, and did not seem to care to take to the woods, but suddenly disappeared. It had a blue ribbon about its neck, and it is hoped that no hunter has destroyed or will destroy it. The tame deer that Capt. F. C. Barker has had at Bemis this season has been taken up to Rangeley, the property of the captain's little daughter. SPECIAL.

Match Safe and Landing Net.

WILMINGTON, Del.—*Editor Forest and Stream:* We don't all have opportunity to hunt New York for a waterproof match-box, as Dr. F. M. Bauer says he did (*FOREST AND STREAM*, Dec. 4). If he loses his, or some other gunner wants one, he can do as I did two years ago, and again last night. Take a Winchester 12-gauge brass shell. Explode the cap, dig out the paper from an U. M. C. smokeless, same gauge. Put the two together and you have a metal box that will carry twenty-five "searchlight" matches—no patent.

Here in Wilmington we can buy a repair kit for bicycle tires, in a brass nickel-plated case, that is about the same size as the shell, for 5 cents. These cases make good match-safes.

A landing net is troublesome to carry from home to camp. I take the ordinary net in my pocket, cut a maple or birch fork, warm the branches, turn them together and tie, cord the net onto the frame, and when through with it cut the cord, put the net in my pocket and hang the stick up for the next man. T.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE MAN IN THE CLOCK TOWER.

NOT for a long time have I seen anything that pleased me so much as that letter of Lew Wilmot's in *FOREST AND STREAM* the other day, telling about his visit to town. He lives in the country, you will remember, and to him, as to most country people, it was a real vacation to get into town, for with all of us, wherever we may live, it is the change of scene, surroundings, people and ways that makes the real recreation and restfulness of a vacation. It is the novelty that diverts the mind. For me, when I do get away for a hunting trip, the good of it begins the minute I get on the car and the telegraph poles flash past the windows. "Why do you go shooting?" folks have asked me.

Why did Lew Wilmot go to town? The answer is all in one word, and that one word is "change."

And was that not delicious when Wilmot wanted the trolley cars to go slower, so that he might read the signs? None of the other passengers appeared to care about the signs. They were *blase* on signs. They probably knew them all by heart. The hundreds of thousands of people who rush through the great canyon of Broadway which the Tower overlooks are for all the world like the people Mr. Wilmot encountered in the trolley cars. Every mother's son of them is in a tremendous, elbowing hurry to get there; and the signs by the way are the last things in the world they give any attention to. But would not it be better for most of us of we went a little slower, and took more time to see things? It must be forty years or more that I read Bunyan's "Pilgrim's Progress" (and to tell the truth I never read it through, although in those days Bunyan was more of a staple than now), and about the only thing I remember vividly is the story of the Man with the Muck-rake. There was a picture of him, with back bent over and eyes fixed on the ground, busily engaged plying the rake in the mud. When we come to think about it, you and I know many a man with a muck-rake, who is everlastingly at it, while somewhere the wind is whispering through the pines and an old grouse is booming on the hillside.

Adam and his Musket.

I was interested the other day in some notes by Mr. John B. Champlin, on anachronisms in art, where painters had ascribed to certain periods ways and things unknown at such times in the world's history, and he cited as one of these discrepancies an old picture of Adam in the Garden of Eden shooting ducks with a musket. This excited my curiosity, and I wrote to Mr. Champlin to tell me where the print could be found. He politely informs me that he cannot recall the work in which it is contained, but his impression is that it is an old Dutch Bible. Perhaps this is one of the things we hear about, but never see. Can any one of my readers, who may be specially versed in old Dutch Bibles, put me on the track of the Adam with a musket?

Sportsmen's Row.

Looking downward two blocks south on Broadway, I can see the colony of great houses which deals in sportsmen's goods, whose names are household words in the countries which have houses, and whose products are familiar to the grasp of civilized and savage man throughout the world.

* Before the large plate windows groups form, melt away or increase, as the ceaseless current of humanity, with its swirls and counter drifts, flows through the greatest channel of the greatest American city. There is something fascinating in the array of modern firearms in the great windows which the male beholders cannot resist gazing upon, or going within and owning such as they fancy if their purses warrant it.

But firearms are not all, for there is every appliance for physical culture and recreation—bicycles, outdoor games, and the appurtenances of all sports by land or water. Appropriate costumes for all are offered.

The modern guns, with their prepared ammunition and rapid action, are in sharp contrast to the clumsy weapons of our forefathers, or rather of our grandfathers, at least those of such of us as are grandfathers ourselves. And methinks there were brave men in those days as there are brave men now, but somehow the discipline necessary in making a trained brave man must then have been much more severe, else they never could have done such execution with the old flintlock guns in the struggles against the fierce animals of the wilderness and the fiercer savages. It was no trifling matter to hold the old flintlock rifle steadily in the calm pastime of shooting at a mark, much less then was it easy to manipulate it in time of danger. There were a series of complexities between the pulling of the trigger and the flight of the bullet. The man took aim, pulled the trigger, and the hammer bearing the carefully shaped flint took a majestic sweep, struck the steel, uncovered the priming pan, sparks flew, the powder in the pan flashed, igniting the powder in the barrel, and then the bullet began its flight. To stand with a single-barreled flintlock, facing a grizzly bear or a hostile Indian, and holding the rifle aimed steadily till all the ignition chain of events followed in due order, from the pulling of the trigger to the flight of the bullet, required a fortitude, patience, confidence and bravery that in the use of the modern arm is not required, even if it could be found to exist generally.

Armed with a rifle instantaneously responsive to his wishes and with capability of sending shot after shot with accuracy and quickness, the modern hunter, facing

the grizzly or anything else, is daring less than did his grandfather, who, armed with his simple weapons, faced like perils. And the latter was braver than was his grandfathers who used the bow and arrow, for they faced not the great dangers of the chase in the manner of the hunter whose arms were of fire.

But those are none the less related to Sportsmen's Row, for the array of shotguns, breechloading, in all sizes of bores, beautiful in design and finish, and the rifles, in hundreds of varieties, from the tiny .22 up to the largest of calibers, are but the latest stage in the application of principles in use by our daddies. And yet, while the principles remain much the same, the mechanical application of them is at present incomparably above all of the kind that has preceded. In beauty, scientific precision, excellence of material and cheapness, the modern firearms are unrivaled and unequalled.

As I gaze on the colony of sporting goods and gun houses on Broadway, I can see that they are in the very center of a circle whose compass is the circumference of the earth. There one could arrange for the arms for an army—rifles, swords, bayonets, machine guns, with ammunition to match the guns and the needs of a nation. The equipment large enough to strain a nation's treasury, or one for the small boy, which, with abundance of ammunition costing but a few dollars, can be alike readily obtained.

Men drop in betimes and speak casually of killing bears in the mountains or forests, or ruffed grouse in the dense woods, or quail and rabbits in the fields and brush—of sport everywhere throughout the land with rifle and shotgun.

And another class is equally earnest in the sport of the rod, and they too drop in and tell of killing tarpon in the Southern waters, or trout and bass in the streams and lakes, and all kinds of game fish in all the known waters of the world. And they gaze with interest on tackle which is light enough for sport in catching the smallest game fish, or large enough to kill the greatest fish within the powers of man to attempt successfully, and they buy of it.

Men come and go. To the casual observer they merely walk in and out, and do not differ from other men who do likewise as to the hundreds of other stores which line Broadway. And yet they are a class distinct in their views of life, in their knowledge of nature's secrets, in being more or less inured to dangers, hardships and privations, and in being skilled in the use of weapons, whether in their use as a matter of sport, personal defense, or in the service of the nation in time of war's need. How few who pass through Sportsmen's Row realize that its radii are worldwide!

The Preserve Question.

I read the contributions of Didymus with much pleasure. He is a sound writer, but last week he went off on a tangent and landed where there is no footing—this on the preserve question. He deprecates the ownerships and growing ownership of game land and water by wealthy clubs. Did Didymus stop to consider that A, B and C, sportsmen of wealth, have quite as good right to use their land for a game preserve as D, E and F, farmers and gentlemen, have to use their land for agricultural or stock purposes? Further, did he stop to think that unless A, B and C had some use for the land they would not have bought it? Did he consider the benefit that G, the seller, derived from the sale of land that otherwise would be unproductive to him? Did he consider that selfishness is the basic principle of society and progress? Every man who labors, or invents, or trades legitimately, benefits himself and the community as well. The working of the hammer, saw, loom, etc., has a selfish origin, yet where would we, who selfishly need their products, be without them? And more to the point directly, which is the more selfish, he who establishes a preserve under all legal and equitable conditions, or he who poaches on the preserve or opposes its establishment with the very selfish end in view that he may take things of value without price or responsibility? It is one of the first principles of common sense, as it is of law, that a complainant should come into court with clean hands.

The Gun and the Night Stick.

There is a certain weak phase of human nature, manifested by a class of individuals, which impels them to display any power which they may have at command, whether the same be moral or physical. Thus the brand new politician must needs assert his authority and lord it over any of his unfortunate underlings, if he happen to belong to the class whose egotism has not a proper counterbalance of sense. To the same class belongs the man who points a gun at his fellow man, that he may enjoy to the full his temporary accession to power. To the same class belong the policemen who only want opportunity to club their prisoners or inoffensive citizens, as opportunity offers. The deaths and injuries from the malicious or wanton clubbing of prisoners in New York have reached such a magnitude that the Board of Police Commissioners is seriously considering the matter of taking away the night sticks of policemen, as was done under the administration of Chief Byrnes. And yet it is a conspicuous feature of every case that the offender has good excuse or was innocent, in manner like to that of the man who "thought it was a deer," or who "didn't know that it was loaded." The remedy is alike in both cases, namely, take away their weapons. Common sense, public safety and the general welfare would indicate that the man who cannot carry a club without abusing its use, and the man who cannot carry a gun without killing or maiming his fellow, should not be allowed to go armed at all.

Dennis A. Janvrin and his Horse.

Writers, whether of history or current events, search in all available nooks to obtain instances of the devotion of the lower animals to man. They vie with each other in making a marvelous event of a simple matter. Thus the world reads one day of the heroic deeds of a dog in saving a sleeping family from death by fire, another saves a boy or a family from drowning, or leads a rescuing party to save the little ones lost in the wilderness. Man's affection for the lower animals rarely has an inning, and yet to his affection many breeds owe their existence. There is something of more than passing pathos in the

tale of Policeman Janvrin, of New York, and his horse. They had labored together ten years, taking good and ill together. Janvrin had ridden no other during the last ten years of his twenty-two years' service, and he had become much attached to him. Last year the horse died. Without the friend who responded to the lightest touch of his hand so well, whose speed could overtake the fleeing lawbreaker, and whose courage and strength were ever to be relied on, the service had lost all its charm and value to him, so he asked to be retired under the twenty-year service act, and he being a good officer, it was done, but reluctantly. And now he comes to the Police Board making application for his old office, pleading that the needs of life press him to ask for reinstatement in the only calling which seems open to him, and it is probable that his application will be favorably passed upon. But the horse which is in the spirit land where good horses go will gallop on riderless.

THE MAN IN THE CLOCK TOWER.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

A November Night.

Editor Forest and Stream:

With gun and game bag strapped on my bicycle, I started at 3:30 P. M., Nov. 18, for Hopkins Creek, fifteen miles north of this city. We had a severe wind and rain storm the day before, and I thought that I might find a few ducks in the creek.

A young friend of mine had put up a 10x12 camp on the lake shore at the mouth of the creek the past season, and had given me a key with instructions to use the camp whenever I chose. The camp is about a half mile from the main road and is reached by a farm road running through an orchard and strip of woods along the lake shore. At the farmhouse I got a small pail of milk, and remounting my wheel with the pail in one hand, rode to the woods, which was as far as I could ride with one hand. When nearly through the woods I took my gun from its case, and putting a few shells in my pocket, left my wheel and started out to reconnoiter for ducks. It was now 5 o'clock and nearly dark, and they should be coming in if there were any; but after a careful search I failed to find them in the creek, but with the aid of my glass I could see birds out on the lake, which was quite smooth. Returning for my wheel, I pushed it to camp, on the opposite of the creek. Although the creek is eight to ten rods wide within 50 ft. of the lake, at present there is no apparent outlet, the space between being at least 4 ft. higher than the water each side of it. This is caused by the low water of the lake. A few years ago I had to use a boat to get across the outlet. Lake Ontario and the St. Lawrence are said to have high and low water once in seven years.

On reaching the camp, which is about four rods from both lake and creek, and from 15 to 20 ft. higher, I found plenty of large wood on hand, and going down on the beach I gathered a basket of dry, fine floodwood, with which to start the fire to prepare my supper of hot wieners, boiled eggs and coffee, which with the good farm milk appeased my appetite. While leisurely eating I noticed that the light from the lamp was waning, and I found that the oil was out. I found a glass-inclosed oil can, which from the weight I thought was about half full, and extinguishing the last gleam of light from the lamp I took both outside the camp, in case I should over-fill the lamp. As I do not hear, it was all guess-work with me, and when I tried to light the lamp I found no oil in it or in the can. Well, there I was alone in the dark with my supper unfinished. I opened the front doors of the stove, but that did not throw much light on the subject (supper). With the aid of about a dozen matches I finally found a dish of grease, probably what had been left of a coon roast a week or two before. I also got a strip of cotton cloth, which I immersed in the fat, and laying the end over the edge of the dish applied a match to it, and I had quite a good light.

After supper I thought it might be well to lay in another basket of the dry wood from the beach, in case of change in the weather. On going outside it was so dark that I could not see to get down the bank, but away to the north across the lake I could see the reflection of the light above the city of Toronto. Securing my newly made light, I managed to get down to the beach and gather the wood. After taking a quiet smoke I arranged one of the woven wire beds and turned in for the night about 7:30 o'clock. This was the earliest "going to bed" I had done for many years, and it was not an easy matter to get asleep. I think it must have been two hours later before it happened. When next I awoke it seemed as if it must be morning, but on striking a match and looking at my watch I found it was only 12:30. I went to the door to see what the weather was; the Toronto light had disappeared, also the lake, and I could not see my hand before my face, but I could feel that there was a dense fog. I went back to bed and lay awake for another hour or more, when I again looked at my watch. It was 5:30. I lay until 6 o'clock, when on opening the door I found the ground covered with snow, which was still falling. And there was I, fifteen miles from home with my wheel; but that did not worry me much.

I started the fire, prepared and ate breakfast, and then with the glass took a look out on the lake and creek for ducks. On the opposite side of the creek I saw something moving through the water, but could not make out what it was. Getting gun and shells and walking up the road a short distance, I came to the creek. Just as I stepped out of the woods a duck started up, which I winged with the first shot; and as I saw no more get up I killed it with the other barrel. I then went back to the camp, and getting a boat, paddled up and secured my game, which proved to be a white-winged scoter.

While in the woods I had seen fresh rabbit tracks, and

after waiting some time without seeing more ducks I started for the rabbit, and had followed the tracks not more than ten rods when I started him up, but made a clean miss. I had used my first shell of gold dust powder, and it was probably too quick for the "old boy;" possibly it might have been the rabbit that was too quick for him. After following the tracks for a short time I got just a glimpse of the game as it went into a brier patch. The tracks led me back to where I had first started him; under the corner of a rail fence in a brier patch. Walking around it, I saw that he had not gone out, and going back to the fence I gave it a kick, which started him out and into a hole about 5 ft. away. I might have got him out, but thought I would leave him for another time.

I was now near the camp of Dr. E. N. S. Ringueberg and Artist Raphael H. Beck, and I had promised the doctor that I would see if the camp was all right. Some vandals had broken down the back door, and on going inside I found things scattered about the floor. I had never been inside the camp before; but I knew that the owners had not left it in such condition. I reported to them on my return home that afternoon, and they went down the next day. They found that the thieves had taken two suits of clothes, all the towels and tablecloths, knives, forks and spoons and all the canned goods, and the looking-glass. The camp where I was staying had been broken into a week or two before, probably by the same party, and a clock, looking-glass and some clothing taken; a reward has been offered for the arrest and conviction of the parties.

I returned to camp about 10 o'clock, put it in order, strapped gun and game-bag on my wheel, and at 11 o'clock I was on the lake road headed for home, where I arrived in time for dinner.

This trip would have been impossible with a wheel, only that there is a side path from here to Olcott, thirteen miles. I rode over it on Monday afternoon of this week and found it nearly as good as in the summer.

J. L. DAVISON.

LOCKPORT, N. Y., Dec. 16.

The Wheel and the Sportsman.

WHETHER the wheel will ever become a recognized shooting and fishing adjunct is a question time alone can solve. An occasional correspondent in FOREST AND STREAM quotes pleasant and successful experiences in which his wheel figures as the vehicle used to reach the sporting grounds, but in these cases the conditions—always prove just right, and we fail to hear of the fellow who got caught in the rain, punctured a tire or had his wheel stolen and had to walk in. Of course shooting from a wheel is a physical impossibility, for the haunts of game are not along the cinder path or the traveled highway; and even were one so lucky as to flush a bird along the road, the handle bars require too much attention to make it possible to manipulate a gun even with one hand. No, I don't think the bicycle will ever become a popular means of transportation for the shooter.

With a light rod and basket it is quite possible for the fishing wheelman to visit some favorite stream some miles away and enjoy a day's sport that would be impossible were he obliged to walk, and expensive if he hired a team. We all know of streams winding through pleasant valleys, with a good road following the windings, where one might spin from one good pool to another, and have a most delightful trip, always presuming that it won't rain and that no accident happens to the machine or rider.

But to the sportsman who has given up actual shooting the wheel is a pronounced success. He can visit the haunts of game, lean his silent steed against a fence or convenient stump, steal through the cover, mark the flight of grouse or woodcock, watch the nimble squirrel in his home tree, fill his soul with sylvan sights and sounds, remount his wheel and spin to and beat another cover, and having had enough return to his business with but little loss of time, and find himself a better, healthier man, with no blood on his hands. Yes, the wheel is a great thing for that sort of a sportsman, and in my opinion is bound to work such reforms in the ranks that the all-absorbing question of game supply will be satisfactorily solved.

H. W. D. L.

DANVILLE, N. Y.

Bicycle and Partridge.

Editor Forest and Stream:

The following singular incident, in which the bicycle appears as a factor, was related to me by my friend Davis, a gentleman of unquestioned veracity. Early in May, Mr. Davis was riding along a lonely road on his way to a trout stream (for what purpose may be easily guessed), when he espied a partridge step from a thicket about 50 yds. ahead. Evidently the bird's intention was to cross the road, but catching sight of the bicycle and rider she paused, with upstretched neck, as if puzzled at the rapid and noiseless approach of the strange-looking object. When the machine got within a few feet her natural shyness reasserted itself, and she started, pattering with affright, for the opposite cover. But so long had she delayed, that by a little extra effort on the pedals Mr. Davis was able to force the machine almost upon her; and following a sudden impulse, as she darted into a brier patch fringing the road, he sprang from his wheel into the thicket, pulling the weeds and briers in a mat down around her and pinning her to the ground, so that he soon had her in his hands. It was a full-grown hen partridge, in full possession of its strength and faculties, and when released, after a few minutes of captivity, took wing with all the speed and vigor characteristic of its species.

This is a new "bicycle record."

Sea and River Fishing.

Fishing Around Washington.

Cockpit Pool.

THIRTY miles south of Washington the line of the Washington Southern to Quantico, a branch of the Pennsylvania Railway, crosses Powell's Creek, an inlet of the Potomac not much over a mile in length, affected by the tides, into which drains a little run almost dry in seasons of drought. On the south side of the mouth of the creek is the old Cherry Hill Farm, many years ago owned by Capt. Dunnington and now by his heirs. It was once a plantation of considerable importance, but is not now cultivated, and the name is all that is left to remind the visitor of its once celebrated orchard.

When the railroad was projected to Quantico, Capt. Dunnington, whose land was a little abrupt where the road cut through it, purchased from the adjoining farm the site of the present station and siding, and gave it to the railroad, and the name, by which it is still known, to the station—Cherry Hill.

A little to the south of this station a point makes far out into the Potomac, called Cockpit, on the charts as well as locally, though in days gone by the north cove off the point was always known as Rose Bay, and a few old rivermen remember the side hill which forms the second bank when it was a mass of roses. This was in 1860 and before. It is a wilderness now, of great trees and underbrush, and looks far more like the primeval forest than a ruined rose garden.

The river off Cockpit is an excellent seining ground, though the shore has not been rented for a year or two. Forty years ago planters from long distances in the interior drove here regularly to get their season's supply of herring for their families and slaves, and the shore privileges were very valuable and rented for thousands of dollars.

Late in the season it is a famous point for rockfish, and will no doubt in the future, as it has in the past, furnish employment, revenue and food for fishers plenty.

The base of the point is wide, low and swampy, and in some years great snipe shooting may be had here, and nearly always a woodcock or two. A mile to the south of this the railroad bed, crossing the mouth of a little run, dams the stream and makes a pool some fifty rods long and half as broad, with a narrow, bushy, inaccessible swamp in the background. The culvert outlet through the roadbed is so high that only spring tides from the river can enter.

This pond, known as Cockpit Pool, has been for several years full of the *Lucius reticulatus*, the green pike or pickerel of the Eastern waters, and throughout the South called the jack.

These fish come up out of the river on the high tides in the spring, in the spawning season through the high culvert, and, imprisoned here, breed and feed in the holes in the swamp and use the pool for a playground. They were discovered by the trainmen, who saw them disturbed by the rumbling of the passing trains, which, jarring the spongy bottom, always sets the jack to wildly jumping. Of course, it was not long after that some enterprising angler had taken a good string and was bragging of his catch, and the pool has since had many visitors.

The writer's introduction to this hyena of the water was at this place in 1894, and we have frequently since taken as many as it was convenient to carry to the station, a mile and a quarter away. Distances are measured with an india rubber tape-line after a day's fishing, and weighted with the paraphernalia of bait fishers, which we have always been here since nothing was to be expected but the pickerel, and we only learned to take them with a fly toward the close of last season.

At the south end of the pool, where sand from the adjoining hill is washed down, the sunfish or tobacco box, as they are called here, are pretty numerous, and large, and though the swamp discolors the water to the shade of porter, these are remarkably highly colored, their rainbow tints being far brighter than those taken from the river.

The mouth of the culvert, discharging its brown flow into the river, like all fresh runs, is a favorite feeding place for small perch and minnows, and the water moccasins feed and breed and winter about and under the culvert, and of a sunny morning in the spring dozens may be seen sunning themselves on the great stones of the riprap work which protects the roadbed. On the occasion of our last visit it is no exaggeration to say that within a radius of ten feet forty were in sight at once. There were ten less in the colony that night. This fish-eater is the natural enemy of all fair fishermen.

Three hundred yards to the north of the pool a fair spring trickles from the sandbank alongside the track.

This road running south to Richmond is a great highway for tramps, and all day long stragglers, tattered and torn, sometimes barefoot, stop by to rest and watch the proceedings, thankful for a bite or smoke, or even a fresh-caught jack with which to join some brother knight of the road and go snacks for the next meal.

One sat on a tie end, on this last trip, and told of his love for fly-fishing, and of his many days of enjoyment of this sport on Northern streams, where the trout hide, when he was seeing better days; but as he mourned he had "got on the road somehow and somehow couldn't get off." The bare suggestion that the hobo is an evolved fly-fisher was a shock, but for lack of corroborating circumstances he was set down as simply a horrible example of too much old-fashioned bait, and the fly discharged of any further responsibility in the matter. However, there is no denying there is something of the vagrant in all our natures, and the man who takes to the woods for his pleasures is apt to get a little closer to these wounded deer than the "fat and greasy citizen," as he has been called, who turns his back upon the misfortunes of his neighbor.

The view from the high roadbed is very fine from this point, covering a grand sweep of the Potomac from Indian Head for ten miles south, with always a bay steamer in sight, or the white wings of some sailboat,

flitting by with wind and tide or tacking and creeping against them.

With a small fly, on a No. 10 or 12 hook, any number of small perch, yellow and white, may be taken on the river side of the roadbed, when the water is anything better than molasses. These perch make excellent bait for the pickerel, so that under ordinary circumstances and conditions of the river it is unnecessary to carry bait to this place.

The pickerel is well armed as to mouth, but his swallow is tender enough to make the spiny dorsals of the perch less palatable than the minnow; and old pickerel fishers advise trimming the dorsals with a pair of scissors, and there is no question it makes a difference in the readiness with which they respond.

But it seems cruel, even if there is no sensitiveness in the fins, as is sometimes claimed, and the fly-fisher is quite ready to throw bouquets at himself for his improved method, that does not require a resort to such questionable practices.

Fishing for jack is different from taking any other fish with bait. He seems to seize the minnow by the tail and make for cover, possibly to escape his companions, who would probably rob him if they could. Stories are told of two pickerel with a snake stretched between them like two chicks with a worm. After a few minutes the fish can be felt jigging the line as if getting a killing hold on the body of the minnow. After another rest he quietly turns the minnow and swallows it, head first. All this takes time, and just how much scarcely two writers agree upon, and after reading them all one is more undecided than before.

David Foster, in the *Scientific Angler*, in 1882, said "A minute or two should be allowed him to gorge it." Thomas Best, in 1802, said "Wait five minutes for the pike to pouch the minnow before striking." Charles Bowlker, in 1774, about "half a quarter of an hour." Fisher, in 1835, "eight or ten minutes." Little, in 1881, said ten minutes. Rev. James Martin, in 1854, thought about a quarter of an hour. The *Anglers' Magazine*, in 1796, said a half hour, and suggested laying the rod down while one might smoke a pipe full of tobacco. In Blakey's "Hints on Angling," 1846, the pike's feeding and capture is told metrically like this:

"At last he stops, and sinking deep,
Seems for ten minutes fast asleep,
In sweet indulgence lost;
I'll wake him soon, as you will see,
And let him know that verily,
He's dining at his cost."

One of the record catches made at this pool was by Mr. Hart, a first-rate fisherman, who is inclined to be methodical, and having watched a pike gorge a minnow in a tank at the World's Fair, found that it took him on that occasion just seven minutes. He now pulls out his watch when he gets a strike, and at the end of the seventh minute raises his fish. It is pretty safe to guess that if he has not gorged it by that time he never will. Of course he did not get them every time, but he secured more than any one else that day. Another day here the best catch was with the spoon, but this is more uncertain since, fishing as one must from the slope of the railway embankment, one is always in sight, and this keeps the fish too deep to rise well to the surface for spoon or fly, and, besides, the bank rises behind so abruptly as to sadly interfere with the casting of a spoon—worse with a fly, and even to some extent with throwing a minnow. To add to the embarrassment, a network of telegraph wires on leaning poles come down so low as to occasionally hang up the tackle. To see a cork, sinker and wriggling minnow woven in and out, and wrapped around a half dozen telegraph wires, is a very interesting sight to everybody but the luckless owner, who usually audibly wishes the wires were "not so high."

HENRY TALBOTT.

ANGLING NOTES.

"Hatching Black Bass."

UNDER this head a New York newspaper publishes an article with a Grand Rapids, Mich., date line that will surprise fish breeders who have been in the business any considerable length of time. That we have short memories was illustrated in my presence within the month when in a public place ten men were asked the name of a defeated candidate for Governor of this State, who had been defeated within twelve months previous. Not one could recall the name.

This black bass article is another illustration of a short memory on the part of the writer. It appeared in a Sunday newspaper only two weeks ago, and reads in part as follows:

"The State of Michigan has just completed the stocking of the new bass ponds at Mill Creek, and now begins some of the most important work ever attempted in the way of artificial propagation of fish in the United States. The artificial raising of bass has been attempted many times in various States, but it has remained for Michigan to make a success of it and show that it can be done."

* * * In spite of all experiments and scientific work, it has never been possible to replenish by artificial means the great inroads made by the thousands of fishermen upon the supply of black bass in the inland lakes and streams, and unless something was done the stock must sooner or later become very scarce."

The article goes on to say that one of the Commissioners has solved the problem; that when he went on the board he was informed that black bass could not be hatched artificially. He then bought books on bass and studied the habits of the fish, and examined the reports of the experiments, and finally met a Commissioner from another State, "who was also convinced that bass could be hatched artificially." Then he discovered that it is the male bass that "sets on the eggs," and finally he put in practice what the newspaper writer has the grace to call a "modified method of artificial propagation."

Now it is not in the least probable that the Commissioner named in the article authorized any such statements regarding his alleged discovery, or has made any such claims as he is credited with in the newspaper article.

The method described is not that of hatching black bass artificially, nor is it a new discovery. It is quite possible that it was new to the newspaper writer, and in his enthusiasm his zeal ran away from the facts.

Black bass have not been hatched artificially, and in making this broad statement I am fully aware that a few eggs have been taken in the States of Michigan and Missouri, and to obtain the milt from the male bass it has been necessary to kill him, so that the operation cannot be called hatching the eggs artificially. Even in the experiments referred to it has been a most difficult matter to obtain the few eggs from the female black bass. The method related in detail in the Grand Rapids article is to put the adult bass in a pond, and when they have paired and spawned and the young are hatched the parent bass are removed and the fry are allowed to remain and are fed until the time comes for their distribution. This is not a new discovery, for it was practiced fifteen years ago; at least it was made public in 1882 by Major Isaac Arnold, Jr., United States Army, who did exactly the same thing at the Indianapolis, Ind., Arsenal that is now exploited as new in 1897.

Upon referring to Major Arnold's various communications in the Bulletin of the U. S. Fish Commission for 1882, I find that he maintained his black bass rearing ponds for three years previous to that date, or from 1879. He placed the mature bass in his ponds and when the young were hatched he removed the old fish and left the young in an inclosure of their own. More than once I have read Major Arnold's record of his experiments, but upon reading them again to-day I find that I had forgotten all about one of his observations, which is this: "The male presses the ova from the female by a series of bites or pressure along her belly with his mouth, the female lying on her side during the operation. The male ejects the milt upon or over the roe from time to time, and the spawning process lasts for two or three days." (On one occasion the late John Mowat asked me what I believed to be the use of the hook on the jaw of the male salmon, and I replied that I thought it was for use at spawning time in the manner described by Major Arnold in the case of the black bass.)

In July of 1882 the U. S. Fish Commission sent a messenger to Major Arnold's black bass rearing ponds and obtained 5,000 fry of that year's hatching, 300 yearlings and a few two-year-old bass, and transported them to the Central Station in Washington and afterward to North Carolina, where they were planted, the entire journey being accomplished with slight loss to the fish. Some ten years ago, I should say, Mr. Samuel Wilmot, then Superintendent of Fisheries in Canada, wrote me of rearing black bass in a similar manner, the difference being that each pond contained but one pair of bass. Since that time this method has been practiced extensively by the U. S. Fish Commission, by the Tuxedo Club, and elsewhere for all that I know; anyway, it is not a new discovery, and it is not hatching black bass artificially, for the adult fish deposit their own eggs, impregnate them and hatch them naturally, and man afterward rears such of them as survive cannibalism, to which young bass just hatched are very prone. The newspaper writer in Grand Rapids has forgotten these facts that I have touched upon, if he ever knew them, and he will thank me for refreshing his memory, that simple justice may be done to Major Isaac Arnold.

Vacuum Dressed Lines.

The notes that I am writing to-night appear to have a flavor of ancient history about the most of them, occasioned perhaps by the storm outside, which turns one's thoughts backward rather than forward; anyway I will charge it to the storm and the retrospective wind howling around the corner of the house. Something like twenty years ago—this paper was then published in Park Row, I remember—I wrote an article in *FOREST AND STREAM* about dressing fish lines. Mr. Hallock suggested it to me to try various oils and dressings on both silk and linen lines, and I did so, with the result that most of the experiments were dismal failures. Mr. Walter Brackett, the Boston artist and salmon fisherman, then gave me samples of lines that he had dressed, and I was discouraged, for I had never seen anything like them, nor have I since until very lately. I got all sorts of lines with all sorts of dressings, each one claiming to be the best, but not until I possessed silk salmon and trout lines dressed in a vacuum did I obtain the best. The first that I heard of vacuum-dressed fish lines was in connection with Mr. Frederic M. Halford, and the best lines I have seen are dressed by the "Halford process," though I cannot say that he was the first to suggest this method of dressing, but assume that he was. The lines are soft, and have the appearance of being made of rubber and seem to be almost transparent. I have used them but one season, but that is enough to convince me that there are no lines that can equal them for fly-fishing. They are double-tapered, and they are expensive, costing a guinea for 35yds; but they can be backed with a cheaper line, and when one end is worn out and the tapered portion used up the line may be reversed on the back line. There are several grades of vacuum-dressed lines, for I have seen them as cheap as \$2 for 40yds. of level line.

This brings me to the point of this note: how vacuum lines are dressed. Mr. Geo. M. Kelson has written an article in *Land and Water* on the subject. The line and the dressing, which must be linseed oil specially boiled for the purpose, are placed in a receiver and the air exhausted by an air pump, which permits the dressing to penetrate to the very core of the line. Mr. Kelson tells us that lines were first dressed with a single cylinder air pump, but this did not sufficiently exhaust the air, and a pump with double cylinders is now used. The line to be dressed must be coiled in the receiver without a twist in it, for he says that dressed with a twist in it and dried the twist remains. With the line packed in the receiver the oil is made hot and poured over it until it is covered. The receiver is then placed on the brass table of the air pump and a glass vessel inverted over it, the rim of the latter coated with candle fat to insure perfect contact and the pump is put in operation: "Bubbles will quickly appear on the surface of the liquid, and when they reach within ½ in. of the top of the tumbler" (which I have called receiver) "suspend operations. Left in that state

for a few hours the bubbles gradually disappear, but I expedite matters by admitting a little air, the weight of which crushes the froth instantly and sends the oil into the line then and there. The next move is to pump, as before, time after time, for at least one hour. Repeat the business for at least twelve hours. Afterward the pump need only be worked morning and evening for four or five days, and allowed on every occasion to remain with valve closed. At about that period it should be impossible to bring forth the sign of a bubble, even in the shape of a bead."

When the air is exhausted as thoroughly as the pump will exhaust it, and the oil has penetrated to the very core of the line, that is called the first process or body dressing, and the line is removed and stretched, in the open air if possible (and the best time is late autumn so the line will not dry too quickly), to be treated by second process. When the line is stretched begin at one end, and with the finger and thumb of the right hand press the oil gently from the line, walking backward, and permitting the superfluous oil to drop from the finger into a glass held in the left hand. "A month or six weeks later, according to the weather, choose a fine day and start on rubbing the line, so that in due course it is made smooth enough for the second process to take good effect. Rub the surface of 2 or 3 ft. at a time with the fingers, working backward and forward. Repeat the dose twice during the next month. Upon the occasion following this procure a piece of thick felt, sprinkle it with powdered pumice stone, double it, place the line in the pad so formed, and now rub in accordance with these directions. The object here is to rub in such a way that the roundness of the line is preserved and not made oval in shape in any part. To do this, spin or roll the line between the thumb and forefinger of the left hand, while the short length is submitted to the backward and forward treatment pretty much as before. * * * The student who regards this business as too tedious may rest assured that it is impossible to get an ideal dressing—one that will last for years and years and never 'knuckle'—by any other known process."

Mr. Kelson is careful to impress upon the operator who is dressing a line that the oil in the line must become perfectly dry before it is polished, and here is the polish and the manner of applying it: "Procure a 10z. phial, and into three-quarters of an ounce of pure spirits of wine put a teaspoonful of the best copal varnish. Shake the opened bottle so filled against the ball of the right forefinger, spin the line to and fro with the left fingers, as in the latter method of rubbing, and with the wetted finger working backward and forward proceed to cover a few inches of it all around. Repeat this performance quickly until a length of nearly 3 ft. is moistened. Then, while the spinning continues, rub that much smoothly and evenly backward and forward between the finger and thumb, and so proceed by degrees from right to left throughout the entire length of the line. In two days give a second coat, and when quite dry the line is fit for use."

I presume that the average American sportsman, after reading Mr. Kelson's precise directions—but Mr. Kelson has a way of being precise and minute in his directions—will conclude that it is certainly easier to buy a line if it does not cost more than \$25; and in one sense that is true, but there is not the satisfaction in using a purchased line that there is in dressing one's own line if one has time to do it and it turns out all right. So far as I can judge, the lines that I have—that is, the Halford-dressed lines—are as perfect as any lines can be. One of them was mounted—backed with a smaller and cheaper line—and tied by Mr. J. J. Hardy before it was sent to me, and I have given it some hard work since I received it, and it is as smooth and soft and polished as when it arrived. I cannot say the same of other and cheaper vacuum-dressed lines that I have. I must say, however, that I think the salmon lines of the best class are too finely tapered, tapering as they do from C. and D. to H.

A. N. CHENEY.

New Jersey Game and Fish Interests.

THE annual report of the new Fish and Game Commissioners is an interesting and most creditable exhibit of a year of great activity in the enterprise of restocking the waters and the game fields, and in the enforcement of the law. Under the direction of the Commission, Messrs. George Pfeiffer, H. P. Frothingham, Parker W. Page and George L. Smith, with Charles A. Shriner, of Paterson, as the very efficient State Game and Fish Protector, New Jersey has taken its place in the front rank of those States which are husbanding their resources of fish and game.

Several years ago New Jersey established a fish-hatching station for the propagation of fresh-water fish, more particularly brook trout, but the conditions proved to be unfavorable and the hatchery was abandoned. The Commissioners report that owing to the establishment of large trout hatcheries as private enterprises they have found it now practicable to purchase fry more cheaply than they could be produced at State hatcheries, and during 1897 there have thus been secured for distribution throughout the State 50,000 half yearling trout.

The experiment made in the latter part of 1896 of introducing adult pike-perch from the Great Lakes demonstrated the feasibility of the plan, and in 1897 the Commission secured a large number of these fish from Lake Erie, also large numbers of channel catfish and white or silver bass. Of the pike-perch 35,000 were put into lakes of Middlesex county; the transfer of the bass was less successful, the remnant after the long journey having been placed in a reservoir of the Passaic Water Co., and in Cedar Pond. The Delaware River received 300 adult channel catfish and Greenwood Lake 100.

There is a constantly increasing demand for black bass to be used for propagation, and the Commissioners report that they have had much difficulty in supplying the fish, owing to the fact that there is no market where they can be bought, nor are they so plentiful in any of the waters of the State that it would be wise to diminish the native supply. Fortunately, through the assistance of Vice-President Hobart and Gov. Griggs, a contribution of about 2,000 black bass has been secured from the United States Fish Commission.

The necessity of providing food for the increase of fish in the fresh waters has been given attention. Large numbers of bait fish have been taken from the Oak Ridge and the Clinton reservoirs and deposited at Greenwood Lake, and through the courtesy of Commissioner H. O. Stanley, of Maine, 250,000 eggs of land-locked smelts were secured and deposited in Lake Hopatcong, Greenwood Lake and the trout streams of Sussex county emptying into the Delaware River, Culver's Lake, Big Swartzwood Lake, Long Pond, Iliff's Pond and Struble's Pond.

The introduction of ring-neck pheasants has proved a decided success; 343 of the birds were purchased early in the spring, and reports show that they have thrived. This chapter of the report was given in full in our issue of last week. Attempts to acclimatize the Southern quail having proved failures in so many instances, it was deemed best to secure birds from the West. Late in the spring 1,032 Western quail were purchased and distributed in lots of from 50 to 100.

It is thought that the establishment of the Audubon Society of the State of New Jersey, with headquarters at Plainfield, will result in the creation of a public spirit in the spread of protection of song and insectivorous birds. Members of the society are pledged to a declaration of purpose which discourages the use of feathers of any birds for ornament except those of the ostrich and domestic fowls, or the destruction of birds and their eggs. The society will strive to secure the establishment of a bird day in the State. The life membership fee is \$1, except in the case of teachers and pupils, who may pay 25 cents. All the money thus secured has been used for the publication of leaflets instructive as to the habits and economic importance of birds.

The book entitled "The Birds of New Jersey," prepared by Chief Warden Shriner and published by the Commission, has been in large demand; and has very generously fulfilled the object of its publication, which was to disseminate useful knowledge concerning birds, and thus create a public sentiment which should insure their better protection. So great was the demand for the work that it was found necessary to issue a second edition, and many applications have been received from outside the State. The book is sent out at a nominal cost of \$1. Ornithology as treated in this publication has been added to the list of studies in a number of schools, and the suggestions contained in it have led to the observance of Bird Day in connection with Labor Day in eighteen of the twenty-one counties of the State.

A suggestive fact noted in the report is that while in former times a few hundred copies of the fish and game laws were found sufficient, there were published in 1897 no less than 100,000 copies in various forms for distribution throughout the State. Under these circumstances, it is pertinently suggested, ignorance is a poor plea for violators to urge.

The past year has been no exception to its predecessors in the number of complaints coming from Barnegat Bay and the violations of the law there; and no other part of the State has been subjected to so much vigilance and attention on the part of the wardens. Nevertheless, no progress of any importance was effected. The blame can rest only on the shoulders of those who should be the most interested in the enforcement of the laws. Repeatedly the most energetic and best qualified wardens were sent to Barnegat, but the efforts there of these men who had been successful in breaking up violations of the law in other parts of the State proved of little avail at Barnegat Bay. The offenders there have formed a clique and have brought to their assistance a large number of the hotel proprietors and residents, the very men who in past years have cried loudly for a better enforcement of the law. It was absolutely impossible for a warden to procure a boat when his errand was known, and he could not depend on any one thereabout for assistance. Those who complained of the depredations of poachers, and who declared that they knew of violations of the law, absolutely refused to give any evidence or clew on which the wardens could work. The frequent presence of wardens on the waters of the bay undoubtedly had a deterrent effect on the lawbreaking element, and your Commission does not believe that the fact that there were no prosecutions was attributable to any lack of determination or skill on the part of the wardens. Fortunately, Barnegat Bay is the only locality in New Jersey where the whole community seems to be on the side of the lawbreakers, and willing to suffer for the misdeeds of a few.

The suggestions contained in the report respecting changes in the law are given in the full text.

The Game Law.

The present law for the protection of game and fresh-water fish has now been in operation for two years, a long enough time to determine its value. Owing to the difference in the latitude of the extreme northern and extreme southern parts of New Jersey, and the consequent difference in the habits of animals in the two extremes, it is manifestly impossible to enact any measure which will satisfy all the residents of the State. The experiment of dividing the State into two sections has been tried twice, but no two succeeding Legislatures approved of it. A law dividing the State was in force in 1895, but it was repealed by the following Legislature, which placed the present law on the statute books. So much fault was found with this law in all parts of the State that the last Legislature undertook to make a change, but so diverse were the views of the Senators and Assemblymen that an agreement was arrived at only during the last days of the session of the Legislature. The act had been so amended that a number of important particulars had been omitted, notably protection for English pheasants. The act partook of the nature of a general law as well as of a two-section law, and before it was ready for final passage its original provisions had been so altered that interest in the measure was lost to a great extent. North New Jersey had asserted its claims to have a law such as would be indicated as proper by the climate and existing conditions there. The southern part of the State, where the seasons are frequently two or three weeks later than in the northern part, had insisted on a later season. The rivalry between the two sections of the State produced a measure satisfactory to neither. Gov. Griggs declined to approve of the act,

and so the law of the previous year remained in force.

The conviction which prevailed a year ago that the law was inadequate to carry out the purposes for which it was enacted, has been intensified, and there has been a general and continued demand all over the State for the enactment of a measure making a uniform season for all woodland and field game. This can be accomplished only by a modification of the demands of interested persons in different parts of the State. If the gunner of the north will agree to open the season for woodcock and partridge fifteen days later than a date such as might be indicated by the climatic conditions, and if the gunner of the south will agree to cease shooting quail and rabbits fifteen days earlier than his demands have insisted upon for some years, a uniform season might be secured. A two-section law, while it might satisfy the people in Cape May, Cumberland, Salem and Atlantic, and at the same time be acceptable to the people of Sussex, Passaic, Morris and Bergen, would be unsatisfactory to the large area of territory lying between these two tiers of counties. A law opening the season for woodland and field game on the 1st of November and closing it on the 1st of January would be acceptable to the people in the southern part of the State, but it would be objected to in the northern part, as it would prevent altogether the killing of woodcock, which have moved southward before the first open day, and because it would mean the killing of hundreds of rabbits and quail in the deep snows which frequently precede the holidays. A law opening the season on the 1st of October and closing it on the 1st of December, while agreeable to the interests of the gunners in the northern part of the State, would meet with serious objections in the southern part, where some kinds of game have not yet matured sufficiently by the 1st of October to make them proper targets for marksmanship. A law opening the season on the 15th of October and closing it on the 15th of December would properly conserve the interests of the whole State. It would satisfy the middle tier of counties, and although the gunner of the north would lose fifteen days at partridge and woodcock and the gunner of the south would be required to cease his sport after rabbits and quail fifteen days earlier than his desires would dictate, both would have the consciousness of knowing that a law subserving the best interests of the State and properly protecting game had been agreed upon. Such a law would be comparatively easy of enforcement. The present law is open to the serious objection that there is some kind of game open to be killed from the 1st of July to the 1st of January, thus affording the violator of the law an excellent cloak for his unlawful acts. Although the law suggested above would reduce the number of days in which game may be lawfully killed, there can be no doubt that it would so increase game as to more than counterbalance the restriction placed on the length of the period. Your Commission feels confident that a law of this kind, once placed on the statute books, would not be disturbed for many years.

The Fish Law.

The introduction into the waters of this State of pike-perch, white bass and channel catfish, more extended reference to which is made in another part of this report, will necessitate some changes in the laws relating to the taking of fish in the fresh waters of the State.

It is but reasonable that some kind of protection should be afforded to these strangers. To prohibit their taking for a number of years would involve hardship on the angler who is seeking for other fish and who could not avoid taking the new species. It would perhaps be impracticable to establish any close season for the taking of the catfish, as all kinds are angled for in the same manner. Slightly extending the close season for pickerel and embracing in it the pike-perch, would afford the necessary protection for the latter, and the white bass would be amply protected if the same protection were extended to it which is now accorded to the black bass.

For the better protection of the game fishes, a slight change in the law pertaining to the capture of the inferior fishes is indicated. At present the law permits of the spearing of suckers, eels and carp; but this provision of the law is frequently abused by persons who spear everything the light of the lantern may disclose in the water. Violations of the law of this nature are palpably difficult of detection. If the law were changed to prohibit spearing altogether, but permitting the use of eel pots under reasonable restrictions, we feel confident that it would tend to the better protection of the game fishes without in any way reducing the opportunities for diminishing the number of eels and catfish.

Although the black bass is firmly established in the waters of the State, there is a continual menace to the proper multiplication of these fish by taking of them at night. Nearly all other States have enacted statutes prohibiting the taking of black bass between 9 o'clock in the evening and sunrise the following morning, and the enactment of such a measure in New Jersey would undoubtedly be attended by good results without in any way interfering with proper sport.

Deer.

In the southern part of this State there are still vast areas of uncultivated lands suitable for the habitat of the wild deer, and these animals would have continued to flourish were it not for the ever-increasing army of hunters. Last year your Commission requested the passage of a law establishing a close season for five years, thus enabling our indigenous deer to increase in number and affording your Commission an opportunity to add to their number by importations from the West; and your Commission would again most strenuously advocate the enactment of this measure this winter.

The law for the protection of our song and insectivorous birds is in anything but a satisfactory condition; the law prohibits the taking of all kinds of insectivorous birds, and strictly construed would prohibit the killing of many species of shore birds now considered legitimate sport, for nearly every bird is more or less insectivorous. A law mentioning by name all the kinds of birds which it shall be unlawful to kill would be more just to the sportsman and also to the agricultural interests of the State, which depend in a great measure for their success on the destruction of noxious insects. Such a law would

also restrain the rapacity of the pot-hunter, who slays birds for the mere sake of killing, or for the purpose of supplying the millinery market with ornaments, the gathering of which inflicts lasting injury on the whole community.

There is one other section of the general fish and game law to which your Commission desires to call especial attention. Of late years game clubs and individual sportsmen have secured by purchase or lease large tracts of woodland and large areas of water for their own exclusive use. According to the present law the fish and game wardens of the State are required to look after the protection of these property rights as far as private streams and ponds are concerned. The law in relation to trespassing with guns is not enforced by the wardens under the statute, the latter leaving all protection of private lands to the owners and their agents. This condition of affairs is anomalous, and it places a burden on a public officer apparently not contemplated by other and similar enactments. Your Commission would accordingly suggest the eliminating of the trespass law from the general fish and game law and placing it in the same category with laws pertaining to the protection of private property.

Menhaden Fishing.

The Menhaden Act.—The beneficial effect of the law which restricts the taking of menhaden from the waters of the State adjoining the eastern boundary is more apparent than ever. For many years menhaden steamers plied their avocations along our shores without let or hindrance of any kind whatsoever, and a fair estimate of the number so engaged was over sixty. An act prohibiting the taking of menhaden was violated daily during the season, the presumption being that the act was unconstitutional, a view of the law taken by eminent counsel. Your Commission caused the constitutionality of the act to be tested, and the result was that the Supreme Court declared the act to be valid. Not desiring to interfere with the judicious taking of menhaden, but anxious to afford them such protection as might be indicated by the circumstances, your Commission suggested the passage of an act providing for the licensing of steamers engaged in the menhaden business, the scale of license fees being governed by the tonnage of the vessel. Two years ago, immediately after the passage of the act, thirty-two steamers were granted licenses, about one-half the usual number seen along our coasts. Wardens were instructed to be diligent in the work of watching the steamers and seeing to it that none but licensed steamers took menhaden. The expense of the license and the vigilance of the wardens has further reduced the number of menhaden taken, for during the year just past only twenty-two steamers availed themselves of the provisions of the menhaden act. The number of sailing vessels licensed during the first year of the operation of the law was nine. A similar number was licensed last year, indicating that the taking of menhaden for bait has not decreased. As to the menhaden taken off shore, it is evident that less than 25 per cent. are now taken when the total volume of fish taken is compared with that of three or four years ago.

Pounds.

Pound Nets.—Your Commission in its two previous reports has pointed out the evils attending the indiscriminate slaughter of fish by means of pound nets along the coast. The evil has not abated in the least, and during the past year thousands of tons of fish were destroyed without any adequate return. Your Commission does not suggest the wiping out of this industry, no more than it did two years ago the wiping out of the menhaden industry; but would strenuously urge the passage of some restrictive legislation. Fortunately this year the pound-net fishermen cannot urge the argument advanced last year in their interest, that they had invested their capital in nets, and that any limitation might work hardship.

An attempt was made last year to pass a measure absolutely prohibiting the maintenance of pound nets. The pound-net men asked the Legislature to give them another chance—they wanted one more year and then they would be satisfied. This plea for clemency probably defeated the measure. Taking the pound-net men at their own word, so abundantly and vociferously given in the halls of legislation last year, they certainly cannot object to a restrictive measure this year; for your Commission desires nothing more than to subject them to such regulations as may conduce to a continued supply of fish for years to come.

Inland Tide Waters.—The most complicated laws on the statute books of New Jersey are probably those governing the taking of fish in the inland tide waters. A large number of these waters are not governed by any law whatever, but others make up for this oversight on the part of past Legislatures by having a number of special enactments. In some instances what is lawful on one side of an imaginary line is on the other an offense punishable with imprisonment. In one water dynamite may be used to kill fish; in the water in an adjoining township it is unlawful even to take crabs. Unfortunately it is a matter of difficulty to agree on a general law governing all tide waters, as the interests are diverse in different localities. Your Commission would, however, suggest, in the event that no general law can be agreed upon, that such of the present enactments be repealed as are worthless at the present day, thus ridding our statute books of a great deal of undesirable lumber.

The Delaware River.—The Legislature of 1897 passed a comprehensive law pertaining to the taking of fish in the Delaware River, every section of the measure having met the approval of the Fish and Game Commissioners of Pennsylvania, Delaware and New Jersey. The Pennsylvania Commissioners agreed to use their endeavors to secure the passage of the law by the Pennsylvania Legislature, but unfortunately their efforts were of no avail. The measure which had been passed in New Jersey would accordingly have been of no avail, and so it was filed away in the State Library by Gov. Griggs without his approval. The Pennsylvania Legislature will not be in session this winter, and consequently no relief can be secured to the fishermen of the Delaware from the burdensome enactments which have been from time to time placed on our statute books. In the interests of these

fishermen it is to be hoped that better success will attend the work of the Pennsylvania Commission next year.

Protection to Sturgeon.—For the past three years there has been on the statute books of New Jersey an act for the protection of sturgeon, providing that these fish should not be taken from the 30th of June to the 31st of December of each year. The act contained the usual clause providing that it should not go into effect until similar measures had been adopted by the Legislatures of Pennsylvania and Delaware. Pennsylvania passed the same law last year, but Delaware took no action until this year, when the law was enacted there. The Sturgeon Fishermen's Association and all others interested in keeping alive an industry which annually turns a great many thousands of dollars into the pockets of the hardy fishermen who make a living by taking fish in the Delaware had for some time hoped for some such action on the part of the State of Delaware, and it came none too soon; for the high price of the fish and its roe during the past few years had induced a number of misguided people to take them at all times and seasons. With the protection accorded to the fish by this salutary legislation it is but natural to expect that the sturgeon industry will continue to flourish for many years.

As Told in Rhyme.

SYRACUSE, N. Y.—*Editor Forest and Stream:* To most of those who fish in the waters of central New York and hunt for gray squirrels in the woods of the same territory my subject is a familiar figure, for Prof. Ernst Held has whipped every stream and knows every likely tree within a wide circle of country of which Syracuse is a center. Many of his vacations have been spent at a quiet little resort in the lake region, where his taste for sport could be gratified to a reasonable extent and where his lovable and gentle nature made many friends among the visitors and inhabitants of the country round about. Like all trout fishermen, he was wont to keep his haunts a mystery to the curious. A professor at each end of the tackle is a strong combination, but even that sometimes fails. A light basket had its story of experimenting on nearby streams, but if it contained a goodly mess of scarlet-spotted inmates, a tale of long tramps and wandering afar was sure to account for the success. Once he surprised the houseful of summer sojourners by bringing in a plump 2lb. beauty; and was besieged by the crowd to know where and how the prize was caught. When the storm of questions was at its height he gravely said: "Well, now, I'll tell you all about it. I didn't catch him at all. I simply gathered him. He was out picking strawberries for his luncheon and I picked him for my dinner," and to prove the truth of the story he opened the fish's mouth, which was seen to be filled with wild strawberries. Upon his return each day he was constantly greeted with, "Well, what luck to-day, Professor?" until one time when appearances were all against him, evidenced by a broken rod and other signs which we all know how to read, when, in reply to the usual inquiry by a very attractive young lady, he agreed to tell his story after dinner, and this is the way he did it—

MY FISHING EXCURSION.

I made a trip, a stream to whip—
Where plenteous trout in frolic skip—
Before—ahem!—I took a sip,
A fever-ague-killing nip.
Thus fortified, I let her slip,
My fishing boat, a tiny ship,
Down North Branch Moose, where river's lip
With kisses laves a sandy strip.
There speckled beauties flop and flip,
And took the fly with eager leap,
Oft filled the basket at my lip.
But joys are fleet, "twixt cup and lip,"
A proverb old, "there's many a slip."
Crazed by mosquitoes' bloody grip,
I rose and lit my pipe, to keep
Those bloodhounds off—meanwhile my whip
I'd thrown across the seat midship.
Just then—alas! my naughty snip
Of boat made a preposterous dip.
I balanced—staggered—made a slip—
A seatward fall—a crash—"Oh! Rip
Van Winkle, saint of woodman, keep
My soul from swearing, lest a heap
Of savory words befoul my lip;
And would that mend my broken tip?"
Thus cried I, while from out the deep
The biggest trout made leap on leap
And dared me with a saucy peep
Of wistful eyes to catch and keep
Them if I could! A splintered tip
Is the memento of this trip.

An artist of no mean ability, a musician whose talent is widely known, a true lover of nature, and on the stream, in the woods or in the drawing-room always the same unselfish, modest gentleman. Such is Ernst Held, and that he may live for many years to enjoy the sports he loves and to brighten the lives of all with whom he comes in contact is the hearty wish of those who know him.

W. A. B.

North Carolina Trout.

The trout fishing this year in Watauga, Mitchell and Ashe counties, N. C., is reported as being of rare excellence. These counties lie between two great mountain chains, one of which is the Blue Ridge, and there are numerous streams, all of which are peculiarly favorable for the habitat of the trout and peculiarly well supplied with that gamest of fish. May and June are said to be the best season for sport.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Kennel.

Fixtures.

BENCH SHOWS.

Jan. 5.—Wilmington Kennel Club's show, Wilmington, Del. E. W. Jester, Sec'y.
Jan. 17.—Brunswick Fur Club's ninth annual hunt, Barre, Mass. Bradford S. Turpin, Sec'y.
Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.
Jan. 18.—Butterly Bench Show Association's show, Grand Rapids, Mich. Miss Grace H. Griswold, Sec'y.
Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.
March 1.—Mascoutah Kennel Club's show, Chicago. L. Lincoln, Sec'y.
March 9.—St. Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.
March 15.—Northwestern Kennel Club's dog show, St. Paul, Minn. E. D. Brown, Sec'y.

FIELD TRIALS.

Jan. 10.—U. S. F. T. Club's winter trials, West Point, Miss. W. B. Stafford, Sec'y.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss. W. S. Bell, Sec'y.
Jan. 24.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal. J. M. Kilgarif, Sec'y.
Jan. 24.—Champion Field Trial Association's Champion Stake, Tupelo, Miss. W. B. Stafford, Sec'y.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

Dogs as Draft Animals.—III.

Frankfort.

MR. F. H. MASON, Consul-General, Frankfort, reports:

FOR AND AGAINST DRAFT DOGS.—Although the use of dogs for working purposes in this city and district of Frankfort dates from medieval times, the subject is one concerning which public opinion is still somewhat sharply divided. The Germans are second only to the English in their general love of dogs for their higher attributes—fidelity, purity of breed for the purposes of hunting, watching over property, and as the faithful, devoted companions of humankind. By a large proportion of German people the use of dogs as draft animals is held to be an unworthy degradation of an animal clearly intended by nature for nobler purposes; and Ludwig Beckman, in his two handsome volumes, "Races of Dogs" (the standard work of its kind in the German language), makes but one reference to that portion of the subject, which may be quoted as a fit expression of the higher sentiment of German people on the subject:

"The use of dogs as draft animals should, on account of unavoidable abuses, be prohibited by law in all civilized countries, as has long been done in England."

Down to 1866, when Frankfort ceased to be a free city, wagons and carts drawn by dogs were not allowed to enter the city gates, and were to a much greater degree than now under the ban of public disapproval. But to a large majority of people here, as elsewhere, life is a struggle which requires the practice of every form of economy, and to the tradesmen and shopkeepers in villages, or even large cities, market gardeners, butchers, milkmen, beer and wine merchants, laundrymen and peddlers of fruit and other country produce, the dog that watches by night and works by day is a cheap and most efficacious substitute for the horse, or rather for the kind of work usually done in other countries by donkeys, which are practically unknown in Germany.

REGULATIONS.—Recognizing this fact, the municipal government adopted in 1884, and has since carefully enforced, a comprehensive code of regulations for the licensing, annual inspection, and general surveillance of dogs used as draft animals, and under the system thus established the number of dogs so used in this city and district has largely increased, and their general condition and treatment visibly improved.

In accordance with this code, each owner of a working dog is required to present the animal for inspection before the chief veterinary official of the district once each year, at a date specially fixed by announcement for each precinct—usually during the early spring. On such occasions the owner or a responsible agent must appear in person with dog or dogs, their harness and wagon in perfect order, and drive up and down before the veterinary, who then examines the animal and its certificate of the previous year, and if all is found satisfactory a new license is granted, good for one year, unless revoked, in which the age, weight, sex, domicile, etc., of the dog, and the maximum load which it is permitted to haul are carefully stated. If a dog is sold the license must be presented at headquarters and the transfer entered on the record. The certificate must be always carried by the driver when working the dog on the public street or highway, where it may at any moment be called for by a policeman, and if not forthcoming the delinquent is subject to a fine; or if the dog is found to be sick, overworked, underfed, or in any way seriously abused, the license may be canceled and the owner disqualified for the future.

BREEDING.—There is in this portion of Germany no race of dogs which, like certain species in Holland and Sweden, are specially bred and used for working purposes. Any large, strong, healthy dog will do, and may be trained to work in harness. Those usually employed for this purpose are not pure-bred animals, but mongrels, either of no definable race or derived from crossings of the Florentine, St. Bernard and other breeds with the *Deutscher Dogge*, a large, short-haired species, which may be called the parent race of working dogs in this country. The dogs in actual use therefore vary considerably as to size, and are of all canine colors—black, brown, gray, yellow, brindle, white, tan—usually short-haired, but sometimes with long, silky coats and showing the markings and general characteristics of the spaniel. There are a few establishments in the country near Frankfort where dogs are bred for hunting, watching and working purposes, but usually those used as draft animals are reared and trained by the peasants or village tradesmen, who afterward use them.

TRAINING.—Training begins at the age of one year, and is a very simple process. The young dog is har-

nessed up to a cart with an older and well-broken one, and being by nature tractable and obedient quickly takes to his work. No distinction is made as to sex, except that a slut is exempt by law during the gestative period and may not be worked.

HARNESSES.—The harness is simple and of one prevailing type—a broad strap or breast collar of leather, passing round the breast and tapering backward about 3 ft. on each side, thence lengthened by cords, as traces, which are attached to the whiffletree. The collar is held in place by a simple backband and girth; the latter being unbuckled permits the harness to be slipped over the dog's head and removed. The leather muzzle which all dogs, in or out of harness, are required to wear at all seasons when outside their owners' premises, serves as bridle and completes the working gear.

WAGONS.—Wagons are of two general classes—four-wheeled, which are usually drawn by two dogs and are used almost exclusively in the country or remote villages, and two-wheeled carts, with long shafts or handles, which are held by the driver, who guides and balances the vehicle while the dog, hitched to an iron bracket projecting downward from the floor of the cart, trots beneath. A board about 2 by 3 ft. in size is required by law to be carried along, and when a stop is made is laid on the ground for the dog to lie upon. In winter the same code requires a blanket to be provided to cover the animal when at rest in harness.

STRENGTH.—The load that can be transported by a cart of this kind, guided by a skillful driver and drawn by one healthy, well-trained dog, is somewhat surprising. The license of each animal states the maximum burden that he may draw at from 200 to 300 lbs., but this restriction, especially in the country, where the police are less watchful, is often disregarded, and a load of 500 and even 600 lbs. is not unusual, and on the smooth, hard level roads that are common in this country a dog will usually go as far and work as many hours per day as his master who guides the cart.

THE DOG LIKES HIS WORK.—From all that can be observed or learned from inquiry, the dogs, at least those used as draft animals in this region, take to their work with entire willingness. Nothing is so irksome to the canine spirit as to be confined in the kennel or left at home when the master goes abroad. Any sign of preparing the cart or wagon for a sortie affects the working dog much as the sight of a gun or shooting costume agitates a setter or foxhound. If left at home while the cart is taken to town by hand, he is apt to howl disconsolately until it returns. Once harnessed, he trots to his place under the wagon, and when used on a milk route or other uniform service he learns the way and the place and average duration of each stop as well as his master, in whose absence he guards the wagon and its load with a fierce fidelity, which no wheedling can corrupt or fatigue impair. Rarely under ordinary circumstances does a dog have to be urged to greater exertion; if spoken to at all, it is usually to restrain him from drawing the cart faster than the driver cares to walk.

TAX.—The annual tax on working and other dogs in Germany is \$3.57, besides which the owner pays 47 cents for the inspection and certificate which are made and issued by the chief veterinary official of the city or district.

LIFE OF A DRAFT DOG.—A dog reaches his full strength at about three years of age, and thenceforward until his ninth year he should be at his best; but with good care most of them are capable of good service until fourteen or fifteen years of age, and instances are not rare of dogs twenty or even twenty-five years old doing their daily task with cheerful alacrity.

MAINTENANCE.—Their best food is meat, but besides this they eat bread, specially prepared biscuits, in which a small proportion of coarse meat is included, and the general refuse of the family table, which in the case of most peasants is neither profuse nor specially nourishing. A good trained dog three to four years old is worth in this neighborhood from \$12 to \$15; especially large and well-bred ones may bring \$20 or even more, particularly when they combine good working qualities with those of a diligent and courageous watchdog, and of such a one the peasants have a saying that, day or night, his work is never finished. It does not appear that working usually affects the temper of a dog or makes him cross or vicious, except in defense of his own wagon, which he is usually ready to protect from interference at all hazards.

CONCLUSION.—Putting aside the sentiment which dignifies the dog as a noble animal, worthy of no baser service than hunting or guarding the person and property of his master, it is difficult to see in the working system, as practiced under carefully enforced regulations, as in Germany, any ground for reasonable objection, either by reason of direct ill treatment or the theoretic abuse that is perpetrated when a dumb animal is converted to a use for which it was not intended by nature. That an animal so tractable, faithful and easily trained as the dog, which at his best costs but a comparative trifle, eats the refuse of the peasant's table, and hauls a load of eight or ten times his own weight twenty or thirty miles per day and guards his burden by night, is not well and properly employed in such service, would probably be hard to prove on any but the extreme hypothesis that all work is degrading.

Hamburg.

W. H. Robertson, Consul at Hamburg, reports:

BREED.—In Hamburg and its environs dogs are very extensively used as draft animals, and as the authorities have prescribed no restrictive measures against the use of any particular breed or size of dog for this purpose, almost every kind of fair-sized dog is employed. In most cases, however, it will be found that cross-breeds of Ulmer dogs and Danish hounds are selected for all sorts of small wagons and hand-carts. The animals are not subjected to any special course of training, but are broken in for their work by their individual owners, according to the latter's own ideas.

HARNESSES.—The harness almost universally used is light and of the simplest kind, consisting either of leather or closely woven jute. A strap or band, which is held in position by a cross strap over the back, passes from the dog's breast to an ordinary pair of traces,

which are fastened to a light singletree. This latter is attached by means of a chain to the bottom of the cart or wagon.

WAGONS.—The wagons which these dogs are required to haul are of almost as great a variety as are the breeds of dogs; and it is quite wonderful what heavy loads the dogs are able to pull without apparent difficulty.

OBJECTIONS TO DRAFT DOGS.—There is very little doubt about the fact that these draft dogs are of great assistance and a source of considerable saving to the small tradespeople, peddlers, costers, etc., whose loaded carts are too heavy for one person to pull or shove alone, and who cannot afford to buy and feed a horse. On the other hand, however, the general opinion prevails, and I confess that, after much personal observation, I fully share the same, that the use of dogs as draft animals is a cruelty.

I have noticed that the people become especially attached to their draft dogs, who are their constant companions in business, and that they treat them well as a rule. The dogs themselves are the very hardest workers, and enter into their work with far more spirit and vim than most horses. It is a frequent sight to see their masters obliged to constantly restrain them from pulling. It is sometimes very pitiable, however, to see them pulled out of shape by overwork and overloading. Their crooked legs, nervous temperaments, blurred eyes, and tender feet tell their tale of fidelity and suffering. They ferociously protect the cart and its contents during the absence of their masters, and seem to feel a personal interest in the business.

I took occasion to interview the Hamburg Society for the Prevention of Cruelty to Animals on this subject, and learned that dogs which are used as draft animals are seldom able to stand the work more than five years without their spines becoming affected, and that such draft dogs as are from time to time brought to the dog hospital of the society for treatment are generally beyond recovery. I was also told that the society had repeatedly requested the Hamburg government to forbid the use of dogs as draft animals, and that, although its efforts in this direction had thus far proved absolutely unsuccessful, it intended to continue to use its best efforts to have the practice abolished. Members of the society must bind themselves not to purchase anything from tradespeople who deliver their wares in carts hauled by dogs.

The International Field Trials.

CHATHAM, Ont.—*Editor Forest and Stream:* Seeing a letter in your last issue from Mr. W. W. McCain *re* the late International Trials, it strikes me that it would ease my mind if I also had a few words.

I have nothing to say as to the Derby, as I did not see it run. Nor did I see the first heat in the all-age. I hope Mr. McCain has not me in his eye when he speaks of the favored few. I beg to tell him that the favors that I have received in the field trial line have been like shot from a blunderbuss—very scattering.

I think Mr. McCain has just cause for complaint in not having his bitch called again, after being told to bring her along, as the rules say the judges shall, after the first series, announce which dogs they wish to see run again, and the order of running them. I think, however, he is wrong in thinking we go in for too wide range. With one exception I don't consider that any of our dogs ranged too wide. Some of them may have ranged too wide in cover, and I will concede that it is just as bad a fault for a dog to range too wide in cover as it is for him to have too contracted range in the open. Wide in the open and close in cover is what we want in our country. Mr. Hough is rather hard on Cleopatra, although I acquit him of any intention to be other than fair.

In the heat between her and Dash, he says: "Later Clo made her worst blunder in a heat otherwise brilliant; on bare cornfield she made game, roaded, cast about and came to a point, but the bevy was walked up thirty feet back of her, and she must have passed fairly through it to have got where she was. This bad locating of birds seemed hard to explain, and Mr. Wells admitted he did not see how she could have done it." My idea of the piece of work was this: Clo was seen on point seventy or eighty yards ahead in a cornfield, near the fence, on the other side of which was a bush, on a bevy which had evidently just run into the field to feed and were scattered about feeding when she came onto them. I ordered her on to flush, going with her, and together we fairly walked through them, she crawling with her nose touching the ground and moving her head from side to side. When we had got through some one behind flushed them, and Mr. Hough will remember they got up very scattering. The birds lay like stones, as they will frequently on bare ground. They had run all about the place, saturating the ground with scent, which, coming from all quarters, prevented her locating any one bird. Had it been a single bird she would have probably followed it accurately to a flush. Had I adopted the American plan of leaving the dog on point, tramped ahead and flushed the birds, instead of taking the dog up with me, in the way introduced by Mr. Brailsford, and since followed by so many American professionals—although they objected to his doing it when he ran in the Eastern—she would have had credit for a good point instead of a bad flush, as the birds were not more than twenty or twenty-five feet from her first point.

Again, in the latter part of his account of the Lock-Clo heat, he gives Lock credit over the bitch, saying: "Lock jumped the fence, made a straight run for the woods, and at once jumped into a second bevy point at a log and brush pile, doubtless on Clo's bevy, though she was now working off to the right away from the bevy." I claim my little favorite to be a good bird finder, but she cannot find birds in two different places at the same time. This is practically what Mr. Hough is penalizing her for not doing. The bush was full of scattered birds from the night previous, and both dogs were doing all that could be asked of them in different places. Mr. Hough was with Lock. I cannot agree with Mr. Hough that Lock required no handling, as at one time it required the united efforts of one of the judges and the handler to stop him from flushing a bird Clo was point-

ing. When they finally got him dropped he was within a few feet of the bird.

I am glad Mr. Hough gives Clo some credit as a meat dog, as on one occasion he flushed a quail and a horse over her point. It was no fault of hers that he had a reputation to redeem, and would not rest satisfied until he had an opportunity. He did not mention, however, on which kind of bird he wished to begin. If on the former, I shall be glad to give him an opportunity when next he visits us; but if on the latter, I must ask him to defer the test until some time when we meet out West, where bronchos are cheap. That is, if I, as on the last occasion, am to furnish dogs and game.

I have no objection to Mr. Hough or any one else having whatever kind of dog suits them best. I like a good dog, let him be big or little, long or short hair. (I came near buying a pointer lately, but, fortunately, got over the weak spell.) But if Mr. Hough or any one else having a kennel of dogs intended entering them, he would likely pick out the best, irrespective of size. I have had some good big dogs, but a great many more from medium to small. I think you will find fifty good small animals to one good big one, whether in man, dog or horse. Of course there is no denying the old saying that a good big one will beat a good little one, and as to the meat dog I am willing to admit that bird finding is the most important part of a bird dog's work. I am considerable of a meat man myself when I start in—just returned from three days at the quail—bag, roo—and will not have a dog that is not a good bird finder; but combined with bird finding I want as much beauty as I can get, also as much speed and style on point. In fact, I want a high-class dog, one whose action is perfect, and who points with spirit and animation, stopping in whatever position he catches the scent. I would rather see such a dog make one point than one of Mr. Hough's ordinary meat dogs make a dozen.

I go into the fields for pleasure, and the dog that gives me the most of that article is the dog I want, whether he wins at field trials or not. Some men measure the day's sport by the size of the bag. I think more of the dog work than I do of the birds. Still I am not averse to a well-filled bag when birds are in good order.

The writer of the editorial on "Professionalism in Field Trial Clubs," in your last issue, mentions the Eastern and Northwestern as the only clubs that have not allowed the professional element to have a say in their management. I beg to inform him that the International has never had a professional as member, and our trials are the only ones in which the amateur handler has much of a chance. Of course, even with us the amateur is handicapped, as he has to compete with dogs trained at such odd times as his business will permit, against dogs that have the regular day-by-day training that a professional alone can give them. But he can nevertheless indulge his fancy without much outlay. Our prizes are small, but so are our entry fees.

W. B. WELLS.

MONROE, Mich.—*Editor Forest and Stream:* In your issue of Dec. 11 appears an article entitled "The International Field Trials," signed W. W. McCain. As he has failed to introduce himself and cannot agree with the decision of the judges nor with the inferences of the reporter, and so freely gives his own views as an authority, a slight introduction on my part may not be out of place, as he believes in the spirit of fairness in everything connected with field sport.

At Windsor, on our way to the trials, we were introduced to Mr. McCain and rode to Chatham on the same train with him. In his conversation he stated that he was entirely ignorant of how field trials were conducted, never having seen or attended any. As to his remarks as to the age and experience of the judges, I know positively that one of the judges, at least, would be younger if he could. As to the experience, neither the reporter nor the judges were novices in attending field trials, and if people can become perfected in anything without experience, why do they study professions or learn trades, even if they do possess very old heads on very young shoulders?

As I followed up each heat in those trials, observing and discriminating carefully, and after reading Mr. Hough's report and Mr. McCain's statement, I am forced by personal observation to agree with the former, and consider his report as being very fair and impartial, while the statements of the latter are as misleading as the imaginative points made by his dog in the field; and I am not surprised, after seeing such an exhibition of false pointing and chasing, that Mr. McCain should entertain the idea of crossing the greyhound and barzoi for a suitable dog, and think he can safely risk the experiment without injury, as an almost failure to point birds and an entire failure to catch them leaves any sportsman in an unpleasant position in the field.

In reference to his question, before commencing the all-age stake, whether point work or bird work was to be considered, the answer was, "All was to be considered." This did not imply that every time his dog came to a halt and he lustily called it "point" and nothing found should be considered bird work. We fully agree with him that in this heat there was much point work, quite as much as in any heat we recollect to have seen, in finding and truly pointing birds once only by his dog. The lusty manner in which Mr. McCain called "point" at every halt of his dog, and the fertile excuses made for her errors, gave evidence of an aptitude for becoming, with age, an expert field trial handler. After the conclusion of this heat the thought of what a young Irishman once said to me came forcibly into my mind. In speaking of an aunt, noted for her excellence as a housekeeper, he said: "She could get up a decent meal of victuals out of nothing at all." For, aside from her very limited range, she had the faculty of doing the most pointing on nothing at all visible, in rapid succession, that I ever recollect to have witnessed, making an excellent display barren of results. How Mr. McCain could state which was the best heat in a competition which he left before being finished, can only be credited to his great power of imagination, with which his dogs and their owner seem to be most bountifully supplied.

JOHN DAVIDSON.

[We desire to call Mr. Davidson's attention to the

The report last week of the sailing of Tampa was incorrect. She did not leave City Island until Dec. 22, towing to New York and out by the Hook.

Margarita II., steam yacht, A. J. Drexel, arrived on the Clyde on Dec. 20, after sailing on Dec. 6 from Philadelphia.

Katrina, cutter, has been sold by George Work to Robert Tod, through Messrs. Tams & Lemoine. She will be altered to a yawl.

The American Y. C. Knockabout Class.

THROUGH the kindness of the designer, Mr. B. B. Crowninshield, of Boston, we are enabled to publish the lines and details of the new 25ft. knockabout class just established by the American Y. C., of Milton Point, in connection with other of the North Shore clubs. The class is intended to provide a generally usable yacht of such size as to give a good cabin with full standing room, and at the same time fast enough for the Sound in summer, with its frequent light airs. It is the intention to race the class regularly through the season, in which case, though competing only against each other, the class as a whole will be open to comparison, in point of speed, with some very fast yachts in the regular classes. It is of course out of the question that a special class of this kind, with accommodations as a leading feature, can equal in speed the purely racing boats; but at the same time the promoters of the class are desirous that the boats shall be fast enough to hold a fair place in the regular open club races, and not to bring up the rear.

The design of Mr. Crowninshield was selected by the committee in charge of the class from a lot of seven, submitted by Messrs. Crosby, Ferris, Hill, Lawley, Stephens, and Gardner & Cox. The committee included Messrs. Stuyvesant Wainwright, F. Bowne Jones, A. Bryan Alley, N. D. Lawton and E. Burton Hart. The fin-keel type was adopted as being faster than the normal keel type, and the centerboard was added on account of the shoal draft at Milton Point and other of the Sound harbors where the yachts will lie. The dimensions are as follows:

Length, over all.....	37ft. 10in.
Length, l.w.l.	25ft.
Overhang, bow	5ft. 7in.
Overhang, stern	6ft. 3in.
Beam, extreme	9ft. 4½in.
Beam, l.w.l.	8ft. 11in.
Freeboard, bow	3ft. 1in.
Freeboard, least	2ft. 1in.
Freeboard, stern	2ft. 4in.
Draft, hull and fin.....	4ft. 6in.
Draft, with board	8ft. 6in.
Displacement	12,600lbs.
Keel	5,600lbs.
Area lateral plane.....	84.60sq. ft.
Mast, from stem at l.w.l.....	5ft. 3in.
Mast, deck to upper hounds.....	34ft. 4in.
Bowsprit, outboard	2ft. 6in.
Bowsprit, beyond l.w.l.....	8ft.
Boom	30ft. 10in.
Gaff	17ft. 2in.
Hoist of mainsail	22ft. 4in.
Mainsail, area	635sq. ft.
Jib	165sq. ft.

Total 800sq. ft.

There is good room forward for a man or boy, berthed in a hammock cot, and abaft the galley and w.c. is a space of 10ft. for the cabin, with a headroom of full 6ft. The floor and lockers are of good width. On the port side the locker is continued aft beneath the deck so as to make two berths, or sleeping three in all in the cabin. There is ample provision for ice, water, and the usual extra lockers for stores, clothes, etc. The cockpit floor is 8in. above the L.W.L., with scuppers, and there is a wide seat within the cockpit coaming, with plenty of deck room on the counter. The construction is simple and strong, a bent oak keel being used, with outside fin of oak and ballast of lead. The centerboard will be of mahogany. The specifications call for thorough workmanship, and a complete finish throughout. The short bowsprit is an innovation in a knockabout, but it adds materially to the shipshape appearance of the yacht. The design conforms to the restrictions of the Boston Knockabout Association. The contract has been awarded to Frank T. Wood, of City Island, at \$1650 for complete yacht.

Rifle Range and Gallery.

San Francisco Rifle Clubs.

SAN FRANCISCO, Dec. 13.—The weather conditions at Shell Mound Range yesterday were good. Several clubs finished their medal shoots for the year.

Columbia Pistol and Rifle Club.—F. O. Young covered himself with glory by making the following two 3-shot scores in the Bushnell medal contest: 1, 2, 2—5 and 2, 1, 1—4. This was done at 200yds. on Columbia target, off-hand, with a Pope barrel.

Scores of the Day.—Pistol, re-entry matches, open to all comers, 50yds., Columbia target, Gordon Blanding pistol medal and cash prizes, 3-shot scores: A. H. Pape, 12, 13; C. M. Daiss, 7, 9, 11; F. O. Young, 11, 15.

Diamond pistol record medal and cash prizes, 10-shot scores: C. M. Daiss 60, J. E. Gorman 33, 35.

Achille Roos .22 rifle medal, ladies' trophies and cash prizes, 5-shot scores: Mrs. C. F. Waltham, 11, 14, 15.

Pistol, class medals, for members only, one 10-shot score with pistol, champion class: Dr. L. O. Rodgers 49, C. M. Daiss 51, A. H. Pape 51.

First class: F. E. Mason 48, M. J. White 52. Second class: G. M. Bailey 63. Third class: A. Hinterman 74, A. H. Cady 94, C. F. Waltham 106, Mrs. C. F. Waltham 168.

Rifle, re-entry matches, open to all comers, 200yds., Columbia target, F. H. Bushnell rifle medal and cash prizes, 3-shot scores: F. O. Young, 4, 5; A. H. Pape, 10; Dr. L. O. Rodgers, 15; O. A. Bremer, 15.

Wm. Glindeman military medal and cash prize, 10 shots, Creedmoor count: E. Jacobson 47, C. F. Waltham 42.

Rifle, one 10-shot score with rifle, champion class: A. H. Pape 53, F. O. Young 64, F. E. Mason 78.

First class: E. Jacobson 59, O. A. Bremer 80, A. B. Dorrell 80, Third class: A. Hinterman 86, B. Jonas 104, C. F. Waltham 113, C. H. Cady 164.

San Francisco Schuetzen Verein, 20-shot scores, champion class: A. H. Pape 432 rings; first class, N. Ahrens 416; second class, not filled; third class, O. Lemcke, 392; fourth class, J. Lankenau, 393; best first shot, J. Tiedeman, 24; best last shot, J. Utschig, 25.

Germania Schuetzen Club, 20-shot scores, champion class: First, Dr. L. O. Rodgers, 426 rings; second, F. P. Schuster, 424. First class: First, J. Young, 379; second, H. Hellburg, 370. Third class: C. F. Rust 421. Fourth class: D. Salsfield 376. Best first shot, D. B. Faktor, 24; best last shot, C. F. Rust 25. ROEEL.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Jan. 18-20.—Hamilton, Ont.—Grand Canadian Handicap. Live birds; \$1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

Jan. 26-27.—Orange Lake, Newburgh, N. Y.—Tournament at Pine Point. Open to all. First day, targets; second day, live birds.

Feb. 15-19.—Hot Springs, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. \$1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 15-18.—Utica, N. Y.—Tournament of the Oneida County Sportsmen's Association. Live birds and targets. Open to all. Henry L. Gates, Pres.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, \$25, extra; \$1,500 guaranteed to the three high guns; \$600, \$500 and \$400; all surplus added.

ONE-DESIGN 25FT. KNOCKABOUT—DESIGNED FOR THE AMERICAN Y. C. BY B. B. CROWNINSHIELD, 1897.

WESTERN TRAPS.

Mussey's Hall Destroyed by Fire.

CHICAGO, Ill., Dec. 24.—At ten minutes before 4 o'clock yesterday afternoon fire broke out in the Tossetti Cafe, 106 Madison Street, this city, and in less than an hour thereafter the upper floors, containing Mussey's magnificent billiard rooms, the finest in America, and one of the best known sportsmen's rendezvous in America, were sacked and ruined. This morning the front of the building is a mass of ice, and even at this hour, twenty-four hours after the fire broke out, hose lines are playing on the ruins, which still burn and smoke. At the bottom of the interior pit of the building lie two-score of the finest billiard tables in the world, with a wealth of ivory, and with pictures, furniture, etc., footing up a total of some \$35,000. Against this is an insurance of some \$25,000, which latter must also be offset against a loss of holiday trade, whose profits would run much over \$100 a day. Billy Mussey is to-day busy among insurance people, and a couple of hundred shooters, fishers, and other sportsmen are homeless and at large upon the streets. It is early to announce any plans about the continuance of the business, but I heard a few moments ago that already a new room is in view, and that as soon as possible the public will be invited to a new hall. As the old building at 106 will be rebuilt, it is likely that Mr. Mussey will in due time be back in his old quarters. He had just added an extra floor to his table space, and had fitted this second room up with lavish expenditure, giving the Chicago public two large rooms superbly equipped. The tables used were specially made and cannot at once be replaced, but any one who knows Billy Mussey and his ambitions about his business knows that he will never rest until he is as well fixed up in every detail as he was before the fire. This may take time, but it will be done, and then the homeless shooters and fishers of Chicago may again be at peace.

The hall of Parson Billy Mussey was a place unique in the concerns of sport in this country. More shooting matches have been made there than in all the rest of Chicago, and more gossip and news of the shooters came there than to any place in the West. If you did not know where to catch a trap-shooter, address him at Mussey's, Chicago, and you caught him. Many of the anglers and field shooters also dropped in there, and the better-class sportsmen of many lines made it a rounding-up point. Any day would see the tables crowded, and the chairs also full along the room sides; and any man wanted was sure to be there, the place being practically a club without a fee or dues, and one elegantly comfortable.

It was at Billy Mussey's that there was located the famous safe with its ever-open door. Alas! the old safe is now about forty fathoms deep under the ice, though it will rise again; let us hope, with the hinges unhurt. In the old days of Chicago, when we were having a little fun now and again with the pigeon shooters, the front door of Billy's safe was about the hottest place in Chicago. Things were a trifle warm around there this week and last week, and we were in a way to have a little fun, until the advent of this unlucky fire brought Billy a Christmas present of disaster and set things of sporting nature second to those of business. Of course all the races which Billy might otherwise have shot will now be set aside, even if for no other reasons than those of business.

At the time of the fire both the halls were full of people, and these thought there would be no trouble, and that the fire would soon be extinguished in the lower floor and basement of the restaurant where it had broken out. Three-quarters of an hour after the fire began some fireman broke a gas pipe in the basement, and the whole lower part of the building was flooded with gas. A heavy explosion followed, and then all was up with 106. Some forty-seven persons were hurt, many of them seriously, by the force of this explosion, but these were chiefly persons who were standing on the street near the building watching the fire, and who were blown about when the whole front of the sidewalk was lifted out and a stream of fire gushed into the air. In the halls on the second and third floors no one was hurt seriously, though the cashiers, Messrs. Sweet, Barstow and 'Gene Day, had narrow enough runs for the firemen's ladders, after tarrying in the attempt to save some of the ivory and the cash. Roil Organ, one of Billy Mussey's stanchest friends and steadiest patrons, carried out a few boxes of balls in his arms, but left his new overcoat inside the hall. When he started back it was too late to save the coat. One of the porters had a narrow squeak of it, but so far as can be learned no sportsman known to the public, nor indeed any occupant at the time in the halls, received any serious injury. The fire occurred just around the corner from the FOREST AND STREAM office. All the evening the street was full of the black smoke of the fire engines. All the street cars for the West and North divisions of this big city were absolutely stopped all night. It seems to have been Billy's idea, if he had a fire, to have a good big one. A great number of readers of FOREST AND STREAM in many different parts of the country will read with regret the destruction of a place familiar to them, and will hope for Mr. Mussey a speedy restoration of his business in a proper home, this to be made in duplicate of the old place as soon as may be possible.

The Chicago Challenges.

On Monday of this week the gentlemen carrier mentioned as being desirous of shooting a race with the regular team in the intercity race met and formally resolved that they were prepared to shoot such a race. They signed their names as published two weeks ago in FOREST AND STREAM, to wit: W. W. McFarland, T. P. Hicks, R. Kuss, Ed Steck, Silas Palmer, and published in a local paper the "news" of their willingness to shoot. Meantime there was published long ago in FOREST AND STREAM the formal acceptance by the original and regular team of the proposal of these gentlemen for this race. This counter-acceptance, or counter-challenge, does not appear to carry much significance, therefore I fear there will be no race between the teams. At the same time Tom Hicks and Si Palmer printed in the *American Field*, of this city, their acceptance of the individual challenge of W. P. Mussey, printed two weeks ago in the *Times-Herald*, a Chicago daily, in which he offered a 100-bird race, \$100, to any of these gentlemen who wanted to shoot the regular team. All this was taken up last week in FOREST AND STREAM, and not much news of interest attaches to it at this date, as the time set by Mr. Mussey for the acceptance of his challenge had long ago lapsed, and his forfeit money had been returned to him by the *Times-Herald*. It is rather curious what could have been the motive of these gentlemen, to wait so long, to try to change the conditions of the challenge (as was sought in the Kuss acceptance), and then finally to post money with quite another paper, where the challenger had not posted his money nor addressed any challenge. I shall not accuse any one of these gentlemen of wanting a little easy notoriety, for I should not think any of them disposed for that sort of thing, but if any of them was really looking for a race was it not easy, natural, and in accordance with all the rules of sporting procedure, to just cover the money at the office where the challenger had his up? Why go to the office of another local paper? Were the acceptors afraid that their money would be lost elsewhere? Now, if they really did want to shoot, they should either have gone to the *Times-Herald* office, or to 106 Madison street—they all knew both addresses—and settled the matter with a word. But if they did not want to shoot, they took just the right way to make it appear that they did not, by going over to the office of the *American Field*, where the doings were enshrouded in comparative secrecy both before and after the publication of their acceptance. Of course I suppose all these gentlemen really did want to shoot, but I am just saying they won't get to shoot, for the above very reason. I hope they will know better next time. I asked Mr. Mussey what he was going to do about this acceptance printed in a different paper, and in the interview he said:

"Do about it? I shall of course do nothing at all about it. I don't know anything about it at all. If any one wanted to shoot me a race, there were the terms and the money up, why not agree at once? If any man had come in here and said a word to me, he could have gotten the same terms as were openly published. I held the thing open five days extra for the sake of appearances, but now it is getting toward the end of the year, and I shall be so busy I shall not have time to think of shooting matters."

"As to the publication in the *American Field*," continued Mr. Mussey, "I don't know anything about that. I have not read that paper for five years; don't know what it is printing, and of course I don't care what it is printing about these challenges. If any of them wanted to shoot, they had their chance all right, but what they may see fit to do elsewhere and elsewhere is matter of indifference to me."

I am sorry about all these misunderstandings, which do nothing to cement the shaky brotherhood of Chicago shootingdom. We were all in hope some of these races would come off, and that we should see some fun here once more, where things have been dull as a directors' meeting for 100 these many years. Of course none of these gentlemen would care to offer or urge a race on Mr. Mussey now, at the time of his business trouble, for they would be too sportsmanlike for that. About all the lesson one can find in the little matter is that there is no official organ of the trap-shooting cult in Chicago, or if there is it isn't located in the Masonic Temple by several majorities. Yet good, clean sport may flourish without an official or officious organ. Let me beg to offer this general rule of sport: If you are honing to get at a fellow on a sporting proposition, get to his money, or get to him quick as you can. Don't go at it in the most roundabout way, but the most direct way. It leaves a better impression and is more apt to be suc-

cessful. In this case, however, no one is injured except Billy Mussey, and his is fire loss only. We shall all be dwelling here in (Chicago) harmony again before many moons.

More Challenges Among Cracks.

Heikes and Grimm are to shoot again, and Gilbert and Elliott are to shoot again. What a narrow, circular competition, and how devoid of genuine sporting interest or sporting news! This is the quickest way to kill these trophies—perhaps I should say the quickest way to bury the stove-lid badge, which is already dead, even if Roll Heikes does use it to fry eggs on just now. Can't some one scare up a contest at the traps with a finish that is a finish, and not a divide; a split or a circular arrangement, with no variety and no end to it? This intercity shoot was a little fun, and if it had brought out new competitors for some of these more prominent trophies it would have been a still greater week we had here in Chicago. But to do it all over again, at Dayton on New Year's Day, at Kansas City on some later day—what's the news to it if the same men shoot all the time? Why not coax out new men? It would sell more goods, if it comes to that. For my part, if I knew where I could find a real good Christmas dog fight to-morrow, where some two dogs wouldn't divide the purse or challenge each other over again, I believe I should make that part of my celebration, such being my old-fashioned ideas of sporting principles and such my notion of a Roman holiday. The difference between the day of Rome and the day of modern trap shoots is that then somebody got licked, and now nobody ever does get licked. I want to see some one licked once at the trap score. This is barbarous, Roman, foolish. Yet think how we respect the old gladiators, even though they are dead! After a couple of those ducks had tangled up, the fellow that was licked never challenged back for the badge. All he wanted was a place to lie down and be quiet. Of course I don't want any of our good folks killed just because they have lost a race or so, but they might lie down and be quiet, and give the amphitheater a look at new talent now and then. As the gladiator said to the boss of the show, "Colonel, there are others."

The Williamson Challenge.

On last Tuesday Dr. J. L. Williamson, of Milwaukee, issued challenge at large to any shooter resident in Chicago for a race at 100 live birds, \$100, race to be shot in Milwaukee at the National Park grounds. At this writing no acceptance of this challenge has been made. You can come into Chicago now and carry off any kind of a proposition you like. We are weary and cast down. Give us a chance to forget Kansas City. If Dr. Williamson cared to come down here to shoot, we might get up nerve enough to find a man to trot him a heat or so; but when we think of how many pigeons he would kill on those grounds in Milwaukee, we shudder, and get goose meat on our collective Chicago spine. It is not likely the doughty blondewill get a victim to come to the Cream City.

1206 BOYCE BUILDING, Chicago.

CHICAGO, Dec. 25.—The Garfield Gun Club, of Chicago, held its second monthly contest at Watson's Park, Burnside Crossing, Ill., to-day. The event was attended with success, and many shooters who were not members of the club were present. The day was cool, with a strong wind from the right quarter and an overcast sky, and many good birds were sent out from the two sets of traps used.

The regular medal contest was at 20 live birds from five traps, 30yds. rise, and members not in attendance in the previous contest were allowed to shoot up one back score. Following are detailed scores of medal contest:

R Kuss	20212110212222222222	18
F Liddy	20221020222222212122	16

*Fehrman	1002121210111210112	16

* Back scores shot up to-day. The following are scores of members and visitors made in practice. De Merest, who is the wife of one of our prominent shooters, and a member of Garfield Gun Club, shows very creditable work for her first time before the live-bird traps by killing 8 out of 15 birds. She has been shooting only a short time, and has made some good scores at targets.

Among others worthy of note was H. Vetter, one of Montgomery Ward & Co.'s good gunsmiths who, while he shoots but little, killed 14 out of 15, and did it gracefully.

Mussey's Challenge.

In consequence of the heavy financial loss sustained by Mr. W. P. Mussey, by reason of the disastrous fire that destroyed his place of business, the following gentlemen, who either challenged Mr. Mussey, or who accepted his challenge, withdrew their challenges, and sympathize with him in his loss. Their names are Thos. P. Hicks, Silas Palmer and Ralph Kuss.

Elgin Gun Club.

The Elgin Gun Club, of Elgin, Ill., announces a target tournament to be held on its grounds at Elgin, Ill., on New Year's Day—Jan. 1, 1898—to be governed by the American Association rules, and to commence at 9 o'clock A. M. Three moneys divided in all events of twelve starters or under, and four in all events of over twelve starters.

A. C. PATERSON.

Audubon Gun Club, of Chicago.

Dec. 18.—Below are the scores made to-day by members of the Audubon Gun Club. Felton, Bissell, Rice and Amberg tied on highest possibles. Scores:

Gillespie, 28	110002212211112	12-2-14
Felton, 26	022121120222211	13-2-15
Bissell, 25	120222222222222	13-2-15
Frothingham, 30	121222022122122	14-0-14
E S Rice, 30	222002112122102	12-0-15
Amberg, 30	011212122222222	14-2-15
Mrs Shattuck	22112101100021	11
Mr Shattuck	202212101122112	14
Leve	22201110220200	10

The above four ties on highest possibles (15) will be shot off next month. Below are the four shoot-offs of the tie in the November shoot:

First tie.		
Morris, 4	21221020012221	11-4-15
Hollester, 2	111212220121111	14-2-15
Felton, 2	012211212221020	12-2-14
Third tie.		
Morris, 4	210221221220002	11-4-15
Hollester, 2	2111101211211	14-2-15
Second tie.		
12110102120120	11-4-15	
1210211210212	13-2-15	
Fourth tie.		
00222200202101	9-4-13	
1121112011111	14-2-15	

Is there Too Much Shooting?

A few days ago we heard the following remark: "The trouble is there's too much shooting. What I mean is that a fellow goes out to shoot nowadays, whether it's a tournament or an ordinary club shoot, and wants to be shooting all the time. He's not satisfied with less than 150 shots for an afternoon, or 200 for a day. A few years ago we'd go out for a Saturday afternoon's shoot and take along fifty or seventy-five shells, and if we fired them all off, we'd think we'd had a jolly good time. Then on Sunday we'd set to work and load up another fifty or seventy-five for next Saturday."

The above remark came home. It's a fact that at the present time an ordinary programme for a tournament calls for 165 shots; sometimes the number scheduled amounts to 200 or more. The object of a club should be to please as many shooters as possible; and we conclude that when the management draws up its programme, it takes this fact into consideration, and fixes the number of targets according to the popular taste. The next conclusion is therefore that the majority of shooters want to fire off their guns as often as possible in a given time. Speaking from actual experience, we would say that this was the case most certainly at present.

Wants Smaller Programmes.

The party who made the above remark was arguing in favor of smaller programmes of events, with more variety in the styles of shooting, and more time for social intercourse. It's a fact that at an "up-to-date tournament," with its two or three sets of traps, there's very little time between shots. Conversations, if of any length, can very seldom be finished without interruptions from the squad hustler. It is business all the time at most shoots. Squads enter "for all day" and march to the score like trained bands. It's bang-bang-bang until the scorer calls "Out"; then comes a grouping around the score board; the man with "20 straight" sticks out his chest; the man who has "got 'em all—but five or six" looks dissatisfied. Then comes the putting up of the guns, the marking down of the scores on the pocket score board; the "How many have you lost now?" etc. By the time that's all over, in pops the squad hustler with his "No. 1 squad, you're wanted on No. 2 set of traps. We're ready for you right away." And so it goes on until the programme's out.

Of course there is the obvious retort: "What are you kicking about? You needn't shoot unless you want to." And right there is the pith of the whole matter—you do "want to!" There's a fascination in it, an excitement in trying to get that straight and beat out so and so. If there's going to be any shooting, you want to be in it.

Clubs Want to Throw Targets.

Then it suits the club. The more you want to shoot and will shoot, the more targets will be thrown during the day, and the more money will it rake in to pay the expenses. If you are a contributor, and not any kind of a manufacturers' agent, you can figure up at the end of the day somewhat as follows: 200 shells at \$2.20 per hundred, \$4.40; paid entrance fee for all day (at the rate of 10 cents per target) \$20. Total, \$24.40; this does not include railroad, hotel, or any other expenses. With so many good shooters up in the crackerjack's class now, a man has to shoot an abnormal gait to hope to clear his expenses, whether it is the Rose system or any old system that is used. What chance does the contributor get to draw down any money? Ask Fred Gilbert what he did last spring.

A good friend of FOREST AND STREAM, who lives way down in Florida on Hobe Sound, took the trouble last summer to figure out the division of the purses in all the events shot at the New York State shoot at Auburn this year. He figured the purses both under the Rose system and under the "old system." The results were so astonishing that we verified them to satisfy our curiosity. His figures showed that there was very little difference between the two systems so far as the Wolves' set of traps were concerned; and it was at that set of traps that one found the shooters who attend for the most part the tournaments of to-day; that is, tournaments other than State affairs, or "professionals barred." Without going back over the figures again, we venture to say that there was hardly a man who shot through every event on the three days of the shoot on the Wolves' set of traps who made enough money over and above his entrance fee to even pay for the cartridges he used. If this was so with the top-notchers, what was it with the 85 per cent. man?

Trap-shooting is Expensive.

Without going into the question of the cost of attending and taking part in the tournaments any further, let us for the sake of argument take it for granted that it is an expensive sport for the average shots. And let us also take it for granted that the average shots cannot afford, or do not care to stand, repeated assaults upon their pocketbooks to the tune of \$15 to \$25 per day. What then is to be done to get them to come out to shoots, not once a year, but two or three times?

The party whom we have quoted at the head of this article was of the opinion as stated above, that programmes should be shorter, and the shooting made more varied and consequently more interesting. Unknown angles, rapid-fire, is most certainly monotonous to watch, especially with a squad of crackerjacks breaking 96 or 97 out of 100. Of course if you cut down the programme you cut down the "added money" if any is offered; and you also cut down the chances of a club getting out whole on the shoot.

Would a programme something like this draw shooters together? One 25-target event, one 20-target event, and two events at 15 targets each, all at unknown angles; two events at 15 targets, Novelty rule; and two events at 15 targets each, expert rule, one man up. The above programme calls for 135 targets. Put the entrance fees at the average rate of 10 cents per target, or \$13.50 "for all day." With twenty entries as an average, this would make a total of 2,700 targets thrown in the programme events, or a receipt for price of targets at 2 cents each of \$54 to pay for about 3,000 targets and the cost of running the shoot.

Would Not Draw the Sharks.

Beyond question, such a programme would not draw out the men who shoot for what there is in it. There'd be no banking of \$2,000 a year of "contributors'" money by following such shoots. But wouldn't there be lots of fun and good sport at such a shoot? And, gentlemen, you who manufacture and sell ammunition and guns and targets, wouldn't such shoots react beneficially to your interests by recruiting the ranks of the trap-shooters from those who would sit and watch the shooting of such a programme, but who wouldn't travel 100yds. to see nothing but a lot of men going through over and over again the motions at known or unknown angles, rapid-fire?

There's food for thought in what we've stated, and we can see that there's a lot more to be said upon the subject, both pro and con. There's plenty of room for argument, and probably we shall get it.

Answers to Correspondents.

No notice taken of anonymous communications.

Brooklyn.—Has the law forbidding "jacking" any kind of game in Maine been repealed? Has the law forbidding the killing of cow moose in Maine been repealed? Ans. Neither has been repealed.

Arkansas.—Does the Arkansas non-export law in "Game Laws in Brief" refer to fish only? I was required to pay this tax two years ago for shooting quail at Weiner. Ans. No; the export of both fish and game is forbidden.

Stray Pigeon.—Should you receive inquiry through your paper for carrier pigeon, gold ring set in enamel, with figures 1895 W. 12 on, information could be received by corresponding with the writer, C. C. Tunnington, Fremont, O.

PUBLISHERS' DEPARTMENT.

"Sunset Limited" Annex from New Orleans.

The annex to Sunset Limited will resume service from New Orleans on Jan. 4, 1898, leaving New Orleans every Tuesday and Saturday thereafter, making connection at that point with the Limited train of the Southern Railway from New York and the East. The Limited will consist of Pullman latest, drawing-room, sleeping car and Sunset Limited dining car. The southern route is the most delightful this time of the year. The route lies south of the snow line, and is free from snow and excessive cold. Washington and San Francisco tourist sleeping car leaving Washington every Monday and Saturday goes through to San Francisco without change. For full particulars, sleeping car reservation, tickets, etc., call on or address ALEX. S. THWEATT, Eastern Passenger Agent, 271 Broadway.

AN EXTRAORDINARY RESOLUTION.

AN extraordinary resolution was adopted by the American Society of Naturalists, at Ithaca last week, declaring it to be the sentiment of the members of the convention that the position of United States Fish Commissioner should be filled only by a competent scientific man.

Ordinary every-day common sense suggests that the Fish Commissioner should be a competent scientific person.

Approved business principles demand that he should be a competent scientific person.

Those who established the Commission and directed its course in the early years of its usefulness contemplated that at the head of it should always be a competent scientific person.

The law providing for the office of Commissioner requires that the President shall appoint to it only a competent scientific person.

The extraordinary character of this resolution of the naturalists at Ithaca then is that, with common sense, accepted business axioms, and the letter of the statute itself all requiring these qualifications on the part of a Commissioner, any such expression of opinion should have been called for. It was demanded only by a most extraordinary situation. The President proposes to hand over to an incompetent and ignorant individual a great public trust; and this is in violation of the law. At such a juncture it was well for the Society of Naturalists to take the action it did. The sentiment expressed at Ithaca should be indorsed and re-echoed from every quarter of the land, until President McKinley shall comprehend that his proposed naming of a West Virginia politician to be United States Fish Commissioner would be as much a defiance of public sentiment as of the law.

SOME ONE ELSE'S RESPONSIBILITY.

WRITERS—and talkers too for that matter—are accustomed to speak of sportsmen as if they were a class apart from all other men, possessing qualities and characteristics which are peculiarly their own. Thus the true sportsman is said to be generous, kindly, hospitable, highly bred, truthful, the soul of honor; in fine, one of those noble men of nature of whom we often read, and whom we sometimes see. If we are to believe the writers alluded to, all these qualities pertain to the "true sportsman" by reason of his sportsmanship; in other words, because a man is fond of shooting, fishing or yachting, he is therefore raised on a pinnacle above his fellow men. Could anything be more ridiculous than such an assumption?

To tell the truth, the sportsman is just a plain, common man, and the fact that he finds his highest pleasure in shooting, fishing or yachting has nothing in the world to do with his mental or his moral attributes. If he possesses those qualities which cause a man to be liked and respected, he will be popular; if he is by nature a curmudgeon, his sportsmanship will not save him from the condemnation of his fellows. His being a sportsman is only an incident of his life.

Sportsmen are just as human as printers, drygoods clerks, railway engineers, doctors, lawyers and actors. In no way is this better shown than in the way in which they strive to place on the shoulders of others the responsibility for their own acts. For many, many years the game of America has been disappearing with constantly increasing rapidity, and the reason, as is well known to everyone, is because the wild birds and animals are shot off by civilized man more rapidly than they can increase. The number therefore grows constantly less.

It is seldom, however, that we hear an acknowledgment of the part of sportsmen in the game decrease. Hawks, owls, wildcats and pot-hunters are cheerfully denounced for their share of harm. There has been invented that absurd story about the Indians of Alaska, who were said

to have ruined the duck crop, and were roundly cursed for it. Next year we may expect to hear that the Klondike miners have invaded the breeding grounds of the fowl and so have caused our bags to become lighter. But whatever the cause of the game destruction, it is seldom we hear any confession of complicity in it. The gunners of the North say that it is over shooting by the people in the South; those of the East declare that the destruction takes place in the West. But what of the great army of gunners spread over this country who pursue the wild creatures for nine months of the year? What is it that they kill? What of the thousands of guns and the millions of cartridges turned out each year by our factories and distributed over the land? What about the man who says, "Why, I used to go out every day except Sundays all through the shooting season, and I always got from twenty to forty birds a day; and now I am lucky if I get three or four. Where have the birds gone?" Or the other who says, "Why, I used to get a hundred canvas in a day and now I can't get twenty-five. I don't see what has become of them."

It is time that this shirking of responsibility ceased and that shooters should face the situation and acknowledge that the reason that there are no birds to-day is because they have killed them off. We can't have our cake after we have eaten it. Unless some strict system of preserving on a large scale is inaugurated in America or our coverts are stocked with exotic game, a time will probably come when our native species will become so scarce in many localities that field shooting will almost entirely cease. When that takes place the birds will slowly increase again, but they will probably always be kept down very close to the vanishing point, and the time is likely to come when the quail, the partridge, the prairie chicken and the woodcock will be birds as little known to the average gunner as the wild pigeon is to-day.

SNAP SHOTS.

An electric wire case was determined in the courts the other day which has a bearing on fish nets. An electrical power company having been notified by the Mayor of New York to remove its overhead wires, unlawfully maintained, failed to do so within the prescribed time, and the wires were thereupon cut down by the Commissioner of Public Works. The company then brought suit in the Supreme Court to compel the restoration of the wires or to recover damages. The court found against the plaintiff, and dismissed the complaint, holding that "the company had no right in the first instance to string its wires, or thereafter to use them, and not having availed itself of the opportunity to place the wires in the subways it was the duty of the Commissioner of Public Works to remove them, as being a public nuisance and constituting a source of danger to person and property." "It is a well settled principle of law," Justice McLoughlin said, "that an injury to or destruction of property necessarily incident to the exercise of the jurisdiction to summarily abate a nuisance interferes with no legal right of the owner, and is not violative of the constitutional prohibition against depriving the owner of his property without due process of law. Therefore any injury which plaintiff sustained by reason of the wires being removed from the streets by the Commissioner of Public Works is not actionable. When cut down, it was his duty to remove it, and thus clear the street of obstructions."

The same principle has been laid down by the United States Supreme Court as applying to the summary destruction of illegally maintained fishing nets. The New York statute makes it the duty of protectors "to seize, remove and forthwith destroy any net, pound or other illegal devices for the taking of fish or game found in or upon any of the waters or islands of the State where hunting and fishing with nets or other illegal devices is prohibited or illegal, and such nets, pounds or other illegal devices are declared to be a public nuisance, and shall be abated and summarily destroyed by any protector, and no action for damages shall lie or be maintained against any person for such seizure or destruction." It was contended by owners of certain destroyed nets that the Legislature was without constitutional authority thus to sanction the destruction of property "without due process of law;" but the Supreme Court held that the provision was well within the police power of the State, and in effect that the due process of law defense did not apply

to the summary abatement of a public nuisance. Those net fishermen in the West who are planning to test the same principle in the courts may save themselves counsel fees if they will read the decision as printed in full text in our columns at the time.

The attainment of Mr. Charles Hallock's proposed system of an uniform game season for all States lying within certain zones of latitude and longitude would be a great stride in advance; but until the time comes when such an ideal plan shall be feasible effort may well be directed toward securing at least an uniform law for each State. The New York League put on record the other day its opposition to local legislation, and another movement in the same direction is now to be credited to the Maryland State Game and Fish Protective Association, which has prepared and submitted for discussion a bill to make uniform seasons for the State. In local legislation Maryland is easily ahead of any other State. Hardly two adjoining counties have identical seasons. The laws have been framed not always to comply with common sense, but sometimes to defer to local jealousies.

Theoretically the dates of a close season are determined by a consideration of what will best answer the practical purpose of the protected period, which is immunity and security for the game in the breeding and maturing season; and as the birds on one side of a county line have substantially the same nesting habits as those of birds on the other side of the line we might expect that the season most propitious for one would be likewise suited to the other. On the contrary, we find almost as many diverse seasons as there are county divisions; and under such a system the enforcement of the laws has been found most difficult. The diversity of seasons and regulations renders it comparatively easy for offenders to evade conviction, and moreover there is a disregard of the statutes because of a public perception that such an inconsistent code cannot be based on reason. The State Association rightly considers that the first and most important end to be sought in amending the laws is such an uniformity as shall simplify their enforcement and command for them the support of public respect. While there may very well be maintained differences of opinion respecting some of the details of the proposed measure, the principle of a general law for the State should be warmly encouraged, and we trust that the efforts of the Association in this direction may be crowned with success.

As is the rule with all reforms, the enforcement of the game laws in New Jersey has been accompanied by numerous newspaper exaggerations and malicious lies, manufactured by those who have sought in this way to bring the service into disrepute. One of the most flagrant instances of this nature is cited by the commissioners in their report. It was the publication by several newspapers of a story that four innocent girls had been arrested and convicted for having caged robins in their possession. For this we are told there was not the slightest foundation in fact. The persons actually convicted and fined for taking robins were two Italians, who had for a long time been engaged in capturing birds, which they carried to New York and sold. The innocent girls were purely the product of fancy or malicious imagination. Whenever the newspapers come out with tear-compelling head lines and sympathetic stories of poor men sent to jail because, being ignorant of the law, they have captured song birds to while away in their humble homes the dreary hours of widowed lives, we may be reasonably certain that the New Jersey game wardens have at last brought to book some persistent violator of the law, for whom they have long been lying in wait.

A series of five special postage stamps is to be engraved for the Trans-Mississippi Exposition at Omaha next summer, and Postmaster-General Gary has invited suggestions for suitable designs. The series might very well show objects characteristic of the several stages of Western history. For primitive days the buffalo or the antelope would answer most admirably for the first stamp; then the tepee of the Indian, the pack train or a prairie schooner, the log cabin or sod house, and finally the locomotive or steam plow or reaper. Any of these would lend themselves to the purpose very effectively.

The Sportsman Tourist.

Cherry.

From "Trail and Camp-Fire." The Book of the Boone and Crockett Club. New York: Forest and Stream Publishing Co. 1897.

I HAD spent a good many hours one October day on the Snake River plains searching for antelope, and it was well along toward nightfall when Rubber Boots and I pulled up before the door at the ranch, and I dismounted, leaving Boots to the care of the packer. The day had been raw and cold, and I hurried into the house and to the great open fire. I was a little blinded by the light at first, and turned all my attention to the fire, only replying to the usual question of "What luck?" addressed me by my companion. I was unaware of the presence of a third person until I heard a strange voice say, evidently in pursuance of a conversation which had been interrupted by my entrance: "For those biggest trout bait with grasshoppers, shove your raft out from the shore, and when they take, just let 'em take, and sit down on your raft, and you are in for a run around the lake."

Looking in the direction from whence the voice proceeded, I observed for the first time a tall, lank, but powerfully built man, standing with his back toward me. I threw some more wood on the fire, and as it blazed up, and seemingly in acknowledgment of my subdued laughter, a grizzled face was turned toward me, and its owner added, "but of course you don't want a very big raft."

This was my first acquaintance with Cherry, an acquaintance which has ripened and become closer with years, and on which I have never ceased to congratulate myself. Whatever I may know of woodcraft and hunting is due largely to his tuition. For many years we have roughed it and smoothed it together; found game and found none; and day in and day out he was the best partner it has ever been my good fortune to meet. He possessed the invaluable faculty of always being around when he was wanted, and was ready for whatever might turn up, from trout fishing to Indian fighting; he had an inexhaustible fund of good humor; was always on the alert, game to the core, and willing to endure any hardship. Cherry was a born sportsman, and a living exhibition of the noblest innate rules of the art; but he had his foibles and weaknesses, and of these only I speak. I think his greatest failing was the careless manner in which he handled the truth, often with ludicrous results, not the least humorous feature of which was his own entire oblivion of them.

As a youngster, I imagine Cherry's education had been sadly neglected, and one of his queer conceits was to hide his evident deficiencies in this respect. It was decidedly a case where silence was golden, but he much preferred fighting in the open to ambuscading in that fashion, and was never known to confess his ignorance of any subject under the sun. For instance, one year when we arrived for our annual hunt, we were met at the railroad station by Cherry and the other guides with a pack outfit, and journeyed from there to a small frontier town where our supplies were awaiting us. On reaching our destination, we went directly to the post-office, to inquire for any mail that might have arrived, and Cherry accompanied us. The postmaster gave us our mail, and with it a letter which he had had for some time, the address on which was not clear, and asked us if we could make it out. We were unable to do so, and were about to hand it back, when Cherry said perhaps he could tell something about it. As he could neither read nor write—a fact well known to all of us—we were somewhat surprised at his request; but in nowise abashed at the witticisms which it provoked, Cherry examined the letter very minutely, scrutinizing it carefully from every possible point of view, and finally handed it back to the postmaster with the utmost gravity, remarking that "the devil himself could not read it."

When we reached Cherry's ranch we found that his partner had just returned from a trip to the nearest railroad station above, and had brought back a telegram and letter for Cherry. He as well as Cherry was unable to read, and Cherry brought the telegram to me, asking that I should read it, stating, by way of apology, that he "could read books and letters, but he hadn't got along quite as far as telegrams yet." The letter was typewritten, and this he also asked me to read, remarking that he could read "what had been writ in a good common school hand, but that letter had been writ most awful poor."

One of Cherry's most elaborate essays at fiction was what would be known on the stage as "the story of his life."

This narrative he imparted to me while we were snow-bound in camp together up among the foothills. The bear signs in our section had become rather poor, and a snowstorm affording us a more favorable opportunity, we started out to take advantage of it. But the storm proved to be rather more than we had bargained for, and after two days of travel, during all of which time it continued to snow, we made as good a camp as possible, and in the loneliness and solitude that prevailed during that time Cherry took me into his confidence. Many of his stories derived too much of their charm from Cherry's picturesque manner of telling to be successfully recounted, and others were imparted only under the pledge of secrecy, but sufficient may be here set down to illustrate his varied career and the resources of his imagination.

Cherry was about sixty; long, lank, and not exactly what might be called a handsome man; as he sat by the camp-fire and related this veracious narrative, the result was impressive as well as ludicrous. He had been born in Texas; was a bit hazy as to location, but, as he put it, "by crossing the Rio Grande twice, and then going between a butte and a sand hill, he could strike the old homestead in the center every time." But whether he followed his back track or not, he said, it would be easy for him to get there when he struck Texas; everybody down there knew the place. As a matter of fact, it was on his father's ranch that old Noah had built the Ark; it was famous on that account, and about everybody in the State had been there at one time or another to look at the place, and to secure a few chips as souvenirs. He

recalled the days of his youth, when evil times came not, and he could travel eighty or ninety miles a day easily, always on the run, up hill and down; how, when he was fourteen years old, he had left his father's house to go to work on a cattle ranch, and when, after six months, word came to him that his father's fortune had been lost in an unlucky speculation, he had returned and emptied out of his pockets \$80,000 in gold, which had tided his father over, and saved the family from degradation. He also told me that his name was not Cherry, but Ryan, and that he had two brothers, one of whom had become known to fame as Doc Middleton, the notorious road agent and confidence man, while the other had acquired a scarcely less enviable reputation under the pseudonym of Dick Turpin. The reason why he had himself assumed an alias was one of the things imparted to me in confidence. He had left Texas many years ago and journeyed to Montana, where he had started a ranch, and introduced a breed of horses which he said had since become known all over the world under the name of Suffolk Punch. Of this stock he had some 80,000 head, besides the ordinary breed of horses, cattle, sheep, etc.

As fortune smiled upon him, he had "done society" a little, as he expressed it, and, wishing to marry and settle down, had paid court to the fair daughter of a neighboring cattle king. While, from Cherry's account, the attractions of this young lady were not such as would entitle her to pre-eminence among her sisters in the capitals of the effete East, they seemed to have secured for her decided precedence in her own circle of society, and suitors came from far and near. While Cherry was far too delicate to go into details, he gave me to understand that his attentions were not unfavorably regarded by this damsel, and that he might long ago have been settled down to a happy matrimonial existence with the object of his affections; had it not been for his prospective father-in-law. Why the stern parent objected was not quite clear, but he did so, and finally his animosity attained to such a pitch that Cherry thought it safer to leave the country, as the old gentleman was a dead shot and afflicted with a villainous temper. Being offered the alternative of migrating or of making a target of himself if he remained, he chose the former, and was forced to depart on such short notice that he was compelled to leave behind him his 80,000 Suffolk Punches, his ranch, and everything else of value he possessed. Up to the time of this conversation Cherry had not succeeded in retrieving his fortunes, but lived in the daily hope of doing so, and, indeed, according to his own account, Dame Fortune had so often and so unexpectedly taken a hand in his affairs that I should not be surprised at anything that might happen. I never read an account of some new western Monte Cristo that my thoughts do not instinctively turn to Cherry, as the possible possessor of this hastily acquired wealth. He could travel the whole road from poverty to wealth and back again in less time than any man I ever heard of.

The storm having blown over in a couple of days, we broke camp and started for the ranch, and on the way ran across the tracks of an enormous grizzly, and, as luck would have it, caught up with him, and, having a fair shot, I killed him almost where he stood. As we were taking off his hide, Cherry told me about the last one he had killed, and as the story progressed, I began to feel that this one was only a cub in comparison. According to this narrative, while he and his companion had been trapping on the upper waters of the Gros Ventre two years before, their trap had been set and been sprung, but the bear had somehow managed to escape. The same thing happened a second, and then a third time. Exasperated at such unbecoming conduct on the part of the bear, Cherry and his companion resolved that they would have him at any cost, and they set a spring gun by the trap, and also a spear with a dead fall, to pierce the wily animal's back. The next morning they found that the trap had been sprung, the gun had gone off, and the spear lay buried in the ground, but the bear had evidently escaped without a scratch. This was too much for Cherry's companion, who insisted upon taking up the death-dealing apparatus and letting the bear go, but Cherry pleaded for one more trial, and the next morning was at the trap as the sun rose over the hills, to see what had been the result of his last experiment. He found everything just as it had been left the day before. Apparently the bear had either risen later than usual, or had secured his breakfast elsewhere at less personal risk to himself. So Cherry, after examining his rifle, made himself as comfortable as possible behind some bushes, and waited. Morning passed and noon came, and still no bear; but shortly after the sun passed the meridian, there was a crashing among the underbrush, and there came into sight what I judge, from Cherry's account, must have been not a grizzly bear, but one of those antediluvian monsters known as a cave bear, which were the terrors of our prehistoric ancestors. Cherry was an old campaigner in bear hunting, and not easily dismayed, but the sight of this tremendous brute as he came leaping toward him, clearing the intervening fogs at a single bound, and making the earth tremble at each succeeding jump, was so startling as to make him turn "goose-flesh" all over, so that, as he expressed it, "you could have struck a match" on any part of him. Realizing that discretion was the better part of valor, Cherry, like Brer Rabbit, "laid low," and with bulging eyes watched the bear as he finally landed with one hindfoot square in the number six trap. This would have doomed an ordinary bear, but not so this one, and with the most intense astonishment Cherry watched him with the greatest deliberation press down the springs with his front feet, and then open the trap with his disengaged hindfoot, and step out, apparently little the worse for his experience.

Up to this time Cherry had been so much interested in the bear's operations that he had forgotten all about his rifle, and it was not until bruin had dodged the spear and started to make off with his booty that he remembered it. He got in two shots on the bear then, but seemingly with no other effect than to put him into an extreme state of irritation, and in this disagreeable mood he started for Cherry on the run. The situation was certainly precarious. Cherry tried another shot, but, as ill-luck would have it, the cartridge missed fire and the ejector refused to work. In the next second or two Cherry thought of all those things in this world that he should have done, but had left undone, and of all those

other things which he should not have done, but had done; but the instinct of self-preservation was still strong within him, and an open tree-trunk presenting itself at this opportune moment, he made a dive for it. It had been felled to the ground in some terrific battle of the elements years before, and Cherry got into it just in time to feel the bear's claws tickle the soles of his boots, as he jammed himself into its farther extremity. Do the best he could, this was as far as the bear could reach. He was baffled for a moment only, however, and then Cherry felt his impromptu habitation suddenly elevated into the air and borne along at a rapid rate. Working himself down to the opening again, he found that the bear had picked the log up on his shoulders and was making for a large beaver pond about 300 yds. distant, from the steep bank of which he dropped it into the water, and then sat down to lick his wounds and await developments. Foreseeing what was coming, Cherry had taken such precautions as he could to keep his rifle dry, and as the log floated high enough out of water to enable him to breathe after the first ducking, he set to work to remove the obstructing cartridge; but it was slow work, and he labored under great disadvantages. Meantime the bear grew impatient, and evidently decided to force the fighting, for he walked out on the dam and tore a large section out of it. The pond drained rapidly, and to his horror Cherry soon felt the impetus of the current drawing him with ever increasing rapidity into the clutches of the bear, who was at the opening, balancing himself on three legs preparatory to reaching for his victim with the fourth. When Cherry reached this point in his narrative I took a good look at him, to see if he was really present in the flesh, so completely did he seem to have closed every avenue of escape. But it seems a new cartridge did go home finally, and as he made the last cut with his skinning knife he told me that that hide brought him \$60 green.

Apparently no adventure ever happened to Cherry that did not remind him of some parallel instance in which he had figured, usually of a much more dangerous and exciting character. One year, while we were hunting in an extremely rough and broken country, we came across a good-sized bear, and finally, after a hot chase, brought him to bay on a narrow trail running around a huge cliff, where we killed him. His death struggles sent him over the cliff and to the rocks below. All of these circumstances brought vividly to Cherry's mind an adventure which happened to him some years before, while hunting bear in the Sierra Madre Mountains. The country was rough and almost impassable on horseback, and finally he came to such a place that he was compelled to dismount and seek a trail with a high bluff above him and a precipice below, and had reconnoitered this for some distance, when he saw, rounding the turn ahead of him, a huge California grizzly. He had left his rifle behind him, so hastened to make a retreat in good order, but on turning the curve behind him he beheld to his horror another grizzly coming in the opposite direction. For thousands of feet, so it seemed to Cherry, the cliff rose above him almost perpendicularly, and the descent into the canyon below was just as steep. Most men in a similar predicament would have ceased to think of the affairs of this earth, and concentrated their attention on the next world; but not so the resourceful Cherry. Short as was the time for deliberation, his fertile instinct was equal to the occasion. With the rapidity of a lightning-change artist he proceeded to divest himself of his clothing, which he tossed over the cliff, and then, throwing himself on all fours, he proceeded to meet the advancing grizzly. In those days, as he explained, he was a most powerful man, and covered with a superabundance of hair. This latter acted as his disguise, and, putting on a bold front, he awaited the approaching grizzly, which growled and showed his teeth as he came up. Cherry did likewise. They drew closer, and putting their noses together both bristled up and growled louder and fiercer. The bear sniffed at Cherry, who returned the compliment. The bear pawed the earth; so did Cherry, and then, with bristles erect and a parting growl, each went his way, with an occasional snarl and a look backward, until the next turn hid them from view. As Cherry was whittling a stick and putting some sand on it, preparatory to sharpening his skinning knife for removing the hide of the bear, he remarked that that was about as close a call as he had ever had; but, as he stated with an air of apology, he knew it was all right, "because it was November, and March is the only month that counts for me. I always notice that if I manage to get through March I always live the rest of the year."

While not an admirer of Indian character in general, Cherry paid the "sincerest form of flattery" to one of them in the person of Iago, and at one time this trait of his came near getting all of us into trouble. The last year we were together the Indians, always more or less dangerous, were especially treacherous. They would get together in small raiding parties, and swoop down on defenseless cattlemen, disappearing as quickly as they came, and leaving a trail of murder and desolation wherever they went, until finally the Government had to send several troops of infantry and cavalry to protect the lives and property of the settlers. One day our party surprised one of these murderous bands and made them all prisoners, and were marching them to the nearest army post, when, at a given signal, they made a break for liberty. Most of them escaped; a few did not. Some time afterward the State authorities sent an agent to inquire into this part of the "massacre," as the "New Journalism" styled it in flaming headlines. Knowing he had been in our part of the country, we instructed Cherry to be most discreet, and not to boast, as was his wont, over the Indians he had accounted for. As a matter of fact, he had not accounted for any of them.

It was not long after this that a stranger rode up to the ranch, and, following the hospitable custom of the country, Cherry hailed him and invited him in. Some twelve or fifteen of us were sitting outside the door at the time, most of us young fellows, and the agent, as he turned out to be, nodded in our direction and asked Cherry if those were all his. Cherry took a look at the throng gathered in front of the house, and then, turning on the agent, asked him, in a tone of undisguised contempt, "if he took him for an incubator?" He soon got on the good side of Cherry, though, by telling him that

HEAD OF MOUNTAIN SHEEP.

Killed by Mr. George Gould in the Peninsula of Lower California. Probably Nelson's Mountain Sheep.

he had heard what a good shot he was, but during the dinner that followed adroitly remarked that he supposed that the Indians whom Cherry had had in charge had escaped. Up to this time Cherry, who had all the time been eager to give a full account of the entire transaction, had managed to restrain himself, but this slur on his ability as a marksman was too much, and, in spite of all our winks and nudges, he came out with an emphatic "No, sir; not much, they didn't; not by a d—d sight." Anything could be questioned but the accuracy of his faithful rifle. I do not know what the agent reported, but am certain he could have had the entire band of Indians satisfactorily accounted for if he had remained long enough in Cherry's society. We took care, however, that he did not.

It was the year that young Robert Ray Hamilton was lost that Cherry's pride received its quickest fall. The horse that Hamilton had ridden was found on the bank of the river not far from our camp, with the saddle overturned, an antelope strapped on behind the cantel, and some river grass clinging to the stirrups. In the hope of finding his body we built a log canoe for the purpose of searching the river. Men accustomed to handling a boat were requested to step out from the motley crowd gathered on the bank, and among the first of the volunteers came Cherry, with the remark that "he was born and bred in a boat." We shoved out from the shore, and began poling along the shallow stream. All went well until we struck a deep and stagnant pool, when Cherry suddenly dropped his pole, and, peering over the side, gasped out: "Boys, we have got to turn back; I can't see no bottom here." Nor could he be induced to get into an upright position again and go to work until the bottom was once more in plain sight.

One of my most amusing experiences with Cherry happened that same year. Reports of remarkably good shooting had come to us from the other side of the range; and, hoping to participate in it, we decided to cross, although it involved a trip of some 300 miles in the dead of winter. We had almost succeeded in reaching the foothills, when a blizzard from the north struck us with such severity that for four days it drove us before it southward. The country back of us was in such condition, and the cold so intense, that we then decided to strike out for a town about ninety miles distant, to rest up and supply our larder before again venturing into the mountains.

After two days of forced traveling we reached the town, and gave an eager welcome to the first place of entertainment we could find, leaving our horses outside. The latter did not relish this arrangement, and soon became restless, so that Cherry finally decided to take them to the outskirts of town and make camp, where we were to follow him later. We were just beginning to luxuriate in the comfort and warmth of the hotel, when we were startled by a series of piercing yells and curses almost outside the door, and, recognizing Cherry's

voice, we rushed out, vaulted into our saddles, and drove our horses pell-mell around the corner. The sight that met our eyes was sufficiently exciting to cause all of us to hurry to the rescue. Our pack horses were bucking about in every direction; some running away; some tangled up in the wire fences, and in danger of serious injury; and some on the ground, thrown by their loosened lash ropes. Cherry was afoot, the bridle of his horse in one hand and his six-shooter in the other. The cause of all this commotion was a trolley car, which had suddenly burst around the corner with the usual clanging of the bell and pyrotechnic emission of sparks. When we arrived on the scene, Cherry had the motorman covered with his revolver, and was bawling to him at the top of his voice to "take his wagon into another street." This order not being obeyed with sufficient alacrity, he fired a couple of shots across his bows as a warning, which confirmed the motorman and his fares in the impression that a hold-up was in progress, and the last we saw of them they were scuttling across lots to a place of safety. We hastily got our outfit together, and started at once in the direction of the old ranch, concluding that, after all, there was no place like home. Cherry listened patiently to our remonstrances as we rode away, but was evidently not placated, and declared defiantly, as the town disappeared behind the hills, that "No Christian soldiers, with their church-bells ringing, could travel up the same canyon with his pack horses. Not if he saw 'em first."

It must not for a moment be assumed from these stories that Cherry was at all deficient in courage, and nerve, and daring. Far from it. And while he was not what is known as a "bad man," and had no private graveyard, yet many a Western bully has found to his cost that, underlying that childlike and amiable simplicity of character, there was a stratum as hard as flint, and which struck fire as readily when dealt a blow. Unless the traditions of the frontier are at variance with the facts, there are several people registered in the next world on Cherry's introduction. According to one of these stories, Cherry and a number of trappers and cattlemen were gathered at a ranch one winter evening exchanging yarns, as was their wont, and everything was peaceful and amicable enough until the advent of a tough citizen from the foothills, who came in just as Cherry was relating some of his experiences, to which the newcomer took most decided objections. Cherry stood his abuse and ridicule as long as possible, and, finally, when it became unbearable, resolved, rather than have trouble, to leave, and was in the act of mounting his horse when this bully, who was of enormous size and strength, dealt him a terrific blow on the head, which nearly rendered him insensible. He then followed up this cowardly advantage with several more of the same kind, after which he dragged Cherry back to the house and threw him on the floor, as an example of what others might expect who incurred his displeasure. He had made a very grave mistake, however, in giving

Cherry this brief breathing spell, for it enabled him to pull himself together and collect his faculties. One of his eyes had been rendered useless by a blow it had received, and the other was nearly blinded by the blood which flowed from a cut on his forehead; but as soon as he was able to distinguish his antagonist he made for him with a rush. Seeing him coming, the bully drew his revolver, but before he could pull the trigger Cherry was upon him, and before the others could interfere, had they been so disposed, had killed him with his own weapon.

I happened to be present at a little tragedy in which Cherry took part, which caused the death of a famous horsethief and his partner, and which well illustrated Cherry's coolness and nerve. He had known years before in Montana a man by the name of Murphy, who at that time was acting as foreman for a large cattle company, and afterward got mixed up in some one of the numerous border frays which were continually arising, and the other side getting the upper hand, he was forced to leave. While en route south he fell in with a man by the name of Spalding, who had some 200 head of horses with him, which, he assured Murphy, were all "good" stock, and offered to give him an interest in them if he would help to get them to market, and this proposition Murphy accepted. Shortly after this they fell in with Cherry, who was returning from a hunting trip, and Spalding made the same proposition to him, which was also accepted. The very next night a band of horsethieves, or sheriff's deputies—they never knew which—stampeded their outfit, and made off south. They succeeded in recovering the greater part of the stock, but, fearing further depredations, and being near Cherry's ranch, decided to winter the stock there.

During the winter a trapper from the north, who stopped over at the ranch for the night, told Cherry that the horses had been stolen, and that Spalding was the man who had done it. Cherry questioned Spalding on the subject, and, much to his and Murphy's surprise, learned that the charge was true. Cherry was for washing his hands of the whole outfit, but Murphy decided to see it out, and, chiefly on his account, our old guide concluded not to interfere, but to allow the stock to winter on the ranch and let matters take their course. The winter was almost gone before anything further was heard of the stock; but the latter part of March word came to Cherry that a strong Montana posse was headed for the ranch. Even then he and Murphy took no measures to disassociate themselves from their suspicious company, but decided to stick together and take chances. Our party was camped on the river, about two miles below the ranch, and one morning in April we heard the posse go by on the gravel bank below, and by the time our horses were caught and saddled we heard the shooting in the distance. We found out afterward that Spalding had gone to the cow barn about the time the posse arrived, and the leader met him at the door as he came out. He was at once covered with revolvers and ordered to surrender, but instead he jumped back into the barn and opened fire with both his guns. The odds against him, however, were too heavy, and he was shot down where he stood, but not until more than one poor fellow had been sent to his long account. Spalding was riddled with buckshot, and a fusillade of Winchesters was kept up long after he was dead, so that we had to bury him in a blanket.

Murphy, hearing the shooting, grasped his rifle and started for the barn, but just as he opened the door of the ranch a bullet imbedded itself in the wood near his head, and sent the splinters flying into his eyes. Dazed and blinded for the moment, he put his hand to his eyes, and half stepped, half fell back into the doorway, and the man who had fired the shot, thinking he had killed him, raised himself from behind the mound where he was hidden. Quick as a flash, Murphy killed him with his gun at his left shoulder, and almost in the same instant shot through the heart another of the deputies, who incautiously showed himself in another direction. Then he stepped into the open, and called out that he would fight them one at a time, or surrender, but even while he spoke a bullet struck him in the back. He turned to face this new foe, but was struck again and again until he reeled and fell; but even then, though shot through in a dozen different places, he continued to use his rifle, and when they got to him the magazine was empty. The posse had surrounded the ranch when we rode up, and commanded the occupants to step forth. Cherry was the only one. As he came out of the door he was ordered to throw up his hands, while forty deputies covered him. He had his hands in his pockets; started to obey the order; drew them half way out; hesitated; shoved them back, and finally crossed his arms on his chest. The order was repeated, but Cherry, looking about him, first at the posse confronting him with leveled rifles still smoking from their recent execution, and then from the body of Spalding to the body of his friend Murphy, both riddled with bullets, he deliberately put his hands back in his pockets, and, turning to the sheriff, said: "These hands will go up for men, not for murderers."

Cherry will be sixty his next birthday.

LEWIS S. THOMPSON.

An Amphibious Alligator.

A BOSTON lady stood on the deck of the Ocklawaha steamer in Florida, notebook and lorgnette in hand, asking ponderous questions of a darky roustabout.

"Is the alligator amphibious?" was one of her questions.

The darky scratched his head; he was a bit puzzled, as there had been more corn-pone than dictionary in his bringing up, but his quick wit and natural logic did not desert him as he replied:

"I reckon he 'am, mis'; he done bite yo' shuah ef yo' monkey wid him."—*Youth's Companion*.

SHE had just returned from a visit to Boston. "Is it true," asked an acquaintance, "that there is an air of culture and educational refinement plainly noticeable in the speech of Boston residents?" "My dear," she replied, impressively, "even the owls around Boston hoot 'To whom!' instead of 'To who!' as they do in the West."—*Exchange*.

A Requiem.

I WENT home the other night, pulled off my shoes and traded them for a pair of slippers, got comfortably settled in a big chair by the fire, and started in on a new book. The first chapter told about New Year's Day—it didn't say a word about the Old Year—and here I was living in the last days of one that was dying, and dying fast. Out of doors I could hear the wind hustling the falling snow here and there, covering the unsightly spots and blotting out the scars of earth that the Year's glassing eyes might close in peace. I fell to wondering how the Old Year felt about dying. It had lived its allotted time; did it grieve to go? At its birth the hour of its passing had been decreed. Unlike the various life that quickened its existence, it knew to the hour its final decease. Was the Old Year leaving a heartache? Was there sadness and a longing for a few more days of life—or did the world make merry over the birth of days to follow—was it off with the old, on with the untried new? Finally I resolved on the morrow to see how the Old Year felt about it. It was to be the last day. Where could I get the nearest to old '97? Not in the crowded walks of the busy town. There there was no sorrow; the bells too quickly pealed out the new King's birth. No, I would watch for once under the shadow of the pines; and mourn with nature in the midnight hour.

So on the following evening, just as the shadows crept in and settled on the busy streets, I started for the woods. Out through the paved walks of the city, just as the lights began to show, just as the day of toil was ending. How cold it was; how blue the sky, with its dancing lights—worlds that had seen the birth of centuries. Now I was out of the city; the woods stood sentinel on either hand; the white carpet was laid; the moon furnished the shadow dancers; the wind played a weird tune, and moved to the music the birch and maple balanced to their shadow partners on the snow.

I climbed the fence at the roadside and struck out across the field, resolved to climb the mountain side, now showing dark against the sky. Just here in this little clump of birches one day last fall a woodcock met an untimely end; it was such a woodcock as artists put on canvas. How different the spot looks by moonlight. I was standing just where Rex had stood on that day when the leaves were falling. Just there was where the woodcock flushed. I could almost hear again the whistle and the wings; but alas! it is now only a memory of '97.

I climbed the hill and at last stood under a giant pine, who had stood so well his winter vigil that the snow found no chance to thrust beneath his guard, and the ground was bare. Beneath me the lights twinkled in answer to the stars. The little lake shone like an opal at the foot of the mountain. Not a sound broke the stillness of the night, and save for the sad face of the moon I knew of no mourner but myself for the Old Year.

Woods and fields where my dogs and I had spent red-letter days lay at my feet. I could see here a spot and there another where the heart had quickened; I could almost fancy the dull boom of the double barrels, the rush of wings as the bird went on. I heard the music of the hound on a far-away hill, and I followed my own footsteps home with the red pelt. And '97 was dying; these were but memories. What of '98? It was a hazard of fortune. Then from field I turned to fireside, and my heart failed me—how could I let the Old Year go; only I could see the face that saw the year begin; what to her or me was '98? But now as I pondered the shadows fled. The moon hid her fair face behind a cloud, I heard the sharp bark of a fox on the hill behind me. The pond at my feet flung to my ears a dull boom as the ice settled; and a sudden chill came on the air as the forest sighed a gentle breeze. I took out my watch; the hour stood midnight. I knew the Old Year was dead, and as if to mock the jangling bells from the city told me the Child was born, the King was dead. Long live the King.

NOX-ALL.

FITCHBURG, Mass.

Podgers' Commentaries.

SAN FRANCISCO, Dec. 29.—I have no bear stories to relate, because there are no bears nowadays hereabouts except Monarch, the big grizzly out at the Park zoo, although when first setting foot on these shores I might have found his counterpart in a wild state on the very ground this big fellow now occupies as a captive. Neither have I any tales of fishing or shooting to tell, the obstacle to the pursuit of the same being that metallic attachment to the ankle and the other end to that oaken conscience set forth in a cut in the FOREST AND STREAM'S "Chained to Business." Fortunate friends aggravate me by sending me a pair of canvasbacks or a 20lb. salmon, and I fear I am not properly grateful. It does stir one's most diabolical fiendishness to have word sent with the birds: "If you want any more say so. Jim and I did very well on our two days' shoot—300 between us and mostly canvasbacks." This is no idle talk either; for the boys have universally made good bags so far this season, and the market-shooter has got in his work, resulting in our market being heavily stocked, reducing mallards and canvasbacks to 50 cents a pair. And to think that a man whose weakness is the gun and rod has to sit by and endure all this, and all within a couple of hours' reach, is enough to make a person swear or get some one to swear for him. That became my duty once when fishing on a stream one time up in old Connecticut when fishing on a stream one time in the State of Connecticut with a clerical friend who stood on a slippery log. Just as he had a strike of a big trout his feet went out from under him and in he went, ker souse. I hauled him out and said: "Parson, don't you feel like swearing?" "Indeed I do," he sputtered, "and if you don't mind doing it for me, I shall feel obliged. There are occasions when the relief it brings is justifiable." Try cracking a hickory nut and hit your thumb instead, and see.

We have had, and are having, an exceptionally good season for game, thanks to the efforts of our game wardens and the consequent restrictions of the usual slaughter by market hunters, although by no means entirely effective.

Netting and big-bored guns still get in their deadly work, as demonstrated by the piles of ducks—wagon-loads, I may say—to be seen in our markets almost any day. It is a wonder that there is a duck or quail left in the country.

Now comes in our salmon fishing, fine sport being had with rod in all our streams emptying into the ocean, into which the fish run after the first rains, and here your humble servant, who claims to have been the first person to take a salmon on the coast with a fly, must sit by and see the fishermen coming home of an evening with a back load of 20-pounders, the result of the day's sport. The fish are generally caught with a feathered spoon, however, as most of them do not even yet believe salmon in our waters can be caught with the fly, and do not try it. The spoon is more reliable.

California is a pretty good country yet for the sportsman, although nothing to what it was in early days. The march of improvement and great increase in population and shooters has in a measure driven the game away or exhausted it. In the early days, say forty years ago, there were elk by the hundreds within twenty miles of the city, and a deer or a grizzly could be bagged where roses and japonicas are now perfuming the air. An old schooner captain tells me that on one occasion in sailing up the straits where the Navy Yard now stands, he struck a band of elk swimming across the straits, so numerous that he could not get through them, and had to lower sail and wait for them to pass. Of course this was before the advent of the hateful Gringo and gold-seeker had spoiled one of the most beautiful countries of the Lord's footstool. Talk about Africa! it could not hold the proverbial candle to what this country was before the discovery of gold, with its millions of elk, deer, mountain lions, and that king of beasts, the grizzly, compared to which the African lion is a pigmy. There are but a few left now—now and then one back in the inaccessible mountain ranges. He has retired before civilization, like every other good thing.

I have referred several times to the numerous expeditions that have fitted out here to search for buried treasure on Cocos Island, which, legend hath it, was the favorite resort of gentlemen pirates. I think I gave an account of six or seven. Since then two more have joined the ranks of the credulous, and even a British man-of-war. Altogether they must have dug over nearly every foot of poor old Cocos and put it in good farming condition. Many of the expeditions declare they almost found it, but just as they were certain of success provisions gave out and they had to abandon the search. All sorts of expeditions continue to be fitted out to sail to the South Sea Islands. One consisting of 100 men bought a vessel and sailed for an island reported to be inhabited entirely by women who were crazy to get married and sighed for the male element. In due time the island was found, but so far from the ladies being languishing maidens, they were found to be provided each with a gentleman with a ring in his nose and a spear in his hand, and showing a lively disposition to boil, fry and roast such of the expedition as they could induce to land. In this the females joined. The story that they were glad enough to welcome white men was true enough, but they wanted them grilled or in an Irish stew. The expedition was finally shipwrecked and straggled back by ones and twos, as they could beg passage from occasional vessels.

Now we have another expedition of miners bound for the Solomon group to search for gold. It is surmised that if they land none will live to return, as the Solomon Islanders are known to be about the toughest lot of gentlemen of the whole South Seas. Their appetites are wonderful, and they pick the bones of a white man so clean that a crow would starve on what they leave.

Natural History.

Nelson's Mountain Sheep.

SOME time ago Dr. C. Hart Merriam, chief of the Biological Survey, described under the name *Ovis nelsoni* a new species of mountain sheep from Mexico. The specimen on which this description was based was a female secured by Mr. E. W. Nelson, of the Biological Survey, a well-known explorer, who seems equally at home whether voyaging in a kayak along the shore of the Arctic Ocean or penetrating the densest tangles of the swamps of Central America.

There are many sportsmen who, on general principles only and without any definite knowledge of the subject, deride this new species, and are disposed to lump all the native mountain sheep of North America under the single name *Ovis canadensis*, instead of counting as four different species *O. dalli*, *O. stoni*, *O. canadensis* and *O. nelsoni*.

The male of *Ovis nelsoni* is not known to the naturalists of the Biological Survey, yet we believe that in the head of a remarkable ram, killed in 1894 in the peninsula of Lower California by Mr. George H. Gould, a magnificent example of this form is to be seen.

Readers who attended the Sportsmen's Exposition in 1895 will recall a superb sheep's head exhibited in the space of the Forest and Stream Publishing Company. This was the specimen referred to. The committee of the Boone and Crockett Club, consisting of Theodore Roosevelt, George Bird Grinnell and Archibald Rogers, who measured the heads of big game on that occasion, gave the girth of the horns of this head as 16 $\frac{1}{4}$ in., the length 42 $\frac{1}{2}$ in., and the spread 25 $\frac{1}{4}$ in. They said of it, "It is on the whole the finest head of which we have any record." It will be observed that for their length these horns were somewhat slender, and further, that their spread is greater than is usually seen in the mountain sheep, although it is well known that in these animals individual variation is quite marked. This, then, seems to be characteristic of this head—light, slim horns, with an outward twist greater than is commonly seen in the mountain sheep of the middle Rocky Mountains. It may be that this is characteristic of the male of *O. nelsoni*.

The country where this specimen was taken is the volcanic desert of Lower California, far south of the United States boundary line. In that country there are said to be not a few sheep, but it is a region almost waterless, and on that account very difficult to penetrate.

It is this sheep whose head is the cover stamp of the second volume of the Boone and Crockett book, entitled "Hunting in Many Lands," in which volume is found a delightful account of Mr. Gould's Lower California hunt. The cover stamp referred to gives a better idea of the lightness and outward sweep of horns on what we are disposed to believe to be the only known male head of this *nelsoni* than does the accompanying illustration. The two figures should be studied together.

We reproduce from Mr. Gould's article entitled "The Gulf of Cortez" the following description of the country in which this sheep was found, and of the incidents immediately connected with its capture. Mr. Gould says:

"We were now approaching the true desert. This term is not restricted to the broad level sand wastes along the Gulf, but includes the arid and waterless mountains adjacent, and this must be borne in mind when the Mexicans tell you that sheep are to be found in the desert.

"We passed the last of the brushy hills, and crossing a small divide came over slopes of volcanic cinders to a little water spot with dwarf willows and grass. This was our hunting camp. The country through which our route had lain heretofore was altogether granitic, though one could see hills apparently of stratified material in the distance. Toward the desert we met beds of conglomerate and trachyte and mountains covered with slide-rock ringing flinty-like clinkers from some great volcanic furnace.

"The vegetation had somewhat changed. There were more cactus, particularly the fleshy kind called venaga, though I noticed with surprise the absence of the great fruit-bearing cactuses, the Saguaro and Pitaya, all along our route. The Spanish daggers were very numerous, as were also Mescal plants, both of these forming veritable thickets in places.

"This makes the third variety of wilderness encountered in the peninsula. There are four: First and best, the pure barrens; second, the brushy hills and plains covered with sage, greasewood and buckweed; third, this spike-bearing volcanic region, and fourth, the appalling desolation of the acknowledged desert.

"The moment we had unloaded and watered our animals Anastasio and I set out to look for deer. Anastasio wore the spotted and tattered remnant of a frock coat once green, given him by an Englishman, of whom I shall say more later. He had guarachis, or sandals, on his feet, bare legs, a breech-clout, and on his head a reddish bandanna handkerchief in the last stages of decay, and as he peered over some rock, glaring long and earnestly in search of game, he reminded one of those lean and wolfish Apaches that Remington draws in a way so dramatic and so full of grim significance.

"Anastasio was fifty-one years old and had no upper incisors, but the way he flung his gaunt leathern shanks over those mountains of volcanic clinkers, armed with the poisoned bayonets of myriads of mescal, cactus and Spanish dagger, was astonishing.

"I told him that I was not racing, and that he would scare the game. In fact he did start one little fellow, but he said he always saw the game first, and for this day I was quite powerless to hold him in; so I decided to return to camp before dark. This disgusted Anastasio greatly. 'In this way we shall never kill,' said he. 'We are going to suffer from hunger.' I assured him that we had plentiful supplies, but he had come for meat. Unbounded meat had been the chief incentive for his trip, and hungry he was determined to be.

"The next day J. B. set out early with the red man. I arranged camp, and two or three hours later took what I supposed was a different direction, but soon encountered the pair returning. J. B. had a painful knee, and Anastasio had started his racing tactics and kept them up until J. B. was quite lame.

"The Indian reported that he had seen sheep. J. B. had used the glass without finding them, and then Anastasio captured it and looked through the wrong end, nodding and saying he could count five, very big. This, I am sorry to say, was false and affected on Anastasio's part, and J. B. was skeptical about the sheep altogether; but I knew how hard it was to find distant game when you don't know exactly how it should appear. To reach the supposed sheep the mountain must be climbed and the crest turned, for the wind permitted no other course. J. B. did not feel up to the task, and I directed him to camp. Anastasio and I climbed for about four hours, and reached a position whence his sheep would be visible. He stared long, and said he could make out one ewe lying down under a juniper. I tried the glass. He was right. His unaided sight seemed about equal in definition to my field glass. On this occasion he declined to use the glass. We could get no nearer unseen, and though the distance was very great I decided to risk a shot.

"I fired in fact two or three shots at the ewe, alarming her greatly, when from beneath a cliff which lay below us a band streamed out. Two big rams started off to the right. Anastasio and I ran down a bit, and I tried a long shot at the leading ram. The distance was great, and the run had pumped me a little. I missed. The second ram was still larger. He stopped a moment at 150 yds., and I dropped him. Anastasio grunted satisfaction. I swung to the left, where the rest of the band was journeying, sighted at the shoulder of a young ram and fired. The ball passed through my intended victim, dropping him, and entered the eye of a yearling ram who stood behind, thus killing two rams at one shot—a most unusual accident.

"The rest of the band were now quite distant, and though I fired several shots, at Anastasio's desire—he said he wanted a fat ewe—none took effect.

"I cleaned the sheep and skinned out the big head. Anastasio took one small ram entire on his back, supporting it by a rope passed over the top of his head, and I with the big horns started down. It was 1 o'clock. The head might have weighed 35 lbs. fresh. It grew to weigh 1,500 lbs. before dark. Stumbling down through the slide-rock with legs full of venomous pricklers, I passed below camp without noticing it, and was well on the other side, when I thought I had gone about far enough, and shouted. J. B.'s voice answered across a small hill, and I

found that he had never found camp at all, but had found a water spot, and wisely decided not to leave it without good reason.

"I scouted a bit to the west, but found unfamiliar country, and as the sun had set we were seemingly about to stay by that water all night, when I turned around and saw a pale column of smoke rising above the crest of the ridge against the evening sky.

"At once we marched around the ridge, and as we rose over the divide we saw the whole hillside flaming with signal fires. Our dear old Anastasio had become alarmed, and set fire to fifteen or twenty dead mesquites in different places to guide us home. God bless a good Indian!

"The next day I spent the morning in washing, resting and cutting spikes out of my legs. Anastasio packed in the second small ram, and ate ribs and slept. Then, in the afternoon, we got the rest of the big fellow down. Anastasio, to make his load lighter, smashed off the shanks with a stone, although he carried a knife in his belt—a striking trick of heredity."

Yellowstone Park Notes.

MAMMOTH HOT SPRINGS, Yellowstone National Park, Wyo., Dec. 19.—This morning a team and three men started out to bring in a soldier who froze to death between the Lake Hotel and the Thumb. The news came in last night. As nearly as I can learn the story it is this:

The soldiers stationed at Snake River and Mud Geyser have an arrangement to meet on the 15th and 30th of every month at a cabin on the West Bay or Thumb of Yellowstone Lake, to exchange mail, reports, etc. Two men started from their station at Mud Geyser, spent the first night at the Lake Hotel, starting from there on the morning of the 14th at about 8 o'clock with the thermometer several degrees below zero. The distance between the hotel and cabin is nineteen miles. When out about ten miles one of the men found himself giving out, and, knowing he could not make to the cabin, started to return. The other soldier, Private John W. H. Davis, of D Troop, Sixth Cavalry, determined to push on to the cabin. This was in violation of very strict orders issued by the commanding officer. The orders are that no one man shall make a snowshoe trip alone; that there shall never be less than two together, and that if one has to turn back or stop, the other man must stay with him. These orders have been in force since the spring of '94, when the FOREST AND STREAM Expedition reported the man lost between Riverside and the Lower Geyser Basin.

The man who turned back spent the night in a cabin on Bridge Bay, getting back to the Lake Hotel next morning with his fingers, ears and toes frosted a bit, reporting to Fort Yellowstone by telephone. Capt. Erwin, the commanding officer, ordered two men from another station over to investigate. The men started out as soon as possible, and very near the 12-mile post found Davis frozen stiff, his snowshoes sticking up in the road. It seems almost impossible for a man to lose his life in such a way in that country, as there is any quantity of dry wood and timber all along the road. He could not have been so careless as to be without matches! I will try to get all the particulars later.

Capt. Erwin has had reported to him thirty-two buffalo as seen by his scouting parties. He was unable to get away on our photographing trip to Soda Butte, and had to give it up until next spring.

To-day I saw in Gardiner Canyon five mountain sheep, not quite close enough for a picture. Quite a number of coyotes have been poisoned in the Park lately, and fresh poison is put out every few days.

Very large bands of elk are seen by the Cooke City stage driver all along the road from the springs to Soda Butte.

I saw about fifteen antelope on the flat across Gardiner's River as I came down.

One of the scouts reported as having seen Saturday about 750 elk on the ridge in the Swan Lake country. Elk, antelope and mule deer are close in to Gardiner, south and southwest of the town. Very few of the antelope have come out of the Park lately. Only a few have been killed in Montana. E. HOFER.

Infertility of the Half-breed Goose.

PROVIDENCE, Ky., Dec. 20.—Editor Forest and Stream: I notice in a recent issue that Shaganoss would like to know about the infertility of eggs of hybrids from common domestic and wild goose (*B. canadensis*). Having from experience been familiar with the raising of these half-breeds, I can say that they will not hatch. The male hybrid retains the red feet of the tame goose, while the female has the dark color of the wild goose. Head of female also darker than male. Some of the geese in this flock are over thirty-five years old. J. T. RICE.

ALGONA, Ia., Dec. 29.—I notice an inquiry by Shaganoss in regard to the hatching of the eggs of the half-breed geese. My experience has been that such eggs will not hatch. I have tried the experiment many times and the result has always been the same. I do not think that the Canada goose should be classed with the goose tribe, as the bird is more like a swan. If the "tame goose" was crossed with the white-fronted or snow goose I have no doubt that the eggs from the birds of that cross would hatch. JOHN G. SMITH.

In reply to Shaganoss in FOREST AND STREAM of Dec. 25, 1897, I would say: In 1869 I was in Sullivan county, Mo., and I became acquainted with a family named Dell. Passing their place one day on my return home from Scottsville, I saw a flock of the biggest geese I ever saw anywhere. They were peculiar in color, too, being much darker than the ordinary domestic goose. I called to one of the Dell boys and asked him whether or not he would sell me some eggs of those geese. He said he would, but that they would not hatch. I told him then I did not want them.

When I got home I told my uncle about the geese, and that young Dell said the eggs were sterile. He said: "You are not; the first person taken in by the Dells' mule geese. They are a cross between the tame goose

and the wild goose. One of the older Dell boys wounded two wild geese, one a gander, the other a goose, and they kept these with their tame flock, and raised geese by crossing both ways. The two old wild geese either died or were killed, and those big geese stay by themselves, as you notice. They do not go with the tame geese, and are a great curiosity. Their eggs will not hatch. The boys used to disbelieve this, but old man Dell gave me some of the eggs, and I tried them: Those crossed geese are mules—the eggs are sterile." I don't know whether or not the wild geese above were *Branta canadensis* or not, but I often heard people speak of "Dell's big mule geese." AMATEUR.

The Linnean Society.

REGULAR meetings of the Society will be held Jan. 11 and 25, and public lectures will be delivered in the lecture hall of the American Museum of Natural History, Seventy-seventh street and Eighth avenue, New York, as follows:

Jan. 6, public lecture, Daniel Giraud Elliot, "Cats and the Lands they Inhabit," illustrated by lantern slides.

Jan. 11, Ernest Seton Thompson, "The Summer Birds of the Yellowstone National Park," continued from meeting of Dec. 14.

Jan. 25, W. K. Parmelee, "Notes on the Habits of Turtles, with Particular Reference to those Species found within Fifty Miles of New York City," illustrated by specimens.

Feb. 3, "From Vera Cruz to Mexico City," by Frank M. Chapman.

March 17, "The Mammals of North America," by Ernest Seton Thompson; illustrated by views from nature and from original drawings by the lecturer.

April 7, "Protective and Directive Coloration of Animals," by C. Hart Merriam.

WALTER W. GRANGER, Sec'y.

AMERICAN MUSEUM OF NATURAL HISTORY.

Trapping an Eagle.

THE capture of an eagle three miles from Brownstown, W. Va., by Geo. Handley, Will Walker, Ed Smith and Jas. Bullington was effected in quite an unusual way, and it was not a less peculiar habit of the eagle that occasioned his capture. The above-named men while searching for maple trees observed for several days an eagle fly to a lofty poplar, alighting every time perhaps not over 100 ft. from the ground and then disappearing from sight. The curiosity of the men was awakened. Accordingly they went to the tree, and one of the men climbed to the roosting place of the feathered king, which to his surprise was a hollow place about 1 ft. deep. They then conceived the idea of trapping him. A common rat trap was put into the hole, secured by a chain. A man by the name of Ross, living near, was trusted to keep daily watch of the eagle, and was soon rewarded by discovering that his majesty had been trapped. After a fierce struggle the bird was firmly secured and borne triumphantly away. He measured 7 ft. from tip to tip of wings. As the men did not care to keep the carnivorous pet they sold him to a circus proprietor for \$11.

N. D. ELTING.

Muskrat in a Store.

A FEW days ago my dog, that, by the way, is fond of rats as game, got scent of something in Brinker Brothers' store, in Central City, W. Va., which proved a flat-tail rodent instead of the kind of rat so much inclined toward the habitat of man. It was about half-grown. It puzzles us to know how and why he got there. He probably came from a ditch running along Railroad avenue, about half a square from the store; but that a muskrat had his residence in the heart of the city was a thing hardly dreamed of. Maybe he was a little truant, and fell into the bad company of his predatory cousins and got into trouble, as did dog Tray for the same reason. N. D. E.

Game Bag and Gun.

Blackbuck in Muzzleloader Days.

AT the latter end of the 60s I was living at a station in central India, the country around which was well stocked with small game. There were also a few antelopes (*A. bezoartica*) and gazelles (*G. bennetti*), but these had been so incessantly hunted during the preceding two years by the officers and men of a Highland regiment that there was much difficulty in approaching within 200 or 300 yds. of them. By hard work I had succeeded, during the cool season, in bagging twenty, besides a couple of four-horned antelope.

The hot weather was commencing. Most of the ducks, snipe and quail had migrated to northern regions, and the partridges and hares were breeding. Sportsmen therefore had given up small game, shooting for that season. After a few weeks of quiet life the monotony began to be insupportable to myself and a friend named B., in the battery of artillery to which we belonged. We therefore applied for a week's leave of absence and arranged to go to a Government rest-house for travelers (called Dawk Bungalow), thirty-three miles distant, where we heard there were antelope which had not been much worried by hunters.

I hired two camels, loaded them with my tent, cooking utensils, some tins of preserved soup, a few bottles of beer, etc., and sent them forward to await our arrival at the bungalow.

In order to avoid a long, slow ride in the heat, we each borrowed some horses and distributed them along the road so as to have a fresh mount about every eight miles.

Before daylight next morning we had some tea, and started. The road was kept in good order for the Government mail-carts to travel over, but on each side of it there was a narrow belt of ground rather less hard, along which we rode at a steady, hard gallop, only stopping to transfer the saddles on to the fresh horses. We thus

finished the thirty-three miles without fatigue in rather less than three hours, arriving at the Dawk Bungalow before the sun became too scorching. The country through which we had passed was cultivated in places, the intervening parts being covered for miles together with low bush jungle of acacia and cornel thorn, or with tall grass bleached by the sun to a light yellow tint.

After breakfast we went out to look for game. B. was a first-rate performer with his 12-bore muzzle-loading shotgun, but was unaccustomed to a rifle.

I lent him a Westley Richards carbine, .45-bore, taking a cartridge of thin, tough paper containing 55 grains of powder and 400 of lead. The bullet lay, for the greater part of its length, in the grooving, and the rifle was the most accurate breech-loader of that time (especially at long ranges), with the exception of the American Maynard, which was superior in calm weather up to 150 yds.

For myself I had a double, muzzle-loading, two-grooved rifle carrying round-belted balls of 17 to the pound, with 55 grains of powder. The barrels, like those of most of the old rifles in England, had been put together for light powder charges, and I could not use more without throwing the bullets 5 or 6 in. apart at 100 yds. With 55 grains it was very accurate, but of course the trajectory was high, being nearly 6 in. for the first 100 yds., up to which distance it carried with the fixed rear sight. There were folding leaf sights for 150 and 200 yds.

Many of your younger readers who have used only improved modern rifles, such as the .40-60 or .45-70 repeaters, may think that a large proportion of shots must have been wasted with bullets making such high curves in their flight. With men who hunted at long intervals this was the case, but those who were in constant practice with their rifles were nearly as certain of hitting their mark at ranges up to about 110 yds. as they would be with the modern weapons. The very necessity of aiming higher or lower, to allow for the curve of the bullet, at all objects beyond 30 yds., made hunters much better judges of distance than they now are, so that, even when firing at running game, the requisite allowance was made almost instinctively.

It is at ranges between 120 and 200 yds. that modern rifles show their superiority in the most marked manner. With the above-mentioned two-groove I had killed several antelope and gazelles at distances up to 200 yds., but had lost many through the bullets going over or under their chests. When the distance was correctly judged, I never used any rifle at game shooting which excelled it in accuracy. W. Greener, the father of the present gun-maker of that name, and Chapman, in his book on "The Improved American Rifle," both write very disparagingly against two-grooved rifles, but every sportsman who has hunted with them, or whose narratives I have read, has spoken of them in the highest terms.

The country all round the Dawk Bungalow was a wide plain, intersected with shallow, dried-up water-courses, and with a range of low, rocky hills in the distance. It was cultivated in patches, from which the crops had been reaped, and the intervening ground was covered with low prickly bushes, tufts of dry grass and a few wild date palms.

B. and I started, each with two coolies from a neighboring village, in order that they might carry back any game that we killed. We separated so as not to spoil each other's sport, and after walking some distance I noticed a gazelle in a clump of bushes 70 yds. away. I always made it a rule to kill something at the earliest opportunity on every shooting excursion, for the purpose of supplying the native servants with flesh food. It was a pleasant change for them, and made them more cheerful when living only upon their ordinary diet of flour, pulse and clarified butter (called ghee). I therefore dropped the gazelle in his tracks with a shot through the shoulders, and, after the little animal was cleaned, one of the coolies carried it on his head to the bungalow.

The most convenient mode of preparing a small deer or antelope to be carried in this way is to slit open the space between the tendon and bone above each hock, push each fore leg from the opposite side through the hole, and prevent the uppermost leg from slipping back by passing a sharp-pointed stick like a skewer through the arm close above the knee. A piece of string tied round all the legs where they cross will fix them still more firmly, and sometimes it is advisable to fasten an animal's head to them, thus preventing it from swaying about. Most coolies prefer carrying a weight on their heads if it can be made compact enough.

After walking about two miles more I saw a fine blackbuck with splendid horns, and managed to stalk to within 100 yds., when he began to move preparatory to breaking into a gallop. The bullet struck in the shoulder rather too high, probably grazing the under part of the spine. The buck dropped on the spot, but as he continued struggling while on his side I feared he might get on his legs, so ran forward and put the bullet of the second barrel through his brain. The sun was, by that time, so hot that after cleaning the buck and helping the coolie to carry the carcass to the bungalow I took a cold bath and enjoyed a few hours' rest.

Late in the afternoon B. and I went out again in separate directions. I found another blackbuck, and approached within 90 or 100 yds., when he moved away in an oblique direction, but stopped for an instant to look back at me. I made a bad yet very successful shot, aiming at the root of the left ear.

On returning to the bungalow I found that B. had been unlucky. He had seen some antelope, but could not approach within fair range, which was not surprising, considering that he was inexperienced in stalking. He was too good a sportsman to fire at game several hundreds of yards distant, for the mere chance of killing, or more likely, uselessly wounding an animal.

The blackbuck is usually found in places where there is little cover, but if not made too wary by having been frequently shot at he can generally be stalked to within 100 or 150 yds. by a hunter who does not mind walking on hands and knees, or dragging himself along with his elbows and toes in the dry beds of streams and behind low bushes. This is, of course, hard work under a blazing sun, and trying to a man's temper when, as is often the case, the ground is strewn with dead thorns.

They are sometimes in places where the cover is better

and can then be shot with less trouble. They must be hit in a vital spot, for if the bullet passes through the back ribs or abdomen they are liable to run out of sight, and if a leg be broken they will sometimes gallop for miles. I have known some sportsmen who followed on horseback and speared them when a leg was broken, but I always waited for them to lie down (which they will soon do if not pursued), and then stalked them again. The part of the chest which must be struck to insure bagging, even with a .450 express ball, is not more (at the utmost) than 6 in. deep and 8 in. wide, including the spine. The first buck I ever killed appeared behind some tall bushes, when I was walking across an open plain. He gave me a fair standing shot at 200 yds., but although the bullet of the two-grooved rifle went clean through both shoulders he ran about the same distance through the bushes before dropping.

On another occasion I fired at a buck facing me 150 yds. distant. The bullet (102. in weight and driven by 62 grs. of powder) struck almost exactly in the center of the breast, passing out through a hind quarter; yet the animal turned round and disappeared in the bushes. By carefully walking exactly against the wind I found him lying dead 80 or 100 yds. further on. (Several kinds of deer or antelope always run, if possible, straight against the wind when wounded, and I have repeatedly recovered them by following in the same direction when there was no bleeding or any track visible.) Occasionally on bare, open plains, I have succeeded in approaching within shooting distance of a herd of antelope by walking slowly round them as if intending to go past, while looking in any direction except toward them, and stooping down like the native cultivators, as if pulling up weeds, every time the animals showed signs of uneasiness. On occasions like these the hunter must be very careful not to go for even an instant out of their sight in a ravine or behind a rock or tree. If he do so, the herd will suspect an ambush and gallop away.

But to return to the narrative: On the following morning B. and I went out soon after daybreak, and nearly in the same place as on the preceding evening I found another buck and obtained a standing shot at about 100 yds., killing him in his tracks with a bullet behind the shoulder.

In the afternoon I went out again, B. walking to some likely-looking ground in an easterly direction, while I went toward the rocky hills in the north. While passing over some cultivated land I noticed a herd of antelope quite 500 yds. away. They at once became alarmed and started off, many of them, as is their habit when frightened, repeatedly springing perpendicularly 8 or 10 ft. into the air.

Not very long afterwards the sound of a rifle shot came from the east, and in a few minutes the heads of some animals appeared over a swell in the plain, moving rapidly in my direction. There was no place for concealment except a slight hollow, in which I sat down. My head and shoulders were above this, but the cover of my pith helmet and my clothes of thin cotton being all dyed with the slate color called in India *khakee*, there was not much chance of being noticed when keeping perfectly still.

One of the animals came at a gallop, a herd of ten or twelve gazelles leading, and a fine blackbuck some yards in the rear going with the long, lurching strides the speed of which is so deceptive until you try to follow on a fast horse. They passed obliquely at about 150 yds., and raising the rear leaf sight for that range I saw the front bead on the shoulder swung forward until it appeared the buck's own length in front of his nose, and pressed the trigger. The bullet, as I afterwards found, struck at the rear edge of the right shoulder and passed out in front of the left, the buck galloping about 60 yds. and falling apparently dead. I had no idea that any man was in sight, but a native who had been hidden behind some large trees close by suddenly appeared and began running towards the buck, which at once showed signs of life, struggled to his feet and commenced walking away. Not knowing at the time where the bullet had struck, I rushed forward to within a short range and fired the second barrel, hitting the back of the head between the ears.

Although animals which drop in their tracks sometimes rise to their feet, this is the only instance I can remember of one doing so after running some distance before falling.

B. met me at the bungalow and said that he had shot a gazelle with the Westley Richards carbine, but lost him and had also narrowly escaped killing a native who was cutting grass a long distance beyond. The man called out in terror, and B., on going to where he was sitting, found that the bullet, after drilling a hole in the gazelle, had passed through the man's hair close above one ear. (On a subsequent occasion when standing on the border of a wide, sandy plain I killed a jackal with this carbine when using the leaf sight for only 150 yds., yet the bullet knocked up the dust quite 800 yds. further on. Bullets with hollow points I had not then heard of, and therefore discontinued using the carbine for game shooting, being afraid of injuring some herdsman in charge of cattle or goats, who might happen to be out of sight in the jungle.)

On the following morning we sent the servants with the tent to a camping ground several miles on the road toward home, B. and myself trying our luck once more in the country around the Dawk Bungalow. After walking a long distance I came upon a blackbuck about 100 yds. away and had an easy shot at his shoulder. At the report of the rifle he bounded perpendicularly fully 6 ft. and galloped away untouched through the trees, while I was too astonished at having missed to fire the second barrel before he had disappeared. When reloading I found that the 150 yds. leaf sight had by some accident been raised, so that the bullet had passed several inches above the animal's shoulder.

While returning to the bungalow I suddenly saw what appeared to be a beautiful, calm lake close in front, and could not feel convinced that it was only a mirage until I looked back and found that there was a similar resemblance to a lake. The illusion was so perfect that the bushes, tufts of tall grass and palm trees were all reflected upside down as if on real water.

After breakfast B. and I rode to the camping ground, the heat having become so intense that, although the tent had a double roof, we were glad during the middle

of the day to keep our heads cool by frequently pouring water over them.

Late in the afternoon I strolled over a plain covered with thorny bushes and masses of gneiss rock 6 or 8 ft. high. I found a herd of gazelles with one buck antelope among them. He appeared to be only 3 years old, for the horns had but three spiral twists, while the hair was just beginning to turn a black color on the sides of the chest. I fired at 100 yds., when the gazelles galloped out of sight, followed by the buck, who soon lagged behind, evidently hard hit. Creeping through the bushes I had a shot at the same distance as before, when he ran off in quite a lively manner. Following for some distance, I obtained a third shot, also at 100 yds., and with a similar result. For the fourth time I stalked within sight and found him 80 or 90 yds. away. At the moment when the hammer of the lock was falling he saw me and darted forward so that the bullet, instead of hitting the shoulder, went through a little below the kidneys. The buck then cantered away, and, passing out of the bush jungle, disappeared over a ridge of ground nearly half a mile distant. I followed as quickly as possible, and, walking cautiously to the top of the ridge, found him lying down about 20 yds. away with the head still erect. His back being towards me, I aimed between the ears, but only succeeded in digging out one horn at its base. This stunned the buck for a moment, so I held down his head by the remaining horn until the coolie hurried forward and bled him. Even then he retained so much vigor as to kick at the man and tear the sleeve of his cotton jacket from wrist to elbow. I never saw another instance of such extraordinary vitality, and am quite unable to account for it. The first three bullets had struck not more than 2 in. from each other, forming an equilateral triangle at the rear edge of the left shoulder.

We rode to another camping ground on the following morning, and on the day after returned to the cantonments, having bagged nothing more except a couple of gazelles, which I shot as food for the native servants.

A native tanner preserved the skins as well as could have been done by the best English taxidermist, and stuffed the four uninjured heads very cleverly, using the hollow bottoms of wine bottles for the eyes.

J. J. MEYRICK.

ENGLAND.

Two Deer Hunts.

Editor Forest and Stream:

How slowly the time seems to pass to the boy, especially those who are fond of hunting and outdoor sport, before he gets to be a man. Then again how swiftly it passes after he has crossed the summit of life's divide. It is now more than forty years since I killed my first deer; it was in the winter of 1855, in Doniphan county, Kan. Some Missouri hunters were after a deer and ran it so close that it came to the river, which was blocked with ice. I was hauling logs when I heard the hounds coming toward the river, and ran and got my squirrel rifle, and ran down below town, and I saw the deer coming across on the ice! It came out near to where I was standing on a log. I bleated at it, and when it stopped I fired at its heart, as near as I could tell, and at the crack of the rifle it jumped very high and started to run. I reloaded the rifle as quickly as I could, started after it, and in less than 50 yds. found it dead. It was but a few minutes before there must have been a dozen men and boys there, but not one was so happy as I. Soon the men and dogs began to congregate on the opposite side of the Missouri, but the ice was not safe, and they were much disappointed at losing their game.

Well, that poor little miserable deer was dragged up to our house, skinned and divided up among our neighbors. And yet it all seems to have been only a few days ago. There may be some people left who got a small piece of my first deer.

As I have given the story of this first one, let me tell of the last. I was at Oro when Mr. Snyder said that if I would stay all night he would go home with me and take a couple of days' hunt. We prepared plenty of wood, so we could get an early start in the morning, and when the clock struck 4 I turned out and started the fires in both stoves, and while I got breakfast he fed our horses, and just as day was breaking we left the house and started for Mount Bonaparte. When we reached the base we saw quite a lot of fresh sign. Here we separated, Mr. S. going up the right fork of the mill creek, while I kept up the left.

I had not gone far when I came across where two old bucks had been having a fight, and for several hundred yards they had cut up the snow completely, and I saw where one had been down a number of times. Here I tied my horse, as the tracks were so fresh I expected I could overtake the deer before they reached the thicket or lay down for the day. Soon Frank scented some. I kept on and hunted very careful, yet saw nothing only fresh tracks. Finally Frank lost the scent we had been following, but I kept on in the direction I had come to the first big thicket, and not liking to wallow through hundreds of yards of brush as thick as wheat I kept up to the left a short distance, and soon crossed the track of a very big buck. From Frank's actions I knew it was very fresh. It went down quartering to my right, but as I had often been through on that route I kept on up, and when I came out into the opening I started down to see if the buck had come out. I had gone but a few steps when I heard him break cover down to my right. Soon he came out of the thicket about 250 yds. below me and was making for a small ridge near the bank of the creek. I knew he would stop when he reached the top, if he did not stop sooner. He passed out of sight for a short distance, and was trotting when he ascended the small rise and stopped and turned broadside. I had guessed at the distance, and adjusted my telescope for the top of the ridge; had sat down in the snow and was resting the rifle against a small black pine; so he had just fairly stopped when I had the telescope on him, and placing the perpendicular hair straight up his foreleg and the horizontal one along his back I pulled the trigger, but he never moved. I was certain I saw snow fall from a bush beyond and above him, so I threw in another cartridge and placed the horizontal hair straight with his belly. Again I fired, and at the crack of the rifle he jumped forward, and I was certain from his movement

he was hit. I went down, and when I came to go over the ground I thought I had over-estimated the distance a little; I had put the sight for 700 yds.

On reaching the spot I found quite a lot of hair on both sides of his tracks. I followed him up for at least 100 yds., and expected to find blood every step, but saw not a drop. Soon I came to where he had run against a small dead bush, and about 20 ft. beyond he lay dead; but not a single drop of blood could I discover. On drawing him I found the bullet had made but two small holes, and had passed through only a little above the heart. It was the first metal-patched bullet I had ever killed a deer with. Yet, oh, how different were my feelings! Instead of feeling proud, I felt remorseful to think I should have killed such a fine animal just to please a neighbor.

LEW WILMOT.

In Colorado Mountains.

THIS season I decided to take my outing in the Rocky Mountains of Colorado and Wyoming, among old friends where I had lived from 1888 to 1894. In company with my father I left my home in Pennsylvania on Tuesday, Aug. 31, arriving at Laramie, Wyo., the following Friday. Next morning we started on our stage journey over the North Park stage line, the driver being an old friend and hunting companion of former years.

We arrived that night at Pinkhamton, Col., after a fifty-mile drive. There we were met by my old friend and neighbor "Elick" Hilton, whom I was rejoiced to see after an absence of three years. After resting there that night we proceeded next day to Elick's ranch, twenty-eight miles distant, situated in a picturesque spot in the Rockies along the Colorado and Wyoming line, where we were to spend our vacation. Being at an elevation of 8,200 ft. and in a cool climate, the only production of the soil is hay; and that being harvested late, the ranchmen were not yet through haying. We turned in and helped Elick to finish haying.

The morning after the haying was completed, Elick hitched a team to a light wagon and drove about three miles up into the mountains, where we found a park suitable for picketing our horses. Then we proceeded into the mountains, where I found myself on familiar grounds I had hunted over years ago. Only those who have experienced the gratification of traversing old hunting grounds after years of absence know the pleasure I felt. During the day's tramp I had the satisfaction of seeing four fine black-tail deer, and got one shot, but missed. Some of the others of the party saw some, but when evening came we all met at the wagon without any venison to take home. After that we spent some time taking in sights at different points of interest near the ranch, during which time Elick went to the station—Pinkhamton—to meet a nephew of his, Will Coolidge, of Wisconsin, who was also out for an outing. He also had to make a trip to the store, which was thirty-five miles away to get provisions, etc., preparatory to going out camping.

At last Elick got his trips made and work arranged, and Friday morning, Sept. 24, Elick, Will, father and myself made a start for camp with a lumber wagon loaded with two weeks' provisions and camp outfit, having also two saddle horses with us.

We had previously selected for our camp ground a small park up in the mountains about eight miles from the ranch, where there was choice feed for the horses, water such as is only found in small mountain streams, and abundance of wood, the mountains being heavily timbered all around us. We reached the camp ground about 4 o'clock, after driving over roads which to the average Eastern man would seem almost impassable with a wagon.

It being a place where there had never been a camp, we found abundance of fresh deer signs, and while three of us went about making camp father took a short stroll down the creek. In a little while we heard two shots, and directly he came in and said some one had shot not far from where he was, and he saw two deer running away. Presently an acquaintance came by camp, saying he had killed a buck down where we heard the shooting. He was camped about two miles from us.

An hour before dark I took a stroll up the creek, and Will went in another direction. Half a mile above camp I saw a bunch of five deer feeding and moving about, but too far away for a shot. As they were moving away from me I crawled after them as fast as their big eyes would permit. Finding that they were getting away from me, and having only a little daylight left, I fired at one as I saw it walking through an opening, but missed. I went back to camp at dark a little out of conceit of my shooting. After it was quite dark we heard two shots in quick succession, and soon Will came in saying he had been watching a path and had seen a deer and shot at it twice.

Next morning we were up early, and just about the time we were ready to start out to hunt it commenced raining, and early in the forenoon we came into camp well soaked, without seeing any game. After dinner Elick started for home, leaving us one horse in case we might have venison to pack in. After getting fairly out on the road he let two of his horses loose, supposing they would go home; but they were met by a party coming into the woods, and the people, supposing they had gotten loose from some one, tried to catch them, and they being driven off the road, lost their way and didn't get hom on schedule time.

The next day being Sunday, we let our guns rest. Monday morning dawned bright and cool, and was an ideal day for hunting. We each took a separate route. I was determined on going several miles westward to a place where I used to find plenty of elk, and had a faint hope of finding still a few left. At 8:15 in the morning I was making my way through a heavily timbered and partially swampy place, when I saw a deer running from me. On my going a few steps ahead to get a better view of it another one started to my left, making a circle around me, then turned and started down through the woods past me at right angles with the way I was going. Sighting an opening ahead, I waited for it and fired as it jumped through, breaking both hind legs at the joint above the knee, something which I had never before done in all my hunting, and by no means a creditable

shot, but it was the best I could do, and the game was dispatched as speedily and humanely as possible.

I continued my journey westward as far as I intended going without seeing any fresh elk sign, although there had been quite a number in during the summer season. I traveled through the woods until 4 o'clock in the evening, when I sighted a deer running, but it had only heard me as I went through a thick patch of brush, and after running some distance it stopped and started walking back along the side of the mountain, something over rooyds. below me, trying to discover the cause of the disturbance. I could only get glimpses of its ears and head at times, and at last it stopped with only its ears visible. Making a quick calculation where its neck was, I shot, then listened and heard the familiar thump, thump! and at once counted that deer out of my list. Going down to the place as nearly as I could judge, I looked about for tracks and saw, to my happy amazement, a fine deer lying on the ground giving its last kick, with a bullet hole through its neck. There had been two deer instead of one. After dressing it I went to camp, where I found a deer hanging on a pole. The report of the others for the day was as follows: Will saw five deer and killed the one I found hanging at camp. Father saw four deer, two of which were large bucks with fine antlers. He succeeded in getting four shots, and displayed good hunting craft in getting a shot at one lying down, but never having shot at a deer before, and having a strange gun with Lyman sights, which he had never used before, his eyesight being dimmed with age, and a combination of circumstances against him, he failed to get his game, and unfortunately no more such good opportunities came his way.

The next forenoon we packed the two deer into camp, and after dinner loaded them on the horse, and I took them down to the ranch. I found that the two strayed horses had not yet come home, and for several days after that I devoted most of my time to hunting horses. The heavy rains immediately after they got away made it difficult to find any trail of them. Finally I found a very dim trail of them about a mile from the road, and after following it part of two days came upon them in a windfall, where they could not find their way out. During this time I was stopping part of the time at the ranch and sometimes at camp, whichever was nearest to me, having plenty of venison to eat at both places.

I was much disappointed to find the elk fast disappearing from that locality. Only one was killed near there during my stay, where there were many wagonloads brought out each season only a few years ago.

Will killed one more deer, besides trapping a number of marten and a fox, making it altogether a very enjoyable outing, and one which will be fresh in our memory many years.

The morning of Oct. 10 we took our last look at the grand old Rockies and turned our faces eastward, arriving at home Oct. 16. I cannot say enough in praise of that section of country as a place to have a general good outing. Boarding can be had at very low rates at the ranch houses, within easy reach of good deer hunting, the finest of trout fishing, duck shooting and plenty of mountain grouse, with an occasional bear to keep up the interest, for we saw some very fresh signs.

EMERSON CARNEY.

Maryland Game Law.

BALTIMORE, Md., Dec. 29.—*Editor Forest and Stream:* I beg to submit to your Maryland readers two bills which have been carefully prepared by the executive committee of the Maryland State Game and Fish Protective Association. These bills will be presented at the next session of the Legislature at Annapolis. Our Association is very anxious to present these bills in a satisfactory shape, and I hope that any suggestions as to changes may be sent to our secretary, Dr. Geo. W. Massamore, No. 334 N. Charles street, Baltimore, Md.

Bill to Protect Game.

It is the opinion of the State game warden, who acts through his deputy game wardens scattered all over the State, and of the members of our executive committee, that the game laws cannot be properly enforced unless there is absolute uniformity in the open season over the State. For this reason, with the exception of Garrett and Somerset, Worcester and Wicomico counties, a uniform shooting season from Nov. 1 to Dec. 24 has been given for pheasants, partridges, woodcock and rabbits throughout the whole State. Garrett county, on account of the mountains, has been given an open season from Oct. 1 to Dec. 1, and Somerset, Worcester and Wicomico counties, as they are affected by their proximity to the ocean, are given an open season from Nov. 15 to Jan. 15.

It is the experience of all persons who are endeavoring to enforce the game laws that if the shooting season opens on different dates in adjoining counties, partridges, etc., are always killed in the closed counties near the county lines, and if the offenders are detected and arrested the story is always told that the birds were killed in the adjoining open county, "just over the line," and it is nearly impossible to get a justice to impose a proper fine on this evidence.

Again different dates in adjoining counties very often cause the birds in the county which has the earliest season to be nearly exterminated by excessive shooting. For example, if shooting should commence in Baltimore county on Oct. 15, sportsmen from all the surrounding counties and from Baltimore City, all eager to begin shooting, would crowd in, and many more of the immature birds would be killed within the first two weeks of the season than would be the case if the season opened uniformly with other counties. The fact that adjoining counties have different dates also causes constant changes at each session of the Legislature, and this greatly adds to the difficulty of properly enforcing the laws.

The executive committee after a great deal of investigation determined to abolish [summer] woodcock shooting if possible, for the following reasons:

First—Because all the best naturalists of the country are of the unanimous opinion that in Maryland woodcock rear a second brood in June and July, and it would be therefore folly to shoot breeding birds.

Second—Because it is the opinion of the game warden and all sportsmen who have investigated the subject that great numbers of young partridges are killed in September and October by men, generally shooting for the market, who pretend that they are hunting woodcock. Woodcock always remain in Maryland until the middle of November, and afford the best sport in the autumn. For the same reason pheasant and rabbit shooting has also been forbidden until partridge shooting is permitted.

Recognizing that boys should have an opportunity of learning to shoot, the committee determined to permit in its bill the shooting of robins, doves, larks and flickers from Aug. 15 to Dec. 24. This action is open to the criticism, however, that it may be used to cover up the alleged killing of game birds. The shooting of wild ducks, etc., is prohibited from April 10 to Nov. 1. Squirrels can be killed from Sept. 1 to Dec. 1, and reed birds, rail birds and blackbirds from Sept. 1 to Nov. 1. The provision now found in many of the county game laws prohibiting the killing of inoffensive birds has been made general over the State. The bill, however, authorizes the destruction of hawks, crows, crow blackbirds and English sparrows at any time.

Bill to Protect Fish.

Black bass, brook trout and rainbow trout can lawfully only be taken with a rod, line and hook, baited with bait or tied with the artificial fly.

Black bass cannot be lawfully caught anywhere in the State (excepting in the Potomac, which is under a special law) between April 1 and July 1. Brook and rainbow trout can only be caught in Garrett, Alleghany and Washington counties between April 1 and Aug. 15, and in the other counties between March 1 and July 1. After weighing a great many fish and consulting many fishermen, both amateur and professional, including wholesale and retail fish dealers, the committee decided upon the following lengths below which it is made unlawful to take the respective kinds of fish:

Black bass, pickerel, wall-eyed pike, or California salmon or pike-perch, 12in.; brook trout, 6in.; rainbow trout, 8in.; white perch, 7½in.; yellow perch, 9in.; pike, 15in.; rock or striped bass and taylor, 11in. All fish must be measured from the end of the nose or snout to the end of the caudal fin or tail.

The bill makes it unlawful to catch diamond-back terrapin measuring less than 5in. on the under shell. A careful investigation made by a subcommittee of eastern shoremen showed conclusively that large numbers of small terrapin are annually destroyed by being confined in pounds during the summer. The diamond-back terrapin is rapidly disappearing, and it is evident that unless they are given a closed season, as with bass, they will soon disappear. All efforts to raise them in confinement have been utter failures, and the present system of fencing them in pounds merely results in large numbers of small, undersized terrapin being caught in the summer and held in unhealthy confinement, where a large percentage die.

The bill therefore makes it unlawful to catch terrapin of any size or to confine them in pounds between April 1 and Nov. 1.

The provisions of this bill which are of the most general interest and value to the great majority of fishermen of this State are the sections which are framed to prevent the outrageous destruction of small perch, rock, etc., by seine haulers, principally in the waters of Baltimore and Harford counties. Investigation shows that tons of these fish are annually left to rot on the shores or are hauled away for manure after the marketable fish have been culled out. The practice at present is to haul the seine on dry land and permit all the small fish to die while the large ones are collected. In this way for one marketable fish which is used for food a dozen small perch or rock are wasted.

It is perfectly practicable for the fish which are caught by the seine to be culled over in water not less than 12in. deep, and by the exercise of little care the fishermen can prevent the death of the small fish. The bill therefore makes it unlawful to land a seine in less than 12in. of water, and it is further made unlawful to so fish a seine that the small unmarketable fish perish. This will prevent the use of these delicious food fish for manuring purposes. The present excellent Fish Commissioners have already recognized the fact that the supply of perch has begun to fail, and last season the Commissioners began to place perch in the bay. It will be an absurd illustration of the old saying "saving at the spigot and wasting at the bung hole" if the Commissioners spent large sums of money in placing perch free in the bay, and the public permits these same young fish to be caught and used for manure before they arrive at a marketable size.

GEO. DOBBIN PENNIMAN, President.

The Megantic Outlaw Taken In.

HENRY LADOUCEUR, the alleged game poacher of Megantic county, arrested by Detective Gladu, of the National Detective Agency, near Spaulding, on Wednesday last, is in gaol at St. Joseph de la Beauce, awaiting trial there before Judge Angers on the 30th inst. He has already confessed having killed a number of deer in excess of the statutory limit. In a remote and almost inaccessible region, the prisoner had been credited by some of the country folk with the possession of all the virtues, dash and bravado of a Robin Hood. A supposed haughty contempt for the lawmakers and the police and a capacity to shoot unerringly helped magnify a promising romance, terminated abruptly by the officers of the Montreal Fish and Game Club.

Dr. Finnie, president of the club, instructed Mr. Gladu to spare no efforts in running Ladouceur to earth. The detective engaged the services of Joseph Renaud, a well-known carter. They entered the wilderness on the 14th inst., as hunters, and ingratiated themselves into the confidences of the country folk. Gladu had a canteen in his outfit, and how well he succeeded with his liquid is evidenced by his success. The runaway of a countryman's horse and the detective's search for it brought him to the dwelling of Joseph Boulet, perched high on the mountain side. The hour was midnight. A rap brought Ladouceur to the door. The hunter soon enjoyed good cheer with Gladu, whom he took for an American hunter. Gladu then left, agreeing to return next day. He mean-

while hunted up Renaud, his assistant, and at dawn they proceeded to Boulet's house. Ladouceur gave them a warm reception, and after bargaining he agreed to sell two caribou carcasses lying in the barn, to Gladu for \$10 each, and agreed to supply seven more at the same price. He boastfully related, so Gladu states, that this season he had made twenty kills with twenty-one cartridges.

When pretending to produce the cash Gladu and his assistant, at a preconcerted signal, jumped on Ladouceur, and, clapping the handcuffs on his hands, made him a prisoner. The hunter was too dumbfounded to offer resistance. A heavy dagger was found in his possession. Gladu says he is not exactly the terror he is described to be.

Six other caribou carcasses belonging to Ladouceur were discovered in a hut in the bush twenty miles from the scene of the arrest.—*Montreal Star*, Dec. 27.

The Colorado Game Wardens and the Ute Indians.

Report of the Commission.

DENVER, Col., Dec. 28.—*Editor Forest and Stream:* On Oct. 24, 1897, a posse of State game wardens came in conflict with a camp of White River Utes on Little Snake River, in the western part of Routt county, Col. The affair caused much controversy, and it was claimed by many that the wardens were guilty of murdering the Indians.

The Governor of Colorado appointed a commission consisting of D. C. Beaman, of Denver; Charles E. Noble, of Colorado Springs, and Joshua Walbridge, of Steamboat Springs, to investigate and report on the facts.

The commission spent fifteen days in the investigation, visiting the scene of the conflict, taking the evidence of the wardens and settlers, and then proceeded to the Indian Agency in Utah and took that of the Indians. Their report has been submitted, and shows that prior to going into Colorado to hunt the Indians had been informed by the agent that they had no right to do so in violation of the law, and that they would be arrested by the wardens; that the Indians paid no attention to the warning, and nearly 200 of them went into Colorado, and on their arrival said to settlers that they were not afraid of the wardens or the "Buckskin Police," as they called them, and that each cartridge was good for a "Buckskin."

The wardens, ten in number, and two unarmed citizens came upon a camp consisting of twenty-seven bucks, squaws and papposes, but only six or eight bucks and a few squaws were in camp at the time.

The wardens found forty or fifty fresh deer hides, several beef hides and two fresh deer carcasses in the camp, and after about three hours' parley with the Indians, endeavoring to have the bucks peaceably submit to arrest or leave the State, which they refused to do, the wardens undertook to arrest them. The Indians resisted, one trying to shoot a warden, but the gun being knocked aside the bullet hit a squaw on top of the head, inflicting a scalp wound only; the Indian then clubbed his gun and knocked a warden down, while two more Indians made an attack with knives. The wardens opened fire with their revolvers, their Winchesters being on their horses, and killed two of the Indians and wounded a squaw in the arm who was shooting a revolver at the wardens.

The report finds that the Indians inaugurated the conflict, and that from an attempt to arrest the Indians it was instantly resolved into a question of self defense by the wardens.

The report states that while these White River Utes inherited the love of hunting, the same blood probably transmitted the instincts and disposition manifested in the Meeker and Thornburg massacres, and concludes that branch of the case as follows:

"It is no doubt true that in many respects these Indians are simple and uneducated, and in argument are entitled to have the benefit of their simplicity and ignorance. This they were awarded to the full limit. But there is no rule entitling an Indian in a physical conflict to any advantage over a white man, or requiring the latter to take greater chances of injury or death simply because his assailant is an Indian.

"While it is cause for regret that any blood was shed, we conclude that after the first hostile assault by the Indians the wardens were not bound nor required to await a further or successful attempt to kill or injure one of their number, and that in the conflict referred to the wardens committed no offense against the law."

It is said that the Indians disregard the game laws whenever they come into Colorado by killing deer at all seasons, and pay no attention to the limit or number prescribed by the law.

The report also shows that in these annual incursions into Colorado the Indians terrorize and insult the women; and kill the settlers' cattle, and says that as the object in removing the Indians from the reservation originally was to open it to settlement and undisturbed occupancy by the whites, the Indians should not be allowed to come into Colorado at all.

The Commissioner of Indian Affairs also sent an agent to investigate the affair, and he has reported in substance the same as the Colorado commission, so that it may be regarded as settled that the Indians were responsible for the conflict.

D. C. BEAMAN.

Quail in Louisiana.

OPELOUSAS, La., Dec. 21.—The cover has been so rank up to the present time that it has been a disagreeable thing to attempt to shoot. Birds are plentiful this year, and some good bags have been made. The breeding season last summer was excellent and there is now lots of feed for the birds. We have had very few snipe and ducks; in fact, snipe and duck shooting in this country are practically a thing of the past. In the future all our shooting will have to be confined to quail. Shooters are increasing so rapidly, and modern guns, shells, powder, etc., are coming into use so much that it will not be many years before quail will be as scarce here as in many Eastern States.

T. A. J.

CHICAGO AND THE WEST.

The Clock Stopped.

CHICAGO, Ill., Jan. 1.—It is a singular fact, which I advance apropos of nothing in particular, that this morning when I arose to begin the pleasures of another year I found that the clock of the household had gone on strike, had folded its hands and quit work. This in itself is nothing wonderful about even an eight-day clock, but the odd feature is that the hands were folded at precisely 12 o'clock midnight (I had heard the hour of 11 struck as I sat near it reading). Some of my friends find in this a sign of great ill fortune, and advise me to sell the clock and take out more life insurance, but this is obviously foolish advice, and I find rather in this an omen of distinct good fortune and an indication of a perpetual high noon of good luck for the next twelve months. I think if I understood this game of policy I read about in the papers I should go out and play it for twelve, with a certainty of breaking the bank. Whether this course would or would not be a wise one, and whether or not the clock should be held justified in stopping at this weird hour of midnight on New Year's eve, are questions which might perhaps best be referred to the "Man in the Clock Tower," who should be passing wise in matters of this sort. My own explanation of the occurrence is that, following some line of obscure communication between the mind of man and the matter of things such as we do not yet fully understand, the clock simply followed a mental impression of my own. I remember saying to myself, as I looked at the bright new face of FOREST AND STREAM in the New Year's number, "She struck twelve this time." Which I submit to be a fact. Not that she can't do it again. I suppose the clock overheard the remark and perhaps misunderstood it.

Snow.

The other day, to continue my household words, when I arose in the morning, I found my sleeping room about half full of snow. It lay in a big heap in one corner on the tessellated marble floor, and covered up to some depth the rich color of the Oriental rugs, to say nothing of speckling a few objets d'art and getting in my slippers some. It is one of my theories that a fellow ought to sleep as near out of doors as he can, and in this case the snow came in through the window to help out the realism. For a moment I thought of the pine woods, of the Yellowstone, the Rockies, but sat down, sad at the contrast. In the city you turn on the steam and are sick; in the woods you hustle quaking asp and are well. In the woods you take your snowshoe to shovel snow out of your bed or your house, but in the city you have to get a dust pan, and ne'er a pine bough near for a broom. Law me! how I did wish it was the real snow of the mountains, that morning, and not this second-hand city snow. Not that we should blame it, for it was probably doing its best.

I have often had occasion in these columns to speak of the virtues of a winter vacation trip, not one to be spent in the house, but out of doors in camp. Really winter is the healthiest time of year, and the time when one can have most fun out of doors. At no time is exercise so beneficial to the physical man as in the cold and purified air of the winter woods, and moreover he is obliged to take his exercise then whether he wants it or not, as our good mothers used to take us by the nose at the time of sulphur or "spring medicine" and force us to swallow it willy-nilly. At no time are the woods so beautiful as in winter, when they are white and clean-starved in nature's laundry, and at no time is it so pleasant to go hunting or just go walking. Although the winter season is usually closed to the hunter of our ordinary game, he may turn trapper or naturalist, or perhaps be lucky enough to hunt where his conscience need not suffer. Then, as he goes abroad over the clean surface of the earth, there lies the record of it all written before him. He can tell, though he be a tenderfoot, the numbers or the nature of the game the country holds; and so his hope may rise—indeed, unduly rise, for to the observer of the tracks in the snow it seems sometimes that the animal that made them must be then and there present, or very near at hand. Only by long practice may he know by a look how far away is the deer or the lynx or the mouse or the rabbit which made the marks in the snow. It is a vast, bewildering, fascinating cryptogram that nature writes on the snow for man to try to read. Under it lie the commonplace dead leaves, which now you have forgotten with all signs of decay, seeing about you only the deathless evergreens and the whiteness which predicts no green and no decadent yellow.

Under it lies the earth, with its commonplace footmarks worn in so deep that the rain cannot wipe them out. Under it lie the old trenches of the camp-fires, and the chips and cuttings, and the bottles and tin cans—gone utterly now, so that the world is new and all quite your own to discover. You see few camp-fires now, and you have no danger from wandering bullets in the woods. You hear no talking or shouting of tenderfeet in the woods, for most of the tenderfeet, thank heaven, are home by the steam radiators now. It's your own world, and yours only because it is winter and because the snow has come. How silent and lovable it is, with only the chirp of some strange bird, the creak of an ice-laden tree, the caw of a jay or the croak of a crossing raven. You see far, hear far, breathe far. You cannot suspect corks or can-openers. Strangest of all, you are quite happy and comfortable. You are not cold. You have found a new world, and a new man to inhabit it—a man, perhaps, who will thenceforth think far less of trips out and dried, and places cut and dried, with guides cut and dried, and his sport mapped out for him, and his work all done for him, and after all is said his fun had for him by some one else. As against the pleasures of a summer or fall trip, those of a winter trip are as Hyperion to a satyr, as ten to one, as dollars to doughnuts, or anything else which is conventional and convincing by way of comparison. This statement should not rashly be set down as wrong until fully proved out by practical experience. For one, when I tell the beads of my trips of many years, those which mark the winter camps are biggest and brightest of them all.

Let no man sit down and shiver. Let no man say that

the advent of the ice closes the sporting year, for it but begins the best of it. The cap and tunic and the belt and snowshoe are as legitimate equipment as the bloody canvas coat. It is by no means necessary always to be killing. What is necessary is to be a man, in every way, and the physical man seems to have got here a little the best of us. What is necessary is to be a man unmindful of nerve tonics and spring medicines when the snow has gone, a man with lungs not full of smoke and soot, and with a brain not full of kinks and hard knots when the grass comes green again. The terrors of winter, forsooth! Rather let us speak of the terrors of steam-heated houses, with tessellated floors and objets d'art. That's what is the matter with this country. Look at Gaul.

Jumping Carp.

A few weeks ago I reported an occurrence at Fish Lake, Ind., where large schools of fish, supposed to be carp, were seen leaping all over a part of the lake. My recollection is that I spoke rather doubtfully over the carp supposition, as I had never known that the carp was a leaping fish. Now I am glad to say that I have reason for changing that lack of knowledge on the habits of the carp. Yesterday Mr. E. F. Daniels, president of the Tolleston Club, of Chicago, came into the FOREST AND STREAM office and took up this question of carp breaking water, referring to the publication of the aforesaid incident.

"I have no doubt at all that the fish were carp," said he. "For a long time I thought that the carp never rose above the surface, and usually kept on the bottom, but last fall I learned otherwise. My little son and myself were walking along the bank of the Little Calumet River, on the grounds of the Tolleston Club, and stopped for a moment at the dam, below which lay quite a good-sized pool of water a few feet in depth. In some manner the dog which accompanied us slipped and fell into the pool, splashing and swimming about for a moment. As he splashed in a number of other splashes arose all about him, and over a dozen good-sized carp sprang clear out of the water, all headed not from but toward the dog, which might naturally have been frightened at them. The boy screamed out, for he thought his dog was going to be eaten up. Of course the carp sank at once, and after that the water was so muddy I could see nothing. I don't know why these fish should have shown this peculiar action, but I do know they were carp, and that they leaped high above the water, showing clear and plain."

This is one of the most curious things I ever heard about the carp. At first thought it would appear that the despised fish were showing pretty game qualities when it tries to eat a live dog, but this is hardly a fair explanation of the singular actions. Everyone has seen how fish in a hatchery pool or an aquarium will plunge for a center where they think food has been thrown or where it customarily is thrown, and very likely this may have been the explanation of the conduct of the carp, whether they had ever been fed at that point or not. A bass will swim at once toward a ripple which it thinks is caused by a frog, and the bigger the splash your live bait makes the better for your catch. Perhaps it is so with carp, though I must confess they must have more nerve than I ever credited them with if they swim toward a whole live dog when he falls in the water. All this is contrary to the commonly accepted idea of these fish, and hence it is very interesting.

The Tolleston Lawsuits.

Mr. Daniels told me that the last suit against the Tolleston Club had been taken to the Supreme Court of the United States, where the club hopes to win, though the decision can hardly be expected in less than a year or two. By error of the attorney the club delayed this appeal over sixty days, and thus temporarily lost possession of the land in litigation, the famous Clough tract of about 600 acres over which so much trouble has arisen. The Indiana Supreme Court held that Clough could hold ground to the center of the stream, and not be confined by the edge of the marsh. Of course this allowed Clough to take out all that part of the dam which was on his land, and half the dam being gone was the same as no dam at all, though the club left its half standing where it was. Meantime the club has left about 1,700 acres of its best marsh, and it has devised a way of flooding this by windmills and ditches. Tolleston Club by no means intends to abandon its rights or its property in this much-contested shooting ground. The locality is very dear to many of the older members of the club, to say nothing of the principle at stake. So far as the principle of preserve protection is concerned, the fight of this club is one of great public interest in sportsmanship. Though Tolleston Club has always been quiet and has avoided notoriety, its fight is really the fight of all sportsmen, and all sportsmen must hope for its final victory.

Michigan Partridge and Quail.

Mr. W. C. Held writes me interestingly about Michigan partridge and quail:

"The article which appeared in FOREST AND STREAM a short time ago, describing your hunt in Michigan, proved quite interesting to me," he says.

"I was in a locality this fall which I call a good partridge country, it being nothing unusual to start from forty to sixty partridges in a day's tramp. One day I bagged sixteen from 1 o'clock to dusk. Where birds are so plentiful I never care to hunt all day. One could start from the house at 9 A. M. and return home by 3 o'clock and have all the shooting one could wish for.

"I carried my camera with me most of the time, and often would take a snap at the dog while on point and then bag the bird when flushed, but frequently the birds would not lie long enough for one to get a shot, either with gun or camera.

"I made a shot this fall which I think will not be repeated by me very soon. A bevy of quail flushed at the edge of a black ash swamp. I fired at a single bird and killed it, the dog retrieved it, and I then went over to a little ridge where the birds had scattered. When I reached the place I ordered the dog on, when he suddenly came to a half point and then picked up a dead bird. I sent him out again and he brought another, and he went out twice more, each time bringing a dead quail, making five with

the one shot. Another singular thing was that all of the five birds were males.

"I think our quail shooting should not commence until Nov. 1, then one would get nothing but fair-sized birds. Now the shooting commences Oct. 1, and some of the birds are too small and easy to shoot. One of our shooters says he flushed several bevs in October that looked like bugs."

Gave him a Watch.

The deputy game wardens of North Dakota made State Warden Geo. E. Bowers a Christmas present of a handsome gold watch, with a suitable inscription within the cover. The shooting public might also very well give Mr. Bowers at least a vote of thanks for his very able work of the past season, which has helped the shooting for all who have sought the big open preserves of the prairie State.

The Game Wardens' Convention.

The game wardens' convention at Chicago on Feb. 7 bids fair to hold a considerable interest. We shall have here the wardens of Minnesota, North Dakota, Wisconsin and Michigan at least and probably others. The question of game protection was never before so widely advertised or wisely agitated as it is now.

The Vindication.

In regard to the "vindication" of the game wardens in the Ute killing affair in Colorado there seems already to be cropping out a slight divergence of belief. Rev. M. W. Reed, of Denver, proposes to take up the matter at a later date, as soon as he has access to the official report. The Salt Lake Tribune in the course of editorial comment on the commissioner's report says:

"This recommendation, if carried out, would make the Indian a nondescript, neither fish nor fowl nor flesh; he could neither hunt according to his hereditary rights and treaties with the Government, nor exercise the same prerogatives as an American citizen. Altogether, Mr. Reynolds's report is a marvel of sophistry and careful avoidance of facts—totally at variance with the testimony which he forwarded with it.

"In reading the testimony of the wardens and Indians, and according to those present when the latter were examined, there seems no justification whatever in his assumption that the Indians fired the first shot. All of the wardens say that they think that such was the case, but none of them—not even Wilcox—asserts so positively, while, on the contrary, all of the Indians are unanimous in their statement that they were not only the last to attempt shooting, but that their arms were where they could not reach them. Altogether, while the report is a disappointment in that it appears to give only the Colorado wardens' side of the story, it is quite as much a surprise, as impartial treatment was expected."

Work of the Wardens.

At Salt Lake City, Utah, Dec. 24, a box of ducks consigned to Ender & Ender, of Chicago, was seized by warden Garn after it was received by the Pacific Express Company, the game being confiscated and sold.

At Mt. Vernon, Ill., Dec. 29, warden Slocum arrested W. C. Merritt, Henry P. Price, of Bellerive; Geo. Campbell, A. McCreary and B. F. Goosetree, of another town, all on different charges of violation of the game laws. Warden Slocum is trying to stop the illegal shipping of quail from that section to the markets of Chicago.

At Pueblo, Col., warden McLean and deputy Williford made a regular round of the butcher shops and stores, and confiscated a large amount of illegal game, giving it to the charitable institutions of the place. I should call this sort of thing very much better than our Illinois way of selling this game at auction. The selling of such game puts money in the pocket of the warden, and so pays him for his work, it is true, but it is a very risky clause this to have in any law, for it makes an ugly loophole. It was under this confiscation and sale clause of our law that the once famous suits were brought against H. Clay Merritt in the Kewaunee game cases—probably the worst bungled prosecution that ever happened under any game laws. Had Merritt been fined and the birds given away or destroyed, the whole matter would have been well ended, with no charges or counter charges of any sort left possible. (Merritt appealed from the Appellate Court to the Supreme Court of the State, which has recently affirmed the lower court, thus finally defeating Merritt and upholding the old Wagner case of Illinois, often cited on this question, which holds that game cannot be legally held in possession after the close of the legal season, no matter how or where obtained.)

At St. Paul, on Dec. 23, Henry Merrill Peck was fined \$30 for having in possession three illegal partridges.

The Stock Growers' Convention of Colorado advertised a big barbecue, after the fashion of the old days. In the old days it was permitted to have elk and antelope direct from the country round about. Not so to-day, and though the elk were shown to come from a private herd, Commissioner Swan at once started queries about the dozen barbecued antelope which were placarded as part of the feast.

In Ohio the farmers are kicking about the rabbit law, which they say should allow them to hunt rabbits all the time. The plea is put forward that the rabbits eat the raspberry bushes. Yes, methinks I see a flock of rabbits, each with a long, thorny festoon of briery raspberry vine hanging out of his mouth and marching across the country like an army of invasion. Let us be protected against the rabbits.

They are kicking in Indiana, near Muncie, because the hard winter has killed the quail in thousands. A coat of ice has covered up the fields, and the quail are taking to the stacks and barns. This is the way quail are thinned out suddenly sometimes, and the matter is indeed one for regret.

Not contented with having the worst game law on earth, so far as oppression to the sportsman is concerned, Iowa is beginning to talk of farmers' leagues similar to those recently formed in portions of Ohio. The Lemars Sentinel takes up this subject, saying among other things: "The town hunter is usually a pot-hunter." But is he? And is he after all a whit better or worse or dif-

ferent from his fellow who lives on a farm? One is as good as the other, and they ought to respect each other and each other's rights and preferences, all subject to the law. The farmers have a right to make these leagues. The "town hunters" have a right to break into them by so strong a showing of a sense of justice and courtesy that the farmers shall feel themselves helpless to resist a reasonable request. And every closed farm, every closed State, is a game hatchery.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Close of the Maine Season.

BOSTON, Jan. 3, 1898.—The last week of the Maine big game season was a poor one for the hunters. A little snow in most sections, and this frozen to a crust, made hunting extremely difficult. J. H. Jones tried the deer a few miles out from Buckfield last week, but they could not be reached. Mr. Jones has not yet got over a shock to his nerves, received from the nearness he came to a terrible accident. His brother carried a new rifle, with "expansive bullet." This they resolved to try on a target, as they came up the railroad track from a hunting trip. A log with a white spot on it showed well from the track a number of rods ahead. This Mr. Jones took good aim at and pulled the trigger. Some fault in pumping in the shell caused the weapon to miss fire. While he was fixing the trouble, preparatory to trying again, a Canadian-Frenchman got up from behind the log. He had stopped to light his pipe out of the wind. Had the rifle done its work the terrible "expansive bullet" would have nearly torn him in pieces. No more shooting at targets for Mr. Jones till he is sure of what there is behind them.

Mr. J. Humphreys and Mr. S. T. Morton came back to Boston Saturday from a week's hunting in Aroostook county. They brought no deer, but considerable experience with cold weather and attempting to approach big game over a crashing crust. A special from Bangor suggests that for the entire season about 7,500 deer have been killed in the State, with 250 moose and 100 caribou. Of this game two-thirds have been transported by rail, of which there is a fast time record. The other third is estimated, and doubtless the estimate is too low.

The record of game transported over the Bangor & Aroostook for the entire season, with the exception of the last day, is as follows:

	Oct.	Nov.	Dec.	Total.
Deer	1,246	1,023	371	2,640
Moose	55	37	10	102
Caribou	20	24	9	53

Following are the figures showing the kill in previous years:

	Deer.	Moose.	Caribou.
1894	1,001	45	50
1895	1,581	112	130
1896	2,245	133	130

By the above figures it will be seen that the increase in deer killed is most remarkable, and the increase has been as great all over the State as in Aroostook county. Moose and caribou have both fallen off in numbers taken. Commissioner Carleton is reported as saying that it is only a question of a very short time when the moose and caribou will all have disappeared from the hunting grounds of Maine, and his views are altogether probable.

SPECIAL.

Game as a Source of Revenue.

CURRITUCK SOUND, N. C.—*Editor Forest and Stream:* An article from the pen of Mr. Charles Hallock, of whose acquaintance we are proud, in your issue of Dec. 11, has caused us to do a little figuring on game as a source of revenue. On the banks of Currituck Sound, both sides of it, from the Virginia line to the Dare County, N. C., line, live about 700 men who live by hunting five months in the year, from Nov. 1 to March 31. In fact, they are generally very poor people, and have no other means of support save the growing of a little Indian corn for bread, and to feed pigs, from which their meat is obtained. Two hundred of these men use batteries, or sink-boxes two men to the box, and kill on an average \$500 worth of game to the battery, or a total of \$50,000; while the other 500 shoot from bush-blinds and points, and kill on an average \$200 worth to the hunter, or \$100,000. This is an income of \$150,000 to the eastern side of this county during half the year, that could in no other way I know of earn \$10,000.

Mr. Hallock speaks of protecting deer and bear near New Berne, which is a "veritable Eden" for that game and many other kinds. His plan of buying Bog Banks for a preserve is a capital one, and I trust will be done speedily. The old Gallop place, just north of Nag's Head, was purchased about three years ago by a gentleman from Newark, N. J., and to-day is alive with deer, simply because they are protected. I am not paid to boom lands near New Berne, N. C., or any other section, but there is no country in America so well adapted for preserves of this kind as eastern North Carolina, from the Virginia line to and just below New Berne. Mr. Hallock is perfectly right about protection, too. There should be a short season, though, when the game might be sold. When God created Adam and placed him in the Garden of Eden He did not fill his pockets full of money, but, according to a sermon by John Jasper, of Richmond, Va., after he had sinned threw him over the fence and told him to go and work for a living. Give the people of this section two months—December and January, or November and December—when they may go work for a living.

CURRITUCK.

Long-Range Rifles in the Woods.

IRVING, Dec. 27.—*Editor Forest and Stream:* I have looked in vain in the columns of our dear old paper for some note of warning from some able pen regarding the use in the woods of the small-caliber rifles, i. e., the .30-30 Government, or any of the heavily charged nitro, steel-jacket bullets. While well adapted for the purpose intended—that is, for defense in war, or possibly on such ground as Mr. Hough describes in his article on goat hunting, or on the great plains of the West—for use in the woods of Michigan or any other State where hundreds of hunters go during the open season for deer, I

claim they are a dangerous arm. They have a range of 2,000yds., or a killing force at almost two miles, and are too often in the hands of men new to the woods, with little or no knowledge of the art of properly shooting large game.

Again, few know how easy it is for the steel-capped bullet to deflect from its true course, if touching some twig or limb or rock or the ground. During the first nine days of the open season for deer in the upper part of Michigan there were nine men shot, some mistaken for deer, but others killed by these long-range small bullets. Nine men in the first nine days killed—a man a day. I have also knowledge of others killed or wounded during the rest of the open season, and all in the Upper Peninsula. Now, it is bad enough to have a lot of fools in the woods who will shoot at any object their excited minds conceive to be fur or feather; but when you arm them with the modern rifle, designed at first only for modern war, it is almost suicide to venture into the wilds of nature when the law is off on our large game.

For my part I could never conceive the use of a more killing gun for deer than the .38-55, .40-60, .44-40 or .45-60. Individually I think the .40-60 about right. But I have killed more deer with the now laughed at .44-40. This year I had a friend who took with him a .44-40 and got all the law allowed him—two deer with three shots—and got out for home again, staying only four days. He fully intended hunting small game, but fear of life and limb caused him to get.

At what distance, pray, does the average would-be deer-slayer imagine deer are killed? From the kind of gun the majority carry, I should guess something like a mile. As the law now stands, killing in the lakes is forbidden. There are no large plains to hunt over. What then does a man want of a gun like the .23 or .30cal., where the trees, scrubs, etc., limit the good shooting to 200yds. and under? Is it because he thinks he is surer of a kill with a small caliber? I am sure one does not require a more deadly arm than the .38-55 or .40-60 for such game as is found in Michigan or Wisconsin. Then why cause bloodshed and death by using guns intended for another purpose? I say, keep the 8 and 10-penny nail-drivers out of the woods.

BRIAN THE STILL-HUNTER.

DEC. 11.

[This subject was discussed at some length in our columns in the autumn of 1896; it appears to have been given some thought by the "Man in the Clock Tower," who wrote of it in his column of Dec. 11.]

In the Month of December.

OPECANCAHOUGH, the last great chief of the Taskinas, has bidden his blood brothers to hunt and feast with him in the month of the ripened maize at his lodge on the banks of the mighty York River in old Virginia. Last of a now withered tribe, he had brought together Pocopotank from the fertile region now called Charlotte county, deep versed in forest lore and weighty among the sages; Pamunkey, of the tribe which to this day pays yearly tribute to the Commonwealth of Virginia, known on the trail as He-who-shoots-deer-on-the-jump, and an Algonquin from Massachusetts Bay who had camped many nights with Opecanough. These were old friends, and although the red men were gifted with the taciturnity of their race all had that rare communion of mind which conveys thought almost without the medium of speech.

The lodge was one which Opecanough had built, with toil and patience, in which to pass the remaining days of his declining years, planted on a bluff from which the eye could see from the confluence of the Pamunkey and Mataponi rivers down stream to what is now Yorktown. Here, deserted by his squaws, and with one faithful follower, the old chief sat him down in peace to wait the end.

The woods were filled with deer, the shore was lined with plump and tempting black duck, with here and there a canvasback, most delicious of his tribe, the gobble of the wild turkey echoed through the trees, and although the quail and partridge were not plenty there lingered hidden beneath the mud at the river's brink the most delicate and succulent morsel of all, the famed York River oyster, juicy and invigorating. Think then if, with the prospective feasting and sport as well thus offered them, the guests delayed their coming.

A frail bark was drawn up on the bank in which under the guidance of Algonquin they skimmed the mirror-like surface of the water or sped like the gull before the gale. Long, tiring mornings passed in the chase, followed by nights of feasting to repletion, and smoking together the spirit soothing Indian weed to repay the enforced abstemiousness of the day, varied occasionally by shivering for hours in a grassy blind to wait the whirring duck, made up of the tale of the week's pleasure. And so they separated, each man stronger and sounder in body and mind, the one to seek the bleak Northern coast, the others to regain their quiet and sequestered wigwams, there to regale their wondering squaws and papposes with imaginative tales of their mighty feats on the banks of the York.

THE ALGONQUIN.

Currituck Game!

WATER LILY, N. C., Dec. 29.—*Editor Forest and Stream:* Old Boreas came howling out from the right point of the compass yesterday and the shooting was fine. Large bags of ruddy ducks, redheads and canvasbacks were made. We have just learned that the old Currituck Club members have had the finest sport this season they have had for many years. The Swan Island people too have had good sport. There are more canvasbacks in Currituck Sound to-day than we have seen for ten years at any one time. Quail are also abundant. The natives at Currituck are very anxious about the agitation all over the country to stop the sale of game. I can hardly see what would become of them.

Large-mouth black bass are not so plentiful here this season on account of the salt water in the Sound, but still there are sometimes as many as 10,000lbs. taken in a day.

Our game laws are well kept this season, with few ex-

ceptions, and Squire A. B. Midgett hasn't business enough to keep him at home. He shot with me yesterday and killed forty ruddy ducks, redheads and other kinds, bringing them down right and left with unerring aim.

We hear that the Albemarle and Pamlico sounds are literally filled with ducks, but the water is too broad and deep, and they are safe.

CURRITUCK.

Adam and his Musket.

Editor Forest and Stream:

In the last issue of FOREST AND STREAM "The Man in the Clock Tower" mentions the picture of Adam shooting ducks with a musket in the Garden of Eden, credits the illustration to an old Dutch Bible, and asks to be put on the track of the pictures. While regretting that I cannot supply the desired information, I do not doubt the existence of such an illustration, and can tell of another fully as curious.

Two years ago in Catskill Village there was taken down an old stone house, built for Madame Jane Dies, in 1763, and commonly called the Old Stone Jug, the fine old building having at one period of its existence been used as the village jail. The fireplaces in the drawing room of the Jug were bordered by tile made in Holland, and decorated with Scriptural scenes. One of these ancient tiles represents the raising of Lazarus, who comes from his tomb with a Dutch flag over his shoulder. This tile is still in Catskill. There is in one of the European galleries a Dutch painting of the crucifixion, showing a Dutch landscape, with windmills in background. The figures are dressed in Dutch clothing of the artist's period. These old Dutch painters were in the habit of representing life as they knew it, and meant no irreverence.

A. C. STOTT.

Sea and River Fishing.

Camp of the "Lone Kingfisher."

Little Presque Isle River, Michigan.

Brer Doc.:

* In answer to your request for an account of my "trouin' trip" last summer to the little Presque Isle River, I will try and scrape together, from memory, a few of the happenings and episodes thereunto appertaining, and put them in some sort of shape for you; just to ease the yearnin' that is no doubt keeping you from enjoying your proper and necessary rest o' nights, and your good wife in a state of perturbation regarding the "equilibrium" of your mind—as Dick Mc—— would say.

It is hardly necessary to remind you of our ride in Ormes's wagon from the main camp of the Kingfishers on Presque Isle Lake, over that road in to Marenisco—you and I and old Temp, you and Temp on your way home and I to the promised land o' trout, four miles west of the station, where I expected to stay a week in the woods alone.

When I got on the 12:19 P. M. train with my camping outfit, leaving you and Temp standing on the platform waiting for the train that would start you the other way to home and work, I felt that I had the best end of the bargain, for a week in the woods, along a trout stream, even by one's self, is worth just the fifty-one other weeks of the year, with no woods or streams or lakes in sight to make you forget the cares and worries of life.

I noted the wistful expression that came into your eyes, and old Temp's, and felt sorry for you and wished that both of you had another week at your disposal, so you could go along and share my camp and help me eat trout. But I "compromised" with my disappointment, as I have with many others, and fell to speculating on how the stream would look, picturing to myself a quiet pool here and there along its winding course where lurked, mayhap, a wary old trout, and wondering the while if the camping place near the railroad that I had been told of would prove as good as represented.

Conductor Wall (may his shadow never grow less) stopped the train and let me off with my outfit just at the beginning of a "cut," a matter of 100yds. beyond the trestle bridge that crosses the narrow stream, and there, at the top of the bank, was a camp of "three gentlemen from Chicago," as I learned shortly after, with our friend John McLaughlin, of Marenisco, acting as their guide, cook and camp-keeper.

I made a mental note of this as another triflin' disappointment, as I had hoped to spend a week there with only the chipmunks, the bluejays and an occasional kingfisher along the stream for companions; and here at the very outset I was confronted with company in short breeches and leggins and a well-appointed camp that made me feel that I was only a cipher "on the face o' this livin' airth."

McLaughlin introduced me to them—two doctors—and the other one just a plain, common sort of a mortal without any handle or prefix to his name whatsoever. We fell into a brief, constrained sort of a conversation, but they seemed to be encompassed with such an air of exclusiveness and self-consciousness that I felt more than ever that I was a cipher, and I was glad to make my excuses and go in search of the spring and camping place that Ormes had told me about, and which McLaughlin now pointed me to.

I shouldered the big canvas bag containing my tent and bedding, and following a hard beaten path for a hundred yards nearly south came to a magnificent spring gushing out at the foot of a low hill, and back up to the right, only three or four rods away, I found a level, open spot, surrounded by woods and bushes, that was exactly to my pleasement for my camp. Another trip for the box containing my cooking utensils and provisions, and another trip for the axe and rod case, and I was "sweatin' like a hoss" and ready to go to work making camp.

* A copy of a letter written to Dr. A. E. Elliott, of Lodi, Ohio,

During all the portaging of my outfit from the railroad to the camping place, the "three gentlemen from Chicago" had very considerably refrained from obtruding themselves on my notice, sticking closely to their camp instead, as if afraid of giving offense if they offered to give me a lift in hoisting the canvas bag or provision box on my shoulder.

After cogitating a good deal over that episode I have come to the conclusion that there is nothing lovelier than a good supply of good fellowship and courtesy to your fellow man to take to the woods with you, and I ever have a good chance I am going to take some along and try it, but I am afraid I may never hope to attain to the standard of the Chicago party in social ethics for the woods and camp; I yield them the palm in advance.

I cut some tent poles in the swamp between the foot of the ridge and the river, a ridge pole and two crotched uprights for it to rest in, and had just got it set up when one of them came up the bank and asked if he could be of any assistance. The tent had just fallen down, as I had not driven the sharpened ends of the uprights far enough into the ground to hold while I drove the corner pins, and I was standing looking at the wreck, wondering what to do next. We set it up again, he holding it till I had driven a pin at each corner, when, after a few minutes of desultory chat he went back to the camp, and I saw no more of them after that except once or twice when they passed along the path below to the spring for water, McLaughlin usually doing that part of the camp work.

I cut a balsam sapling and stripped a lot of boughs, which I shingled along one side of the little tent till they looked about right, and then with the rubber piano cover, a cotton mattress doubled, a pair of blankets and a big comfort, I made a bed that was simply perfection, and then I rolled over it two or three times to make sure there were no humps in it that would move me to make a few remarks during the night.

Next I wanted a table, and this I made by flattening with the axe 4 or 5 ft. of the top of a fallen tree 6 or 8 ft. in front of the tent, which had been chopped down by some former camper, seemingly for my especial benefit. Then I made a scaffold of poles about 5 ft. high, near the log, on which I placed the provision box, to be out of reach of porcupines and other varmints; drove some nails in a tree on which to hang the frying-pan and other kitchen furniture, and lastly I made a fireplace handy to the table, cut enough firewood to last a day or so, and sat down on the log—I had forgotten to bring a camp stool—to smoke and survey my work. I was satisfied with it and happy as a chipmunk. The Camp of ye Lone Kingfisher was complete from a solid-comfort outlook, and I rested and smoked some more.

I was congratulating myself in a selfish sort of way, as I made it out afterwards, that I was to have this camping spot all to myself, when the train from the West stopped, and directly after three men and a boy of ten or eleven years came trooping up the path past my "front yard" and dropped a lot of camping duffle in the larger open space 15 or 20 yds. to my right, separated only by a narrow strip of low bushes and briars that grew near my tent.

As the last one reached the top of the slope, with a sheet-iron camp stove on his shoulder, he hailed me: "Hello, partner, where ye from? Come over and get acquainted."

I "come over," and when relieved of his load he turned and said: "My name is Thomas; this (pointing to the smaller of the three) is Mr. Jensen, and this (with a flourish of his arm toward a jolly, good-natured Dutchman) is Mr. Schreiber—George Schreiber—and here's my boy. Now what's your name, and where are ye from?"

I gave up my name, where I was from, with the further information that I dropped off the west-bound train and had about got my camp fixed up, and that I had come over from the camp of the Kingfishers on Presque Isle Lake for a week's trout fishing.

"All by yourself? Well, I guess you're all right; there ain't many fellers that would come over here to camp alone for a week. But come, boys, let's put up that tent."

They had but one tent, and that was soon up, the stove set up, their bed made, and their camp was finished. By this time we were all on the best of terms, and as long as they stayed we "neighbored" together as if we had been old friends for years, exchanging commodities and good fellowship to the benefit, I trust, of all concerned. They were the very best of camp neighbors, and I was glad they were there, and sorry when they went away.

They had come over from Bessemer for a few days to fish a little for trout, incidentally, but mainly to pick blueberries in a big patch a couple of miles back, up the railroad.

They were off early every morning and back in the evening in time to catch a few trout, maybe, and get their supper in the twilight or by the light of the campfire, and I saw little of them except in the evenings; but when we got around the fire after supper was over, it was better than a seat in the gallery to listen to the quaint yarns of Schreiber, one of the drollest, best-natured, fun-loving Dutchmen that ever turned the English language upside down. He was high and low comedian, and the whole show, and kept the audience in great good humor till the fire would burn down and it was time to go to bed. May he never grow old.

By the time their camp was made it was well along toward sundown, and my fingers were itching to grasp the butt of the old rod. My neighbors were sooner ready than I, having only to tie on a piece of line to poles picked up along the stream, give a grasshopper or two and go to work. They went down stream below the bridge, and I took my way up the creek through a tangle of "bresh" that reminded me of some other trout creeks that I have "rastled" with in the past eighteen years of camping in the north woods.

I only fished about forty rods up the stream, using for bait some barnyard hackles that I had brought over in a tin can from the main camp, for it was impracticable to use a fly on account of the overhanging limbs and bushes.

I made my way back to camp a little before sundown with seven trout of 6 and 7 in. in length, ready to eat a well-earned supper—when I had cooked it.

The others came in with eleven trout—if I remember

rightly—of about the same size as mine, except one "whopper" of a half pound taken by the genial Dutchman from a pool a few yards from the bridge.

I dressed my seven trout at the foot of the big spring basin, started a fire in my new fireplace and fried them brown and dry—not forgetting a couple of generous slices of bacon to give them the proper flavor. Then I made a pot of coffee strong enough to float a brick, and with some hard tack and a few other good things that I fished out of the provision box I "hived" a supper that would have astonished even our spindle-shanked dude back in the camp on Presque Isle Lake. I didn't leave a fin of the seven trout that a couple of hours or so before had been "disportin' o' theirselves in their natyve element," as Dick M. would say, and by shaking out a reef of my corduroys I might have held a couple more; but the fryin'-pan was cleaned out, bacon and all. After supper I swapped a few fish lies with my Bessemer friends around the camp-fire, and turned in tired and chock full of good feeling and—trout—and slept as only one can on a bed of fresh, odorous balsam browse, in the quiet of the woods, with the soothing voices of the night for a lullaby. I was up next morning at the break o' day, with my trout tooth still bothering me a little, and to pacify it I went down stream a couple of hundred yards, looking for a few trout. I was back to camp when the sun was a half hour high, with five that were just above the limit, and it only took a short time to

"OLD TEMP" AND "OLD HICKORY."

Photo by Dr. A. E. Elliott.

start them on the trail of their seven brethren that I had taken the evening before.

After breakfast, and when my neighbors had got off for the huckleberry patch, I went down the stream and fished it for about a half mile, taking ten trout, one of which would weigh 3 1/2 lb. The capture of that trout was one of the episodes of the trip. I had pushed my way through the bushes to the stream where it was not more than 15 ft. wide, and overhung with alders from both sides. It was quite a likely-looking place for a trout—water 6 to 8 ft. deep—and I poked the rod under the drooping bushes toward the further bank, with about 3 ft. of line clear of the rod tip. As the bait—a trout fin—struck the water, a violent swirl indicated that something was about to happen.

The tip of the rod was jerked violently under water before I had time to think the situation over. I struck instinctively and instantly with a side twitch, and we had it out right there—as beautiful a fight as ever was "fit."

However, the trout had the advantage, for I couldn't raise the rod for the bushes that hung over and in the water, nor could I lead him either to the right or the left for the same reason. There was a clear space of water only about 2 yds. square, and I had to keep him in the bounds of that, or he would get a turn around a limb or twig in the water, and that would end the contest.

I reeled up a foot or more of the already shortened line, and stood there and held the rod firmly in one position as nearly as I could, and let him cavort and surge and tear around and turn somersaults in the water and make desperate dashes to get into the submerged bush-tops, till he wore himself completely out and came to the top rolling teebly from side to side, with the fight all knocked out of him by the inexorable pull and spring of the faithful old rod.

Now I was in another category. I could neither raise the rod up through the bushes to get hold of the line, nor lead him to the bank above or below me, so I just backed up the sloping banks and dragged him out through the brush to where I could work along to the rod tip and get hold of the line before he could flop back into the stream. The performance on the whole could probably not be classed as artistic angling from a fly-fisher's standpoint, but it was the only possible way to get that trout—and I got him. Had that "crimson-crested princeling" of trout fishers, "the aesthetic fly-caster of the North Shore," the big Injun of rodsters, been looking on, he would doubtless have been shocked into a fit at my methods, but—I wanted that trout, and I have a notion that he was so bewildered when he was dragged up the bank that he didn't remember whether he had sucked in a "professor" or "swallowed" a bullfrog.

There are more ways than one of taking a trout, but whether deftly handled with a 3 oz. split-bamboo and a cunningly devised fly, or yanked out with a tamarack pole and a chunk o' pork, the end in view is the same—to get the trout—and it may be safely ventured that nine trout fishers out of ten who would scorn to take a trout

only on a fly will, on occasion, fall back on the humble, despised worm for a lure—"when nobody's a-lookin'."

I might mention, as a postscript to the tussle with that trout, that when I opened him to prepare him for the fryin'-pan I found in him some grasshoppers and two small trout, one about gin. long and the other an inch shorter, with the crimson spots yet plainly visible on them. The cannibalistic cuss!

I got back to camp about noon; no one in sight and nothing to disturb the quiet of the woods except the west-bound train that went by soon afterward. I cooked my dinner alone and ate some more trout. (I've made up my mind concerning trout, about the same as the old darky did about possums: "Dey's mighty delusive critters, but dey's pow'ful good eatin'.")

When the last morsel of bacon and trout had gone the way of other trout and bacon, I sat on my front porch—the log table—and smoked and dozed in the sun, and conjured up visions of other camps of bygone days, till, to keep from going to sleep, I took the axe and got up some more firewood, and by this time I felt so lazy and shiftless that I lay down on the big comfort in the shade of some bushes—it was too hot in the tent—and slept soundly for a couple of hours.

I can think of nothing more satisfyin' on the face of this livin' airth than a nap in the woods in the shade of a bush when you're tired—or think you are, and are only lazy and indolent and "wuthless," incident to having no cares to bother and nothing on your mind only to make the most of the opportunities and good things that are put before you.

I got up refreshed in mind and body and went a-fishin' again down the stream—I had had enough of the upstream fishing—and caught a few more trout.

Back to the camp again, and finding the berry pickers had not returned, I got supper and took it without company, except for a little pine squirrel that sat on a limb of a nearby tree and jerked himself out o' shape and flipped his tail in unison with the "sassin'" and "scoldin'" he was giving me for not sharing my supper with him. Leastways, that is the way I interpreted his chatter.

This little fellow and a bright-eyed, frisky little chipmunk that had staked a claim on an old log near the spring, became quite familiar and friendly, and got many a piece of cracker and scraps from the table, placed where I knew they would get them, and soon Frisky (I had named the little chipmunk Frisky and the pine squirrel Sassbox) got so tame that he would come tripping boldly up the bank, and then move shyly up to within a couple of yards and sit up and look wise till I threw a piece of cracker toward him. Then he would skurry back down the bank, soon to come tiptoein' back to hunt up the cracker, which he never failed to find and carry to his retreat somewhere near the old log.

I am always interested in the habits and ways of the birds and the wild things of the woods, and I took a good deal of pleasure in watching the capers and cunning maneuvers of Mister Frisky and Mister Sassbox, albeit I have no doubt the two rascals had a high old time exploring the camps when no one was around; but the provisions were in such shape that they could not get at them, and they had to wait for their share till it was handed out to them, as it were. However, when I broke camp I left them enough to last a couple of weeks, to remember me by.

The afternoon train brought three newcomers from Bessemer, who put up a tent in an old gravel pit across the track from the Chicago camp, and along toward sundown they came over to the spring for water and we soon struck up a fishing acquaintance. One of them offered me a "swaller o' wrath" from a bottle concealed somewhere about his person, and seemed a trifle surprised that he had found a fisherman who didn't drink. KINGFISHER.

[The photograph comes to us from Dr. A. E. Elliott, who has labeled it: "Portraits of Allen Temple, alias Old Temp, alias Tempus Fugit, of Cincinnati, and James M. Hickman, alias Old Hickory, alias Kingfisher, of Cincinnati, both of the Kingfisher Club. The photo was taken at the Kingfishers' Camp, on Presque Isle Lake, Wis., August, 1897. Kingfisher is the one on the right of the picture, full face toward the camera." Dr. Elliott's note runs: "Mr. Hickman writes me that his letter will soon appear in FOREST AND STREAM. I thought possibly you might like to surprise him by adding his picture to the letter. The photo shows him just in the act of telling a fish lie. I consider Old Hickory the prince of good fellows—a thorough angler and gentleman."]

[TO BE CONCLUDED.]

A Fighting Tarpon.

RIO HACHA, Colombia, Dec. 7, 1897.—*Editor Forest and Stream:* On the morning of Dec. 3 I was making my way along the north coast of Colombia, South America, in a great canoe made out of a single log.

We had been traveling all night, and were a little to the eastward of the Sierra Nevada de Santa Marta Mountains. I had four men with me, and as the sea was very smooth they hitched a long rope to the canoe and three of them went on shore to tow it along the beach, while one sat in the stern to steer, keeping the canoe just outside the low breakers.

The coast was flat, and the water very shallow. Just inside a sandbar there was an extensive lagoon, similar to those along the south shore of Long Island beyond was a stretch of low arid country, and then the mountains rising almost directly from the plains—a great impressive barrier when the higher elevations were covered with snow that was glistening in the sun.

It had been a tiresome night, and I sat languidly watching the men work, or looking at the massive mountain ridges. Presently we reached a small inlet, and the men came clambering into the canoe to pole it across the deeper water.

They had just settled down to work when there was a splashing in front of the canoe, as if a wave had broken under the bow, and the next instant a shining silvery form came headlong out of the water toward the boat. I saw it was a great fish of some kind, and started back in astonishment. The men got out of the way as best they could, and then by a clever use of their poles the

fish was knocked into the canoe as it came forward, and then before I realized what had happened a great tarpon and a boy of some fifteen years were floundering around in the bottom of the canoe, and it seemed a question for a moment whether the fish would kill the boy in its struggles or smash the canoe to pieces; but the next minute the men were punching it in the gills with their long poles, and presently it was dead. The boy had scrambled up out of the way and now sat on the side of the canoe for several minutes, staring at the fish and looking like a frightened monkey.

The men did not seem very much surprised, and as they began pushing the canoe along the captain told me that it was quite a common thing for a tarpon to jump at a canoe, and frequently they were caught in that way.

Why did they do it? He didn't know they were ugly fish; perhaps it was to fight.

There are quantities of tarpon all along the coast of Colombia, but I am told that they have never been known to take the hook. The people say that they have often tried to catch them in that way, but without results. They take them in strong nets, and at certain seasons of the year this fish is one of the common articles of food among the people here.

Our specimen measured about 7 ft., and was an abundant supply for my men and quite a company of their friends.

It was good eating, but I am sorry to say that I did not get much of it. I dined with some friends about two miles back from the coast, beyond the lagoons, where we had meat boiled in lard and such things, which in this country are considered much superior to plain fish. The men saved some of our prize for me, and it was good, though I was too much burdened with grease to think of eating very much.

FRANCIS C. NICHOLAS.

ANGLING NOTES.

How do Fish Rise to the Fly?

WHEN in Quebec last season Mr. Chambers showed me an article in some publication with the title, as I recall it, "Is the Ouananiche a Fraud?" When I read it I thought I would comment on one part of the article, but it passed out of my mind, and I cannot now remember what publication the article was in even, much less what it said in detail. To the best of my recollection the article was dated at Quebec and signed by a physician. To-day I was reminded of the article and one of the charges brought against the ouananiche in it. The writer found fault with the fresh-water salmon because it would not rise to the fly when drawn on the surface of the water, and said the fish were never taken except the fly was sunk beneath the surface. To the best of my knowledge the sea salmon has never been considered a fraud, even by implication, because it is necessary to sink the fly just beneath the surface to lure him to the hook.

But the intimation, if not the language, of the criticism condemned the ouananiche because it would not take the fly on the surface of the water like the trout.

Now the question arises in my mind how many brook trout of 2 lbs. or over in weight has the writer of the criticism, or any other man, for it is not intended as a personal question, taken by casting and drawing a wet fly on the surface of the water without letting the fly sink beneath it? Furthermore, can any one cast three flies—as this is the number generally used in ouananiche fishing—and keep them all on the surface of the water? Possibly I have not had experience enough in catching big trout, but such as I have had teaches me that trout of 2 lbs. and upward take the fly when it is sunk an inch or so beneath the surface of the water, and not when drawn on the surface. I heard it declared in Maine, at Rangeley Lake and at Parmachenee, that it was almost unknown to take a trout of above 2½ lbs. when the fly was on the surface. As a matter of fact, I have fished in exactly the same manner for ouananiche and big speckled trout because in no other way was I successful, and that was by drawing the flies beneath the surface, for that is the only way as a rule that big trout or ouananiche would rise to my flies. Books will tell you, possibly with a diagram, to mount your cast with drop flies of unequal length, the one nearest the hand longer than the next, so the two with the stretchers will trip gently or slide gracefully over the surface of the water, but, honestly, I have never seen the flies do it except in the diagrams. What I would like to get at are the facts; has any one taken any number of big brook trout by drawing a wet fly on the surface of the water?

Casting a single fly, such as is used when fishing for big trout, I doubt if it can be kept entirely on the surface of the water when it is cast from 35 to 50 ft. away from the caster, but if it is really done and big trout take it in that way, it should be known. I caught more than a score of trout this year weighing from 2 to 6 lbs. each, but not one of them took the fly on the surface of the water, and the most of these required the best fishing that was in me to entice them to the hook; but if the system or practice is wrong, or any other is better, I am not the only one who would be glad to know it.

Frogs.

Mr. John Wilkin, of Middletown, N. Y., wrote me some time in the summer, and I put the letter so carefully away that I have only this evening found it. There is considerable information in the letter, but I will only refer here to one item. He says: "Are frogs cannibalistic? Yes, and I will tell you why I know. My angling friend and companion Louis Roth was out yesterday looking for bait for black bass, and incidentally looking for frogs for supper. He shot twenty-four nice fellows, and came home with twenty-five saddles. Inside of a big fellow weighing 1½ lbs. he found a frog large enough for count. I never heard of a similar case, but have seen a frog clean up a garter snake once in my time."

Mr. Chamberlain, of the U. S. Fish Commission, who writes of the edible frogs of the United States, says: "They may occasionally capture disabled fish or small fish of sluggish habits found in the mud or on the bottom, and instances are recorded of their eating snakes, toads and young birds, but insects and lower forms are their staple diet."

While on the subject of frogs I would like to say that frogs are not hatched artificially; as fish are hatched. A long time ago a fish breeder said in effect that frogs could be so hatched, but he neglected to say how it was to be done; that is, he did not go into details of the hatching process.

About four times a year, on an average, for ten or more years, I have been asked about hatching frogs, and as often as I am asked I say it is not practiced and never has been. As a rule, I believe, my correspondents credit me with being honest in my reply, but last summer, after I had given the stereotyped answer to a man, he called to see me and showed me a newspaper clipping about a frog farm in California. To the best of my ability I told him what a frog farm was, but I had a suspicion when he left that he thought I had sold him a gold brick, and that frogs were hatched after the manner of fish. There is no occasion to take the eggs from frogs by hand, for nearly all the eggs are fertilized by natural processes, so nothing would be gained by artificial impregnation, even if it could be done. What may be done by transplanting the eggs—the "frog spawn" that every country boy is familiar with, being the eggs in their albuminous coating—is another matter. Mr. Chamberlain describes a frog farm in the Trent River Basin, Ont., as follows: "It has been in successful operation about twenty years, and annually yields a comparatively large product of frogs. The waters were stocked by means of mature mated frogs. No attempt is made to confine the frogs until near the time for shipment to market. They are then taken alive at night, with the aid of a torchlight, and confined in small pens that can be drained when the frogs are desired for market. No food is given, as this is naturally present in sufficient amount for successful growth. The species is the Eastern bullfrog. It begins to breed at the age of three years and reaches a marketable size in four years. During the years 1895 and 1896 this 'farm' yielded 5,000 lbs. of dressed frogs' legs and 7,000 living frogs for scientific purposes and for stocking other waters." The concluding paragraph of Mr. Chamberlain's article contains this statement, and if its publication here does not answer those who are still curious about hatching frogs artificially, I may have to get a rubber stamp with the words: "While at present it would perhaps be advisable to limit practical attempts at frog culture to stocking natural waters with paired breeders, experiment in artificial methods should not be abandoned."

Moose and Salmon.

Last evening I had occasion to open a bundle of letters, and one of them was marked on the outside, "Moose in the Adirondacks;" but I did not open it to see what its contents might be, for I was not hunting moose. This evening I read in the *Mail and Express* that Sam Dunnigan captured the last moose in the Adirondacks in 1859. The animal was captured alive and taken from the present Honnedaga Lake to Utica, where it was sold for \$140.

I returned to my letter marked "moose" and read it. The writer is Mr. James B. Blossom, of New York city, and the letter was written in January of this year. He says:

"I wish to thank you for the very interesting communications you have been sending to *FOREST AND STREAM* for so many years. I did not know there was another so great and enthusiastic pisci-maniac as myself. I commenced when I was ten years old. * * * My first symptoms found me on Morrisania Brook (now a sewer under Brook avenue, in the Twenty-third Ward, New York) in 1845, and the disease rapidly broke out and carried me to the Beaverkill, Willowemoc and Dry Brook, then to the Adirondacks in 1853 (where I killed a moose in 1861), which I quitted in 1868, for Canada and salmon. I fished the Restigouche in 1868, Nepisquit, etc., and the Romaine in 1870 and 1871, finally leasing the Grand Caspédia for several years in the name of and with several friends. My heaviest salmon landed is 43 lbs., but I have fought with some whales."

I am of the impression that a moose was killed in the Adirondacks later than the year 1861, but I must leave the matter for some other person to settle, as moose hunting is not angling, although there seems to be an affinity between moose and salmon.

Mr. Blossom went from moose to salmon, and my friend Mr. J. W. Burdick, the general passenger agent of the D. & H. R. R., did just the reverse. Together we fished the Restigouche for salmon in June, and when I returned from the Triton Club in September I asked for Mr. Burdick, as I wished to tell him about my trout fishing, and found he was in Nova Scotia. One evening he came into the club in Albany, browned and cheerful, and greeted me: "You made a great mistake that you did not come back from Canada a few days before you did, as I watched for you for a week, hoping you would put in an appearance." "Why?" "To go to Nova Scotia with us for moose. I had a place for you, and did not fill it, hoping until the last moment that you would return." "I would not have exchanged my fishing at Moise Lake for all the moose in Nova Scotia; but did you get a moose?" "Yes, I killed a fine bull moose. I had to do it; it was a ground-hog case; having killed salmon, I had to kill a bull moose to be absolutely happy, for moose hunting and salmon fishing are in the same class, and having enjoyed one I just naturally had to take part in the other." A. N. CHENEY.

The Sportsmen's Exposition.

THE Sportsmen's Exposition for 1898 will open its doors at 7 P. M., Thursday, Jan. 13, and will remain open until Saturday night, Jan. 22. This year's Exposition will be on a considerably larger scale than any of its predecessors, at least fifty firms having taken space who were not in the Garden in 1897.

The special attractions outside of the exhibits are tournaments for riflemen, fly-casters and bait-casters, bowlers and amateur billiard players. The bowling tournament and the billiard tournament are both new, and are sure to be exceedingly popular. Entries in all the above events are coming in rapidly. The billiard tournament, the result of which will decide the amateur championship, is given under the auspices of the Amateur Athletic Union.

The Song of the Kentucky Reel.

DEDICATED TO FRED MATHER.

LIKE the delicate flush of the maiden,
When the step of her lover is heard,
Comes a glorious blush to Aurora
When she hears the first notes of the bird.
As he sings on the tip of the hemlock,
With his resonant, musical peal;
So my pulse beat time to the measure
Of the click of my Kentucky reel.

In the soft, pearly dawn of midsummer
I hie to the pool in the stream,
Where the stately old elms are reflected,
And the pond lilies float like a dream
On its mirror-like surface in beauty.
Ah! the quick inspiration I feel
As I think of the bass 'neath the lilies
And my exquisite Kentucky reel.

Now a brown hackle floats on my leader;
Far and fast o'er the water it flies,
Till it 'lights on the pool like a feather:
"One moment—a swirl—'tis a rise!
He's missed it! Once more—he's a beauty—
Such a prize for a fisherman's reel
Another good cast near that boulder,
Then hark to my Kentucky reel."

Back and forth sways the bamboo elastic,
And the line lengthens out in the air
Till the fly o'er the spot is just floating,
And I drop it with delicate care;
But ere yet it reaches the water,
Far swifter than flight of the teal,
Comes a leap and a snap—and I have him—
Hear the message clicked off on the reel.

With a flash and a dash like a rocket
To the foot of the rapids he whirls;
He is checked! Now he leaps from the water
In a shower of sparkling pearls.
Ah, he's off!—no, he's not! He is tugging
With a genuine black bass's zeal,
As my line whistles sweet obligatos
To the song of my Kentucky reel.

But the strain of the fly-rod is telling
And beginning his rushes to tame;
Still the bronzeback's a thoroughbred stayer:
Like a hero, he's bound to die game.
Ha! a jump—he is clear of the river,
And he shakes out the feather-clad steel:
All hushed is my paeon of triumph
And my musical Kentucky reel.

ZERO.

The Fish of Chautauqua Lake.

JAMESTOWN, N. Y., Dec. 30.—*Editor Forest and Stream:* Chapter 705 of the laws of 1897, purporting to be a statute to protect fish in Chautauqua Lake, provides as follows:

It shall be unlawful for any person or persons to take fish of any kind, or to fish for or attempt to take any fish from the waters of Chautauqua Lake, from May 1 until June 15 of each year, except by the authority of the State for the purposes of propagation.

Black bass, yellow bass, rock bass and muscallonge may be fished for and taken by angling only from June 15 until Dec. 1 in each year; provided, however, that muscallonge and bill fish may be fished for and taken with fish-houses, decoy fish and spears through the ice, from Feb. 1 until Feb. 20 in each year.

No person shall have upon the ice or waters of Chautauqua Lake at any time during the close season for fishing any fish-house, spear, blanket or any device for concealing the fisherman, except as provided above, during the period from Feb. 1 until Feb. 20 of each year.

It is then provided that all acts or parts of acts inconsistent with this act shall be repealed, so that this statute is the only one governing the taking of fish from Chautauqua Lake. The Chautauqua Fish and Game Association, backed by 4,000 petitioners, insist that this statute should be repealed, and that Chautauqua Lake should be governed by the same laws which are in force in other parts of the State; that the muscallonge, in common with other game fishes, belong to the State, and that there is no possible reason why a few professional fishermen living on the margin of this lake should have privileges which are denied to other citizens of the State. They hold that as the statute now stands, there is absolutely no closed season except from May 1 to June 15, and that there is absolutely no prohibition upon the taking of muscallonge during any other part of the year, by whatever contrivance the fishermen may see fit to employ. The general law of the State, in so far as it relates to Chautauqua Lake, is repealed, and applying the well-known rule of construction that statutes in derogation of natural rights, or common law rights, are to be strictly construed, they find no prohibition in this special law against spearing or taking muscallonge by any other methods, except from May 1 to June 15. The permission to take "black bass, yellow bass, rock bass and muscallonge by angling, only from June 15 to Dec. 1," does not deny the right to do so at any other season of the year, and the same may be said of the permission to spear fish during twenty days in February. There is no declaration that these fish shall not be taken with spears or other devices at any other season of the year, except from May 1 to June 15, and without such a declaration the statute is powerless to prevent such fishing.

But if we concede that it is the purpose of the statute to have a closed season from Dec. 1 to May 1 in the year following, with the exception of the twenty days in February, the statute is still hostile to the declared policy of the State and to its best interests, and the exception which is made of Chautauqua Lake cannot be justified upon any grounds of right or public policy. Its repeal is demanded, not to serve special interests, but to preserve to the people of this State their right in the fish of this lake, and to make it possible to propagate the muscallonge in sufficient numbers to supply all of the inland waters of this State. This lake is the site of the State hatchery for the propagation of muscallonge; it is the only lake in which they are sufficiently well developed and numerous enough to supply the necessary spawn, and we deny the right of a few individuals wantonly to destroy these fish, as will be done if they are permitted

to go upon the ice with spears. The water is shallow and clear, and with fishing houses and spears one man can take more fish in a day than a dozen men would take with hook and line in a month.

Hon. Porter Sheldon estimates that 3,000 men, armed with spears, will be on the ice on Feb. 1, many of them from over the border in Pennsylvania, which does not permit this wholesale fishing, and that literally tons of these game fish, including many of the bass, will be taken. Confining the fishing by spear to the twenty days would, therefore, in a short time utterly exterminate the muscallonge, and we ask the sportsmen of this State, as a matter of public policy, to join us in demanding that there shall be no special laws permitting to citizens of Chautauqua county privileges which are denied to the people residing upon the margins of other inland lakes. If it is a good thing to spear in Chautauqua Lake, it is equally a good thing for Seneca Lake, or for any other inland waters, and the precedent which is being established will be made use of to increase the abuse, unless steps are taken at once to prevent it. There should be only one law governing the taking of muscallonge, and that law should be absolutely uniform throughout the State. Certainly there should be no concession to those who have no higher motive than the gratification of a desire for the wanton destruction of game fishes, denying to posterity, and to all those out of the local jurisdiction, the rights which belong to all in common.

If you are with us—if you believe in the protection of game fishes against the butchery of those who are actuated only by a desire to grab all that they can of the present, leaving the future to fate—ask your New York State readers to write to their members of the Assembly and State Senators, and demand the repeal of Chap. 705 of the laws of 1897.

BEN S. DEAN.

The National Fish Commission.

ITHACA, N. Y., Dec. 29.—At the convention of the American Society of Naturalists, now in session here, and in its 200 members being fairly representative of the sentiment of the country, a resolution was proposed bearing on the United States Fish Commission as follows:

"Resolved, That the American Society of Naturalists, as representatives of the principal scientific and educational interests of this country, unanimously express to the President and the Congress of the United States their sentiments that the Commissioner of Fish and Fisheries should, according to the law of 1888 governing his appointment, be a person of proved scientific and practical acquaintance with the fish and fisheries of the coast."

"It is of the utmost importance that the Fish Commission, as one of the most useful scientific institutions of the Government, should be free from political influences, and should be administered with the highest degree of scientific efficiency by an experienced officer."

The resolution was adopted unanimously and with a vigorous demonstration of approval. Prof. H. F. Osborne, of Columbia University, New York, was appointed a delegate from the Society to present the resolution to President McKinley.

From the New York Mail and Express, Dec. 30.

The American Society of Naturalists, in convention at Ithaca yesterday, voiced the sentiments of everyone who takes an interest in the work of the United States Fish Commission, when they demanded that the new Commissioner shall be a man who is fitted for the place, and who fulfills the strict requirements of the law.

On this subject that watchful guardian of our fishing interests, FOREST AND STREAM, is outspoken enough to say:

A crisis has now come in the Commission's affairs. A new head is to be appointed. It had been the hope that the President would intrust the Commission to a person competent to administer its affairs on the broad ground of public interest, and without regard to politics; but it is announced to be the purpose of the President to nominate for the Commission a politician who, being ignorant of fish and fisheries, is unqualified for the position and a wholly unfit person to hold it.

The mere announcement of such a purpose has brought forth the protests of scientific bodies all over the country, for the appointment of an unscientific man would not only affect deplorably the excellent work of the Commission, but would be a violation of the law. The statute of 1888, creating the present Commission as a separate bureau, provided that the Commissioner "shall be a person of scientific and practical acquaintance with the fish and fisheries of the United States."

This statute means just what it says. No man who has devoted his life to politics, and whose knowledge of fish and fisheries consists of twelve months' reading of encyclopedias and works on pisciculture, has either a "scientific" or a "practical" acquaintance with a subject which scientists, who have made it a life study, have no hope of fully mastering.

If there is one office under the Government to which political considerations should never apply, it is that of the Fish Commissioner. When the predecessor of the present Commission was established in 1871, and was put in the charge of Prof. Spencer F. Baird, that distinguished scientist stipulated that no salary should attach to the office. He feared that if the office was made a salaried one it would sooner or later become a part of the spoils of politics. In order to protect the office from the politician's greed, when it was made a salaried place in 1888 Senator Frye secured the insertion of the provision which made eligible to appointment only those who had a practical and intimate knowledge of that branch of science, to diffuse and develop which the Commission was created.

We cannot believe that the President has it in mind to nominate to this most important office a man who is both unscientific and unpractical.

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

THE MAN IN THE CLOCK TOWER.

The Jackson's Hole Elk.

It was a mere accident that the firm was domiciled in Wyoming, its purpose being purely philanthropic.

As a mere amusement feature for the diversion of the firm's members in their idle moments, they had a New York office, of which Mr. Glidden was in charge, and on his card by way of embellishment he announced that he was a "breeder and shipper of polo ponies, live and cured wild game, meat and mountain trout, buffalo, elk, moose, deer, bears and mountain sheep, mounted heads, horns and antlers, fine hides and skins."

It was truly a well-organized institution for philanthropic business, and there was much enthusiasm in its conduct.

And it so came to pass that a band of elk "strayed" to this benevolent institution, and "strayed" through an opening in the fence of it, and further "strayed" to some hay, a most extraordinary series of strays.

And it so happened that there was already a market in the East for a band of stray elk, and the tender-hearted agent in the East thought that a purely philanthropic act was not complete without filling the craving in the market for stray elk, and the tender hearts of some State officers closely affiliated with stray elk thought that the State had lost more or less property in the elk when the latter had eaten sundry mouthfuls of hay in the philanthropic institution; for, said they, if they had not eaten of the hay some of them would have perished and the State would thereby have been a loser, and the officers could not see into nor out of the case further.

This institution for the preservation of lost elk won the sympathy of the Governor, who was enthusiastic in the preservation of the property of the State, and he gave authority for the shipment of the game to New York, where it would be out of all further danger, and it was so shipped.

All the poor philanthropists ever got for their trouble and loss of sundry pounds of hay was a few thousand dollars as an honorarium. And thus, by the unselfish philanthropy of this firm, supplemented with the friendly offices of its establishment for the preservation of elk, was a noble band of elk saved to the State. Without the interposition of the firm the State would surely have lost some of the elk. As the matter turned out, they were all saved.

The same public elk spirit should impel others to acts of public elk beneficence. There should be convenient gaps in the fence through which the elk should be initiated by "straying" through them, and then the benevolence of the spider and the fly has begun.

"Homing Instinct in Dogs."

"A Believer in It" joins issue graciously with me in the matter of the homing instinct in dogs. I comprehend that the popular belief is all against me, and popular belief is not an easy matter to upset, whether it is right or wrong. But popular belief on abstract matters is many times on loose and vague foundations. For instance, if "A Believer in It" were to set forth early in the morning through the highways of his neighborhood, asking every man whom he met to define instinct, to tell what it is in itself, and in what respect it differs from reason, he would undoubtedly be astonished at the prolix exhibition of utter ignorance made by the average person on the subject, as he would also be at the self-confidence of each that he knew all about it.

The definitions of the best lexicographers and the treatises of the best philosophers convey no accurate ideas on the subject. Webster struggles with it as follows: "Instinct—1. Natural inward impulse; unconscious, involuntary or unreasoning prompting to any mode of action, whether bodily or mental, without a distinct apprehension of the end or object to be accomplished. 2. (zool.) specif., the natural, unreasoning impulse by which an animal is guided to the performance of any action without thought of improvement in the method."

Then, to help the matter out, he quotes thus: "Paley—An instinct is a propensity prior to experience, and independent of instruction. Whately—An instinct is a blind tendency to some mode of action, independent of any consideration, on the part of the agent, of the end to which the action leads. Sir W. Hamilton—An instinct is an agent which performs blindly and ignorantly a work of intelligence and knowledge."

That's instinct. Any one could recognize an instinct at sight from those definitions, perhaps.

Philosophers are agreed that an instinct is common

alike to a species, as the common impulse of the young to nurse the dam and the common impulse of the dam to care for the young. Birds build their nests after the same fashion as their parents, without having any experience as to the mechanical manner of building the nest, and without any knowledge of the purpose for which they build it. Many other true instincts could be enumerated, but enough have been set forth to show that an instinct is common alike to a species. Each individual possesses it in manner like to that of every other individual. The young bird builds its nest quite as well as does the old one, and old and young alike have the common impulse.

Let us apply the test to the "homing instinct in dogs." Is it present alike in all individuals of the species? No. It is an easy matter to lose some dogs near by home. Moreover, a dog, young or old, has no instinctive knowledge of his home. Then how could he have an instinctive knowledge of a home when he naturally has none? He learns that home is home only after a series of experiences. He observes that he is kindly treated, and fed and housed, and becomes identified with the household, and he accepts the conditions as those of a home. He becomes habituated to the surroundings, and will fight intruders. There is nothing instinctive in this. The owner arrogates all this as referring to himself, declaring that it is from loyalty to and affection for himself, overlooking the fact that the wild dog will fight to defend his own den in the wilderness, or a companion of his own species for which he has an affection.

When the dog is bought by a new master and taken to a new home, he has to go through the same tentative experience before he will accept the new home as a home. Thus he learns only by experience what constitutes his home. Thus we know he learns his home by a process of reason, and we are asked to believe that he knows how to find this home instinctively, thus reversing the order of instinct and reason as we observe it in nature, for instinct comes first and reason afterward, not the reverse.

If this "homing instinct" were a true instinct, it would be present in puppies and aged dogs alike. A puppy cannot find his way home as can an old dog, even in a neighborhood with which he is familiar; in fact, he very easily is lost.

If it were a true instinct, a lost dog would go directly home instead of taking days for a journey he could make in hours. Foxhounds when carried out of a neighborhood with which they are familiar often become lost.

Out of the total number of lost dogs but few find their way home at all, and fewer still without assistance. Let us assume that out of the millions of dogs in the United States 10,000 are lost every year. Let us consider that the dog when lost does not travel in a straight line, differing not therein from other lost animals. In the law of chances, some of the dogs circling about would sooner or later hit upon some neighborhood with which they were familiar, and thence the way home would be easy. But in any event there is no phenomena presented which can be even remotely classed as instinctive.

Battues and Dollars.

Sundays in the Clock Tower are pretty dull as a rule. There is little else to do but to read the Sunday papers. Sometimes they're dull, too—not always. On Sunday, Dec. 26, I bought the Sun's Sunday issue and found it fuller of meat than usual; that is, of my meat. For instance, under the head of "What is Going On in Society," I found the following paragraph:

"Mr. Bradley Martin has finished the shooting season at Balmacaan by a five days' shoot, when 5,400 head of game were killed by ten guns. This to the uninitiated seems to be enormous, but it must be remembered that one-third of them were rabbits, which are neither toothsome nor salable. Of the remainder, only thirty-five were woodcock, and the pheasants, which run up among the hundreds, are not counted very gamy or delicate, and, indeed, are pronounced by many connoisseurs as no better than barnyard fowl. Thus, although the bags are full and the sport is exciting, the result is not all that it seems to be."

The explanatory portion of the paragraph is rather mixed. Why should the fact that "one-third of them were rabbits, which are neither toothsome nor salable," be allowed to detract from the size of the five days' bag? Then again, "the pheasants, which run up among the hundreds, are not counted very gamy or delicate, and, indeed, are pronounced by many connoisseurs as no better than barnyard fowl." The finish is far from lucid: "Thus, although the bags are full and the sport is exciting, the result is not all that it seems to be."

After reading and re-reading the above quoted paragraph, the thought struck me that I had seen some report of Mr. Bradley Martin's five days' shoot elsewhere. And sure enough, here it is, taken from the Shooting Times and British Sportsman of Dec. 11:

"Mr. Bradley Martin has just finished the season at Balmacaan with a most successful shoot in the home coverts, and in five days 4,440 head of game were killed by ten guns, the bag including 2,626 pheasants, 539 wild-duck, 1,206 rabbits and 35 woodcock. The guests were Lord Craven, Mr. Baillie, of Dochfour, Lord Encombe, Mr. Charles Ramsay, Mr. Hugh Fraser, Mr. Henry Fraser, Mr. Dudley Majoribanks and Mr. Brinckman. Balmacaan is Lady Seafield's beautiful place in the Glen Urquhart district of Inverness-shire, which has been let to Mr. Bradley Martin for many years. The scenery is very fine, and it is one of the best "all-round" shooting places in Scotland. There are nearly 30,000 acres of heavily stocked deer forest and 12,000 acres of low ground, including extensive woods."

It is really a pity, to my mind, that the writer of the "society note" in the Sun did not turn to the last page of reading matter in that issue of the Shooting Times. Had he done so, he would have saved making himself and some of his remarks so ridiculous by scanning the market prices of game in London. Rabbits, "which are neither toothsome nor salable," are quoted at from 16 cents to 25 cents each. Pheasants, a game bird that he looks down upon gastronomically, are worth anywhere from 85 cents to \$1.10 a pair.

How much more interesting it would have been had he, after stating that, "although the bags are full and the sport is exciting, the result is not all that it seems to be," just gone to work and given the market value,

bottom prices, of the bag. For, judging from his criticism, it's money's worth he's after. Thus:

2,626 pheasants at 85 cents per pair.....	\$1,116.05
539 wild ducks at 50 cents per pair.....	269.50
1,206 rabbits at 16 cents each.....	192.96
35 woodcock at 70 cents each.....	24.50

A total of 4,406, value.....\$1,603.01

Therefore, ten men in five days shoot \$1,603.01 worth of game, or about \$320.50 per day for ten guns; or \$32.05 per gun per day.

The Kennel.

Fixtures.

BENCH SHOWS.

Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.
Jan. 17.—Brunswick Fur Club's ninth annual hunt, Barre, Mass. Bradford S. Turpin, Sec'y.
Jan. 18.—Butterfly Bench Show Association's show, Grand Rapids, Mich. Miss Grace H. Griswold, Sec'y.
Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.
March 1.—Mascoutah Kennel Club's show, Chicago. L. Lincoln, Sec'y.
March 9.—St. Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.
March 15.—Northwestern Kennel Club's dog show, St. Paul, Minn. E. D. Brown, Sec'y.

FIELD TRIALS.

Jan. 10.—U. S. F. T. Club's winter trials, West Point, Miss. W. B. Stafford, Sec'y.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss. W. S. Bell, Sec'y.
Jan. 24.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal. J. M. Kilgarif, Sec'y.
Jan. 24.—Champion Field Trial Association's Champion Stake, Tupelo, Miss. W. B. Stafford, Sec'y.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

The New Classification.

CONCERNING the new classification we have had a number of inquiries, all of which indicate that the inquirers have given the matter but little thought and less study. It is palpable, furthermore, that many who have given the matter some study have very vague ideas as to the reasons why a champion is a champion, instead of being just a plain every-day dog, or why a plain every-day dog is not a champion.

What Constitutes a Champion?

Free, unobstructed competition against all comers is the essence of a *bona fide* championship. Any championship won on any other lines is either a product of arbitrary ruling or a sham. The rules should be such that a competitor, striving for championship honors, must make a competition of sufficient breadth and quality to warrant a reasonable inference that he has met all comers, either beating them by direct competition or indirectly by beating the best representatives of near and more remote sections. The art of making champions without competition has no legitimate place in the making of rules. That is a matter of special study for those who desire the greatest honors with the least effort.

In considering the older classification as compared with the new, we may here ask: Did the older classification make dogs compete properly for championship honors? No, positively no. It was absurdly inadequate and weak in its workings, and permitted the multiplication of championships till the honor of the title was much weakened. It was often bestowed on dogs which never would have been known outside of the open classes under the new classification. No doubt there are those who would oppose the new classification for this reason alone. A classification which would enable every family to own a champion would not be without its advocates.

But as the basis of all rules we must recognize that the essential of a championship is wide open competition. If the reader will agree to this as a starting point he will agree in the main with what follows.

Some Comparisons.

A brief analysis of the old classification and its imperfections will aid materially in a better understanding of the new. In a general way the old classification was faulty in that it afforded a quick road to championship honors with an absurdly limited competition; in fact, the challenge class, strange as it may seem, afforded protection from competition in a way, as when a dog won all his honors in open classes in one section, and then was shown in a challenge class in another section where there were dogs he had never met nor beaten and where he had a walkover and a win. But let us examine the workings more specifically, and incidentally we may compare the two classifications in the points in which they agree, and thus dispose of much matter as we proceed.

As to the conditions governing the puppy class, we find them to be about the same as the new. The latter, however, further rules that no entry can be made of a puppy whose date of birth is unknown. That is a good ruling, since it prevents the showing of an aged dog in the puppy class.

There is no difference in the two classifications in respect to the novice class, though the new rule is much better worded.

The open classes of the old classification and the junior classes of the new are the same thing practically. The students of the old classification have no problem to solve in the new up to this point.

We next come to the senior class, which in the new classification corresponds to the challenge class of the old without its significance. A divergence begins. To make the resemblance and difference distinctly apparent, the text of the two are quoted in full: Old classification: "The challenge class shall be for all dogs having won four first prizes in the open classes. A dog having won three first prizes in the class, one of which shall have been won at a show offering not less than \$1,000 in cash prizes, shall have the privilege of the title of champion without

further competition. (This qualification does not apply to shows held west of the 95th degree of west longitude.)"

New classification: "The senior class shall be for all dogs having won four or more first prizes at any recognized show, wins in the puppy and novice classes excepted. In entering a dog in the senior class it is necessary to specify on the entry blank a sufficient number of first prize winnings, giving name and year of show, to entitle it to compete in such class, until such time as it has won in a senior class, after which one senior win will be sufficient. These wins must be published in the catalogue."

The senior class seems to be purposeless, aside from affording extra classification, and could be abolished without loss.

The Challenge Class and Walkovers.

It will be apparent that this class under the new classification has lost entirely the significance of the old. Wisely so, for the old challenge class was an absurd grinder out of champions. In it a dog was practically fenced in from competition, and it was a fine juggling ground for the making of champions without competition. But did not winners of four first prizes meet other winners of four first prizes in this challenge class? Theoretically, yes; practically, no. A dog could secure his four wins by competing at the small shows, where the prizes were not sufficient to interest the regulars, and where a walkover was certain. Indeed, walkovers were the rule at the largest shows. Aside from the inherent weakness of the old rule, there developed conditions which tended still further to depreciate their worth. The professional "handlers" have various breeds of dogs; they could mutually assist each other in the championship juggle by one withholding from competition at one show and permitting his friend to secure a walkover for his challenge dog, while the friend reciprocates by doing the same favor for him in a challenge class of some other breed at the same show or at some subsequent show. Once in the challenge class, the dog then was protected from offensive competition. The only thing to bring him out into the open was the special for the best dog of his breed, and this the owner could evade by stating on the entry blank, "Will not compete for specials."

The challenge class was mostly a one-dog class. It was a class of competition called walkovers. The reports of shows reiterated with monotonous recurrence as the different breeds were touched upon that "Buster had a walkover, or that he won without competition, in the challenge class; in the corresponding bitch class Evangeline was alone and was looking well." Even the matter of decent conditioning was many times neglected, for no dog needs much conditioning to engage in a walkover. The dog is trotted into the ring, the judge gazes at him sharply, so that all may see that he has an X-ray eye, then he hands out the ribbon and it's all over—over quicker than you can read about it. It was nothing more than the handing over of a ribbon. Is that the essence of a championship? If any one not familiar with these matters will investigate the records of the list of champions he will be astonished to find such a grand list of walkovers, and these are matters of record as true and meritorious warrant for the title which they produced—that is, champion of record.

The walkover champion was the cheapener of champions. He became so numerous and was often of such common merit that he was not much different from other dogs, save in the matter of mummery. Among the champions, however, were a few first rate dogs, and from that down to fourth-raters more or less, many of the latter being champions by sneaking through a corner of the competition instead of through the middle of it. The average champion was largely the visible sign of a bench show fiction, a titled gladiator, a paradox which had been in the battle and yet had not been in any battle. It was a grave error to have ever recognized walkovers as wins having a championship significance. Of course owners plead that they had incurred great expense in showing their dogs, that it was not their fault that there was nothing to compete against them, presenting also all the other sophisms that people use when they wish to further their own interests in the most economical manner, but all that did not in the least change the fact that a walkover determined nothing in respect to a championship whose essence is competition. Tears, pleadings, money spent, walkovers, etc., in no wise determine that a dog has in any way beaten some other dog. They are all irrelevant and immaterial to the purpose.

The challenge class was really a class of walkovers. The exceptions were a very small per cent. If there were two or three dogs making the rounds of the shows some judge would prefer one dog, some another. The exhibitor would hold aloof from the class when the judge was not favorable to his dog, and be present with the greatest air of assurance when he knew he had a sure thing. The preferences of judges at the shows where they would meet the weakest competition or none at all, and the advantage to be now and then gained by bargaining in the way of permitting some friend to win in other classes for the like favor as desired, made the championship very much of a farce so far as competition and representing any sterling merit are concerned.

Its Advantages to Inferior Dogs.

It was not such a difficult matter to steer even the third or fourth rate dog into a championship. The number and quality of certain breeds vary greatly, one section compared with another, and indeed some breeds are almost entirely provincial. By way of illustrating this point, let us take the Boston terrier into consideration. At the Boston and New York shows these dogs are out in force. In the classes there present a vhc. dog might compete throughout his life without winning a championship. By sending him out on the circuit the class of competition might be such that the vhc. dog at New York and Boston might be a first prize winner on the circuit, inasmuch as he might meet little or no competition, or at all events because excellence is a relative quality. Once in the challenge class, the walkover act was easy. To bring out the point more clearly by a practical example, let us consider three large shows of 1897—Boston, New York and Chicago—and the Boston ter-

rier competition at them. Let it be understood that this breed is mentioned only by way of illustration, as would be any other breed if mentioned in this connection. The classes at Boston and New York were well filled. At Chicago there were ten classes and twelve dogs. In five classes there were walkovers, one dog to a class.

The regulars, knowing all the circumstances of each show, knew to a nicety the lines of least resistance in the pursuit of a championship, and governed themselves accordingly.

The inadequacy of the classification was recognized long since, and efforts were made to correct it by requiring that one win of the three constituting a championship should be at a show offering not less than \$1,000 in cash prizes. Prior to that one of the wins must have been at a show which had not less than 500 entries. In theory either requirement would bring out a stronger competition; in practice the challenge classes remained about the same, whatever the size of the show. At the New York show walkovers were almost as common as they were at the smaller shows. The effort to indirectly make a more difficult competition by cash qualifications or number of entries was almost a complete failure.

The challenge class, the walkover route from the open classes to a championship, was the end of the old classification. Beyond it there was nothing more to conquer. In theory the three-time winner had vanquished all comers. In practice he might not have vanquished a dozen dogs, and his victories might be largely local.

The new classification attaches no significance to the challenge class. For this alone it should receive the warm commendation of all who admire the sterling article and detest the sham.

The Free-for-all Class.

The free-for-all class is the next one of the new classification, as follows: "The free-for-all class shall be for all dogs of any age over six months. No prize winner shall be debarred from competing." Here is a class which permits of direct competition between all dogs which desire to try conclusions. What is a bench show for? Competition. There you have it. How are genuine championships made? Competition again. The new classification provides for it at every turn.

The Winners' Class.

We now come to the winners' class, from which champions emerge. I will quote its rule in full: "All shows offering cash prizes for three of the above classes, for any one breed, one of which must be the free-for-all class, shall be empowered to provide for that breed a winners' class for the dogs which have won the first prizes in said classes, and the winner of three first prizes in such winners' classes will thereby become a champion of record, and be so registered by the American Kennel Club. No class winner can be withdrawn from competition in the winners' class. No entry shall be charged for exhibits in the winners' class." The immunity of the walkover champion is gone. Competition is now mandatory. Instead of being absurdly guarded from all the dogs in the show, as he was in the old challenge class, the would-be champion must now face all the best dogs of his breed, and instead of sneaking through without competition he must compete. That is the essence of the championship. There may now be fewer champions and fewer fourth-rate dogs in the championship, but the whole interest will be just so much further from a sham.

The Miscellaneous Class.

This class has the same significance as in the old classification.

Amendments.

One amendment to the rules to be passed upon at the next meeting of the A. K. C. is in a way a return to a restricted competition, an effort to make a championship easy to retain. To "No class winner can be withdrawn from competition in the winners' class" the new contemplated amendment adds, "except those dogs which have already won their championships." In other words, the champion asks permission, if you please, sir, to compete in the senior class as long as he pleases without any danger of losing his laurels to some better dog in the winners' class. What then does the champion go to the show for? For something easy. It would seem to be the better way for him to meet all there was coming, or if he cannot hold his laurels to stay out of the competition. The day of fitting rules to the circumstances of the dog instead of to the circumstances of the championship should be of the past. If a dog is a real champion, he should not be afraid to meet anything on earth within the championship requirements. If he is not a real champion, then there is a reason for him to hunt for cover. A competition necessarily implies that some lose, some win; but the champion, the dog which should represent the highest and broadest competition, asks for rules which will make a championship a sanctuary instead of the high merit which the world at large understands it to be.

The Universality of Principle.

The new classification, being based on competition alone, is applicable to all sections alike. The principles of a championship are the same on the Atlantic or Pacific Coast or anywhere else. It is shorn now of the old arbitrary and artificial qualifications which sought to accomplish by indirection what can only be accomplished by actual competition. It is moreover so arranged as to be adjustable to the needs or means of the smallest shows or the greatest. New York can select a satisfactory classification from the new, and a provincial town can modify it to suit its circumstances. It is universal in its application because it is founded on a universal principle.

The Framers of It.

The gentlemen who framed the new classification were thoroughly informed in the theory and practice of bench show competition. They thoroughly understood the workings and imperfections of the old classification. They thoroughly comprehended what constitutes genuine competition and genuine honors. The delegates of the

different clubs accepted and approved the new classification when they voted for it.

It has been intimated that the A. K. C. is an arbitrary body, governed largely by emotional impulse, regardless of the fitness of things. The delegates of the A. K. C. represent their respective clubs. The doings of the A. K. C. are thus the doings of the clubs which compose the confederation. The meetings are held with parliamentary gravity and consideration, and the delegates, being trained business men as well as fanciers, know how matters should be considered and what measures to take. A club which is at all dissatisfied with its delegate has the power to quickly make a change. Thus the A. K. C. governs only with the consent of the governed, and it is not the arbitrary body which it is sometimes represented to be, nor could it be such and exist.

The Story of Snider.

Editor Forest and Stream:

When our train arrived at Custer Station we were met by ambulances that took us to Fort Custer, Mont., thirty-three miles away. There we were met by an escort and transportation to take us to our new station, Fort McKinney, and the Eighth Infantry, the regiment to which the colonel had just been promoted.

Our first camp after leaving Fort Custer was upon the Custer battle-field. While the Chinaman was preparing supper many Indians gathered around, of course accompanied by the usual number of children and Indian dogs. The next morning while the men were breaking camp we went over the battle-field, guided by an Indian who had been with Reno and had been wounded there. Following our guide was a dog, a lean, hungry animal that looked like a coyote, and, to tell the truth, must have had some coyote blood in him, as is the case with a good many Indian dogs. On returning to camp we bade good-by to our Indian friends and started on the road. It was in the spring, and all the streams were swollen so as to make some of the crossings dangerous. After crossing the first stream the colonel got out of the first ambulance to see that the second one, with the nurse and children, should get over safely. It was there that we discovered that the wretched dog which had followed us over the battle-field had also followed us here. We all tried our best to scare him away and send him back, but it was useless, as five days later he followed us into Fort McKinney, as close to the wagon wheels as he could get. When we drove up to our quarters the first thing the dog did was to rush under the porch, and for two days he refused to be coaxed out even by offering him meat, which had never failed before to make him come around.

Even when he did come out it was a long time before he could be coaxed up on the porch, and it was a month or so before we could induce him to come into the house. He would become frightened at the least thing, and invariably would run under the porch, and the longer we coaxed him the longer he would remain there.

It took him a very long time to grow accustomed to a house, and it was over two years before he would go upstairs. He had always preferred remaining at the foot, curled up in a heap, until the children should come down, even sleeping there at night, when the children were up in bed. By this time he had got over his timidity of persons and had grown fat, so that he presented a very fine appearance (for an Indian dog.)

He was the happiest dog on earth, so he seemed, always playing around, and so devoted to the children that they never moved but he went with them. He grew very fastidious about his food, taking his milk from a glass tumbler and preferring ice cream and cake and candy to anything else.

When the new cavalry quarters were being built the children went all over them, and, much to the surprise of us all, Snider even followed them up the long flight of stairs. Before this he had not attempted anything but our front steps. Naturally they were delighted at the new accomplishment, and patted him to his heart's content. But when they started down he grew frantic, but would make no attempt to come down, nor would he let any soldier touch him to carry him down; so they finally got disgusted and left him, thinking that after a while he would change his mind. But no, he began running around upstairs, and, seeing an open window, jumped out of that and on to the roof of the porch, where, upon seeing the children half-way across the parade ground, he did not hesitate a second, but ran to the edge and jumped off, a drop of at least 20ft., not injuring himself in the least.

When we left McKinney for Fort Russell the boys accompanied the troops to the railroad station on horseback, Snider faithfully keeping at their heels. At the station, when it came time to put him in the car with our two horses, he could not be coaxed; and even Jim, to whom he was most attached, could do nothing. Finally it took six or eight men to get him into the box car, where he looked as if he would die from fright, and remained huddled up in the corner of the car and would eat nothing.

The next morning, Nov. 8, about 100 miles east of Edgemont, Neb., the soldier who had charge of the horses opened the car door to look out and stood there watching the country. This was the dog's chance, and before the man had time to stop him he made a break and jumped past him and out of the door. The man said that the last he saw of Snider he was rushing madly after the train as hard as he could go.

We, of course, thought that he was gone for good.

On the 20th of January, coming from Cheyenne in the carriage to Fort D. A. Russell, we saw a thin, forlorn-looking dog lying in the field not far from the road; and as he did not move as we passed him, we thought he must be either asleep or dead. We remarked at the time that he looked very much like Snider. The next day a soldier said that he had seen the dog, and he felt sure that it was old Snider. Still we didn't think it could be possible, so we paid no attention to it.

On the 22d my mother went to town again, and, upon returning, noticed the dog ahead of them in the road. On their coming nearer the dog looked up and, recognizing the horse, rushed for him and barked and jumped all around him as if he had gone crazy.

Then we knew for sure that it was Snider, but so thin and changed that if he hadn't known us we would never have known him.

He followed the carriage up to the post, and when we entered the children were just coming out of school, and the dog, seeing them, ran up to them, barking and jumping up on them as if he were possessed. Then there was a grand reunion, the children making as much of a fuss over the dog as he did over them, which is saying a good deal.

What has puzzled us and everybody who has heard of it is how he ever got here. Fort Russell is 300 miles in a straight line from Fort McKinney, and by the railroad over which the troops came it is over 1,000 miles; and the dog started by following the train. The railroad (the B. & M.) runs east until it reaches the central part of Nebraska, where there is a branch road running southwest and meeting the main road at Hastings. The troops went on that until they came to Holdrege, where they connected with the Union Pacific, bringing them here. Anyway, the dog got here. Whether he followed the special train with the soldiers, or whether he came here by accident, no one knows.

He stayed with us always after that—even more devoted to the children than before, if that could be possible—until last year, when he died, much to the sorrow of us all, especially the children, and it was a long time before they could talk of him without crying.

ROBERT VAN HORN.

FORT D. A. RUSSELL, WYO.

New England Kennel Club.

MR. JAMES L. LITTLE sends us the list of the specials offered up to date for the club's forthcoming show, as follows:

The American Scottish Terrier Club's two silver cups; one for the best American-bred dog and bitch respectively. To be competed for by members only.

The Collie Club of America offer the President's cup for the best collie, the winner to receive a silver medal in commemoration of the award; a club medal for the best of the opposite sex to the winner of the President's cup; a silver medal for the best in the novice classes; a club medal for the best owned by a New England member of the club.

The National Beagle Club of America offer a silver medal for the best beagle in the show; a bronze medal for the best of opposite sex to the winner of the silver medal. Open to members only.

The American Fox Terrier Club offer (open to members only) grand challenge cup for the best fox terrier in the show. Second Division, eleventh grand Produce Stakes (1897); Apollo Stakes of 1897; \$5 for the best American-bred fox terrier (smooth and wire respectively) in the free-for-all classes; \$5 for the best American-bred fox terrier (smooth and wire respectively) in the novice classes; \$5 for the best American-bred fox terrier (smooth and wire) in the puppy classes.

The Bull Terrier Club of America offer a trophy collar for the best bull terrier owned by a member of the club; a medal to the winners of all first and special prizes, if won by a member of the club.

The American Dachshund Club offer (open to members of the club only): 1. The Klein Breeders' Trophy, for the best dog or bitch under eighteen months, bred, owned and exhibited by a club member. 2. Club challenge cup, for best American-bred dog. 3. Club Challenge cup, for best American-bred bitch.

The Pointer Club of America offer \$20, for members only, and to be divided as follows: \$5 each for best heavy-weight dog and bitch, and the same for light weights.

The Irish Terrier Club of America offer (open to members only) the Daredevil Stakes, silver cup added by the Irish Terrier Club; the Vixen Stakes, silver cup added by the Irish Terrier Club. There is a \$5 special for American-bred dogs, as follows: "Best terrier dog, bitch, dog puppy and bitch, best dog and bitch in the junior class, dog and bitch in senior, and best brace of American-bred Irish terriers."

The Poodle Club of America offer (open to members only): \$10 for the best poodle in the show; \$10 for the best American-bred poodle in the show; \$5 for the best American-bred poodle puppy.

The American Pug Club offer (for members only) the following special prizes: The club's silver trophy, for the best American-bred dog; the club's silver trophy, for the best American-bred bitch; the club's silver medal, for the best American-bred dog or bitch; the club's bronze medal, for the best puppy dog or bitch.

George N. Phelps offers a cup, value \$15, for the best French bull (dog or bitch). James L. Little offers a tankard for the best French bull (dog or bitch) owned outside of Boston. The special conditions governing the different cups and stakes can be learned by addressing the Bench Show Committee, 110 Tremont street, Boston.

A Team of Dogs.

Editor Forest and Stream:

The means of transportation to the Klondike has caused many to think of the dog as a propelling power, and not without good reason, as the evidence of our consuls in Eastern countries goes to prove. I have seen many a dog harnessed under a cart and doing good service.

The type of dog that I have generally found so used was what is commonly called a bull dog, or what dogdom at one time was pleased to call an American bull dog, a dog with rather heavy head, thick and heavy shoulders, about 20 or 22in. high, jaw very near level, color white and brindle, or fawn predominating. They seemed to enjoy their work, and I never saw them ill treated. If they suffered hardship it was on account of their desire to do more work than they were capable of performing. They were so ambitious that they would pull the load faster than a man could walk, and I have seen some pretty heavy loads put upon them.

After reading so much in FOREST AND STREAM and other papers lately it has stimulated a desire to have a road team of dogs for my own use. I have in my mind a team of four or five dogs which shall be hitched to a

four-wheeled vehicle, made light as possible, with seats wide enough for two, body to be a cross between a buckboard and spindle, with bicycle wheels, ball bearing, a device for steering and a brake. Now, with your assistance as a valuable advertising medium, I want to find four large-sized Irish setters, just what I have had a number of in my day. Large size, plenty of spirit and dash, not good enough to pass muster on the bench or take any more notice of a bird than a cow driven before you. I have had my share of them, but now I want them; am entirely out, as our graveyard out back of the Hampton Kennels will testify. I want this team all broken by spring, when I think I can take a spin out to the falls and pools near the Sperry homestead in Woodbridge and back (seven miles each way) quicker than any one will want to drive their team of horses over the same route.

E. KNIGHT SPERRY.

St. Bernard Club.

I HAVE at last to announce the organization of the (New) St. Bernard Club.

A meeting was held at Grand Rapids yesterday, at which the constitution and by-laws of the new club were adopted and the officers elected. Col. Jacob Ruppert, Jr., of New York, was elected President; Capt. C. A. Pratt, of Little Rock, Ark., as Vice-President; Miss Anna H. Whitney, of Lancaster, Mass., Second Vice-President, and H. B. Turner, Third Vice-President; Dudley E. Waters, Secretary-Treasurer; and the following were elected governors: W. H. Joeckel, R. A. Sawyer, I. W. Comey, A. C. Shallenberger, R. H. Burrows, Arthur Froembling, Ed Meisenheimer, Thos. Sheubrooks and N. Robbins, Jr. DUDLEY E. WATERS.

POINTS AND FLUSHES.

The Christmas number of the Shooting Times (England) has reached this office. It contains many good things, notably a reproduction of Prof. Osthaus's painting of Nabob and India pointing and backing at the edge of a cornfield. It is pleasing to perceive that our contemporary has such excellent judgment, but one could regret, if it were worth the while, that it seems to be void of all moral sensibility, for this excellent picture has the artist's name cut out and another name substituted, and it is forced to do service to illustrate an article entitled "Around the Boundaries," which title it also bears. Some of Mr. Frost's pictures are treated in the same way, and are presented as bona fide illustrations of the articles of which they are a part. To call this piracy would be a mild term, for to pilfer, to efface the name of the artist, to present the pictures as original matter illustrative of actual English shooting experiences, is more than piracy. Possibly the text may have been secured in like manner. As a journalistic thief the Shooting Times ranks with the Canadian Sportsman.

The judges who are engaged for the New England Kennel Club's show are Harry W. Smith, fox terriers; Geo. B. Post, Jr., beagles; W. C. Codman, bull dogs; H. W. Lacy, bloodhounds, Great Danes, poodles, dachshunds and miscellaneous; E. H. Moore, St. Bernards and mastiffs; H. W. Huntington, deerhounds, wolfhounds and greyhounds; Dwight Baldwin, Boston terriers; Dr. R. S. Huidekoper, bull terriers; Dr. R. D. Perry, foxhounds; Lambert Stansfield, collies and Old English sheep dogs; J. L. Kernochan, French bull dogs; Dr. H. Clay Glover, English, Irish and Gordon setters; James Watson, Irish, Scottish and Bedlington terriers; Geo. W. Lovell, pointers; A. Clinton Wilmerding, all sporting spaniels; T. Farrer Rackham, all toy dogs and pugs.

The matter of transportation is one that should be considered at the first instead of the last moment, if one has to consider seriously the problem of ways and means. Nearly all the railroads now give concessions to bona fide field trial goers, if they observe certain railroad regulations, which can be readily learned by consulting the road's agents or officers. The Alabama Field Trials Club announce that the Memphis & Charleston, L. & N., Southern, and Central R. R. of Georgia will sell tickets to Madison for the club's trials on Feb. 5, 6 and 7 at one and one-third fare for the round trip, on the certificate plan. All stakes will be run in the week beginning Feb. 7. In the club's circular by mistake the special stake was announced for Jan. 7, instead of the correct date as given above. H. K. Milner, Sec'y, Birmingham, Ala.

Mr. H. L. Kreuder, Nanuet, N. Y., has purchased the entire pack of beagles owned by the late Pottinger Dorsey, consisting of fifteen matured dogs, among which are champion Lee II., champion Pilot, and other celebrities. Mr. Kreuder writes us that "This exceptionally pure-bred, Rowett-strain pack of beagles, on which the late and much-beloved Pottinger Dorsey devoted the better part of his life in breeding, is now in my kennel. With it as an additional or main foundation, I hope to elevate and possibly perfect the standard of beagles."

The championship medal for all champions of record is very artistic in design. The obverse side bears a spray of laurel which half encircles it and the words "Awarded to Champion" surmount a blank space left for the engraving of the champion's name. The reverse side bears the official stamp of the A. K. C. Its simple elegance makes it a most desirable symbol for the commemoration of the highest honors a dog can win in the bench show world. It is furnished at a trifle less than cost, \$3, to all champions of record before Jan. 1, 1898, to all champions subsequent to that date it will be given gratuitously.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Yachting.

THE Bath Iron Works has contracted to build a steel steam yacht for Col. Oliver H. Payne, a sea-going craft which will rob the Nourmahal of the one point of distinction she has long enjoyed, as the largest steam yacht of American build. The new yacht will be a "floating palace," with elaborate furnishings, but it is not stated whether she will be of the standard Bath model or whether she will be of modern design. Her dimensions will be 300ft. long, 35ft. beam, 16ft. draft, with bark rig. With a single screw she is to make 15 knots with natural draft on a 48-hour trial. Capt. Wm. Scott, who has had charge of Sagamore and Eleanor, will supervise the construction, and will be in command. The yacht will be ready by next spring.

THE action of the Massachusetts Y. R. A. at its special meeting is satisfactory in two respects: it represented the sober and deliberate opinions of the associated clubs, and it settles the rules finally for the coming year. The question of the abolition of time allowance has awakened a great deal of feeling, and has been widely discussed for a couple of months before the meeting specially called to consider it. As a result a very large number of members have studied it out and reached a final opinion; while the delegates have been definitely instructed by their clubs. Under these circumstances it is hardly to be doubted that the vote against further allowance represents the opinion of the majority. It has already been shown that the injury to vested interests is confined to a very few yachts; nearly all, both new and old, being able to accommodate themselves at the top of some class.

A RUMOR is current that the newest of the "Protected Cruisers," Alcedo II., completed last summer, is to undergo the rather radical alteration of an addition of 22ft. length amidships. She is now 185ft. over all, 152ft. l.w.l., 24ft. 2in. beam, 14ft. hold, and 11ft. draft. Of course it is much less expensive to build a yacht properly at the outset than to cut her in two or sponson her in her second season, like Atalanta, Wadena, Wild Duck and other notable examples; but as long as American owners are satisfied with this method it is hardly worth while to criticize it as reflecting but little credit upon the skill of American designers.

Through the Sound in an Oyster Sloop.

THE northwestern sky was heavily draped with massive thunderheads. Sharp flashes of dazzling lightning blazed at regular intervals from the ponderous clouds. Deep, rumbling thunder grumbled warningly. Yet we who formed the crew of the staunch sloop Susie C. glanced defiance into the face of such unfavorable conditions as we hoisted the mainsail. The chain cable had already been hauled short, and Susie floated almost over her anchor.

"All hands in with the skiff!" The order given by Sam is quickly executed, and we lash the tender securely on the starboard side of the deck.

"Up with the anchor! Stand by the jib halliards! Trim jib!" These orders are also quickly obeyed, and under the fresh south-west wind Susie heels until her scuppers are under. She rises and falls without headway for an instant, then like an unleashed hound she seems to shake herself, and springs away on the starboard tack. Like a trained warrior, stripped for the fray, she meets each oncoming sea and smashes it into foaming fragments.

"Ready, about!" Excellent judgment, for when Susie's bowsprit seems about to pierce the white side of Com. Benedict's Oneida down goes the helm, and our little ship shows wonderful obedience by the snappy manner in which she swings on to the other tack. We notice Oneida's crew alternately eyeing us and the thunder squall. The thought enters my mind that they undoubtedly think us crazy for leaving a snug anchorage in Indian Harbor in order to face the dirty conditions in store for us on the Sound.

"Where are you fellows bound?" The question comes from the sailing master of a handsome keel sloop that is pitching at her anchor near by.

"Block Island."

"I don't admire the kind of weather you pick to start out in."

"Don't you care?" Guess we'll get through all right," sings Stanley, as he rattles a breakdown on the deck with his bare feet.

"Ready, about!" Thump! I get a crack on the head from the boom that makes me think for an instant that hundreds of solar systems are falling. It is sarcastically suggested that I had better take one reef in my neck, or two in my legs, if I don't want to be minus a head.

It was just seven bells when we swung back on to the starboard tack, and found we could point so as to clear Tweed's Island and the red buoy off Greenwich Point. By this time darkness was rapidly settling over land and water. Astern, and outlined against the dark green shore and sooty sky line, the snowy walls and pillars of Com. Benedict's palace shone like some enchanted castle told of in fairy stories. In the semi-darkness they appeared ghostly and unreal. The thunderstorm had passed well to the north, but indications pointed to a harder one advancing from the west. Instantaneous bursts of bright light came at regular intervals from that quarter. As we could hear no thunder, and the blazes of light grew brighter and brighter, we realized that the storm must be a terrific one. Although the wind still blew as hard as ever, Stanley suggested putting the topsail on. Sam wondered if the topmast would stand the strain, decided it would, and in less than five minutes we were sailing with lee rail well under.

Now that we are well started on our way, it will not be amiss to introduce to the reader Susie's crew, and to give a short description of the boat and outfit. In the first place, the crew numbered four. There were Samuel Chard, Stanley Chard, Walter Avis (my youngest brother), more generally known to the crew as Bub, and your humble servant.

Samuel Chard is already known to readers of the FOREST AND STREAM. He is the same Sam who experimented on Thomas Humphreys and myself with broiled water turkey and alligator steaks in Florida. As I have said a number of times before, he is the best small boat handler I ever knew. Blow high or blow low, Sam never gets rattled, but always does the right thing at the right time.

Stanley Chard had never figured in a trip in which I was interested before. Like Sam, he is a master hand at the tiller. It will take time, however, to eliminate some features from Stanley's boat handling, which might prove objectionable to persons of a nervous temperament. I refer to a daring recklessness which is almost always associated with perfect health in young persons. Many times when it has seemed to me that sail should be reduced Stanley would cock his eye aloft and "guess she might stand a little more." As a fearless sail handler, especially in reefing weather, Stanley could not be excelled. At the Bridgeport Custom House Stanley is rated as Susie's captain. He is nineteen years of age.

Now comes Walter Avis, or as he will be known in this narrative, Bub. Like Stanley, Bub never figured in a trip with me before. He is thirteen years of age, and was the photographer of the trip. I was a little undecided about having him with me at first, not knowing how he would stand roughing it. My story will prove that I had no grounds for misgivings. Excepting an exasperating habit of asking a dozen different questions in a dozen different ways when it was least convenient to answer at all, Bub was all right. He proved himself a plucky sailorman.

Now a word about our boat and I am done with introductions. Susie was launched two years ago. She is an oyster sloop, and was built at Greenwich by Samuel Chard, Sr. She is 34ft. over all and 27ft. waterline. She has a graceful overhanging bow and stern, and is 13ft. beam. Her draft is nearly 5ft. without her board, and she certainly is very staunch and able. She is full sloop-rigged, and her sail spread is unusually large for a boat of her size, especially an oyster boat. As in all boats of her kind, the cabin is placed well aft, so as to allow plenty of deck room for-

ward. Oyster sloops' cabins must also be small, therefore Susie's only contained two bunks. Stanley occupied one on the trip, while I held down the mattress in the other. Sam and Bub enjoyed very good quarters forward in the bows. Susie's lines under water are finer than those of many yachts, and she proved herself marvelously swift.

It was eight bells by the time we weathered the buoy off Greenwich Point. Wind and clouds were poking above the western horizon. The lightning was dazzling and almost incessant. The thunder rumbled warningly, and taken all in all things commenced to look serious. I had a notion we were in for business, but Sam and Stanley said the southwest wind would drive the storm to the northward, as it had the first one. Undoubtedly this opinion would have proven correct had there not been more storm below the horizon than we could see. What proved to be the advance guard did pass to the north in a blaze and rumble of splendor. It was not over fifteen minutes after, however, before the whole main army was roaring and flashing astern.

The wind was now blowing so hard that even Stanley acknowledged it time to douse the topsail. To the west, northwest, north and northeast thunder storms were in full progress. When the lightning was not flashing from one quarter it flashed from another. The storm astern was the only one we feared, and we decided that as things were so ugly we had better run for the Norwalk Islands. We had hardly reached this decision when the wind came down on us in shrieks. We were now compelled to double reef the mainsail. This was easily accomplished, as the continual flashing enabled us to see plainly. So bright was the lightning that the shore line stood out to view as plainly as in midday every time it flashed.

"I hope the rain holds off half an hour longer," remarked Sam, as he strained his eyes shoreward. "If it only does, we'll be anchored safely in Wilson's Cove then."

"We'll beat the rain this time," replied Stanley. "Listen! We're well to the leeward of Green's Ledge now. Don't you hear the bell buoy?"

We all listened intently, and from up to windward came the doleful, though welcome, sound of a tolling bell.

Bub, who had sensibly gone below in order to be out of the way, stuck his head out of the companionway long enough to hear the bell, then went below again. We were agreeably surprised at the coolness he had displayed thus far. It was his first trip, and many an older person would have been frightened half to death under like conditions.

Shortly after hearing the bell buoy we entered Wilson's Cove and anchored in two fathoms of water at exactly 8:35. Susie had covered twelve miles in one hour and five minutes; two miles of the distance we were close-hauled.

We had no sooner furled the sails than the rain came down in torrents. What cared we though? Snugly ensconced in the cabin, we stored away supper enough to give dyspepsia to an ostrich. When the meal was finished the dishes were shoved out on deck so as to let the rain do the washing. We then lounged a while, talked and listened to the storm beating on the cabin roof. It was four bells when we turned in.

All hands were astir bright and early next morning. While the storm had departed, still the sky was more or less covered with clouds. There was very little wind, and the atmosphere had a thick, muggy feel about it that promised anything but a pleasant day. That the storm had been a severe one was plainly evident by the amount of water that had fallen in our skiff. It was fully one-third full.

As the tide was favorable, and what little wind was stirring came out of the southwest, we got our anchor, hoisted our sails, and were soon heading on our way. Stanley prepared breakfast, Sam held the tiller, and Bub and I lounged around the deck and took matters easy.

After wending our way in and out among the numerous islands, we finally came up with Cokenoe Island; we passed it at four bells. The wind then left us entirely, and the tide commenced to run against us. Soon we got a little air from southeast. It was so light, though we could hardly hold our own against the tide. Finally the clouds departed and the sun poured down upon us like a furnace. We tacked—tacked—tacked, back and forth, back and forth, only to bring up in the spot from which we started in the first place. Over and over again did we try to pass the red can buoy off Cokenoe Island, but it clung to us like a long lost brother. Trolling lines were hung over the stern, but all we managed to catch was somebody's oyster buoy, which relieved us of a couple of hooks and part of a line.

While drifting back and forth we noticed numerous schools of small herring sporting on the surface. With a small scoop net we managed to secure some for bait.

If there is one thing in this wild world on which I am a crank it is a wild yearning to possess a heavy coat of tan. To my way of thinking there is nothing so becoming to a man, woman or child as a sun-browned hide. This insane hobby led me into trouble. The conditions for getting tanned were so extremely enticing that my excited feelings ran entirely away with my judgment. I not only removed my hat, but my shirt as well. Then I smoked and smoked a pipe that was strong enough to walk—and I am no veteran at the smoking game either. Between that du-deen and the sun my sea legs went completely from under me. The horizon swam round and round, and the sky rocked up and down. Then I became possessed of a wild, eager desire to pay tribute to old Neptune. I realized, however, that this would never do. I didn't hanker for the credit of being seasick when I wasn't. I also felt too "stuck up" to own that I was "knocked out" from smoking. Therefore I watched my chance, and when no one was noticing I quietly sneaked below. I went into the hold and laid down on the cool planks. Here I fought like a fiend for more than an hour, and finally overcame the wild, devilish desire that filled my soul to fly up on deck and hump myself over the rail.

We "monkeyed" in the vicinity of that confounded buoy until 2 o'clock in the afternoon. Then a slight breeze came out of the south, and we didn't delay in getting Susie started on her course. Under mainsail, topsail, jib, jibtopsail, and a small jibtopsail rigged as a ringtail, and with the tide in our favor, we glided along through a sea that trembled with brilliancy.

As if to repay us for the vexations of the morning, the wind increased to a delightful sailing breeze. The surface of the Sound became covered with opal-tinted waves. They laughed and gurgled along Susie's sides and piled into a bubbling, snowy wedge of spray under her bows. Astern a broad, scintillating trail of radiance a sparkle with countless beady jewels, it seemed, marked our course. Away off to windward, under the sandy cliffs of Long Island, snowy sails of yachts and merchantmen inclined at angles, which betokened an increasing wind. No cloud floated in the purple vault, and the sun shone with that warm, delightful luster that is always associated with a perfect summer afternoon on the water.

It was at this stage of the trip that Stanley gave a reckless exhibition of his ability to "monkey" between sea and sky on a topmast that was already swaying like a drunken man from the strain upon it. "There's going to be more wind, fellows," said he, "and up aloft I go to rig a topmast backstay. Bet your life, we never shorten sail aboard this craft so long as there is a chance of keeping her deck a-top of the water."

After imparting this delightful information Susie's skipper took the end of a manilla rope between his teeth and quickly shinned the mast by means of the hoops. After reaching the masthead he paused an instant and glanced down at the deck, then up at the swaying topmast. It seemed impossible for the slender spar to stand any extra weight. Stanley, however, removed the rope from between his teeth, and assured us in the plainest manner that it would "be as well to stand from under there. If I start to come, once," said he, "I'm not going to stop until I reach the deck or go overboard. If you don't want me coming astraddle some of your backs why you'd better keep from under, that's all I've got to say." Of course none of us hankered to mix in such a collision, so we kept "from under." Glancing aloft again Stanley spat on his hands and shinned up until he was able to make the end of the rope fast near the topmast head. The spar bent dangerously, but Stanley stayed until his task was finished.

It was six bells when we made Penfield Reef Lighthouse, and the wind and sea had steadily increased. The wind gradually veered to southwest.

When nearly up with Stratford Point we met a fleet of yachts sailing to the westward. They were evidently racing. Susie must have presented a fine sight to them, for they waved hats and handkerchiefs as we passed. Every sail, including ringtail, was drawing like a horse, and we were making fully nine knots.

From Stratford Point to Southwest Ledge Light we indulged in probably the finest and most enjoyable bit of sailing we met on the trip for the distance. With boom wide off to port Susie reached like a thing of life over surges of green, whose crests were beaded with white. Like carved marble the sails stood plainly out, and no wrinkle marred their snowy curves. Down in the southwest a huge triangular-shaped cloud of a grayish black had lifted out of the Sound, it seemed. One point of the triangle appeared to rest on the water, while its upper side seemed to hang in the sky, above where the Norwalk Islands should lie. On the upper edge of the triangle, and near its center, was perched the sun like a great bursting ball of fire. Two dusky paths showed where the kind of day had pierced the cloud with his javelins of light, and red fiery shafts penetrated to the uttermost limits of the heavens. Directly beneath the sun and near the edge of the cloud a minia-

ture thunder storm was in full progress, and twisting forks of freakish lightning squirmed and wriggled now and then. The whole western sky line was piled high with massive banks of clouds, which glistened in all the tints of the rainbow. To the north and east the shores and waters basked under the soft beams of the summer sun. The steady sweep of the boat, as she rode the swelling undulations, imparted a delicious feeling of freedom and contentment. Indeed life was worth living, if only to lie there on the deck, to gaze, to dream, to worship nature while quaffing deep drafts of the brine-laden air.

It was two bells when Susie swept by the breakwater that extends west from Ludington's Rock shoreward. After sailing well toward Southwest Ledge Light we took in the ringtail, jibed the mainsail to starboard and squared away into New Haven Harbor. On our way up the harbor we passed a large two-masted schooner, whose dilapidated sails, rigging, and rotten timbers denoted great age. Sam pronounced her a relic of the old whaling days.

We anchored off the New Haven Yacht Club house just as the sun buried its face in a monster pillow of gold-fringed clouds piled high in the western sky.

That night Stanley and I took a run into the country to my house. As none of my family was at home I naturally had a desire to see how things were progressing. That was principally the reason for making the trip. We didn't forget, however, to load up the grocery wagon with green corn, tomatoes, potatoes, apples, pears, etc., and to run the whole load down to the wharf in the morning. Here we found Sam impatiently awaiting our coming. We had agreed to be on hand by 5 o'clock, but it was nearer 7 when we put in our appearance. We quickly unloaded our stuff from the wagon into the skiff, then the young man who had driven us to the wharf started back for the farm, while we rowed out to Susie.

The wind was blowing fresh N.W.; Sam said it had been blowing from that quarter since daylight. He wasn't very complimentary in his remarks toward us for the delay we had caused. "If it wasn't for you loafers," said he, "we'd be looking at Faulkner's Island over the stern by this time."

"Yes, but we wouldn't have all this corn and other grub with us," Stanley answered.

"Well, come, let's get sail on her and make a break or we won't get away to-day."

The fruit and vegetables were quickly dumped into Susie's hold; the skiff was yanked on deck, and the cable was hove short. We then set mainsail and topsail, got our anchor, put the jib on her, and away we went like a frightened steed for the mouth of the harbor. Stanley satisfied his hobby for carrying sail by setting the jibtopsail and ringtail.

The morning was one of those bright, crisp ones, when all nature seems to smile, and everything is a-sparkle with light. The wind blew strong, streaming the smoke and steam of tugs and steamboats in lines parallel with the water, and quickly dissolving them in the pure atmosphere. The green waves danced with a vim that betokened plenty of sea in the Sound. Not the smallest sign of cloud could be seen in the pure ethereal vault, whose depths were flooded to their uttermost limits with the mellow rays of the sun.

"We'll have the wind south-west before we've been in the Sound long," prophesied Sam. "See how that schooner's got it under the Long Island shore?"

"By George! she's got it in good shape too," replied Stanley. "Look! See how she lays over! I'll be hanged, if they aren't dousing her topsails!" He had spoken rightly, for soon all three of her topsails were in, and even then the schooner seemed to have all the sail she needed.

By seven bells we were off Morris Cove. The wind had hauled to the westward, and it was blowing considerably harder than at the start. "That ringtail and jibtopsail 'll have to come in if it blows any harder," said Sam, as he critically eyed the topmast.

"Well, mebbey they will," answered Stanley. "We aren't going to take them in until we have to though, you can bet." We passed into the Sound through the channel between Lighthouse Point and the east end of Southwest Ledge Breakwater. We then found the wind so heavy that we were compelled to dispense with the ringtail and jibtopsail, though they were carried to the last minute. The wind gradually veered until it was plumb southwest, and it blew to beat the band.

It was about this time when the thought struck Stanley and I that we had had no breakfast. We went below, and when we reappeared on deck our stores had been considerably reduced.

About two bells we were abreast of the Thimble Islands. The wind had steadily increased, and Susie was swinging over the long rolling seas at an 8-knot clip. Ahead of us, half way between the Thimbles and Faulkner Island, we could see a large sloop yacht. She was under mainsail and jib, and she was evidently heading for the race. Suddenly she shifted her helm and started for the Thimbles. Her crew had undoubtedly considered discretion the better part of valor, and concluded to make a port while there was a good chance to do so. Soon after this we were compelled to take in our topsail. It pained Stanley considerably to have to "knuckle" to the inevitable. It was either take the sail in, however, or see the topmast go out of her.

Bub had been firing questions right and left, but suddenly he grew very quiet and thoughtful. We wondered greatly at the sudden change. Our wonderment increased to amazement when he guessed "he'd go below and turn in." At first we concluded he must be getting frightened, but when he came on deck soon after and gazed wildly about for an instant, then sank on his hands and knees and crawled to the rail, arched his back like a canker worm and yelled "Yauck! yauck! yauck!" as though at some marine monster far down in the depths of the sea, then we knew he was paying his respects to Neptune. Poor Bub! He crawled back after a while, turned his bloodshot eyes on us for an instant, sadly murmured "malaria," then crawled down to his bunk again.

WILLIAM H. AVIS.

[TO BE CONTINUED.]

One-Design Classes.

THE New York Sun is responsible for the following absurd attack upon the "one-design" classes:

The "one design" classes of yachts, which promise to be popular among racing men next season, are causing a goodly amount of comment among naval architects, and it will be quite easy for a prophet to foretell the future of the yacht designer if these classes are to be encouraged to the exclusion of all others. It is a fact that a number of boats built from one set of moulds do less to advance the science of yacht designing than if the class was open to all designers and the product from several competitors was raced in each of the classes.

The sport of yachting gains nothing from "one design" boats. Scientific designing is lost sight of and discouraged, and the men who are depended upon to evolve any future craft that will sail under the Stars and Stripes in an international contest are left to rust out and gather a meager knowledge of progress in the art from the results obtained by others and not by their own work. In England this matter is different, and Watson, Fife, Soper and others are building boats under the present racing rules, each one vieing with the other in order to obtain the best results from which information is gained that will be valuable in future races.

It is plain that American designers should receive some encouragement if yachtsmen expect success. Otherwise the type of boats by Americans will fall back from lack of experience and practical tests. In England there is quite a fleet of racing yachts in course of construction, no two of which are exactly the same. The results from these boats will undoubtedly be an advantage, while the architects upon whom Americans depend for their speedy types are building few boats outside the "one design" vessels. This disadvantage may also be applied equally to the special, restricted classes such as the 21, 25 and 30-footers. Where boats must be raced within certain lines draftsmen are fettered by numberless rules and regulations that are made by men who, as a rule, are not competent to sail a catboat. An expert who has made the subject of yachting a study for many years says:

"New Yorkers are beginning to see the danger, and in the future, so Designer Gardner says, all boats over 25ft. must be built under club rules, for no special, restricted classes will be allowed above this. The New York Yacht Club, when it put a limit on draft of cutters under 70ft. and schooners under 85 ft., and adopted a rating rule, did that which is an injury to yacht racing, besides being most inconsistent, in view of holding the America's Cup where freedom in design on the lengths is given."

We have no idea whatever that Mr. Gardner is responsible for the statement credited to him by the Sun. Mr. Gardner has always favored what the Sun miscalls the "rating rule," and was a strong advocate of its adoption for classification, as well as measurement, a few years ago. He was also in favor of the draft limit adopted last season by the New York Yacht Club.

The great error which the Sun makes is in assuming that the one-design idea is the cause of the present stagnation in yachting, whereas it is but a natural and inevitable effect. It is the unlimited modern yacht, expensive, short-lived and useless, of which Defender is such a conspicuous example, which has killed yacht racing in the large and even the medium classes, and left the designer idle. Last year the one-design idea played no serious

SKETCH DESIGN OF 46FT. L.W.L. SCHOONER. MESSRS. CARY SMITH & BARBEY.—1898.

part in yachting; and yet the designers were idle, but one racing yacht, of 51ft. R. M., being turned out. This year they are no worse off, and some at least have orders in the small classes. All the life and activity there is in yachting is concentrated in the one-design or otherwise restricted classes; and without them there would be no sport next summer.

It is all very well to talk about what is done in England and the duty of American yachtsmen; but the conditions are different abroad, the sport of yacht racing has always had a more generous and extended support than in this country, and the rule is more strongly restrictive. Certainly no one can blame the American yachtsman who declines to build a fin-keel of extreme and prohibitive draft to race against Defender, Colonia, Quissetta or Syce.

The Sun poses as a strongly American paper, but it deliberately goes out of its way to cast a slur on the catboat, a craft which even we who are not among its admirers will admit is responsible for the education of many of our best yachtsmen.

Such comments as those above quoted can only do harm at the present time; and, on the other hand, there is a need for full and ample discussion of yachting topics through the winter season in the American press.

The Proposed One-Design Schooner Class.

The preliminary plans for the proposed one-design schooner class have been completed by Messrs. Cary Smith and Barbey, and sent out for estimate. Through their courtesy we are enabled to re-

produce the plans this week. The sheer draft is only approximate, but serves to show the generally wholesome character of the designs in the moderate draft, large internal room, and conventional keel contour and rudder.

The cabin trunk is low, but gives full head-room for the greater part of the length of the vessel. The main saloon is over 13ft. long, with a floor width of 6ft. 9in. On each side are two sofas and two berths, the latter in the wings, with drawers under. On the port side is a sideboard, and in the center is an extension table. The owner's room and toilet are on the starboard side, as usual; the former with berth, sofa, bureau and washstand. On the port side aft, convenient to the saloon, is the steward's pantry, with a stateroom forward. What there is of the centerboard trunk above the floor is just abaft the mainmast.

The fore end of the passage swings to starboard with three doors, giving access to the toilet room, galley and an extra stateroom intended for the captain. In the fore-castle is the galley and hammock berths for four men, with good lockers, closets, etc.

The rig is shown in the sail plan, and requires no explanation. The general specifications, as given below, show the proposed construction strong, substantial and thoroughly good, but with no costly extras. The boats should prove serviceable and satisfactory in use, and also should retain a good sale value for some years.

SPECIFICATIONS FOR SCHOONER YACHT.

General Dimensions.—Length over all, 64ft. 2in.; length on l.w.l., 46ft.; beam, extreme, 16ft.; draft without board, 6ft. 6in.; least freeboard, 3ft.; Specifications: Keel, white oak, moulded,

5½in.; stem, white oak, sided, 4½in.; stern post, white oak, sided, 5in.; frames, hackmatack, double, sided 2in., moulded at keel 3½in., at plank-sheer 2¼in.; floors, sided 2½ right and left; trunk log, sided 6in. and moulded 10in., bolted with ½ galvanized iron; sides of trunk, yellow pine and white pine 2x8in., bolted with ½ galvanized bolts; centerboard, oak and yellow pine, bolted with ½ galvanized iron; pin and hanging to be of brass; ballast to be of lead furnished by owner, 20,000lbs. in all, 18,000 on keel bolted with ¾in. Muntz metal bolts, 25 in number; plank of yellow pine, spike fastened; clamps, yellow pine, 2 in number, 1½x6in.; shelf, same, 5x2in., worked to shape, one through bolt on each frame; bilge strakes, yellow pine, 3 on a side, 1½x6in.; ceiling, only where cabin work calls for it, ¾in. pine; deck beams, white oak, sided 3in., moulded 2½in.; partner beams and house beams to be sided 6in.; partners, hackmatack, kneed with same; plank-sheer, white oak, 1½x7in.; deck plank, white pine, 1¾in. thick by 2¼in. wide, spiked; bulwarks, pine; stanchions, white oak; trunk cabin, tongued and grooved sides, 1½x3in., with wrapper; trunk deck, tongued and grooved stuff, 1½in., covered with canvas; hatches and slides, mahogany; bitts, locust; windlass, pump brake; anchors, 120lbs., 160lbs.; chains, 70 fathoms, ¾ tested.

All chocks and kevels as required; steerer, Perley patent, mahogany wheel about 30in.; tanks, galvanized iron, to hold about 200gals., pump in galley basins to discharge in receivers (bilge pump); one small tank on C. B. trunk.

Masts and spars of best spruce; rigging, best cast-steel wire-rope and manilla; sails to be as follows: mainsail, foresail, fore-

staysail, jib, small jib, small jibtopsail, second jibtopsail, spinaker, two gaff-topsails, small maintopmast staysail; blocks of white ash; iron work of all kinds of best iron, galvanized; awning staunchions galvanized; joiner work to be of tongued and grooved stuff, where it will not be seen, and the rest to be paneled, of white pine, all to be of 3/4 stuff; to be painted with three coats of paint.

Massachusetts Y. R. A.

THE special meeting of the Massachusetts Y. R. A. was held on Dec. 30, with Pres. Clark in the chair. A proposition to establish an associate membership was considered and voted down, 11 to 7, thus failing by one of a two-thirds majority. The following was omitted from Rule 12, Article III.: No extra spars, booming out or whisker poles, except a spinaker boom, shall be used. Rule 18, Article II., was changed to its old form: If any part of hull or spars of a yacht be across the line when the starting signal is given, she must return and recross the line when ordered by the judges.

The following was also adopted: "The judges shall not recognize any yacht not having racing numbers in position, and such yachts shall not be entitled to any rights on the course."

The greater part of the evening was given up to the allowance question. The first resolution—"That the Yacht Racing Association declares itself in favor of time allowance"—met with the "happy despatch" at the hands of sixteen out of twenty-one delegates. Mr. S. N. Small presented a list of seventy-one names in favor of the permanent retention of allowance, with fourteen opposed to it.

Com. Sanborn, Quincy Y. C., explained his plan of allowing time to the extent of 1ft. to all yachts for the year of 1898. After discussion a proposal was made to give allowance to all existing yachts for 1898, but it was voted down by 11 to 10. Com. Sanborn's plan met with the same fate, after which no further proposals to amend the rule were made, leaving all yachts without allowance for the future.

Gilbert's Bar Y. C.

WAVELAND, Fla., Dec. 23.—*Editor Forest and Stream:* The Gilbert's Bar Y. C. held the grand opening day of their new-club house on Tuesday, Dec. 14. The results of the races, which were sailed in a refreshing breeze, are as follows:

First Class.		
Albatross	Actual. 0 42 20	Corrected. 0 42 20
Joker	0 45 46	0 44 40
Britannia	0 46 10	0 44 52
Gull	0 51 42	0 50 14
Trochee	0 52 14	0 51 53
Petrel	0 54 05	0 53 20
Omega	1 04 36	1 04 36
Winner, Albatross.		
Second Class.		
Swallow	0 54 06	0 54 06
Eclipse	Did not finish.	
Winner, Swallow.		PAUL M. ASTON, Sec'y.

YACHTING NEWS NOTES.

The new fleet of Seawanhaka knockabouts is growing steadily at Stearns's yard; the first yacht was launched on Dec. 14, and a photo, for which we are indebted to Mr. Stearns, shows a very handsome ship. As they are launched they are taken across the neck at the head of Marblehead Harbor and hauled out under a big storage shed. Mr. Stearns has an order from the Corinthian Y. C. of Philadelphia for a similar design, from which a number of yachts will be built on the Delaware.

The wooden steam yacht building in South Brooklyn for Thos. L. Watt will be named Osceola. She will be launched this month.

Rifle Range and Gallery.

The Sportsmen's Association Rifle Tournament.

There is now every prospect that the rifle tournament of the Sportsmen's Association in Madison Square Garden, Jan. 13-22, under the auspices of the Sportsmen's Exposition, will be a grand success. It is very evident that New York and New Jersey will not have things to themselves, by any means. New England and Pennsylvania will be well represented at the galleries in the Garden, while scattering representations will be recorded from other States.

Instead of only four ranges, as last year, there will be six ranges. This number, with the additional two days for the tournament, will make it quite possible to accommodate all who went to shoot in the individual championship 100-shot match, or in any of the other competitions.

Mr. Plaisted will again occupy the cashier's seat, while Messrs. Zettler Bros. will have charge of the ranges and will look after the rifles, ammunition, etc. It should be remembered that, whereas last year only 22-short ammunition was allowed, this year the tournament rules permit the use of the 22-long cartridge. This change will suit many riflemen who do not approve of the 22-short for the best gallery work.

Trap-Shooting.

Fixtures.

Jan. 18-20.—Hamilton, Ont.—Grand Canadian Handicap. Live birds; \$1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

Jan. 26-27.—Orange Lake, Newburgh, N. Y.—Tournament at Pine Point. Open to all. First day, targets; second day, live birds.

Feb. 15-19.—Hot Springs, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. \$1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 15-18.—Utica, N. Y.—Tournament of the Oneida County Sportsmen's Association. Live birds and targets. Open to all. Henry L. Gates, Pres.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, \$25, extra; \$1,500 guaranteed to the three high guns; \$600, \$500 and \$400; all surplus added.

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

April 5-8.—Baltimore, Md.—Annual spring tournament of the Baltimore Shooting Association. Geo. L. Harrison, Sec'y-Treas.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluebirds thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

DRIVERS AND TWISTERS.

As so many daily papers have given publicity to the "thirty days' shoot at Baltimore in February, 1899," article which appeared in one or more Baltimore papers about a week ago, we may as well refer to it too. From this article we gather that it is proposed to have a thirty days' shoot, the actual shooting taking place on the alternate days only. There are to be six sets of five traps, three sets on each side of an open space, that is to be filled with "cashiers' tents, bookmakers' booths, and the like." All events are to be high guns or miss-and-outs, with entrance fees of \$5, \$10, \$15, \$25 and \$40. There are to be events for professionals and amateurs mixed, and also events "for the gentlemen shooters of America—men who are seldom or never seen at a regular tournament." It is also said that "a total of \$5,000 has been subscribed to be added to the stakes. Before the date

of the tournament this amount, it is believed, will be doubled, at least." In regard to the birds, the writer of the article has this to say: "There has been much correspondence with persons who supply birds, and these are now on the hunt for such as will be needed. Only the best strong birds will be accepted, and every one of them will have to go through a ring measure to insure their being in a strong flying condition. Arrangements are also being made for a large consignment of wild pigeons, and it is thought that they will be secured. Offers of large, black birds, of the crow variety, have been made, and it is possible that some of these may be used." When they talk about "large consignments of wild pigeons," they would more properly talk about "large consignments of wild ideas;" such would be in perfect keeping with much of the article referred to. In conclusion, we would make use of another item in the article, which states (nat "H. A. Penrose, the president of the Coast Pigeon Manufacturing Company, has supervised all of the correspondence in relation to this tournament, and he says he is convinced that not one thing will be left undone to make it the grandest tournament ever conceived."

An interesting and exceedingly close match was shot on Thursday last, Dec. 30, on the grounds of the Crescent Athletic Club, Bay Ridge, L. I. The contestants were John L. Lequin, secretary of the Hazard Powder Co. and of the Interstate Association, and A. W. Higgins, secretary of the Lafin & Rand Powder Co., and of the Crescent Club, too. Ben Norton and John J. U. M. C. Hallowell looked after Mr. Lequin, and managed to pull their man through by the narrow margin of one break in a 50-target contest. Mr. Higgins was attended by Ed Taylor, and it is worthy of note that neither of the two last-named gentlemen attribute the defeat to any fault of W-A powder. (The detailed scores have been suppressed for cause.)

The 1897 season for the Hell Gate Gun Club, of New York, closed at Dexter Park on Dec. 28, when the club met for the last shoot of the season. Before the shoot commenced Conrad Weber was one point ahead of his nearest competitor, Henry Forster. The club shoot is at 10 live birds, and on the above date Forster scored 9 to Weber's 8. As both were handicapped, at the same points, viz., 6, Forster added 3 points to his score, tying Weber, who only made 2 points. The tie for first prize was shot off at 10 birds; again they tied with 7 kills each; then they shot off miss-and-out, Weber winning in the fifth round.

Elliott has still another match on his hands besides his one with Gilbert. This match is a one-barrel affair, or rather one-shell affair (for fear some one might think it was a match with Winchester repeaters only!) with Peter Murphy, of Philadelphia. The match is to be at live birds, Rhode Island rules, and will be shot at Gloucester, N. J., on Jan. 8. Rhode Island rules call for gun below elbow, 21yds. rise, and permit 10-gauges and 1 1/2oz. of shot. Elliott, however, means to show that his Winchester with its Schultze powder and 1 1/2oz. of shot is all that he needs; at least, such is his intention.

The Keystone Shooting League, of Philadelphia, announced a handicap at 20 birds per man, \$10 entrance, birds extra, for New Year's Day, the shoot to take place on its grounds at Holmesburg Junction, Pa. The advertised starting time was 1 P. M., but with 23 entries it was impossible to get through before night came on. At the close of the day there was only one possible straight, J. H. Vandergrift, who had scored all his 16 birds. The match was then postponed until the following Monday morning, Jan. 3, that being the regular annual shoot of the club.

Tom Keller has found quarters for himself and the interests of the King Powder Co. and the Peters Cartridge Co. in the building at 88 Chambers street, New York city. He hangs his shingle out there and wants his friends to know where he can be found. It looks to us like a very wise move on the part of the above companies to tie Tom down to New York and her neighboring States, so that we can know where to look for him when we want him.

In Western Trap will be found a copy of a letter written by Mr. H. T. Hearsey, of the Limited Gun Club, Indianapolis, to Mr. Hough. The subject of the letter is a proposed tournament at Indianapolis, to be held the week prior to John J. Sumpter's shoot at Hot Springs, Ark. Besides the inducements of a couple of days at sparrows and targets, the club can offer a cheap rate to Hot Springs and return, together with the attractions of a special parlor car to St. Louis, and a special sleeper from there to Hot Springs.

but over seventy shooters were out at the grounds of the Florists' Gun Club, Wissinoming, Pa., that date being the one set for the ninth monthly shoot of the League. Ten targets were about all that a man could fire at without getting too chilled to handle his gun; there was a northwest gale blowing, and it wasn't good for either man or beast to be out and standing about. Yet the teams went out and shot strings of anywhere from 26 to 40 targets per man without coming into the shooting house to warm up. Truly those Philadelphians must be made of "hot stuff."

Visitors to the Sportsmen's Exposition will have a chance on Saturday, Jan. 15, of seeing Elliott and Gilbert shoot at Dexter Park for the Du Pont trophy. The match will commence at 12:30 prompt, in order that those whose business it is to attend the Exposition may have a chance to see the match and get back early to Madison Square Garden. Elsewhere in these columns we give some figures on the recent matches between these two experts that will be of interest, in view of the coming match.

W. H. Wolstencroft has set Jan. 15 as the date for the match between himself and B. A. Bartlett for the "expert rules cup," now held by Wolstencroft. The match will take place on the grounds of the Keystone Shooting League, at Holmesburg Junction, P. R. R., Pa. It is rather unfortunate that these dates should clash with the ones set for the Gilbert-Elliott match at Dexter Park, but such things can't be helped occasionally.

Those people who started in to make big averages on the first day of the year did not calculate on the kind of weather the youthful '98 was going to provide for them. Zero weather, with a forty-five-miles-an-hour gale back of it, is not the sort of weather that is favorable for "over 90 per cent." averages on either targets or live birds.

The Herron-Hill Gun Club, of Pittsburg, elected the following officers for the coming year: President, Charles A. Painter; First Vice-President, W. S. King; Second Vice-President, H. B. Mohler; Secretary and Treasurer, Louis Lautenslager; Board of Directors, J. G. Messner, A. H. King, O. L. Hertig; Field Captain, H. L. Born.

In its issue of Jan. 1, our Western cotemporary publishes a letter on "good form," and gives in an editorial foot-note its idea of what "good form" means. As common or ordinary "good form" is alone dealt with, wouldn't it be a good plan for our cotemporary to go a little further, and tell us what constitutes "usual good form"?

The Philadelphia Trap-Shooters' League is made up of clubs whose members don't care whether it rains, snows, freezes or scorches. No matter what the weather is, the eleven clubs composing the League turn out in force and eleven teams compete for the honors of first position. New Year's Day, 1898, was a freezer.

A prominent figure at the shoot of the Philadelphia Trap Shooters' League, on New Year's Day, was Charles Edward Mink, the "shell man," from Shannon's store, 1020 Market street, Philadelphia. Mink carries his sign on his back and in his gun—for he shoots those "hand-loaded shells" just as well as he talks them.

So Rolla Heikes keeps the cast-iron medal, and that heirloom has left the old family that brought it up and fostered it so long and so carefully. The scores look well, too; 93 to 90 is not bad work, for the Ohio pigeons were not summer birds or squabs.

In another column we give the programme for the Apgar benefit shoot at Orange Lake, Newburgh, N. Y. The shoot promises to be a success both financially and socially, Neaf's popularity with the shooters of this section being well assured.

The Baltimore Shooting Association has changed its dates from April 4-7 to April 5-8, Tuesday-Friday of the week following the Pennsylvania State Sportsmen's Association's annual shoot at Reading.

JAN. 4. EDWARD BANKS.

Pawtuxet Gun Club.

PROVIDENCE, R. I., Dec. 25.—At the annual Christmas shoot of the Pawtuxet Gun Club for turkeys and chickens, the following scores were made. Conditions, 25 blue rocks:

Events:	1 2 3	Events:	1 2 3
Dr Hammond	19 23 19	C Adams	11 15
R C Root	20 20	W Waterman	17 19
W Sheldon	17 15 17	W Hanks	15
J Armstrong	12 19 17	A Hanks	15
F Arnold	19 17	S D Greene, Jr.	17
C Stanich	18 15 10		

W. H. SHELTON, Sec'y.

The Heikes-Grimm Match.

DAYTON, O., Jan. 1.—In the match to-day for the cast-iron medal emblematic of the live-bird championship, Rolla O. Heikes, of this city, successfully defended the trophy and title against his challenger, Charles M. Grimm, of Clear Lake, Ia., by a score of 93 to 90. The conditions were 100 pigeons per man.

On Dec. 31 a preliminary shoot was held at McCullough's One Mile House, but on account of the inclemency of the weather the attendance was small. A number of events were shot, Heikes doing the best shooting, making the highest average, and by his clean work still further strengthening the belief of his friends that he would certainly be the winner to-day. Grimm did not take part in the shoot on Friday, for the reason that his trunk containing his gun, ammunition, etc., had not arrived. It was unfortunate that he did not get any practice, as lack of the same became decidedly manifest during the early part of the championship race to-day.

Up to midnight of Dec. 31 it was generally conceded that the race on the following day could not take place. Snow covered the ground to the depth of at least 1/2 ft., and large flakes were still falling so thickly that it was impossible to make out anything across the street. It was the general opinion of the visitors who came to witness the race that everything looked to a postponement. We were all agreeably surprised when we arose early on New Year's Day and found that the sky was a blue and Old Sol was shining in all his glory. Every one appeared in a good humor.

The match took place at Fairview Park, where everything was in readiness for the great event. Without a moment's hesitation Messrs. Heikes and Grimm consented to appoint C. A. Young, of Springfield, O., referee; R. L. Trimble, of Covington, Ky., score-keeper, and Harry Aultie, of this city, to act as puller.

It was generally admitted that Grimm had a shade the worst of it in drawing hard birds, but such is the luck of duck shooting, and the intimation of hard birds must not be construed as an effort to detract from Heikes's extremely brilliant work. He was in splendid form, and from the beginning he started in determined to win. Dr. L. C. Adams looked after Heikes's personal comfort and wants.

Promptly at 2 P. M. Grimm stepped to the score and drew a swift right-quartering incomer from No. 5, which he killed with the second load. Heikes's first bird was a swift left-quarterer from No. 4, which he scored. Heikes was the first to miss; this occurred on the second round. He drew No. 3 trap and received a swift driver, which was not, to all appearances, touched. Grimm followed suit by drawing an easy bird from No. 1 trap, which fell dead just over the boundary. Grimm also missed his sixth and twenty-fourth birds, which gave him 22 out of the first 25. Heikes missed his second, fourteenth and twenty-fourth birds, which made a tie on the first 25. During the next 25 Grimm failed to score the thirty-first, thirty-fifth and fortieth birds, while Heikes allowed his thirtieth and thirty-seventh birds to cross the boundary. The match was then half over with Heikes one bird ahead.

The third 25 was shot and resulted in Grimm losing the fifty-sixth, fifty-ninth, sixty-fifth and seventy-fifth birds. It was during this series that Grimm allowed two easy birds to get away untouched. Heikes saw his chance and profited by scoring 24 out of 25, losing the sixty-seventh bird, a swift right-quartering incomer. He was then four birds in the lead, and victory was assured. Before starting on the last 25 Grimm asked "Shorty Bacon" for a chew of tobacco, which he stated would help him greatly. His words were verified to the letter, for it was a caution the way he went after that last string; drivers, twisters, towerers, incomers, right or left quarterers—it made no difference; he centered them beautifully and finished with a clean score, making 90 out of his 100.

Heikes still remained unruffled, and demonstrated that he is worthy the title of champion. Of the last 25 live birds he scored 24, losing the eighty-fifth, which was a swift outgoer from No. 5. This gave him a total of 93 out of 100 as against 90 for Grimm; therefore Heikes was declared the winner, and all Dayton was put in a much happier frame of mind.

Readers of this letter who were not present may perhaps think the scores made by Messrs. Heikes and Grimm are rather poor; but a word to the wise will be sufficient. The traps were set facing south by southeast, the sun shining brightly on the great expanse of snow, and to add to that, the day was exceedingly cold; puffs of wind blowing across the park and chilling spectators and contestants to the bone. The birds were a selected lot, and took wing readily, only one bird refusing to fly when the trap was sprung. Another item: It took just two hours and ten minutes to trap and finish shooting at the 200 birds. All retrieving was done by trappers. Following are the scores showing number of traps and flights of birds:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

LESTER.

Haverhill Gun Club.

HAVERHILL, Mass., Dec. 25.—Christmas Day in this section was a remarkably pleasant one from any point of view, and particularly fine for winter trap-shooting. Some of the members of the Haverhill Gun Club met to-day, and below you will find the scores they made:

Events:	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17
Targets:	10 10 10 15 15 10 10 20 10 15 15 15 10 10 20 5
Bryan	8 3 8 13 13 8 7 16 7 14 13 13 10 9 5 15 2
Wright	6 7 3 11 6 5 16 5 9 14 7 7
Merritt	4 4 4 6
Miller	5 7 6 9 5 7 6 11 8 7
Short, D S.	11 8 5 1
George	8 9 11 10 9 13 8 9 9 10 8 6 7 14
Short, E B.	10 8
Sprague	6 1 5 13 9 10 7 9 7
Fernald	7 6
Leighton	3 11 10 9 7 6 4 15 3
Osborne	6 10 10 5 4 11
Ingham	6 9 12 8
Brooks	9 7 5 6
Harley	7
Siegars	6
Crepian	4
Brown	7 7 14 3
Orne	3 5 3 2
Griggs	8 6 11 3

The last, a 5-bird event, one man up, was at unknown traps and angles, use of both barrels allowed.

GEORGE F. STEVENS, Sec'y-Treas.

The Wolstencroft-Bartlett Match.

FRANKFORD, Philadelphia, Pa., Dec. 28.—*Editor Forest and Stream:* I hereby accept Capt. B. A. Bartlett's challenge as published in your issue of Dec. 25, and name the Keystone Shooting League's grounds, Holmesburg Junction, P. R. R., Pa., as the place, and Jan. 15 as the date for the match. Inclosed please find \$25 to cover the amount deposited in your hands by Capt. Bartlett.

W. H. WOLSTENCROFT.
[\$25 received from both Capt. Bartlett and W. H. Wolstencroft.]

New York State League.

Editor Forest and Stream:

In view of the recent action taken by the representative sportsmen of the State at their annual convention in Syracuse, by which the connections previously existing between the protective and trap-shooting branches of the New York State Association for the Protection of Fish and Game were dissolved and a new organization, known as the New York State Fish, Game and Forest League, was formed, some facts concerning the early history of the parent society will doubtless be of general interest.

The initial convention of the sportsmen of the State for the purpose of obtaining unity of action between the various local sportsmen's clubs in order to secure proper legislation for the preservation of fish and game was held at the Franklin House, in Geneva, on Nov. 15, 1859. The following delegates were present:

Waterloo—W. A. Maynard.
Utica—J. E. Spencer, C. W. Hutchinson, A. Scranton.
Syracuse—Elisha Garrison, C. A. Kellogg.
Penn Yan—Stephen Gilbert, H. A. Wagner, L. Ogden, J. B. Harvey.
Canandaigua—R. S. Pierson.
New York City—Charles H. Haswell, Thomas Bond.
Binghamton—Dr. George Burr, C. Story, Jr., John Clapp, Hon. R. Balcom.

Buffalo—S. Douglass Cornell.
Rochester—Seth Green, A. G. Wheeler, Henry Hunter, T. S. Hall, E. H. Munn, N. P. Stone, James Wing, N. S. Winston, John Haywood, Jr., James C. Hart, F. H. Oriel, Geo. A. Watson, B. Moeller, Fred Nussbaumer.
Geneva—Wm. F. Cook, John E. Bean, Wm. S. Tuttle, G. M. Barnes, H. L. Suydam, J. B. Ansley, Wm. S. Baxter, M. H. Mandeville, G. W. Nares, S. S. Cobb, John D. Cobb, John S. Dey, J. S. Lewis, A. M. Cobleigh.

It was decided to endeavor to secure the enactment of a uniform and efficient State law for the protection of fish and game, and the following provisions were agreed upon:

1. Making the season for shooting woodcock begin July 4 and end Jan. 1 in each year.
2. Making the open season for quail begin Oct. 25 and end Jan. 15.
3. Making the season for partridges commence on the first Tuesday of September and close Jan. 15.
4. Making it illegal to shoot woodcock except from the first Tuesday in August until Jan. 1 following.
5. It was decided that no restriction should be made in reference to the killing of English snipe.
6. Prohibiting fishing for speckled or brook trout from Sept. 15 to March 1, and the use of all devices or means for taking such trout, except the usual mode—with hook and line.
7. Prohibiting the killing of deer from Jan. 1 to Aug. 1 in each year.
8. Prohibiting fishing for lake or salmon trout with a hook or line or any other device, from Nov. 1 to May 1.
9. Prohibiting fishing at any time in Crooked Lake and Canandaigua Lake other than with hook and line.
10. Making the possession of fish and game by any person during the prohibited season *prima facie* evidence of the killing or taking the same during the time prohibited by law.

It was decided to name the organization formed at this time the Sportsmen's Club of the State of New York, and the following officers were elected: President, Charles H. Haswell, New York; Vice-Presidents, Henry Hunter, Rochester; C. W. Hutchinson, Utica; Corresponding Secretary, M. Mandeville, Geneva; Recording Secretary, S. S. Cobb, Geneva.

A committee was appointed to meet in Albany on the third Tuesday in January, 1860, and urge upon the Legislature the passage of the bill proposed by the club.

This committee met, and the bill, after being amended somewhat, was finally passed.

The annual meeting of the Sportsmen's Club in 1860 was held on Oct. 9, in Syracuse, delegates from nearly all of the associations being in attendance. A committee was appointed to define the object and position of the organization, and the following report was submitted:

That the convention of the New York sportsmen's clubs be declared to be an annual meeting, formed by the representatives of all the associations and clubs in the State that have an organization, for the purposes of encouraging shooting and fowling, and the protection of the birds, deer and fish of the State, and such other sportsmen being county delegates, as hereinafter provided for; that such convention be held annually on the third Tuesday of the month of June in each year at such place as the next preceding convention shall select.

That the members of this convention consist of delegates appointed for that purpose by each association in the State, not exceeding five delegates from each association, and two delegates who are sportsmen, residents of any county in the State in which there is no such regular association organized, and who shall have faithfully co-operated in the purposes of our organization.

That at meetings of the convention all members of clubs and gentlemen interested in matters connected with the objects of the convention be invited to attend, but not to have the privilege of voting. That at each of the annual conventions some competent person be appointed to deliver an address or read an article at the next meeting of the convention upon some subject relating to the objects of the convention.

That on the second day of the convention, and after the business of the convention be finished, there be held a trial of skill with both rifles and shotguns, the trial of shotguns to be at live birds from a trap, and the rifle off-hand shots at 100 yds., and a certificate or prize of this convention be given to the winners at such games. That only delegates and all members of associations that may be represented in the convention be authorized to contend at such trials. That the officers of this convention consist of a president, two vice-presidents, a secretary and a recording secretary, to be elected at the annual convention, and to hold their offices until others are elected.

The report was adopted after a warm debate. Officers were elected as follows: President, Charles H. Haswell, New York; Vice-Presidents, C. W. Hutchinson, Utica; Henry Hunter, Rochester; Secretaries, C. E. Whitehead, New York; Geo. Dawson, Albany.

The next annual convention was held in Utica, June 18 and 19, 1861. At the business session several amendments to the game laws were agreed upon. The old officers were re-elected, save in the case of second vice-president, to which position John Haywood Jr., of Rochester, was chosen to succeed Mr. Hunter. On the second day the prize contests occurred, the first in the history of the State Sportsmen's Club. The events were as follows:

Trap Shoot.—Match between competitors west of Utica and those east, 10 birds to each man, 21 yds. rise, 60 yds. fall. Won by the former team, the score being 70 and 56.

The rifle match, distance twenty rods, off-hand, was won by Morgan James, of Utica.

In the second match at live pigeons, 12 birds to each man, 21 yds. rise, M. M. Mayhew, of Utica, and C. A. Kellogg, of Syracuse, tied for first place with 11 birds each, but in shooting off the tie Mayhew won.

The prize for skill in fly-throwing was awarded to Mr. Lennbacker, although the committee decided that Mr. Hutchinson excelled him in distance and ease of motion, and Mr. Calverly excelled both in distance.

In the evening an elaborate supper was enjoyed, and the annual address was delivered by Charles E. Whitehead.

In June, 1862, the convention occurred in Rochester. The following clubs were represented: Buffalo, Genesee County, Central New York, of Utica; Onondaga, of Syracuse; Oswego, Monroe County, and Wayne County. The annual address was made by C. W. Hutchinson, of Utica. The old officers were re-elected except in the case of one of the secretaries; Frank Sidway, of Buffalo, succeeding Mr. Dawson. The trap-shooting and other contests took place on the second day. In the former a team selected by C. H. Kellogg, of Rochester, defeated one chosen by E. Garrison, of Syracuse, the score being 177 and 175. In another trap-shooting contest C. H. Finch, Syracuse; Seth Green, F. H. Oriel, A. S. Winston, Rochester; Robert Newell, Buffalo, and M. M. Mayhew, Utica, divided first prize. The certificate of superiority in rifle shooting was awarded to Seth Green, as was also the prize for excellence in fly-casting.

Perhaps this is enough to say concerning the early conventions of the State sportsmen, only it may be added that those who participated were enthusiastic hunters and anglers, and men who believed that the killing of fish and game should be reasonably restricted, and the results of their protective efforts are felt at the present day.

In late years the organization came to be known as the New York State Association for the Protection of Fish and Game, and was so styled until the recent meeting in Syracuse. In February, 1892, a convention of sportsmen of the State was held in Syracuse for the purpose of agreeing upon a plan of action for more efficient protection of fish, game and forest. A committee consisting of F. J. Amsden, Rochester; Gen. D. H. Bruce, Syracuse; Robert B. Lawrence, Charles B. Reynolds, New York, and J. Van Cleef, Poughkeepsie, were appointed to present to the State Association suggestions for increasing the efficiency of the organization. The

committee's report, submitted at the June convention, forty-eight clubs being represented, was unanimously adopted. It provided for two meetings annually, one in the winter for game protection interest only, and the other in summer for trap-shooting and other competitions. The wisdom of this action has been clearly shown by the very marked increase of interest in protective matters which has since been manifested, and in the highly satisfactory legislation that has been obtained along the lines suggested by the association. While the trap-shooting feature did not conflict particularly with the protective work, it increased the duties of the officers materially, and it was finally decided that the protective element had attained sufficient strength to warrant it in asking that its connection with the other branch of the association be served. The plan was considered at the meeting last June, and the committee in charge of the matter met in October and came to the conclusion previously stated—that there should be a separation. This report, together with the new constitution, changing the name of the association to the New York State Fish, Game and Forest League, was adopted at the convention held in Syracuse, Dec. 9. There is no intention on the part of any one to exclude trap-shooters from the League, but on the contrary their united and hearty co-operation is earnestly desired in the work of protection. It is sincerely hoped that every organization of sportsmen will join the State League, and assist in increasing its efficiency. W. E. Wolcott.

Utica, N. Y., Dec. 16.

CONSTITUTION.

ARTICLE I.—Name.—This association shall be known as the New York State Fish, Game and Forest League.

ARTICLE II.—Objects.—The objects of this association shall be to create and foster a public sentiment in favor of better fish, game and forest protection, to procure the enactment of laws for the protection of fish and game, and for the preservation of the forests, and to promote the observance of such laws.

ARTICLE III.—Board of Trustees.—The entire management of the concerns of the association shall be entrusted to a board of trustees to consist of twelve members.

ARTICLE IV.—Officers.—Board of Trustees.—The officers of the association shall consist of a president, a vice-president, a secretary, a treasurer, a legislation and law committee of five members, and an auditing committee of three members. The officers shall be elected by ballot at the annual meeting, and such officers shall constitute the board of trustees.

ARTICLE V.—President.—Sec. 1. It shall be the duty of the president to preside at all meetings, to see the rules and regulations strictly enforced, to cast the deciding vote whenever there is a tie, and to perform such other duties as usually appertain to the president of an association.

Sec. 2. The president shall be entitled to a vote in the election of officers and members.

Sec. 3. All special committees shall be appointed by the president, of which he shall be a member *ex-officio*.

ARTICLE VI.—Vice-President.—It shall be the duty of the vice-president, in the absence of the president, to assume the duties of and be invested with all the powers of the president hitherto enumerated.

ARTICLE VII.—Absence of President and Vice-President.—In the absence of both the president and vice-president from any meeting of the association any member present may be selected to preside with the same powers as the president for that meeting.

ARTICLE VIII.—Secretary.—It shall be the duty of the secretary to keep a full and complete record of the proceedings of all meetings of the association, issue calls for all meetings, keep a roster of the officers and members, notify applicants for membership of their election, preserve all records in books furnished by and which shall remain the property of the association, and hand them over to his successor in office within ten days after the election of such successor.

ARTICLE IX.—Treasurer.—Sec. 1. The treasurer shall be required to give a bond, with good and sufficient sureties, to be approved by the legislation and law committee, conditioned for the faithful performance of his duties, the expense of procuring which shall be borne by the association.

Sec. 2. It shall be the duty of the treasurer to collect all dues, receive all moneys paid to the association, have the custody of all the funds of the association, and pay all bills presented to him by the auditing committee, and make a written report to the association at each annual meeting of its income, expenses, and the amount of money remaining on hand.

ARTICLE X.—Legislation and Law Committee.—It shall be the duty of the members of the legislation and law committee to keep themselves posted on all laws of the State governing the taking of fish and game, the preservation of the forests, and report to the association at each annual meeting thereof all changes deemed necessary in the fishery, game and forest law, and present to the Legislature the action taken by the association respecting the proposed enactment of such measures and to urge their adoption.

ARTICLE XI.—Auditing Committee.—It shall be the duty of the auditing committee to examine and pass upon all bills presented to the association, and indorse thereupon their written approval of such as they deem proper charges, and such indorsement shall be a warrant upon the treasurer for the payment of such bills.

In case any bills are not deemed proper charges they shall be submitted to the association at any regular meeting thereof.

ARTICLE XII.—Powers of Board of Trustees.—The board of trustees shall have the control and management of the property and affairs of the association, and shall have charge of all matters respecting the welfare of the association.

They shall also have full power to suspend any member from office on receiving evidence of the unfaithful discharge of his duties, giving him notice of such suspension and an opportunity of defense, and said board shall have the power to fill the vacancy occasioned by such suspension until the next annual election, or until the suspended member shall be reinstated.

ARTICLE XIII.—Vacancies.—The board of trustees shall have full power to fill any vacancy which may occur from death, resignation or otherwise among its officers or members, and any appointments so made by them shall be valid until the next annual election.

The board shall also prescribe such rules regulating the affairs and conduct of the association, and such by-laws, not inconsistent with the constitution, as in their judgment may from time to time become necessary, subject to the approval of the association at its next regular meeting.

ARTICLE XIV.—Meetings of Board of Trustees.—The board of trustees shall hold meetings whenever summoned by the president or by the secretary upon the request of three members of said board, and seven members of the board shall constitute a quorum of that body for the transaction of business.

ARTICLE XV.—Membership.—Any club or association organized for the purpose named in Article II. shall be eligible to membership in this association.

All applications for membership shall be made to the board of trustees in writing, accompanied by the initiation fee, and said board shall have the power to accept or reject the same.

ARTICLE XVI.—Quorum.—Delegates representing ten clubs at any regular or special meeting of the association shall constitute a quorum for the transaction of business.

ARTICLE XVII.—Representation.—Each club of fifty members or less having membership in this association shall be entitled to two delegates to any annual meeting of the association.

Clubs having a membership greater than fifty shall be entitled to two delegates for the first fifty members and one additional delegate for each additional fifty members or fraction thereof.

Every delegate and alternate, or set of delegates or alternates, to any annual meeting of this association shall be provided with credentials signed by the president or vice-president and the secretary of their respective clubs, stating the full name of the club or association which said delegate or alternate represents and the actual membership thereof.

ARTICLE XVIII.—Initiation Fees and Dues.—The initiation fee shall be \$5 for each club, which fee shall be in full for all dues for the ensuing year, commencing on the first Thursday after the first Monday in December of each year.

The annual dues thereafter for any club having a membership of fifty or less shall be \$5. For clubs having a membership of more than fifty the annual dues shall be \$5 for the first fifty members and \$2.50 for each additional fifty members or fraction thereof.

Initiation fees and annual dues shall be payable in advance of the fiscal year, which commences with the annual meeting on the first Thursday after the first Monday in December of each year.

ARTICLE XIX.—Resignations.—Sec. 1. All resignations shall be made in writing to the secretary, and all interest in the property of the associations or clubs resigning, or in any other way ceasing to be members, shall be vested in the association, and no resignation from a club in debt to the association shall be accepted.

Sec. 2. Officers in good standing may resign by presenting their written resignation to the secretary, and such resignation is subject to the action of the board of trustees.

ARTICLE XX.—Failure to Meet Dues.—Any club failing to meet its dues or any other indebtedness to the association shall, after sixty days' notice, be expelled from the association at the next regular meeting, unless said indebtedness shall have been previously paid or remitted.

All delegates from any club indebted to the association at the annual meeting or any subsequent meeting shall be debarred from voting until such indebtedness has been paid.

ARTICLE XXI.—Construction of Constitution.—In respect to all questions of construction of the constitution or by-laws the decision of the board of trustees once made shall control and be binding thereafter until rescinded by the association.

ARTICLE XXII.—Matter not Provided for in the Constitution.—All matters not particularly provided for in the constitution shall be controlled by the board of trustees, and may be passed upon by a two-thirds vote of said board, and shall be fully binding upon the association.

ARTICLE XXIII.—Annual Meeting.—The annual meeting of the association shall be held in the city of Syracuse, N. Y., on the first Thursday after the first Monday in December of each year for the election of officers, and for the transaction of such other business as may legitimately come before it.

ARTICLE XXIV.—Special Meetings.—The president shall call a special meeting of the association at any time when requested so to do by ten clubs of the association, and he may do so at any time when he may deem it for the best interests of the association so to do. In all cases written notice of the time and place of the intended meeting to be given to the secretary, who will notify each club of the association.

ARTICLE XXV.—Honorary Members.—Honorary members may be elected at any meeting by a unanimous vote of those present, but said honorary members shall have no vote.

ARTICLE XXVI.—Votes.—Each delegate or alternate shall be entitled to only one vote.

ARTICLE XXVII.—Amendments to the Constitution.—This constitution or parts thereof may be altered or amended by an affirmative vote of two-thirds of the delegates present at a meeting, provided that sixty days' notice shall have been given to all clubs in writing that an alteration or amendment, specifying the same, is proposed to be submitted at such meeting. But a proposed amendment may be entertained without such previous notice by unanimous consent of the delegates present.

ARTICLE XXVIII.—Object Stated in Call for Special Meetings.—At all special meetings the object of the meeting shall be stated in the call, and no other business can come before that meeting.

BY-LAWS.

Sec. 1. The order of business shall be as follows:

- I. Presenting of credentials.
- II. Roll call.
- III. Reading of minutes of previous meetings.
- IV. Reports of officers.
- V. Reports of standing committees.
- VI. Reports of special committees.
- VII. Unfinished business.
- VIII. New business.
- IX. Bills and accounts.
- X. Election of officers.

Sec. 2. The president and secretary of the association shall be respectively the chairman and secretary of the board of trustees.

WESTERN TRAPS.

New Year's Shoots.

CHICAGO, Jan. 1.—Both sets of traps at Watson's are busy to-day, one with sweeps open to all, and the other for amateurs who only want to spend a part of the day pleasantly shooting for the price of the birds. A number will mingle with the J. Watson hummer to-day.

At Glen Ellyn, one of the prettiest little spots around Chicago, Dr. Shaw and Tom Hicks will to-day join issues in a live-bird match (scores elsewhere), which should be of interest, and other shooting will occur.

At Elgin, on the Fox River, a live-bird shoot will be held to-day, as also at almost every other town of any size within a radius of many miles of the city. After Thanksgiving Day, New Year's is the great shooting day of the trap lover.

The E. C. Cup.

A. C. Paterson's acceptance of F. P. Stannard's challenge for the E. C. cup contained conditions not agreeable to the latter, and he declined to accept same. The clause in regard to "snipe" shooting at targets was waived by Paterson, who, however, still insists that he has a right to hold to the location of Calumet Heights grounds, although the latter are in Indiana, because this is a Cook County League trophy, and the League has held meets at those grounds, and the Calumet Heights Club is a regular member of the League. The actual terms of this competition are but vaguely understood by some of the shooters of the League, discussion having come up over the probable future of this trophy in case the League disbanded (which it has not done). It would be very desirable if the American E. C. and Schultze Powder Co. would once more kindly publish the terms of the competition.

Indianapolis and the Hot Springs Shoot.

The following enterprising and agreeable proposition from the popular Limited Gun Club, of Indianapolis, will appeal to a great many shooters, who will gladly accept the chance to go South again for a shoot this winter. The quality of John Sumpter's shoots needs no comment, nor does the hospitality and organizing ability of the Limited Gun Club. Get together, all you people, and be sure you never were in a better chance to have a rattling good time with rattling good fellows. The second whirl at sparrows and birds for Indianapolis this winter would certainly be appreciated by every man who was there this past December, and the proposed two days ought to fill well. The letter reads as below:

"Indianapolis, Ind., Dec. 30.—We have noticed in your columns the announcement of the shoot offered by Mr. Sumpter at Hot Springs, Feb. 15 to 19, inclusive. Last year we succeeded in collecting quite a crowd of gentlemen prior to the San Antonio shoot, and took them from Indianapolis to San Antonio and return at a very liberal railroad rate. We would now like to entertain all the gentlemen who could make Indianapolis on their way to the Hot Springs tournament—one day at sparrows, say 100 sparrows divided into five 20-bird races, and the second day we would suggest a 100-bird handicap target race, allowing different shooters extra birds to shoot at. We would suggest Feb. 10 and 11 for our shoot. This would enable the gentlemen to leave Indianapolis Saturday, Feb. 12, at noon, and reach Hot Springs Sunday, Feb. 13, at noon. Of course, if they desire to shoot another day in Indianapolis, we should be pleased to have them; they could then leave Sunday and arrive Monday, the 14th, at noon.

"From information we have at hand, although we have not the exact figures, we can promise a very liberal railroad rate, and also a special parlor car if we secure sufficient passengers, and a special sleeper from St. Louis. We will have our programmes, embodying matters mentioned above, issued in a few days.

"We would now ask, as a special favor, all gentlemen who desire to take advantage of our offer, to notify us at their earliest convenience, so that we may be better prepared to entertain them. We wish to say that we shall be more than pleased to have you as our guest on this occasion, as you missed going with us last year, and we trust that your engagements will be such that you can join us this time.—Limited Gun Club, per H. T. Harsey, Sec'y."

Proposed Medal.

The proposed medal for Chicago shooters, to be purchased by the balance of funds left over from the late intercity shoot, has this inordinate condition attached to it, that it would make the boys think of Kansas City every time they shot for the medal. Just now we don't speak at all of Kansas City except in a subdued whisper.

Kansas City Team Shoots.

The intercity shoot between Kansas City and St. Louis has probably fallen through. That with Omaha is very apt to be a go, but will hardly come off before next May, according to latest advices at hand here.

Old New York Trophies.

The recent reorganization of the New York State Sportsmen's Association brings up the question of the disposition of the original capital prizes of that body. The Dean Richmond cup now shot for by that body is not the original one, as has been earlier stated in these columns, though sometimes that fact is overlooked by the shooters of recent days. Col. Charles E. Felton, who called at this office this week, said: "I am the sole and individual owner both of the original Dean Richmond cup and the Green Smith badge, having acquired these after the disbandment of the teams and clubs owning them. The cup you have seen and know its value. It cost \$800 in its time, and was then thought a wonder. The Green Smith badge was incased in a silver trunk case, in imita-

tion of a gun case, and was thought a grand affair. It cost \$900, and of course is a very valuable trophy, in view of its history. These old trophies of New York State antedate those now in competition, and of course they do not revert to the organization in either of its branches. I thought it might be interesting to call up the history of these trophies."

The Mussey Safe.

Last week, in describing the fire at Mr. Mussey's hall, I stated that the historic safe was buried beneath the ruins of the falling building. At the time this was apparently the case, but now it seems that, by some curious chance, that portion of the floor which held the famous safe was left unburned and the safe stood the fire triumphantly. It is still in place and ready for business, almost the only thing in the whole establishment which was not utterly destroyed.

Goes to Monte Carlo.

Mr. Crittenden Robinson, of San Francisco, Cal., who was last season present at Monte Carlo, and gave a good account of himself, will be on hand again this year, leaving this country in time to be at Monte Carlo Jan. 24.

Christmas at Kansas City.

In their Christmas shoot the doughty live-bird shooters of Kansas City made up a series of handicap sweeps which offered plenty of amusement. Scores:

Fred Lamb, 30.....	02222222212220221022-17
George Stockwell, 30.....	222221101222202222-18

Pretty Close.

At Denver, Col., last week, a pretty close team race was shot between A. B. Daniels and J. S. Sedam on one side and Bryan Haywood and Sam Adams on the other. Daniels, Sedam and Haywood each scored 24 and Adams 23, a total of 48-47, or a grand total of 95 out of 100 for four men—not a thing that happens every day.

Olathe Annual.

The annual shoot and banquet of Olathe Gun Club, of Kansas, were held yesterday. Frank Hodges and W. R. Walker were captains, the team contests being at 25 blue rocks per man.

Soo.

The Soo Gun Club, of Sioux City, Ia., had a pleasant club shoot Dec. 27, using up some 500 live birds.

Baker—Studley.

At Kewanee, Dec. 29, E. E. Baker defeated Victor Studley, of Neponset, for a \$100 purse, 50 birds. Score 45-37.

Minnesota Medals.

At Stillwater, Minn., Dec. 26, George Bancroft won the Torinus medal with 44 out of 50, and Bert Torinus won the Mainwaring medal with 37, handicap 5.

E. Hough.

1206 Boyce Building, Chicago.

Huntington, Ind.

The Erie Gun Club, of Huntington, Ind., held its regular live-bird contest on the club's grounds, Friday, Dec. 24. The weather was fair and the birds good ones. Some splendid kills were made by Burnison, Gusman and Dr. Chenoweth. Mr. O. R. France met with an unfortunate accident during the afternoon. At the time he went to the score to shoot his last bird he slipped and fell on the icy ground, discharging both barrels of his gun; the charge, while going close to the spectators, did no damage and no one was hurt except Mr. France, who sustained some bruises which will require his attention for a time. Following are the detailed scores:

Twenty live birds:

Burson.....	12122201121211220112-18
Gusman.....	20221110221022201211-16

Brown.....	22001212w-6
O R France.....	200122020211000212w-11

Notter Gun Club.

The Notter Gun Club held its two days' tournament on the club grounds at Archer and Kedzie avenues, Chicago, Dec. 25-26. The days were cold and the sky overcast. Some fair scores were made, considering the elements. Workman's shooting deserves comment, as he is a new figure at the traps, having been shooting only a few months; some of his kills of live birds were equal to those made by the older and more experienced shooters. Following are scores:

Events:	1 2 3 4 5 6	Events:	1 2 3 4 5 6
Targets:	15 10 5 10 10	Targets:	15 10 5 10 10

M Auer.....	8 8 3.....	Jackson.....	5 6 4

Nos. 1, 2 and 3 were at live birds; Nos. 4, 5 and 6 at targets.

A 25-target match was shot as below, the stakes being \$10 and the targets:

Goodrich.....	11111011111101111111-23
Wharrie.....	11111111111110001111-22

The next club shoot will be held on the club's grounds on Jan. 9. All shooters are invited to attend.

Jan. 1.—John Schick, of Chicago, shot a race with John C. England, of Mount Pulaski, Ill., on Wednesday, Dec. 15, on the grounds at Obermiller's Park, Mount Pulaski, Ill. The race was at 50 live birds each and \$500 per man on the side. The day was clear and bright, with a strong wind on the back of the shooters. The birds were good, and strong flyers, and there was not an incomer of the entire 100 birds trapped. Both gentlemen shot in good form and killed their birds well. Schick made a run of 43 straight, while the three not scored to England were dead out of bounds.

Following are the scores:

John Schick.....	1122122212111212122212-25
	221211121222212222102211-23
John C. England.....	**2222112122211212221212-23
	222122222112121122222222-24

Glen Ellyn.

Some few of the members of Garfield Gun Club spent the greater part of New Year's Day shooting live birds on the Ackerman farm near Glen Ellyn, Ill. Considerable interest was manifested, and a few friendly races were had. The birds were strong, robust fliers, and when liberated from the traps would get away instantly. Many birds were hit hard, but were able to carry their load some distance over the boundary before they dropped. Out of the entire number shot during the day, only three were incomers.

The wind was on the back of the shooters, the light was bright, and with the ground covered with snow, white birds were difficult to see. Thomas Hicks shot against Dr. Shaw, 25 live birds for the price of birds, while Silas Palmer shot same against A. S. Paterson, with the following results:

Dr S Shaw.....	*222220022020*22202*2202-16
T P Hicks.....	1100122212200102101011-18
Palmer versus Paterson:	
S Palmer.....	020021011201020*0100*1111-13
A C Paterson.....	211*12102220201220020221-17

Later on, another go of the same kind was indulged in by the same persons, ending in a tie for Hicks and Shaw and a defeat for Paterson. In the shoot-off tie Hicks won by one bird. Paterson seemed to hit most of his birds hard, but not hard

enough to stop them inside the bounds, as will be seen by the following score, which shows 10 dead out of bounds:

Shaw versus Hicks:	
Dr S Shaw.....	2020022220222002202222*16
T P Hicks.....	0212101012100110112012*0-16
Palmer versus Paterson:	
S Palmer.....	0001*02010020210121220-14

Cicero.

The Cicero Gun Club held its regular holiday shoot on New Year's Day, on its grounds at the Desplaines River and West Madison street. The shooting was exclusively at live birds. The day was cool and the ground covered with snow. The wind was directly in the face of the shooters, which made many of the birds incomers direct and quartering.

Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Banks.....	3	2	2	0	1
Rexford.....	2	3	2	3	5	3
Barnard.....	4	4	3	3	3	4	4	3	3	3	4	2
Musley.....	4	4	2	4	3	5	5	4	4	5	5	4	5
Einfelt.....	3	3	3	4	5	3	3	5	5	3
Pollard.....	3	5
Jones.....	3	4	2	3	2	3
Fish.....	3	4
Comley.....	5	3
Richards.....	2	3	4
Webber.....	4	4	3	4	4
Foru.....	3

All the above events were at 5 live pigeons. The tie in No. 12 was shot off miss-and-out, Webber winning with 4 more kills.

Team Race.

A race between Harry W. and old John Glover vs. Hoyt Shaw and Dick Dwyer has been made and is to be at 25 live birds per man, the losers to pay for the birds and the suppers. The race will possibly be shot at Watson's Park, at an early day not yet decided upon.

Dwyer vs. Von Lengerke.

Some time ago Dick Dwyer and O. von Lengerke were to have shot a live-bird race at Diamond Park, Chicago, for birds, dinners and other things, but on account of the new traps not having arrived the race was postponed. It is expected that they will soon get together and shoot it out.

E. C. Challenge Cup.

I hereby modify my acceptance of F. P. Stannard's challenge for the E. C. challenge cup of Cook County Trap-Shooters' League, and confine myself to the American Association rules, making "snipe" shooting as mentioned in acceptance already published to be at expert singles; but the place named for the contest to be as published, on the grounds of the Calumet Heights Club, which club is a member of the League.

Calumet Heights Club.

The Calumet Heights Club will hold a live-bird contest on its grounds at Grand Calumet Heights, Ind., on Jan. 9. This will possibly be the last one held until Washington's Birthday, Feb. 22.

A. C. PATERSON.

The Du Pont Trophy.

Elliott and Gilbert to Shoot at Dexter Park.

We have received the following communication from Mr. J. A. R. Elliott in regard to his coming match with Mr. Fred Gilbert for the Du Pont trophy:

"New York, Dec. 31.—*Editor Forest and Stream:* In answer to Mr. Fred Gilbert's challenge for the Du Pont cup, I will defend the same at 100 pigeons each, loser to pay for the birds. The match to take place at Dexter Park, Brooklyn, N. Y., Jan. 15, at 12:30 P. M.

J. A. R. ELLIOTT."

Dexter Park has witnessed many a good live-bird match and some capital exhibitions of skill with the shotgun have been given on those grounds. It is a long time, though, since a match of such importance took place there. The last big match shot there was that between Elliott and E. D. Fulford, which was shot Dec. 31, 1896, Elliott winning by 94 to 90. On that occasion there was quite a gathering to witness the match, but this time we look for many more spectators. Fred Gilbert has been doing some wonderful work on live birds, and although Elliott has been shooting in rare form, Gilbert has succeeded in beating him by a majority of three out of the last four matches.

The results of these four matches were respectively:

Oct. 8, Kansas City Star cup: Gilbert 95, one dead out of bounds; Elliott 94, nve dead out of bounds.

Oct. 22, Kansas City, Du Pont cup: Gilbert 97, three dead out of bounds; Elliott 97, two dead out of bounds. Shoot-off at 25 birds: Gilbert 25; Elliott 24, one dead out of bounds.

Dec. 7, Watson's Park, Chicago, Star cup: Gilbert 97, two dead out of bounds; Elliott 87, seven dead out of bounds.

Dec. 9, Watson's Park, Chicago, Du Pont cup: Gilbert 93, one dead out of bounds; Elliott 93, two dead out of bounds. Shoot-off at 25 birds: Gilbert 23, Elliott 25.

The above figures show that Gilbert has scored 430 out of 450 shot at, an average of 95.5, with a total of 7 dead out of bounds out of the 20 lost birds. On the other hand, Elliott has lost 10 more birds than Gilbert, having scored 420 out of 450, an average of 93.3 per cent., but he has 17 dead out of bounds in his 30 lost birds. Barring that one match in Chicago for the Star cup on Dec. 7, the men have broken exactly even on the other 350 birds shot at. Is this not a good reason for expecting a close and exciting contest on Jan. 15?

Matches at Omaha.

OMAHA, Neb., Dec. 27.—Below are the scores of several live-bird matches shot on the grounds of the Omaha Gun Club on Dec. 22, 23 and 24. The boys in this vicinity have done a lot of live-bird shooting this fall, something over 15,000 pigeons having been trapped here during the fall and winter to date.

Dec. 22.—To-day two matches were shot, one between W. N. Nason and M. C. Peters; the other between Loomis and Blake. The Nason-Peters match was for \$50 a side and the birds; it was a one-sided shoot, Mr. Peters being in rare form, while Mr. Nason was below his usual gait. The match between Loomis and Blake for \$100 a side and the birds was a very interesting race, the two men being tied on 44 and 66 at the end of the fiftieth and seventy-fifth rounds respectively. Loomis ran 24 out of his last 25, but Blake, lost three birds, finishing with 88 to Loomis's 90. Scores were:

Dec. 23.—To-day a four-handed match was shot between the Crabill Bros. and Messrs. J. W. Den and Fred Ray. This race was at 100 birds per man, for a purse of \$400, losing team to pay for the birds. The result was a win for the Den-Ray combination by 176 to 168, J. Crabill being clean out of form. In addition to the above stakes, there was a side bet of \$50 between Frank Crabill and Den on their individual scores, and this bet hung in the balance until the ninety-ninth round, when Den lost his bird dead out of bounds, Frank Crabill thus winning by one bird. Scores:

Team Totals—F. W. Crabill 92, J. Crabill 76—168. Ray 85, Den 91—176.

Dec. 24.—Den not being satisfied with the result of his side bet with Frank Crabill yesterday, challenged the latter to shoot him a 100-bird race to-day, the stakes to be \$100 a side and loser to pay for the birds. This match resulted in Crabill's favor, the scores standing 94 to 80. Mr. Den was badly out of form, indeed. He is still unsatisfied and has challenged Mr. Crabill to shoot him another race, same conditions, the date for the match to be Jan. 15. Below are the details of to-day's match:

Crabill.....	1112211221222212222201222-24

Answers to Correspondents.

Wm. Foster, Troy, N. Y.—1. Regulation bull's-eye for 50yds. is 2in.; for 100yds., 4in.; 150yds., 6in., and 200yds., 8in. 2. The calendar you ask for has been forwarded to you, addressed as above, by the firm you name.

H. K. B., Pittsburg, Pa.—What would you understand to be meant by the term "unknown angles?" Ans. When an event is stated to be at unknown angles, it always means (or should mean) "known traps, unknown angles."

Hoodoo, Bedford, Ind.—Please state whether it is or is not lawful to kill quail in Indiana on Jan. 1? The law reads: "It shall be unlawful to kill, etc., from the first day of January to the tenth day of November, etc." I claim that this law prohibits the killing of quail on Jan. 1, and the matter is left to your decision. Ans. We interpret the law as forbidding killing quail on Jan. 1.

W. H. S., Litchfield, Conn.—A bull terrier about four years old is troubled with sores breaking out on all parts of him. They begin with a small pimple, which he scratches and makes a running sore, which takes off all the hair for a space from the size of a dime to the size of a hand; as soon as one heals up, another breaks out. As soon as the sores heal, the hair grows out again. I have tried giving him compound sulphur tablets twice a day and painting the sores with iodine, zinc ointment and boracic acid at different times, none of which seem to do any good. He seems to feel perfectly well, is bright and full of life, and wants to eat at all times. If you can suggest a remedy for the trouble, you will greatly oblige

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. {
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JANUARY 13, 1898.

VOL. L.—No. 3.
No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the FOREST AND STREAM. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

Until within the present generation Americans only hunted big game if they were frontier settlers, professional trappers, Southern planters, army officers or explorers. The people of the cities of the old States were bred in the pleasing faith that anything unconnected with business was both a waste of time and presumably immoral. Those who traveled went to Europe instead of to the Rocky Mountains. Theodore Roosevelt.

MAKING THE MOST OF IT.

It is a wise and comfortable philosophy that teaches us to make the most of what we have, and be content therewith; to accept thankfully the small things that are at hand rather than weary our hearts with longing for the greater things which we cannot reach.

If we cannot have the loaf, let us eat the crust, and be assured that with a healthy appetite we shall find it sweet and wholesome.

If the land of large game and the rivers of the salmon are as far from us as the sunset and the sunrise, and there are many lions in the long paths that lead to them, there are pleasant, if narrower, fields and woods and bright waters nearer to us than we have overlooked when our eyes were on the glorified peaks and the gilded clouds.

Let us school our desires to moderation, and learn to be satisfied with whatever these limited hunting grounds may give us, and they will surprise us with their bounty. We may study the book of Nature the closer when the pages are few and always at hand.

Gilbert White found an ample field of observation in his own parish, and Thoreau discovered more in the fenced acres of Concord woodland and in its tamed river than in the vast forests and wild streams of Maine.

In truth, a man may see much of nature without traveling far, for she will reveal herself, in some degree, to whoever approaches as a true lover, for many of her charms need only the eye of love to see them, and to such an ear she gives the music of her voices. She displays charms that never grow old in all time nor stale with continual presentation—the budding and bursting of leaf and flower, their growth and change, the gorgeous ripening, the dun decay, the ghosts of shrubs and trees—specters, but never repulsive, always graceful and virile with promise of resurrection, and over all these changes the sun, the blue sky and painted clouds, or the gray and somber canopy; through all, the perpetual shifting of light and shade.

For him who listens, without far seeking, are the songs of the wind among the trees, of the rushing brooks, of ripples kissing pebbly shores, of birds that woo their mates, the shrilling and droning of innumerable insects, all in most harmonious discord.

If we may not content ourselves with the gentle sportsmanship which needs not blood to satisfy it, we may at least imitate it in our moderation. The skill to find game comes with a knowledge of its habits, and is a finer art than the skill required to kill it. The scarcer and warier the game, the subtler must be the woodcraft, while a moderation in killing is enforced that, if practiced in the days of abundance, would have preserved it.

One may have but little to show for his skill with the gun, and yet be the skillfullest of hunters. It is a greater achievement to see the partridge drum, or the woodcock probe the swamp mold, or to catch the wild duck asleep, each in its fancied seclusion, than to bring down game from its startled flight, as the mere marksman may by the score in a battue. One so finding his game

may take home with him something sweeter and more enduring than its flesh, something finer than its plumage, may take from the mink, the muskrat and the unseen otter a richer spoil than their fur, in some secret of their lives, and yet, if he will, leave them and the wild world no poorer for all he takes.

But if, after all such philosophising, we cannot be content without tangible trophies, let us be assured that a little well earned is to be valued more than cheaply gained superfluity, and so be satisfied.

If we may not have salmon nor trout nor grayling, nor so much as bass, there are pickerel and perch and bream in the streams we know. The fewer they are, the warier and the greater the skill that is needed to take them, and the greater the triumph of capture, and, between bites, the more time for contemplation, which is a part of the true angler's pastime. Let us be content if, it is, the larger part, and so in all our recreations make the most and the best of what is vouchsafed us.

WOLVES AND BOUNTIES.

The practical results of offering bounties for the destruction of noxious animals have often been discussed in FOREST AND STREAM, and many facts bearing on this question have been given. It is evident, however, that the legislators of some of the Western States have still much to learn on this subject. In certain States the lesson on the bounty question has been thoroughly taught by the practical bankruptcy of more than one county treasury, while in others instruction is still going on, and the taxpayers are footing the tuition bills, which are often heavy.

For example, North Dakota has a wolf bounty law, which was passed at the earnest solicitation of the stockmen, whose herds had suffered seriously from depredations by wolves. At the last session of the Legislature an appropriation of \$12,000 was made, which, it was supposed, would suffice to pay all the bounties called for during the next two years, or until the Legislature should meet again. This expectation has not been fulfilled, and it is stated that since the appropriation became available certificates amounting to \$18,000 in excess of the sum provided have been issued. This makes a total of \$30,000 to be paid by the State, and at \$3 per head would account for 10,000 wolves. Most of these certificates are said to come from the western counties of the State, and after these the northern tier of counties furnishes the greatest number. It is said that in each of two or three counties more than 1,000 certificates have been issued, and that a single individual—said to be the champion wolf killer of the State—holds 300 certificates representing his own captures. The most successful method of wolf killing practiced in North Dakota is by the use of dogs, and the bounty is said to be paid only on big wolves.

In Kansas there is also a wolf bounty law, paid chiefly on coyotes, which are numerous there. It is reported that most of the bounties are collected in the southern counties, and that the animals on which the certificates are issued are for the most part killed in Oklahoma or in the Indian Territory.

Setting aside altogether the question as to whether noxious animals can be exterminated by means of bounties—which has been pretty clearly shown to be more than doubtful—the examples from North Dakota and Kansas, just cited, very clearly show the futility of an effort by a single State to rid itself of wolves in this way. Even if all men were honest and all the wolves in the State paying the bounty should be killed, its territory would be constantly invaded by wolves from adjacent States, and the work of keeping them down would never end. Besides, this method puts a premium on perjury, and for this reason alone it is against public policy.

SNAP SHOTS.

One would not need to go back more than a dozen years to find in these columns some pretty hard things written of Jonathan Darling, and if one were then to follow later references to him a change of tone might be discovered. This was due, not so much to any intended or conscious extenuation of his attitude, abstractly, toward the game laws, as it was to a better understanding of the man and his motives. Darling's life spanned a period of transition in the Maine woods. Born at a time and in a place where hunting moose for

their skins was unrestrained, and with no notion of the justice of any restraint, he found it difficult to adapt himself in thought, conviction and conduct to the new order of things. For years the name of Jock Darling was synonymous in public repute with game law defiance and violation. His attitude was mistaken, ill-advised and utterly wrong; that was plain, and it was easy for the world to censure it. But in time it came to be understood that Darling was no worse than many other people, not indeed so blameworthy as the men from the cities—clergymen, lawyers, society men and others—whom he guided in their illicit expeditions. Darling had the courage of his convictions; he talked and wrote as he believed, and as he carried out his belief in action. There was no preaching one thing and practicing another with him; he might be an "outlaw," but he was not a hypocrite. It was this phase of his character which made friends for him. People found much in him to admire and respect, and they liked him better the better they knew him. This was not to condone the lawlessness of the out-of-season market hunter; it was a recognition of sterling qualities of character and agreeable personal traits in the guide and woods companion. That those who went into the Maine wilderness with Jonathan Darling esteemed it a privilege if they might repeat the experience is as complete a tribute to his character as need be written.

In spite of the exposure of the unfitness of the West Virginia Senator's man for the place of United States Fish Commissioner, and notwithstanding that the statute expressly bars him, it is understood that President McKinley adheres to his determination of making the surprising nomination. Political expediency, we are told, prompts the act. It may explain, but it cannot justify, the gross betrayal of public interests, and the prostitution of an important office to subserve partisan plans. President McKinley can plead ignorance neither of the requirements of the place he proposes to hand over to Mr. Elkins's man, nor of Mr. Elkins's man's want of qualification for the place.

The Washington correspondent of the New York Mail and Express relates that the West Virginia aspirant recently went down to the Fish Commissioner's office, and, Commissioner Brice happening to be absent that day, the candidate walked into his office, took his seat in his chair, and began to survey his surroundings. His actions attracted attention, and when asked what he wanted, he replied that, as he was going to be appointed Commissioner, he wanted to see what kind of a place it was, and how he would like the office.

This is, of course, grotesque, but there is another side to the humor of the situation. A public officer who receives such a place as his share of the political spoils will carry out the administration of the office in the same spirit. Mr. Bowers has already promised his friends places in the Commission to supplant the present efficient chiefs of departments. The demoralization of the Commission has already begun.

Several of the State Fish Commissioners will be represented at the Fishery Congress, which is to be held at Tampa, Fla., Jan. 19 to 26. Gov. Black has named as delegates from New York Mr. Warren N. Goddard and Dr. T. H. Bean, of this city; ex-Senator McArthur, of Troy; Commissioners C. H. Babcock, of Rochester, and Edward Thompson, of Northport, and State Fishcultivist A. N. Cheney. A number of papers will be read, dealing largely with the sea fisheries.

Wakeman Holberton died suddenly of apoplexy, at his home in Hackensack, N. J., on Jan. 7, aged fifty-eight. Mr. Holberton was one of the best known sportsmen and anglers in the country, and had traveled extensively over the United States and the British provinces in pursuit of his favorite sports. He was an accomplished artist, his work relating chiefly to game and fish, in the delineation of which he was so skillful as to win a high place of merit. Mr. Holberton was a member of the New York Association for the Protection of Fish and Game, and was always an earnest and active promoter of protective interests. He was a frequent contributor to FOREST AND STREAM and other publications. He was an admirable companion and a charming person to listen to as he related his rich reminiscences of field and stream.

The Sportsman Tourist.

Just About a Boy.—I.

ONCE in the time that is now represented by pictures in the mental gallery only, I fished a Western stream.

It was a pleasant stream, I remember, that dimpled in little waves where the gentle south wind kissed the wider reaches, and there were curious, wavy shadows under the opposite bank where the grasses hung down and the cottonwoods spread their ample branches to shade the water.

Hidden reefs made riffles in the current. Circling eddies behind the boulders that occasionally poked up above the water furnished resting places for big blue channel catfish that took my minnow or frog with a savage rush like a salmon.

The water was cool and clear, and the fish that lived there were full of fight, and such good eating that I often wandered to this Western river and cast my bait.

True, it was "not all of fishing to fish" in those days, just as it is now, and I mixed my time between fishing and watching the natural beauties of the landscape.

One particular day in June I had waded down the stream until the drowse of noontide was in the air. I was tired of fishing and of fish, had fought great blue-black fellows until, for once at least, I wanted no more; so I climbed out on the shaded point of the little island in mid-stream and stretched at full length along the grass, resting and content in watching the life I saw around me.

Swallows came tacking along near the surface of the river, darting up, down and crosswise, as they feasted on the insect inhabitants of the air. Fleecy clouds floated overhead and disappeared in space like phantom balloons. A saucy kingfisher flashed up from somewhere and came to a stop on a nearby snag, looking for all the world like a part of the dead wood. A moment after he alighted, and I forgot all about him until I heard a splash and knew instinctively that another small fish lacked wisdom, but had found it out too late.

Bees, the only busy things in sight, fumbled the yellow heads of a few rosin weeds that looked toward the sun. The river people sang with crooning voices an underwater song in the hurrying riffles. Tinkle, bubble, gurgle—the quiet swirl of the waters. A splash up at the head of the rapids where "the big one got away" an hour before, another splash in the pool below, and a circle of ever-widening rings.

A big heron stalked lazily along a sandbar 300 or 400 yds. down stream, and the summer air made him as big as an ostrich.

A soft patter of bare feet announced the arrival of the boy. He had waded across to the head of the island and then came by land to the lower end. He saw me, and stopped short, hesitatingly.

He was all boy, too, about fourteen or fifteen years old, sturdy, bright-faced, exceedingly homely and clad in a straw hat the worse for wear, a flannel shirt wide open at the throat, a leather belt with a knife sheath dangling from it, and—well, the rest of his costume was mostly an expression of gladness. He was certainly a picture of health and youthful "orneriness" as he stood there in the June sunshine, digging one bare toe into the sand and balancing himself with a long cane fishpole in an uneasy way, and I made a mental note that I somehow liked that boy.

"Hello, young man! Fishing, are you?"

"Yep."

"Catch anything yet?"

"Yep."

"Where are your fish?"

"Got 'em picketed out up at the head o' th' ilan'. Git any?"

"Yes, I have quite a string down there," I said, pointing toward the water where I had secured my fish.

The boy walked down, dropped his fishpole and examined my string with a critical eye. "Got some good ones, ain't yeh?"

"Yes, pretty fair, I think, for half a day's casting."

"I got about that many, and I've on'y bin out 'bout two hours. Run out o' bait 'n' come down here for minnies."

I saw no net or other contrivance for securing minnows, so I asked: "How do you catch your bait?"

"Seine 'em," laconically.

"Where's your net?"

"Over yonder," jerking his thumb in the direction of a dense clump of willows. "Got 'er cached sost I can get it when I want it. Say, gee! that's a dandy pole you got, hain't it, 'n' a reel too!" he remarked, casting an admiring glance at the old lancewood rod that leaned against the bushes.

"Yes, that old rod is a good one; not very handsome, but it has stood the test, and I know what it will do."

"Gee! I had a pole like that. Must be fun to see ole Balaam go with all that line; 'nen a little Rastus 'd make 'er bend, too, I reckon," he added, reflectively. I did not then understand that this boy had a pet name of his own for the people of the wilderness, but I afterward learned that "Balaam" meant a large fish and "Rastus" was a small one, so I replied that all kinds and sizes of fish "made 'er bend."

The boy closely examined and tested the balance of the rod, remarked that "she switched like a buggy whip," and showed so much interest that I concluded to let him "try her."

"Would you like to catch a fish with my rod?"

"Would I? Well, I guess yes."

"All right, now I'll show you a few tricks about handling it, so you won't smash my tip, you know; and then you may try your skill."

He was delighted, and paid strict attention as I explained the wrist movement in the cast. In a few trials he had mastered the knack; indeed, he took to it as naturally as a duck to water, and was ready.

"Reckon I'll git a few dandy red-horse minnies, 'nen I'll git a Balaam sure right crost there by that old root. They's allus a Balaam er two over there, 'n' I'll git one all right."

He scrambled into a thick clump of willows on the

island, ducked in among the branches and brought out a minnow net made of a yard or so of blue mosquito bar, with the ends rolled around a couple of willow sticks. With this primitive outfit he waded out into the current, and making a quick sweep through an eddy behind a rock, dipped up about a dozen fine red-horse minnows, bright as a bit of rainbow, and brought them ashore. Here he picked out three or four, remarking: "You want to git these rough-nosed fellows if you want good bait," though I saw no difference in the color or size or any characteristic of the minnows until the boy showed me the heads of two or three of them. One was smooth and slippery as any fish is, while the other fish felt as if it had a skin of sandpaper, it was so rough. The boy declared that a catfish took the rough kind "quicker 'n lightning," when it would not notice the smooth kind that looked just like it.

He put the few baits that he had selected into his hat, and then complacently put the hat back on his head, saying: "They're handy that way, an' you can git 'em fresh whenever you run out of bait." He strung one on the hook to his liking and then waded out into the stream within casting distance of the old root he had mentioned. At the third cast he got a strike, and in a moment I saw he had a large one. "Got ole Balaam, sure!" he shouted. I gave him directions about handling for a few moments, but soon saw that he instinctively understood the handling of a rod and reel, so I stood still and watched the fight, and a pretty one it was too.

In about ten minutes the boy started back for shore, working the fish slowly and carefully across the stream, leading him always into the stiffest currents he could. I waded out with the net and stood ready, and when the catch came within reach I landed him safe in the net. "Gee! that's a slick way to get your fish, too," said the boy, as he noted the landing-net act. We walked up on the island and unhooked the prize, which tipped the pocket scales at 9¼ lbs., and then sat in the shade talking. The boy was enthusiastic about the working of the rod, though a 9 lb. fish seemed to interest him only as an adjunct to the sport of reeling in and reeling out.

"Gee! that's a mighty nice pole. How much d' yeh pay for 'em?" I told him the run of prices on rods, and explained the points of a good one to him. "I'm goin' to have one like that," he said, and I knew he meant it by the snap of his square young jaw.

In our conversation that afternoon I found that the boy knew every foot of the river for miles up and down stream, and every foot of the surrounding country besides, for he had a shotgun and a rifle and hunted in season.

He said he went to school "sometimes," and always camped out in vacation. He had his boat and cayuse too, so he was fixed for all kinds of outdoor sport. When the sun began to lengthen the shadows the boy reckoned he'd "vamoose," but we parted firm friends, and with the understanding that we would meet again on the following Saturday at the dam, and fish the riffles down stream together.

"So long," said the boy, as he gathered up his long cane pole and his big fish, and silently disappeared into the bushes of the island, barefooted and barelegged, unmindful of the scratching bushes or the saw-like edges of the wiry slough grass.

"There is a boy that is a character and is a good one to study," I thought. I was right too; for I saw him grow up, hunted, fished and traveled with him, was at his wedding and am good friends with his five-year-old—but I'll have to tell you about the boy in some other article, for I could write a book about him and the years we have spent together. This time you must be content that you have met him. Maybe you will have a chance to go over some old trails with him later on.

EL COMANCHO.

North Carolina Wild Turkeys.

EVER since the day that the Philistines answered Jonathan and his armor-bearer and said: "Come up to us and we will shew you a thing," there have been, and always will be, people—Philistine or Israelite, Gentile or Jew—who will take great pleasure in showing anybody and everybody something. My purpose in writing is to tell the readers of FOREST AND STREAM something about the wildturkey and the methods practiced in hunting the great bird in this section.

Four miles south of New Berne, in the county of Craven, the hamlet of Thurman is situated upon a level plain between the Neuse River and the A. and N. C. R. R. Just three miles in a westwardly course from this point the waters of Bryce's creek are reached. The length of this creek, from its source to its mouth at Trent River, is nearly fifty miles by water route; by land, upon railroad or county road, the distance is covered by about fourteen miles. The novelist would, no doubt, describe this water as being a silvery stream, serpentine or tortuous in its course; but the fellow who paddles a ducking boat against it when it is running at the rate of eight knots per hour, soon discovers that the water is as black as tar and torturous to his back, arms and wrists. Along the course of the creek, from mouth to source, upon either side, high rolling ridges of land jut out in points through thickly matted and ever-green canebrakes to the stream, or become gradually flattened as they meet and are lost in the peat and mire of cypress and black-gum lowlands. The growth of these ridges consists of red, white and black oaks, hickory, dogwood, holly, galeberry, hazel and the ever-present pine. Where the point of ridge reaches the lowland the water oaks and black-gum trees attain huge proportions, and furnish acorns and gum berries in great quantities, which are highly relished and devoured with avidity by turkeys and others of the feathered tribe.

Here is the natural home of the red-legged, black-headed, pure-blooded bronze turkey. The gabble of the gobblers is heard when the dogwood is in blossom, and they are strutting and parading themselves before the females of the flock, using all their cunning to get as many hens as possible to accept them as lord and leader. At this time of year the gobbler is a gallant bird. His instinct seems to teach him the fact that he is not being

hunted; hence his gabble, gabble, from every dell and every hill upon the course of Bryce's creek and Trent River. The hens commence laying in this section in April; some years as early as March. By Nov. 1 those hatched in April and May are large enough to be killed, and have by this time acquired sufficient wariness to be game worthy of your steel, be it laminated or Damascus twist, with hammers or hammerless. All combined are useless unless the hunter gets close enough to the bird.

To find the range over which a particular flock is feeding is the first step to be taken if you want a turkey. The number contained in the flock can be ascertained by the experienced turkey hunter by the space scratched over. Old scratches can be distinguished from new or fresh ones, and the birds can be followed by coursing their scratching. When doing this walking is out of the question; you must creep, crawl, slide—get there any way you can. When you have got close enough to hear them scratching, stop and rest; get your nerves steady, and just now, should the whole flock fly off and you didn't get a shot, don't curse your luck, but kick yourself for not getting to the other side of them. Don't be discouraged at this, your first failure to bag the game. There are other turkeys feeding in the woods.

Should you follow a flock by trail all day and fail to get a shot, there is a chance to get close enough to them to hear them fly to perch just after sunset. Upon a calm evening the sound produced by the wings of a flock when flying to roost can be distinctly heard at a distance of half a mile. When their roosting place has been accurately located to get close enough to shoot them before night conceals them from view is the object. When you have picked the bird most plainly seen and easily to be reached, all possible stealthiness must be observed while approaching the point to shoot from. Turkeys don't go to sleep immediately after perching. When they have tried the limbs upon which they purpose to spend the night, they stand up, spread their wings, stretch their necks to the fullest extent and look cautiously around them in all directions. When they have repeated these tactics three or four times they settle down to sleep, with both ears and one eye open. Now is the time to get close enough to shoot. You can plainly see the bird's shape when at a distance of 60 or 70 yds. from him, and at this distance he can be easily killed with No. 2 shot. Should it be too dark to see your gun-sight a sulphur match rubbed around and upon it will enable the shooter to draw a fine bead. Time will be wasted should the hunter try to pick a gobbler from the flock while they are roosting. The whole flock does not roost upon the limbs of one tree, but divide themselves into squads of three and four, which number occupy a single tree. The gobblers roost alone, and always some distance in the rear of the hens. The male is not in December or January the gay, gallant bird he was when the dogwood was in bloom. He has ceased to strut and gabble, and is satisfied to eat the berries of the trees, and remain always in the rear, like the general of an army, while the hens of the flock are, like the privates, graciously permitted to be to the front in time of advance, and allowed to look out for the rear in time of retreat.

When turkeys are shot at while at perch they become scattered. After shooting them at night, get to the perching place again the following morning, before sunrise, and call them to you. This is done easily enough by the aid of a "caller," or "yelper," made of two joints of reed or cane, the smaller joint telescoped into the larger, the small end being inserted between the lips, while the larger joint is held between the hands, the fingers of the right hand being placed lightly over those of the half-doubled left; suck the reed held between the lips three or four times in quick succession. A little practice with this call soon enables the hunter to lure the turkey hens, but the gobbler is seldom fooled; he lets the hens go to the call of distress and investigate to their satisfaction or destruction.

When wintry weather prevails in this section and we have had some ice, the turkeys no longer roost upon the high lands on the pine trees, but perch upon the cypresses, close to the margin of the creeks and smaller streams. Now, if we have to get a turkey, the 8-knot per hour flowing creek must be tackled, and after indulging in the healthful exercise of paddling up stream for some hours, we lie alongside the bank, wipe the perspiration from our face and tie up until sundown, when we haul aboard our painter and drift down stream, using all our strength and skill to keep the boat from ramming its head out of sight into the reeds, brambles and briars which line the creek side. If we get the turkey, a few scratches upon the hands and face, torn and shredded coat sleeves and the loss of a handful of hirsute covering are not taken into account.

We had a very dry spring and summer in '97, therefore turkeys and quail are plentiful. The last turkey I killed was an old gobbler weighing close upon 20 lbs. His beard, or tassel, measuring 9 in., is presented to the editor of FOREST AND STREAM. A friend enjoyed the old patriarch upon Christmas Day.

I was out in company with Mr. J. S. Hardison on Dec. 28. We walked about six miles and surprised a flock of turkeys, and they surprised us by flying before we got close enough to shoot. After they had made their escape we called upon an honest old negro, Tony Haddock, who lives back in the woods. Tony is a very truthful old man; arithmetic is unknown to him; he has never learned to multiply 10 trotting turkeys by 4 and make 45 or 50 of them. Some white folks in this section can perform this operation without the use of pencil or paper. Mr. Hardison asked Tony if he had seen any turkeys around lately. Tony very truthfully replied: "No, sah, I hain't seen none, but dey pennyrates through here, an' I can't see like I use ter, but sometimes I stumbles over dey tracks down in de fiel'."

We proceeded to look for the tracks, but stumbled over none. However, late in the afternoon Mr. H. shot a turkey.

I do not profess to know all about the wild turkey, but I have killed many. If any readers of FOREST AND STREAM will come down to us, we will promise to show them a thing or two and give them a chance to kill wild turkeys.

Natural History.

The Red Squirrel.

Editor Forest and Stream:

That red squirrels store food I thought was known to every one who haunts the bush. But here comes FOREST AND STREAM, with its numerous writers that seem to be in doubt, and with others that claim positively the opposite.

Some time ago I promised to write something about a red squirrel and his cute method of sprouting acorns. I will fulfill that promise now.

The squirrel referred to introduced himself to me eight years ago last November. I was feeding corn to bluejays and chipmunks, when the red came into the dooryard to investigate. He seemed to think well of the corn, and gathered in two kernels and scampered home, to store it away, I suppose. When he returned, the corn had disappeared. The bluejays and chipmunks loaded up with from fourteen to nineteen kernels, and made two trips to the red's one. The latter never carried more than two kernels, so was never able to get anywhere near an equal share until he set his "thinker" to work. It took just three days for the red to find out how matters stood, then he adopted a new method. He would seize

trouble when it knows there are plenty of seeds in the dooryard.

Five years ago the red squirrel moved into my dooryard and proclaimed himself one of the family. He dug two holes in the side of a bank for winter storehouses, and made himself a summer residence in the top of a sapling pine.

He fills his storehouses every fall with something. He commences on hazelnuts, followed later by beechnuts, and, last of all, sweet acorns. He does not store up cone seeds unless the nut crop is a failure. During the summer months he has the trees around the cabin ornamented with bits of bread, meat and mushrooms; later the bluejays come to the cabin, and the red no longer uses the trees for a storehouse for bread and meat. For thirteen years I have made use of the varieties of mushrooms selected by the squirrels and wood mice as edible, and have had no reason to regret my confidence.

When there are plenty of acorns, my squirrel, after filling his storehouses, hides nuts around boulders, stumps and the holes of trees. These nuts the squirrel eats during the spells of warm winter weather and in the spring. When the nuts sprout and commence to grow, the squirrel goes around, sometimes to more than a hundred places, and sprouts his acorns just as a farmer sprouts his potatoes and for the same reason, to keep them from growing. These nuts are sprouted two or three times, and each time they are removed to a new locality. The

Miss Hamand will be glad to distribute these at the rate of 40 cents a hundred copies, or 10 cents for twenty copies. The society is without funds and charges no membership fee. It must, therefore, obtain money to print its literature by selling it.

Snakes in Costa Rica.

COSTA RICA means the Rich Coast, and in most respects it is rich particularly in the snake family, the most deadly of which is the terrible *Culebra de Sangre* (or blood snake.)

This variety of reptile does not grow to a large size, and perhaps for that very reason is most to be dreaded, as it is not so easily seen. It is red, and resembles a large, swollen vein, ready to burst with blood.

A short time ago I stepped on one of these snakes, and like a flash he struck at me, but as I had on a pair of leather leggings no harm was done, though it was a close call. Not so fortunate was a poor day laborer who was bitten by the same variety of snake. The man was working for a neighbor of mine, and I did not see him until the day after he was bitten. The moment I heard about it I went over to see the poor fellow, taking with me a remedy for snake bite, thinking it would do no harm to try it, anyway. When we reached the men's camp the sight that met our eyes was a sickening one.

HERON GROUP. DEPARTMENT OF ORNITHOLOGY. FIELD COLUMBIAN MUSEUM.

one kernel of corn, rush with it some 20ft. away, to a carpet of pine needles, thrust his nose into the needles and drop the kernel, after which he would make three or four light, airy passes with his forepaws before rushing back to the dooryard. The next kernel would usually be placed about 20in. from the first, and the keenest eye could not detect that the needles had been displaced. After the last kernel had disappeared from the dooryard the red would satisfy his appetite and then carry home the concealed corn, two kernels at a time.

He had a regular system in concealing corn. The first kernel was always placed near a landmark, the bole of a tree, a boulder or some other prominent object. The corn was dropped in a line between two landmarks. Sometimes there were three or four lines, but the squirrel never forgot the exact spot where the first kernel was concealed or the direction of the line. Knowing the direction of the line, his keen scent helped him to find each kernel.

Some readers may doubt what follows, but others besides myself have witnessed the same thing, and proof does not depend on any one individual, so I feel bold to tell the story. The late Mr. Frank Bolles, in one of his visits to my cabin, suggested the experiment of removing a kernel of corn from the line to learn if the squirrel would miss it. Or, in other words, to find out if a squirrel can count. The experiment was a great surprise to me. When a kernel was removed, the squirrel did not seem to miss it until he had reached the end of the line. In some way he was then aware that his count did not hold out, and he would immediately search the whole length of the line. He could tell if more than one kernel was missing, and when I threw to him the missing kernels he was cute enough to catch on to my trick, for after a few lessons he would come to me for the missing corn. If I withheld it, he would search the line. This power to count is not foreign to birds. Bluejays can count, and so can the diminutive chickadee. The chickadee takes from two to four hemp seeds at a time to a tree, and deposits all but one on a limb in the crevices of the bark. With the single seed it hunts a small twig where it can hold the seed while it beats off the hull. If one or two of the seeds on the limb are removed the chickadee will institute a thorough search in the bark, after which it will drop to the ground and hunt beneath the limb. It is somewhat singular that a chickadee will take so much

sprouts, which are usually about $\frac{1}{2}$ in. in length, may be seen near a fresh hole in the ground, but the nuts—two or three, seldom more—are not to be found.

The gray squirrel here on the Cape does not store food in a storehouse. If he did, the reds would rob him. He hides nuts beneath the oak trees, and his memory is seldom at fault. I have spent hours watching the grays while about this work. I have often marked the spot where a single nut was concealed by thrusting a stick into the ground. I have found that the squirrel track would lead directly to the spot, and beside the hole in the snow I would find the shell of the nut, even if the snow was over it, in depth.

GLOUCESTER, Jan. 3.

HERMIT.

Infertility of the Half-Breed Goose.

NEW IBERIA, La., Jan. 3.—In the Dec. 25 issue I notice a query by Shaganoss if it be true that the eggs from a cross of the common domestic goose with the Canada goose (or brant as we call them here) are sterile. I know of an old gentleman, Mr. Charles Mestayer, living near the lakes here, who has interbred these two different species for the last twenty years, and he claims that they do not lay at all, and that he has never found one of their eggs. He keeps up the breed by securing the slightly wounded ones from hunters on the Gulf coast. He now has a flock of about fifteen or twenty of this cross breed. Another instance, somewhat similar to the above, is the cross between the "Muscovy" and the common barnyard fowl known as the "puddle duck." This cross produces what is called the "mule duck," which never reproduces itself. It bears the same relation to bird life as the mule does to animal life. Hence its name.

L. S. FRERE.

The Schaller Audubon Society.

A LOCAL Audubon society has been organized by Miss J. E. Hamand in Schaller, Iowa, which has already done much good in awakening in that neighborhood an interest in and love for the birds. The field in Iowa is a wide one, for no State Audubon society has as yet been organized. This, it is hoped, will come in time. The Schaller Audubon Society has issued an attractive leaflet, which appeals to the young on the humane side, and

The man was bleeding from his nose, mouth and ears, also from his finger and toe nails. How a man could bleed as much as he had, and still live, was a marvel. He had been bitten in the foot; only one fang of the serpent had entered the flesh. The manager of the estate had given him several doses of curarina, a medicine made in Colombia and much used here in Central America for poisonous bites. We also gave him the medicine which I had brought with me, which made him vomit profusely. In a few hours' time the bleeding stopped, and next day the poor fellow was sent to the hospital. No one expected that he would live, as the bite is considered deadly; but, strange to say, he did recover, and in a month's time was at work once more. If both fangs of the snake had entered the foot instead of one, he would undoubtedly have died. I have known a horse to die in a few hours after being bitten by one of the snakes. In the past three years two men in my district have died from snake bite, and in hunting in this country one must always keep a sharp lookout for snakes.

FRED S. LYMAN.

HACIENDA COLOMBIANA, Costa Rica.

[Our correspondent would have added to the interest of his note if he had told us what the medicine he employed was.]

Field Columbian Museum.

THE persistent energy with which the work of the Field Columbian Museum is pushed forward is certainly very interesting and impressive, and the results of this energy are easily seen by a visit to the museum.

Among its work, which is especially useful because it tends to interest a very large class of the public, are the lecture courses which are given in the autumn and spring by men who are leaders in their special fields of research.

From the point of view of the public, however, the important work of the Field Museum is after all the field work done and the placing on exhibition of the collections made. At the date of the last report Mr. D. G. Elliott's African expedition was still in the field. Six months were spent in northern Africa, during which not only large collections were made of mammals, birds, reptiles and fishes, but also the skeletons were secured of most species, as well as casts of heads and parts of the bodies. Collections

of native weapons and utensils, of all sorts, were made, so that in fact the collections very completely cover the ground traversed in all departments of zoology. It was high time that this should be done, and Mr. Elliott says: "In a few years, from the gradual disappearance of the large animals, which has been going on in the African continent for a considerable period, and already has resulted in the complete extinction of some of the finest species, the collection brought to the Field Museum will be practically priceless. It is the only proper way to secure collections for a museum, and for what must still be accomplished, 'twere well if 'twere done quickly'; for the time is near at hand when, in certain lines of zoology, especially in the large mammals of the world, it will be forever impossible to procure examples. They are certain, most of them, to become as extinct as the mastodon or dodo are to-day. Of all the existing wild creatures, those of the African continent are disappearing the most rapidly, and although the Field Museum by its recent acquisitions is ahead of all its sister institutions in the United States as regards the large quadrupeds of Africa, yet there are large numbers not yet represented."

Mr. G. A. Dorsey, Assistant Curator of Anthropology, has done good work among the Indians of the Northwest; and the chiefs of other departments have all of them been hard at work.

The installation of the collections has progressed rapidly. Setting aside the many other interesting departments, that devoted to mammals and birds may be especially referred to. In the west court of this department are installed two remarkable groups—of musk-ox and the lesser koodoo—and by this time a group of gazelles is no doubt also in place. These groups are posed and arranged with the utmost scientific fidelity in themselves and in their accessories, and are on the same plan as the groups to be seen in the National Museum at Washington and in the Natural History Museum in this city. Through the kindness of the directors of the museum we are able to reproduce one of these groups.

The Woodcock's Strut.

Editor Forest and Stream:

I read with interest Shadow's account of a strutting woodcock. I have never seen a woodcock strutting in daylight, except when hunting them with dogs, when I have gone into willows or thick brush to flush the bird. I have often seen them do exactly what Shadow saw Mr. Allin's woodcock do; but they were frightened and running away.

If Shadow will come to spend a few days with me during the next woodcock hunting season, he will have a fine opportunity to see from one to three or four birds strutting every evening. Just across the road from my house is a side-hill pasture grown up to scattered brush, leaving a very open cover. Woodcock have nested there every spring since I have lived here, and I have been here eight years.

I have seen eight male birds in the air at once. Just at dusk they will start from the ground, fly in a small circle, which grows larger each time they go around, until they are quite high, and when they descend they sing a very pretty song, which lasts till they are anywhere from 10 to 40 ft. from the ground, when they close their wings and drop straight down to within 3 or 4 ft. of the earth. Then they open their wings again, and I think it is a good thing for them that they do, for if one hit the ground at the same rate he was descending there would be a dead woodcock.

I love to watch them. Every evening that I have the time to spare in their mating season, I am in the pasture, and the birds have often lit within 3 or 4 ft. of where I was standing. When they strike the ground they sit very still for a short time, then stand up, shake themselves and commence to strut, and some of them have strutted away from me and others have strutted in a circle, just as an old gobbler will strut around a hen.

I have never heard them make any hissing noise, and I have been close enough to hear it if any such noise was made. I do not mean to say that I doubt Mr. Allin's word, only the birds that I have seen strutting have made no such noise so I could hear it. This coming spring I am going to observe them more closely and see if I can hear them hissing. Unless frightened a bird will always alight within a few feet of where he got up, and from this I believe that Mrs. Woodcock is somewhere near. I never hunted for her, for I do not like to scare them; and when you get a bird's lighting place located you can see him strutting every evening.

I have hunted woodcock every fall for the past eight years, and watched them every spring for the same length of time, but I do not pretend to know anything about them. I have told what I know to be facts.

Some time in the future I want to ask Shadow some questions about grouse. My friend Robert Thilo and I have hunted them much together during the last season, and some of them cut up antics that were altogether new to us.

F. E. HAMILTON.

WARREN COUNTY, Pa.

Pennsylvania Squirrel Season.

A PENNSYLVANIA correspondent writes: An article appeared in one of the Pittsburgh evening papers a short time ago, which stated that a number of Pennsylvania sportsmen were dissatisfied with the present law, and intended to take immediate action in getting the law on squirrels changed, so that instead of opening Oct. 15, it would open Sept. 1 or 15. They claim that the best part of the squirrel shooting is over before the season opens. This is correct; but how many of these same men, if they did succeed in getting the law changed, would shoot at squirrels only? I venture to say not one in fifty. The majority of them would blaze away at anything that got up in front of them, and when the season did open for birds, the ones who had obeyed the law would find birds all gone. If any change is made in the law, it should be to lengthen the season, to close Jan. 1, instead of Dec. 15. This would give the people who can only afford to go hunting on the holidays a chance. As it is now, they get only one day each season (Thanksgiving). I hope FOREST AND STREAM will have a few

words to say against this contemplated change in the near future.

I am the only person in this little town who reads your paper, have been reading it for about five years and feel like kicking myself for missing so many years of the most enjoyable reading.

D. G. LAMONT.

Game Bag and Gun.

The Boone and Crockett Club.

THE eleventh annual meeting of the Boone and Crockett Club was held on Saturday, Jan. 8, at the Metropolitan Club in New York city. Among those present, members or guests, were Messrs. W. A. Wadsworth, D. G. Elliott, S. D. Warren, Madison Grant, C. Grant La Farge, De Forest Grant, W. A. Chanler, J. P. Morgan, Jr., Frank Lyman, Dr. John Rogers, Jr., J. L. Seward, James T. Gardiner, John L. Cadwallader, George Bird Grinnell, J. S. Watson, William Milne Grinnell, Alden Sampson, J. J. Pierrepont, Dr. W. B. James, Prof. F. H. Osborn, Philip Schuyler, C. S. Davison, R. H. M. Ferguson, A. Bierstadt, H. L. Stimson, H. C. de Rham, F. S. Billings, J. E. Roosevelt, Dr. W. K. Draper, Dr. L. R. Morris, L. S. Thompson, Gifford Pinchot, Dr. A. Lambert, Gen. W. D. Whipple, Gen. W. H. Jackson, Thomas Paton, Hon. W. Cary Sanger, Hon. Redfield Proctor, T. H. Barber, R. F. Zogbaum, A. C. Humbert, W. F. Merrill, W. J. Schieffelin and Hon. W. K. Townsend.

The business meeting was called to order at 7 o'clock, Mr. W. A. Wadsworth, president, in the chair. After the reading of reports by the secretary and the treasurer the chairman of the Editorial Committee reported the publication of the third volume of the club book, "Trail and Camp-Fire." The chairman of the Game Law Committee gave a brief history of the legislation at Albany, which led to the abolition for a term of years of the practice of hounding and jacking deer. Mr. Gifford Pinchot gave his views on the present outlook for the establishment of a national forest service, and reported a remarkable change of sentiment on the forestry question among the people of the West, where he has spent four months during the past summer.

The revised constitution printed in the Boone and Crockett book was submitted for approval by the club, and after some discussion was accepted without change. The chief modifications of general interest are found in Articles IV., V. and X., as follows:

"Article IV.—Under the head of American large game are included the following animals: Black or brown bear, grizzly bear, polar bear, buffalo (bison), mountain sheep, woodland caribou, barren ground caribou, cougar, musk ox, white goat, elk (wapiti), prong-horn antelope, moose, Virginia deer, mule deer and Columbian black-tail deer.

"Article V.—The term 'fair chase' shall not be held to include killing bear or cougar in traps, nor 'fire hunting,' nor 'crusting' moose, elk or deer in deep snow, nor 'calling' moose, nor killing deer by any other method than fair stalking or still-hunting, nor killing game from a boat while it is swimming in the water, nor killing the female or young of any ruminant, except the female of white goat or of musk ox.

"Article X.—The use of steel traps, the making of large 'bags,' the killing of game while swimming in water or helpless in deep snow, and the killing of the females of any species of ruminant (except the musk ox or white goat), shall be deemed offenses. Any member who shall commit such offenses may be suspended or expelled from the club by unanimous vote of the Executive Committee."

The Nominating Committee's ticket contained the names of the old officers, who were unanimously re-elected. They are: President, W. A. Wadsworth; Vice-Presidents, Charles M. Deering, Illinois; W. B. Devereux, Colorado; Howard Melville Hanna, Ohio; William D. Pickett, Wyoming; Frank Thomson, Pennsylvania; Secretary and Treasurer, C. Grant La Farge; Executive Committee, Winthrop Chanler, Lewis R. Morris, A. Rogers, Henry L. Stimson, Madison Grant; Editorial Committee, George Bird Grinnell, Theodore Roosevelt.

After the business meeting the dinner was served, and following this a paper was read by Mr. Daniel Giraud Elliot, the ornithologist, on his six months' trip in Eastern Africa, devoted to the collection of specimens of large animals for the Field Columbian Museum of Chicago. The lecture was illustrated by many colored lantern slides of Eastern African scenery, animals and wild people, and was listened to with very keen interest.

At the conclusion of Mr. Elliot's paper a few lantern slides of North American mammals, made from photographs taken by A. G. Wallihan, were shown.

In the course of some remarks by Gen. W. H. Jackson the speaker gave a most interesting account of plains life forty years ago, and of many of the old-time plains characters, among others of David Crockett. At the conclusion of his remarks, Gen. Jackson was specifically asked to tell the story of his great and unique feat of killing a grizzly bear with a saber. This he did in a most modest fashion somewhat as follows:

"It was in 1856, during an Indian campaign, and we were following the Indians and were on a hot trail. Strict orders had been given that no shots should be fired. The troops marching along stirred from a patch of brush a grizzly bear, which made off over the prairie, and I asked Major Porter, who was in command, for permission to try to kill it with my saber. I was riding a very fine horse that I had brought with me from Tennessee, which was blind in its right eye, and on which I had killed many buffalo. I rode up to the bear, and as I passed it gave it a strong downward and backward stroke with my saber across the head. It sank back on its haunches and remained there while I went on, made a circle and turned back toward it. It then started to run again, and I chased it, but this time, when I got close to it, it adopted the only true military tactics, that is, always to be on the aggressive rather than on the defensive, and charged me. As it came up I held my saber

en carte and thrust it into the bear behind and a little under the foreleg, and turned it loose. It was about fifteen minutes before I was able to go up to the animal and recover my saber. The bear tore me down the right leg, scratching the skin and bleeding me a little, and also cut my horse on the flank."

Following Gen. Jackson, Senator Proctor made some interesting remarks, in which he spoke very cordially of the objects of the club and of the good work that such an organization could do, as this club had done. He closed by expressing the hope that many years would pass before he reached a point where he could no longer cast a fly or aim a rifle.

Mr. James T. Gardiner, formerly of the United States Geological Survey, talked interestingly on Western travel and on the ways of Western animals and Indians.

The meeting was adjourned at a late hour.

Prairie Chicken Shooting in Iowa.

DURING the prairie chicken season just passed local sportsmen alone have indulged in this most fascinating sport, so far as I am aware, in this portion (Floyd county) of our State. The bags reported, while fair for this region and these times, are yet so small, when compared with those secured fifteen to twenty years ago by the local sportsmen, as well as by those from New York, Chicago and other Western cities, as to make a mention of them seem almost ridiculous in comparison.

Now the bags range from nothing to four to seven chickens for sportsmen for a day afield. In the good times gone by, however, the number would register from thirty to 150 or more per sportsman for each day's outing, especially if they knew the "lay of the land."

During still earlier times the number of birds secured was much greater, as the chickens were more plentiful, less wild and the sportsmen far less in number. Then, too, the sportsmen met with less obstacles, in various ways, than later on, when the country became more fully settled.

In those early times the coveys of chickens, which varied from five to sixteen birds in each, occurred almost everywhere outside the belts of timber which skirted the streams of the region, although they were always more numerous adjoining grain fields and in the stubble after the grain was cut.

During the early morning and along toward sundown they would always seek the stubble fields to feed, and during the rest of the day they would seek the prairie grass, where, during the hot days of July and August, it was the coolest. As every sportsman knows, the best time for shooting is always during the early morning while the dew is on, and at this time, also, the dogs invariably work the best.

During the earlier times of which we speak there was no law protecting the chickens in this portion of the State, or, perhaps, I should say whatever law was then in force was practically a dead letter.

Some sportsmen then seemed to consider the "open season" began almost as soon as the chicks left the shell, and "held on" until the birds became so wild in the fall as to keep entirely out of shotgun range. This monstrosity of the sporting world was, I am glad to say, greatly in the minority.

During those days my brother Merton and I were farmer boys, and, like many others of like situation in life, had guns of our own and knew pretty well how to use them. My first gun, and the one which became a famous chicken shooter, I bought for \$4.50, when I was fourteen years old. It was an old Springfield rifle partly bored out, with the barrel and stock liberally curtailed. The screw of the original back sight of this gun extended so deep into the barrel that the gunsmith didn't dare rim the barrel out smooth, and, as a consequence, it would scatter all over a forty-acre lot at medium range, but was a strong shooter for all that. The percussion cap used was a monster, being somewhat less in size than an ordinary 6½ hat. We always had to be careful in raising the hammer that the click of the lock didn't scare up the chickens before time.

Until we became accustomed to this gun we always shut our eyes when firing at a bird, and pulled the trigger with both fingers. We were always sure of bringing our bird to bag if we got the gun somewhere within range. The gun my brother had was an old Harper's Ferry musket, that had been curtailed the same way mine had been, and had seen plenty of service during our late unpleasantness. When fired, it would kick like a bay steer and roar like a young cannon. The percussion cap used and the click of the lock were perfect counterparts of those features in my own gun. When properly led, however, it was a good and strong shooter, and, unlike mine, the shot always had a tendency to concentrate. We, of course, used loose ammunition and part of the time paper wads, rammed down with a heavy steel ramrod. But these antiquated guns did most excellent service during those early days.

For many years we had no hunting dog, but as we knew perfectly the lay of the country we could at any time locate a half-dozen or more coveys, and this was all we wanted, as we never hunted for market.

We often had grand sport with other shooters then, two of whom I especially recollect. They were recognized as the best local shots in the country, and spent much time engaging in this most fascinating sport. They had well-trained dogs and the best of double-barreled guns, and would happen along when we were in the midst of a covey, dropping the birds as fast as we could load and fire. We always considered this a gross infringement on our rights, and it was done on their part because we were only boys. We, however, were always able more than to hold our hand with them, as we seldom ever let them get a single bird; the reason being, we were quicker shots than they.

Although I have since then spent much time hunting the deer and antelope, wild turkey and other game on the plains and in the mountains of the Southwest and in Mexico, and used the best of ammunition and up-to-date arms, yet never have I enjoyed such unalloyed delight in these sports as I did hunting chickens with our old muskets when we were boys on the farm, and as I look back now to those happy days, it seems

as though I would willingly give a few days of my life to be able to go back again, and for a short while enjoy again those early hunting experiences.

To-day the habits of the prairie chickens have changed from what they were even fifteen years ago. Now they remain in the center of the largest cornfields—40 to 200 acres in extent—of the region, and do not leave their retreat save during a short period in the early morning.

When flushed they invariably steer straight for the center of these great fields again, and on alighting immediately scatter and run, much like the wild turkey in some regions. If flushed in their fastness, they will fly so low among the corn that it is with difficulty a fair shot at them can be had, and even when shot it is often difficult to retrieve them.

CLEMENT L. WEBSTER.

Death of Jonathan Darling.

BOSTON, Jan. 8.—Jonathan Darling, well known to sportsmen as "Jock," died at his home in Lowell, Me., on Wednesday, Jan. 5, after an illness of nearly two years. He was sixty-eight years of age and one of the pioneers in the business of entertaining sportsmen from out of the State. He built his famous camps at Nicas Lake over twenty years ago, and many sportsmen will be pained to learn of his death. An excellent guide and a thorough woodsman, he was beloved by those he took charge of. He always believed in his right to hunt game as he chose, and his remarkable defense of himself at the time he was under a cloud for breaking the game laws was widely published. He visited the office of the *FOREST AND STREAM* and other papers, taking great interest in hunting and fishing matters, and always inspired editors and writers as a man of integrity, though possibly mistaken as to his rights. He even became a game warden afterward, so great was the confidence of the Maine Commissioners in his ability and integrity, could he be brought to see matters in their true light. But he was afterward removed, not wholly converted to the new ideas of fish and game protection. He was always looked up to as an authority on fish and game questions, especially in regard to the numbers of moose, caribou and deer. The many sportsmen he has guided from this section speak in the kindest terms of his skill as a guide and woodsman, of his integrity in all matters pertaining to a guide and camp-keeper. SPECIAL.

This autobiographical fragment is interesting, because it shows Mr. Darling as he saw himself:

My father was one of the oldest settlers in this part of Maine, and he became quite a successful trapper and hunter. Game then of all kinds was plentiful, and right at home, too. His traps were mostly wooden ones, and his gun was a flint lock shotgun, and I think he never fired a rifle. As soon as I was big enough to travel I used to go with father to his traps, and sometimes he would shoot a deer with bullets he made himself. This gave me a hankering to hunt, and as soon as I could manage the flint lock I took it. The first time I shot a deer I broke a hind leg and the dog caught him; it

tion of our law, for which readers of *FOREST AND STREAM* have made a great deal of trouble for me. Now I have accepted the office of Fish and Game Warden, and am confident that I can do good in the cause of game protection.

I have caught nine bears there this season, and have taken up my traps for the present. I send you two of my photographs. One is where I have just landed from a bear hunt, with two bear skins hanging over the edge of the canoe. The dog in the stern of the canoe is the dog Tinker, that the wardens made so much talk about at my lawsuit with them. As I have been such a notorious outlaw, etc., I did not know but you would wish to show your readers what a bad looking creature I am.

J. DARLING.

A Fox Hunt in the Adirondacks.

ON the last day of 1897 I was called at an earlier hour than usual, having arranged with my guide, Fred Patterson, the night before for a fox hunt, should the morning prove favorable. When I heard Fred's rap on my door I knew the weather was all right. Hurriedly dressing (but taking time to put on an extra woolen shirt, heavy sweater and thick hunting coat, as at this season of the year one needs all the clothing he can comfortably carry to keep warm while standing on a bleak, barren mountain top), after a hastily eaten breakfast, we left in a sleigh on a 5½-mile drive for the farmhouse of John Nokes. If any one has spent a winter on Saranac Lake and hunted for fox, they would know of genial John Nokes, always ready to extend hospitality to a sportsman; courteous alike to all, no one would think of going elsewhere for a fox hunt, a welcome or a good, square meal. John never fails to start a fox, and never fails to take pleasure in doing so. He also extends hospitality alike to the fox, as there is an inducement lying over the hill, on the edge of the swamp, that John put there for a purpose. I noticed that one of his head of cattle was missing, and he hinted something about a midnight barbecue, to which more than one fox made nightly pilgrimage over many miles of moonlit snow, to feast and sport, and to feast and sport again, provided his presence there that night did not bring him in too close contact with the hunter the next day. At any rate, John always started out in a bee line in the direction of this nightly rendezvous of the fox, as he did this morning.

We arrived at John's at 7 o'clock, finding him ready and waiting for us. After directing Fred and myself to our standing ground, off he went toward the swamp, and I knew we would hear some music before very long, for John's hound Drive is quite as famous as his owner; he knows no other game but the fox, and once he strikes a track never fails to bring the fox in view or within range of the hunter's gun. John pointed out the mountain where we were to stand, and told us to stick to it until we reached the highest point. "You stand on this side of the mountain, Fred, and if you do just as I tell you and Drive gets one a-going, you'll see him. It may take an hour, or it may take a couple of hours; but hang to it and you'll get a crack at him.

he could not fool old Drive; proof of which I saw demonstrated afterward.

To the left of me there was a patch of timber, further down a line fence part way up the slope, perhaps a half mile in length. A rail fence and a pursued fox harmonize, and many a fox has lost his dog at such a point. Below and on the same side a long, narrow swamp was flanked on either side by hills and ridges partly timbered; while still further over another ravine and hill made ideal ground for a fox to lose his foe, and keeping to the trail was not an easy task even for old experienced Drive to accomplish. I had just time for observation and to put in the shells and exchange signals with Fred, when I heard Drive give one of his short, penetrating bays. Then he was off, and when Drive made his whereabouts known John said it meant business.

It was the kind of a day when a fox would not run long in the deep snow before making for the ridges. Soon the change of Drive's tune told us as plain as words that he had started the fox. Off in the opposite direction he went, sometimes going straight away, again coming back, circling, and finally taking the ridge opposite, running parallel. Locating Drive as well as I could, I watched the ridge, and before many minutes saw the fox on the left of it, apparently coming straight toward me. But he must have thought better, for he turned again before reaching the swamp and doubled back over the same course. Drive hung in one place for some time, and I decided to change my position to the far end of the ledge, and was about to carry out my intention, when, happening to look in that direction, I saw the fox just as he took the ledge at that point, making straight for me. He had in his cunning at last chosen that barren, snowless mountain top as the place to get the better of Drive, and had I not been there he might successfully have exploited his known sagacity, but I was there, and only there. I had an opportunity to study him for some minutes, and my pleasure was keen in watching him come down the ledge, animated, keen, alive to the sense of danger, graceful, every leap landing on a snowless boulder. Every thought must have been concentrated upon his pursuer, with no knowledge of the real danger ahead. I let him come to within about ten rods before I fired. Miscalculating the distance between him and an intervening boulder, I shot a fraction of a second too late, and just grazed the top of the boulder; he turned and left the ledge to the right, landing 5 ft. below in the snow, and took a parallel course, but at a greater distance. Catching a glimpse of him again, I fired a second time with the same result. Hastily throwing out the shells, and putting in the only one I had left, I waited for him for a third shot, thinking the chances of getting him were slim, but Fred stood where I thought he would be able to stop him. Although Fred had a Winchester and a running fox is not a large target, still I had seen his skill as a marksman displayed before, and felt he would bear it out again.

The fox was making for a large flat rock that projected above the snow, and I made up my mind he would cross it, and at that point I could use my last shell. I calculated rightly. He made the rock, but not to cross, for I shot as he touched the top, and off he rolled on the opposite side. The distance was so great I was not sure I had killed him until I went down and saw him lying in the snow. The charge had taken effect just back of the fore shoulder. I called Fred to come up, and together we waited for Drive to come in. Over the ledge he came some ten minutes later, never slackening his pace, and straight down to us.

We discussed the hunt during dinner at John's, and left for home, feeling the day had been well spent, not, however, before we had arranged with John for another hunt in the near future.

W. S. LAMBERT.

SARANAC LAKE, N. Y.

By Way of Illustration.

WYMORE, Neb., Dec. 29.—*Editor Forest and Stream:* For many years I have maintained that man acts from necessity, that he is impelled to do just what he does do by forces over which he has no control, and I once defended a man for stealing hogs on this theory; but the jury was too stupid to see it that way, and when I argued the motion for a new trial to the judge I found he was stupid, too, and my client went to the penitentiary, still impelled by forces over which he had no control. But there is an air of stupidity about the court-room that I know I will not encounter in the forum of *FOREST AND STREAM*. So I will submit, in illustration of my theory, something that happened to myself.

This neighborhood has been overrun with rabbits this winter; they are so plenty that they have become a pest, and all the farmers who have young orchards have been appealing to all the local Nimrods to help destroy the rabbits and save the orchards. Now, I have been too chickenhearted for a long time to kill a rabbit or anything but a blue rock, and reading "Men I Have Fished With" these long winter evenings has not had a tendency to make me bloodthirsty. But the wonderful stories being told every day of the great number of rabbits had excited my curiosity.

So the other day, when Doc dropped in and asked me why I did not go rabbit hunting I said: "You drive round to my house after dinner and I will go with you." We started about 2 o'clock and drove out to Ben's. Ben hitched up to the sled and got one of his boys in to drive the team, and away we went.

It was about 3:30 when we reached the "draw," a wide slough, full of snow, grass and weeds, leading down to the creek. Doc got on the high bank on one side and I took the bank on the other side. Ben, with three dogs, took the center of the slough.

Pretty soon the rabbits began to show up and run in every direction. I saw two or three dodging around in the weeds, but did not shoot at them. Finally, I saw one a long way off and fired, but did not get him; then I shot at several more and missed. By this time Ben had killed seven or eight, and he yelled across to me: "Say, don't be so particular about holding that gun in a nice position, but kill the rabbits."

I looked over at Doc. His cap was pushed back on his head, his gray hair was streaming about his face, his

JONATHAN DARLING.

was a big buck. I used to go hunting every chance I could get, but as I was the oldest of the boys I had to work quite hard.

I was quick to learn the habits and nature of the wild animals, and, being good with the gun and not easily excited, I soon got to be quite successful. I kept improving, and as years rolled on I began to hunt for the Boston market. This was some forty-five years ago. Then I could kill moose near home, where I could drive to them with a team. Later on I hunted moose for their hides. I did not believe this was right, but the Indians and many white hunters made a business of it, and I saw that they were sure to kill them all, and so I took a hand in it, and have killed over a hundred in a year, until they were nearly exterminated. I never killed any caribou or deer for their hides, but piles of them for the markets.

I have been set down as a notorious poacher and outlaw, but really I am more of a poacher than an outlaw, and more so in the papers than otherwise. I have advocated the use of dogs to hunt deer on bare ground and to drive them to water, and have used them in viola-

Drive will fetch him sure." "All right, John," I said; "just give us a little start." For the snow was 1½ to 2 ft. deep, and we found it brought out the perspiration long before we got to the top. After slipping and sliding, in the course of half an hour we accomplished our object. Leaving Fred, I started higher up, and the last effort made my heart beat at the rate of forty miles an hour. The snow was too light for snow shoeing, and it was hard traveling without them. I hailed Fred when I got to my stand on top, and then surveyed the lay of the land, and could understand at a glance John's wisdom in sending me there, and took back all the hard things I had said about him during the climb. The entire mountain top was rocky and barren, a succession of ledges. No snow could hold there against the unbroken wind from every quarter of the forest. I took a stand on the right of the ledge, which extended some sixty or eighty rods in length, precipitous on one side, sloping gradually down on the other and at both ends, just the place the fox by instinct would choose in the course of his race for life to elude his pursuers. John told me this, saying that even up there (pointing to this ledge)

eyes were flashing fire, his hands were bloody, and his general appearance suggested Kit Carson in an Indian fight. Ben was yelling: "Look out there, Doc; there comes one, Mac," and I began to get interested. Then I saw one sitting close to me and I shot his head off. I did not feel as badly as I expected I would. Then it occurred to me that if Doc killed more rabbits than I did I would never hear the last of it, and I went to work. A quail got up under my feet and went the wrong way. I whirled around and gave it one barrel, and fell down, running my gun into a snow drift, with my finger on the other trigger, but luckily did not pull it off. I took out the shells and blew the snow out of the barrels, loaded up and killed a rabbit with each barrel. Then I noticed a rabbit sitting right at my feet under a bunch of grass and snow, with his rump sticking out in plain sight. I reached down to catch him; then I thought I had better step on him, but finally concluded to kick him out and shoot him. I kicked, the rabbit went down the bank and I missed him with both barrels. Then I got mad, and in the next forty minutes killed over forty rabbits. Just then I heard Ben say to Doc: "The old man's getting on his ear," but I paid no attention to them; there were more rabbits; I wanted blood.

I tore up and down and across that "draw" like a maniac, and when I killed a rabbit with the first barrel I gave him the second, for safety, and I walked over a mile after Doc and Ben had got in the sled to go home, and they drove along behind me, waiting, as Ben said, "Till y'ud cum to ag'in."

When it got so dark that I could not see to shoot I got in the sled and we went down to Ben's and had supper, and as we drove out of the yard on our way home I yelled back to Ben, "I'll be out in the morning, Ben." But how many did we kill? I don't know. We had a sled full, and I don't know who killed the most, but I "hain't heard no 'snickerin' on the back seats since," and then it don't make any difference. You must not look for statistics in a philosophical paper like this, anyway. But I know I shot away a hundred shells loaded with Dupont smokeless, and the little barker got so hot that it leaded badly at the muzzle. When I got home I skinned and dressed a few rabbits and hung them out to freeze, and went to bed and dreamed of "murders done in caves."

When I woke up in the morning a change had come over the spirit of my dreams; I would not go out to Ben's. I felt like a murderer, and I had been caught.

Fred Mather says: "A boy is a savage." So is an old man. The only difference is the old man is lazy. I am retained by the boy.

A. D. McCANDLESS.

Maine Sportsmen's Association.

To the Maine Sportsmen's Fish and Game Association:

I have the honor to submit the following report for the year 1897. The present membership is 409.

In looking over the field of operations, I think there can be no reason for discouragement, but many for encouragement, in the work which the association is endeavoring to accomplish.

Contrasting the condition of the game interests when our association was organized, in 1893, with the interest now shown by the citizens of the State, one cannot but come to the conclusion that, from some cause or other, a better understanding prevails as to the value of our fish and game in the State, and a greater determination to care for it by the enactment of better laws, and a more stringent enforcement of them.

The enactment of the guide law was an advancement in salutary legislation on game matters which will prove of vast benefit to the State. So long as the State adheres to the policy of improving and preserving its fish and game, so long must it have conditions by which those who are instrumental in its capture must be governed. To abandon this right to impose restrictions upon the professional guide, while aiding in the capture of the State's property, would be a virtual abandonment of the preservation of its fish and game. It has become a necessity, in the interest of protection of the State's valuable property, to bring, first, those who desire to take fish and game under legislative restrictions, and those who are mainly instrumental in its capture, in close alliance with the State.

During the season just closed, all agree that there was more large game taken than ever in the history of the State. All agree, also, that during the fishing season more fine large fish were taken than ever before. All agree, also, that there is more large game in the forests to-day than at any other close of the shooting season. And, also, that there are without doubt more and greater fish in our waters than ever before at the beginning of the year. Then why not take courage, and continue what seems to me to be the good work already done by our association?

There will be vexing questions, queries, as to whether the State should continue to spend its money in the preservation of its game interests, whether this or that law is bad or good, whether it should be repealed or enforced, but all these questions will be settled by those who pass upon our public matters and make our laws.

When complaint is made as to the appropriation made for fish and game interests being more than the State ought to tax itself for this purpose, it will be well to remember that the tax is very small, and is only about 10 cents on a tax valuation of \$1,000. Therefore a person who pays tax on a valuation of \$2,000 is paying less than 20 cents for fish and game purposes.

This argument is used by the advocates of a non-resident license law, making it appear a burden upon the people to meet this \$25,000 appropriation.

The compelling the non-resident to pay a tax for taking our game I believe to be unjust and uncalled for, and unless a tax shall rest upon all those who avail themselves of the hunting privileges of the State, and all who receive direct benefit from them be included in the tax license payers, such a law bearing upon one class, and that the class which the State invites to its summer resorts, will be found a great injury to the tourist business of the State.

If it becomes necessary to make those partaking of the fish and game privileges pay the cost of continuing the

same, then let the tax license be general in its scope. To this end I wish to submit a plan which might be put in form of law, and which would not, to my mind, be open to the objection a law would be bearing wholly upon non-residents.

Compel every person sixteen years or more, citizens of the State, to pay \$1 each for the privilege of fishing and hunting small game. Except that any citizen may fish or hunt such game within his own city or town. For hunting large game, moose, caribou and deer, each citizen shall pay \$2, and such fee shall allow hunting in any town or place in the State, without any special right to hunt in his own town, as in fishing.

The non-resident shall pay (not being taxed in Maine) \$2 for right to fish and hunt small game, and \$5 for large game. Those are in main the principles involved, and which by enactment may be properly guarded, and then, in addition, will come the levying a reasonable tax on hotels, lodges, boarding houses, which properly come within the meaning of sporting places, and upon railroads and express companies. Such a tax would bring sufficient money to make all advances we need in propagation and protection of these great interests. In order that the advocates of a non-resident law may see how such a law works, let me cite the results in Wisconsin. There were 23,000 deer killed during the season. There were 12,250 persons, citizens of the State, who took out licenses at \$1 each. There were thirty non-resident persons who took out a license at \$30 each. Nine hundred dollars was all the State got out of non-resident sportsmen. Such a law here would be a failure, so far as raising money is concerned, and would affect disastrously the tourist travel, I believe. The association can afford to wait until its next meeting before it gives official expression to its judgment.

The treasurer's report shows that there is about \$100 in the treasury at present. Respectfully submitted,

E. C. FARRINGTON, Sec'y.

Officers were elected as follows: For president, Hon. P. O. Vickery of Augusta; first vice-president, A. M. Spear; Gardiner; second vice-president, Hon. C. A. Marston, Skowhegan; third vice-president, Eugene M. Hersey, Bangor; fourth vice-president, Hon. William P. Frye, Lewiston; fifth vice-president, Hon. A. R. Nickerson, Boothbay; sixth vice-president, John H. Kimball, Bath; seventh vice-president, Hannibal E. Hamlin, Ellsworth; directors, P. O. Vickery, Augusta; J. F. Hill, Augusta; W. S. Choate, Augusta; J. F. Sprague, Monson; J. H. Kimball, Bath; E. C. Farrington, Augusta; F. E. Timberlake, Phillips; Dr. G. G. Weld, Old Town; S. L. Crosby, Bangor; by the State, Elmer P. Spofford Committee on Legislation—P. O. Vickery, H. M. Heath, E. C. Farrington, A. M. Spear.

Committee on Hatcheries—E. M. Blanding, Bangor; L. T. Carleton, Winthrop; H. O. Stanley, Dixfield.

Consulting attorney, H. M. Heath, Augusta.

Secretary and treasurer, E. C. Farrington, Augusta. Regarding the changing of the moose law, the Hon. J. F. Sprague of Monson said that he did not think that any question to come before the meeting was any more important. As he understood it, open time was made from Oct. 1 to Nov. 15 through an error of the engrossing clerk at Augusta.

He thought that there were just as many moose in the State at the present time as ever, and that if the game laws were enforced there would be no need of cutting off the time.

In speaking of the new law passed at the last Legislature, making any person who killed a moose in close time liable to four months' imprisonment, Mr. Sprague asked if he was not right in saying that this law was made to place the rich man on the same level with the poor man. He knew that this law was passed for just this reason. He referred to the case of the students who killed the cow moose, last summer, in the West Branch region, which was the first case under this law. Mr. Sprague did not think that there was much sense in the statement that these boys shot the moose while under excitement, not knowing what they were doing. He would like to know whether or not this case is punishable under the law of 1897.

"We have some cases in Piscataquis county, and I am glad I am not County Attorney," said Mr. Sprague. "Why is it not fair for a boy who goes to the Greenville High School to have just the same rights as the Pennsylvania boy, whose uncle is the Attorney-General of that State? A boy or man, or any one else who violates that law ought to be punished. If any favoritism is to be shown in meting out this law, why, we want it repealed."

Game Commissioner Carleton said that the whole burden of Mr. Sprague's talk was a reflection on the commission.

"Now, in regard to the celebrated cow moose case," said Mr. Carleton, "I know that a great effort has been made by Mr. Sprague to create a prejudice against the commission on account of the action taken by it on this case. Now see how fair the gentleman is. He says he does not know the age of the boys. The record shows that one boy was sixteen and the other seventeen years and they were good boys. These boys were members of a party of seventeen who had gone into camp there with their tutors. Game Warden Pollard was going up Cattcomgomuc Lake. He saw something floating in the water and found that it was a cow moose. When Mr. Pollard arrived at the camp of the boys he told the tutors what he had found, and they replied that they would find out if it was killed by their boys. The tutors questioned the boys, and they owned up to killing the game. There is no law on the face of the earth that could have convicted them if they had not pleaded guilty. The boys were out to shoot a bear, and in their excitement they killed the moose."

"The case was one that struck my heart. I could not send those boys to jail. I could not put the brand of a jail sentence upon them, to follow them through their lives. Gentlemen, take the case in your own hands. Would you want your boy branded for life, simply because in the heat of great excitement he made a mistake? When the case was taken in hand by the County Attorney of Piscataquis county, it passed out of the hands of the commission. The bond which they were put under is good to this day, notwithstanding that the case was not pressed."

Mr. Carleton's remarks were received with great favor, and he was loudly applauded when he took his seat.

Hon. A. M. Spear of Gardiner spoke on the question, "Should Non-Residents Pay a License Fee for Hunting Game in Maine?" Mr. Spear believes that every hunter should pay a fee for the privilege of shooting game in Maine. Opening his remarks, he introduced a bill to procure revenue for the protection of fish and game, reading as follows:

Mr. Spear's Proposed Bill.

An act to procure revenue for the Protection of Fish and Game:

Sec. 1.—A license fee of \$1 shall be charged and collected by the State upon the carcass of every deer transported beyond the limits of the State, and no property in such carcass shall vest in the killer thereof until the payment of such fee for such intended transportation.

Sec. 2.—The fish and game commissioners shall appoint agents in different parts of the State, during the open season for shooting large game, whose duty it shall be, upon the presentation, in person or by his agent, of the written application thereof, over his own signature and in his own handwriting, of any person who has actually killed a deer, and so states in his application, to receive the required license fee and issue a license, in duplicate, the form of which may be prescribed by the fish and game commissioners, for the transportation of the carcass of such deer beyond the limits of the State, which license shall be attached to the carcass to be transported.

Sec. 3.—The fish and game commissioners shall appoint wardens during the open season for killing large game, whose duty it shall be, under the direction of said commissioners, to examine all cars, steamboats and other vehicles of transportation, to ascertain if the carcass of any deer is deposited therein without a license attached thereto, as provided in section 2 of this act; and if so found, to immediately seize it without a warrant, and forthwith sell it, and turn over the proceeds of such sale to the fish and game commissioners, as a part of the appropriation for fish and game.

Sec. 4.—It shall be the duty of every railroad company, express company, steamboat company and other transportation companies, their agents and employees, or persons doing business in this duty of the company, its agents and employees, or person transportation and to disclose to them the carcass of any deer therein, to enable them to determine whether the same is properly licensed or is contraband, under section 3 of this act.

If any such carcass is found to be contraband, it shall be the duty of the company, its agents and employees, or person transporting the same, to deliver such contraband carcass to said wardens.

Sec. 5.—It shall be the duty of every transportation company, its agents and employees, or person doing business in this State, to refuse to carry beyond the limits of the State the carcass of any deer not tagged with a license as provided in section 2 of this act.

Sec. 6.—If the license certificate attached to the carcass of any deer under this act shall become detached and lost by accident, the company, its agents or employees, or person transporting the same, shall orally certify to the officer finding such carcass that such certificate was originally attached thereto, with the same effect as if attached, but for a false statement under this section, the company whose agent or employee, or person who makes the same, shall, on complaint, be punished by fine not less than \$100.

Sec. 7.—Any person who shall deliver to any transportation company or person the carcass of any deer, to be transported beyond the limits of the State contrary to section 2 of this act, shall, on complaint, be punished by fine not less than \$50 nor more than \$100.

Sec. 8.—It shall be lawful for any person to ship the number of deer which the law may allow him to kill, through and beyond the limits of the State, without accompanying them in person, when the carcasses thereof are licensed in accordance with this act.

Sec. 9.—This act shall not be construed to nullify or amend any of the laws now existing in relation to the transportation of game from place to place in this State.

Sec. 10.—All fees received for licenses issued and fines imposed under this act shall be turned over to the treasurer of the State, and by him transferred to the appropriation for fish and game to be expended for the same purpose and in the same manner as the regular appropriation therefor.

Mr. Spear thought that it would cover the matter the way he looked at it. He believed that when the people of the State understood the question, they would never allow the present appropriation to be increased. He thought the taxation question was not divided right. He did not believe the farmers in Cumberland, York and other counties should be obliged to pay their part of the game appropriation when they were not being benefited by it.

Mr. Spear thought that a license fee would prevent such men as those who have been here this fall, and brought their own provisions, etc., and employed no guides, from coming into the State, and he questioned whether such men were wanted here. The amount of money appropriated for the protection of fish and game is not yet sufficient to fully enforce the laws, etc. Mr. Spear said that 10,000 deer had probably been killed in Maine this year. This meant 5,000 sportsmen. If they were taxed at \$3 or \$5, the State would get quite a revenue from them.

Mr. Sprague said that the non-resident licensing scheme had been killed several times by the sportsmen's association. Two years ago he heard Senator Engel make a most able argument against it, and he wanted to hear from him again.

Senator Engel said: "Naturally, the more prosperous any business enterprise is, and the more people there are engaged in it, the public, just in that ratio, is interested in it, for the reason that large interests or industries furnish labor, food and education for a great many, and as it is with private interests, so it is with public."

"Everybody in this State is aware of the importance and magnitude of our fish and game resources. It has been estimated by a very conservative man recently that these interests, coupled as they must be with the summer travel, are larger than our entire lumber interests in this State, which latter we have always regarded (outside of the agricultural pursuits) as being the largest. In short, they bring about \$8,000,000 into our State without making any perceptible inroads upon our resources, and, unlike many other large money transactions, it does not go into the hands of trusts or corporations, but directly into the hands of a class of people which needs it the most, and now the question for us to solve is: How can we best retain this large income? For it is vital that we should, for you, gentlemen, who are looked upon as the representatives of these great interests, are to decide as to the best methods to foster it, and it is well to remember that unwise legislation will kill the goose that lays the golden egg."

"The first question under consideration is 'Should the Moose Law be Changed?' I, for one, think that it should in one respect, and that is that the judge should have discretionary powers. The punishment does not fit the crime, for you must remember the fact that killing a moose in close time is not a natural crime, and that at best it is only an ordinance prohibitive geographically, and therefore may be at times encroached upon by the best of men, and as every man has the right of trial by jury, the jury can only render a verdict of guilty or not guilty, while the learned judge, who is broad and humane in our State, should be empowered to impose a

sentence according to circumstances. At times a prison sentence may bring about the best results, while at other times a fine would be better justice than an arbitrary sentence.

"You give your judges discretionary powers in imposing sentence in cases of manslaughter, where a man, woman or child is killed, but you make the sentence arbitrary in cases of moose slaughter.

"The next topic to be discussed is, 'Should the Guide Law be Repealed?' As it is a new law, it should certainly remain in force for a sufficient length of time to test its value, and even if it is not perfect in all its details, I should say let it remain as it is at least two years or more, so that if it is necessary to make any changes, you will be in a position to speak with experience; but I will say just a word to the commissioners. Be sure and remain broad and generous, so as not to create cliques and factions, and, above all, look out for and grant licenses to the humble as well as to the influential.

"The next subject we are to take up is, 'Should Non-Residents Pay a License for Hunting Maine Game?' My answer is most emphatically, 'No.' I have spoken upon the same subject once before in this room, and since then have examined into it very carefully, and am stronger in my opinion to-day than ever before.

"It seems to me, without going over the same ground again, that the visitor from outside the State already pays a license under a different name, for, from the time he comes into our territory until he leaves, he pays it; first to the railroad; then to the hotels, to the merchant, to the guides, and all we give him in return is a few fish, which, at a close estimate, cost him \$5 each; possibly two deer at \$50 each, and perhaps a moose at \$500, good prices for all. As a matter of fact, the most our State furnishes is scenery, and we have lots of it, and the more contracts we can receive for this kind of merchandise the better off we will be, for we have had it for centuries, and will continue to have it for centuries more.

"Finally, we are confronted with the question, 'Shall the State continue to improve its fish and game supply?' What better investment can our commonwealth make than this? From what source can more speedy returns be obtained? If the arguments I have advanced are in any respect correct, then the answer must be in the affirmative. The object of any government, whether local or State, is to make appropriations with benefit in the greatest degree to the largest number of people, and I have indicated how substantially our citizens are benefited by the aid the State has given these interests. I say, let the good work continue."

Capt. H. N. Fairbanks believed that the guides' bill was a good thing, and thought that the guides liked it. He believed that the sportsmen coming into Maine should be taxed for taking away the State's property. He did not agree with Senator Engel that the sportsmen who come here are "squeezed." They pay the same railroad fares and same hotel rates as the resident, and he thought they received full value for everything they paid out.

Game Commissioner Carleton made some interesting remarks on the guides' bill. He said that it took \$15,000 to run the hatcheries, and \$10,000 was left for warden service. This sum did not begin to pay the wages and other bills of the ten wardens employed by the commission.

Mr. Carleton said he did not believe it was possible to get an appropriation larger than \$25,000. He said that the guides during the past year had guided 7,000 non-residents and 3,000 residents. At \$3 per day they have received \$117,000 in wages, or an average of \$88 to each man. According to the guides' report, it shows that 10,000 deer have been killed in Maine in 1897. There were at least 250 moose, 150 caribou and 150 bears killed during the three hunting months. The sportsmen who have been in Maine this year hunting have spent in round numbers about \$1,500,000. The guides registered numbered 1,316. Sixty-two persons were refused because they were non-residents, but there are some non-residents who have licenses that lied to the commission in order to get them.

Mr. Carleton said he believed that every sportsman who comes here should be obliged to hire registered guides. He said that the game question was held by the guides in the palm of their hand. They should let the people of Maine as a whole know that they were interested, and help the commission in carrying out their plans. Some guides have written the commission, said Mr. Carleton, who were opposed to the measure at first, but they were heartily in favor of the bill now.

Mr. Vickery said that he had heard a good deal about the students' case, and he had just a few words to say. He was glad that there was humanity enough in the Fish and Game Commission not to brand the boys with a jail sentence.

Game Commissioner Oak was not in favor of making the sportsman pay a license fee. He thought they paid enough for everything they carried away. It was about time, too, that this matter died out, and he believed that the association should let it drop.

Mr. Spear said that the gentlemen who made up the next Legislature would come pretty near passing a bill to make sportsmen pay for the privilege of hunting here. The last Legislature came very near passing such a law, and it would take some argument besides nonsense to make the next Legislature believe that such a bill should not be passed.

Mr. S. L. Crosby of Bangor said that Mr. Spear was all right when it came to an argument, but he was on the wrong track. Mr. Crosby believed the sportsmen paid money enough for what they secured in Maine. He thought the guides' bill had been a success, and he hoped it would be a greater one next season.

Mr. W. L. Miller believed that if the slaughter of game continued the State would be without its game in a few years.

Mr. A. J. Darling of Enfield thought that the increase could not be killed in any year.

Mr. J. S. Rowe was not in favor of making sportsmen pay a license fee for hunting in Maine.

The Game of Alaska.

JUNEAU, Dec. 13.—While all eyes are now turned on Alaska it is well to remember that there is more that glitters besides gold, for, aside from the brilliant metal that lies buried beneath its surface, there exists a rich field for the naturalists, a host of sport for the hunter, game fish for the angler and a variety of fur-bearing animals that for numbers and quality far surpass that of any other country.

It may not be generally understood that Alaska, as well as being the home of myriads of water fowl, is teeming during the summer months with all the bird life of the midland region. Thrushes, robins, swallows, sparrows and humming birds abound in all suitable places. In addition to these are the native species, the rock and willow ptarmigans and sooty grouse.

In the interior are found the black spruce partridge and in a few localities the ruffed grouse, but no quail of any kind. Ducks are abundant in all the waters, both fresh and salt. The rare emperor goose is found on the flats of the great Yukon, while further up the stream is the breeding place of countless geese of other varieties as well as swan. Bald eagles are everywhere numerous along the coast. Their huge nests are a prominent feature of many of the little islands scattered about. The Alaska bird has just been separated into a new variety by the scientists at Washington, and is now known as the Alaska bald eagle owing to a difference in the shape and size of the bill and legs and the amount of white on the head. Owing to the bird not assuming the white head and tail till after three years of age many people believe the young black birds to be of a different species, even declaring that they have seen young eagles in the nest with white heads. Others maintain that the head of a bald eagle is "bald" of all feathers. I found it difficult to convince them to the contrary, even with specimens, they maintaining that "in the East they are bald anyway." Such people also believe that porcupines throw their quills.

The great stretch of country comprising Alaska harbors much game; many kinds abundant at some places are unknown in other places. For instance, no deer are found on the mainland owing to the many wolves that drive them to the smaller islands, and even then they are of peculiar distribution, some sections having no deer whatever. Probably the best deer country in Alaska is the Prince of Wales archipelago. They are also plentiful near Sitka, not so in the vicinity of Juneau, and a few about Wrangel. They remain high up in the mountains the year round, reaching the beach only in case excessive snow falls in the woods. The bucks drop their horns about the last of the year.

Mountain goats are found most everywhere on the main, and where the mountains are high and bare—the vicinity of a glacier is a favorite ground of theirs. The meat of the old "Billys" and "Nannies" is strong and seldom eaten; the flesh of the kids is better, with a flavor like mutton.

Mountain sheep are found only far in the interior among the rocky canyons of the large rivers. Three varieties exist in this country, the ordinary species of the Rocky Mountains, a new variety known as Stone's mountain sheep, that inhabit the Stickeen River country, differing from the former in the much darker coloration and with a difference in the curvature of the horns, and another very rare form, a light colored sheep from the headwaters of the Kenai River, in the Cook Inlet country.

Musk ox are not found in Alaska; they inhabit the barren grounds of Northwest Canada, and are a very rare animal. Moose are found in the interior, but not near the coast, except around Cook Inlet.

Caribou are plentiful up the Stickeen River, in the flat barren country of its headwaters.

Bears of many kinds are found. Small black bears on the islands, keeping well in the thick woods, coming down to the beach and the fresh water streams during the salmon run, living on the fish for a month or two, becoming very fat, but owing to their diet are unfit for food. Brown bears that attain a great size and are very formidable inhabit the mainland near the coast. Hunters have the utmost respect for this powerful brute, whose vitality is fully equal to that of the grizzly, and their capture should only be attempted with a gun of known killing qualities, a favorite weapon in this country being the .30cal. smokeless Marlin rifle. With one of these guns a man is fairly safe to tackle this animal, for the destructive power of this modern weapon is something marvelous. I have seen a small black bear shot in the side with a soft-nose bullet that, in passing out, carried the bone of the shoulder, together with the surrounding flesh and skin, completely away. And I have frequently seen the effect on deer. In one instance a buck shot in the nose, as it faced the shooter, had the base of the skull, together with both horns, blown out. Other deer shot in the head, the bullet striking no heavy bones, would so completely shatter everything inside as to leave the skin of the head hanging like a sack.

On the Alaskan peninsula and Kodiak Island is found the largest bear in existence—the huge fish-eating Kodiak bear. And among the snow-clad mountains of the mainland is a bear of uniform bluish-gray, that is known to hunters, but not mentioned, I believe, in natural histories.

Polar bears can hardly be said to inhabit Alaska, although they are occasionally taken in the vicinity of Point Barrow, at the extreme north.

Rabbits of any kind are unknown on the islands, while on the mainland they are uncertain, common at times and vanishing as if by a plague at others. They are mostly white hares with immense feet, known as snow-shoe jacks.

Alaska salmon are famous. The life history of the fish has long been surrounded with mystery, however. That they should leave the stream of their birth and remain in the depths of the sea for two years and return to spawn and die, seems inconsistent, but this appears to be the conclusion at which fish men have arrived. Experiments have also been made at hatcheries, where yearling fish were liberated, bearing silver tags, that have returned two years later, fully grown, to the original stream. This interesting experiment has tempted

many concerns to erect hatcheries near the works, where the constant drain on the supply has lessened the number of fish caught each season. Probably one of the most wasteful methods is the practice of putting up bellies, where two-thirds of the fish is thrown away.

The fur-bearing animals are many. First in importance, of course, is the fur seal, the protection of which has grown to be an international question, and while three governments wrangle over the matter the question is gradually being settled by the extermination of the seals themselves. That all the fur seals of the world should congregate at the little Pribiloff Islands to breed is their misfortune, for even those that pass safely through the gauntlet of sealers and natives that line the route north from their summer sojourn in the warm seas are here still denied a place of refuge in which to rear their young. The latest move for their protection has been the branding of all female seals, in hopes of making the skins unsalable, thereby protecting her and her unborn young, a proceeding the worth of which is yet to be proven.

Sea otter remain in the open sea the year round, but always have been a rare fur, and are growing scarcer every year. Government experts estimate that less than 1,000 sea otter now exist in Alaskan waters.

Land otter and mink are plentiful on the islands and martens on the mainland.

Beaver are found as a rule on the mainland, in the headwaters of the larger streams.

As a general thing, foxes are not numerous, a few reds on the mainland, the white fox in the extreme north and the rare black fox in the interior.—*Geo. C. Cantwell in Tacoma Ledger.*

CHICAGO AND THE WEST.

CHICAGO, Jan. 8.—It is stated that the United States agent sent to Norway for the purpose of securing reindeer for a Klondike relief expedition has discovered that he cannot pack very many reindeer in a car unless he cuts off their horns. It was decided to use reindeer because they can live on moss en route down to Yukon. If you cut off the nice frontal plow which the reindeer has been some thousands of years in developing, how is he going to dig out his moss from under a few feet of snow? But, meantime, the reports from Klondike seem to run to the effect that the men there do not need any rescuing. So I presume this thing will be all right, although at first I was afraid the United States Government was going to be confronted with a lot of sore-nosed deer.

The annual meeting of the National Game, Bird and Fish Protective Association will be held at St. Louis, Mo., Feb. 10. President Lakee hopes for a good attendance.

The Interstate Convention of Wardens at Chicago, Feb. 7, still bids fair to prove of interest. The Fish Commission of Wisconsin have determined to be present. I have already mentioned the strong delegation chosen for Minnesota, and have stated that State Warden Bowers of North Dakota would be here. The interest seems of a quiet but very determined sort. A good meeting is expected.

The State Game and Fish Commission of California is purchasing Mongolian pheasants in numbers in Oregon for the purpose of stocking California.

The Mongolian pheasants turned loose by Oshkosh, Wis., sportsmen a year ago are doing well. Some of them have been seen near Omro. The present winter is mild, but even were it much more rigorous, it is thought the birds would hold their own very well.

A blanket license law is one of the possibilities of the next session of the Wisconsin Legislature. I trust it will not cover up so great a multitude of sins as the present non-resident deer license law. Let me again call attention to the striking fact that only thirty men from outside Wisconsin hunted deer there this fall!

Lake Poygan Gun Club of Chicago held its annual meeting at the Sherman House, this city, last Thursday afternoon, and elected the following officers for the ensuing year: President, Sheriff James Pease; Vice-President, R. R. Clark; Treasurer, S. A. Goss. The president, vice-president and Mr. E. W. Murphy will be the Board of Directors. The preserves of this club are located on Lake Poygan, one of the famous Wisconsin ducking regions, and the club holdings are some 8,000 acres. Judges Sears, Adams and Windes of the Appellate Court are among the membership of seventy prominent sportsmen.

Messrs. C. A. Warner, William E. Noyes, R. M. Jessup and W. F. Lasker, hailing from New York, stopped at Chicago this week on their way west to Alaska, on a hunting expedition. They expect to sail from Seattle Jan. 9. They expect to be gone a year, but disclaim intention of hunting gold. They will return by the overland route, east of the mountains, and via Edmonton.

Quail.

The big Flora quail case, by which Warden Loveday secured so heavy a conviction for illegal shipping of Illinois game, is being followed up in Jefferson county vigorously and successfully. The violations of the law there have been flagrant. A new device in game shipping was this week discovered at Mt. Vernon. A box of game, purporting to contain rabbits, was opened, and thirty-one rabbits were found. Each rabbit had had the entrails removed, and then been carefully stuffed with quail, ninety-one quail being found thus prepared for smuggling. This box was at the Adams Express Company's, but its shipper was not found. It is said that over 100 arrests will be made in that vicinity. Local express agents are accused of winking at the violations of the law.

At Charleston, Ill., and vicinity the weather has been bad for quail, a coating of ice having covered up the food. Hundreds of quail have perished, and the stock will be cut down badly for some time.

In Scioto county, Ohio, illegal quail shooting has been going on. Last week A. Glockner, of Fremont, went out and killed one bird. It cost him \$25 and costs.

At Cape Girardeau, Ill., last week Warden Burford arrested H. C. Gillam, agent of the Western Poultry and

Game Company, and had him fined \$100 for illegal shipping of game.

Two Side Hunts.

The Leander, Tex., Gun Club, numbering some forty members, held a side hunt last week. T. H. Griffin and E. C. Perkins choosing sides. The net results of one day were 133 quail, 309 doves, 30 jack rabbits, 67 cotton-tails, 17 robins, 13 hawks, 10 crows, 3 owls, 7 opossums and 15 squirrels. Cash prizes were paid for first, second and third high bags. At the banquet which followed the hunt some 200 guests were present.

The Methodist Church of Jericho Corners, a point nine miles west of Aurora, Ills., this week held a side hunt for sparrows, captained by William Johnson and John Calkins, the party being made up of young men belonging to the church. Johnson's side during the week killed 1,674 sparrows and Calkins's 3,200. The bounty on these, at 2 cents a head, was paid to the church. The ladies of the church had an oyster supper, the Calkins side paying the bill. The church "rejoiced over the replenishment of its treasury."

Two Deer Hunts.

The St. Louis Republic describes the hunt of a party of St. Louis men, who have returned from the Devil River country of Texas. The story says, among other things: "Several extraordinary pot shots were made on quail, one hunter claiming to have slain fourteen at a single shot." The paper prints a picture showing the hunters' wagon full of deer. Six deer are shown, and not one has horns.

A friend of FOREST AND STREAM sends me a copy of the Wave, a handsomely illustrated San Francisco publication, marked at an article headed "Hunting for Deer, a Fourth of July Experience in the San Hedrin Mountains." This article is written by Carl Purdy, and describes the killing of nine deer in one morning by the party of four, "not a tenderfoot in the crowd," the hunt occurring on the Fourth of July, when "Mendocino county is not a refrigerator." At first sight it would seem that such a season must be the close season for any country, but on looking up the law I find that it states in general that no deer can be killed from Oct. 15 to July 15 of the following year, only males to be killed at any season. This party, therefore, only broke the law by about a week or so, not being tenderfeet. And what an odd deer law from all our Eastern standpoints! Deer hunting on the Fourth of July!

Jack Packing.

And now they are packing jack rabbits for shipment to Liverpool. At Clay Center, Kans., there is a corporation known as the Kansas Jack Rabbit Packing Company, which has six carloads of jacks ready to ship across the sea.

Wolves Endanger an Institution.

And still another institution is in danger, out in Minnesota, this time no less than the ancient and honorable institution of matrimony. The Duluth News-Tribune flies into the breach with the following note of warning: "There should be a bounty of from \$10 to \$15 for each full-grown wolf killed, and the killer should also receive the skin. Such an arrangement would likely result in a heavy death rate in the wolf family, and make it possible for a bridal couple to make a tour through St. Louis county without being compelled to spend the wedding night in a tree, with a dismal yelping chorus for a serenade."

North Dakota Wardenship.

Mr. George E. Bowers, of Fargo, State Warden for North Dakota, is up for reappointment for the ensuing term. Editor Bassett, of the Valley City Alliance, is also a candidate. Mr. Bowers knows his work well, and has proved efficient in it. He knows his State, and he has his corps of deputies appointed and broken in. He is a good man, and no one has a word against him. What reasonable purpose could be subserved by changing wardens? Does a good merchant break in new clerks just for the sake of change, after he has one good set educated in the business? Why change wardens when you have a good one now? By all means Mr. Bowers should be retained.

Cleaning the Territory.

J. F. Wisdom, Chief of the Territory Police, and J. S. Hammer, United States Marshal, have decided to raid all the unlicensed market shooters now operating in the Chickesaw country, and drive them out of the Nations, where no one is authorized to hunt without a permit. The pot hunting has become an outrage.

Mr. Wisdom says that the migration of Indians from the Nations to Old Mexico is to be a fact, under the leadership of his father, Col. D. M. Wisdom. He says:

"A commission of Indians representing the Five Civilized Tribes has just returned from Mexico, where they examined the State of Chihuahua. They reported that the country was everything that they could desire, and recommended its purchase. The commission expressed the opinion that there would be little difficulty in closing the deal with the Mexican Government. I think it probable that a large number of the Indians will migrate."

Larks.

At this season of the year the meadow lark is supposed to be a good way south of this latitude, but at Kankakee, Ill., only fifty miles south of here, meadow larks are this week noticed in great numbers. The winter has not yet been very severe, but those meadow larks would better look out. Old settlers say it means a mild winter.

Texas Deer.

Col. Jeff Johnson, Col. George Walton, Judge F. G. Morris and Mr. Will Hart, all of Austin, Tex., returned last week from a camp hunt. They got twelve deer and many wild turkeys.

Southern Migration Small.

The Southern migration of sportsmen is smaller this winter than usual. Hard times, yellow fever and Klondike interest are all alleged causes.

E. HOUGH.

Shooting and the Golden Rule.

Editor Forest and Stream:

I consider it rather mean for a man to get up in a tower, where he's out of reach of common shot, and then throw bricks on people down below. This Tower man says "a complainant should come into court with clean hands," so I've been and gone and washed mine, though I can't imagine how I got them soiled. If he had put on his spectacles he might have seen that I am not gunning for legal but for moral game.

If "selfishness is the basic principle of society," then society has a false and weak support, and it ought to be knocked away and replaced by something more in accord with the golden rule. I don't deny that a man may legally hoard lucre to the amount of \$50 or \$200,000,000, but I flatly deny that he has any right to call himself a Christian, because "it is easier for a camel," etc. When the young man who had lived a model life was advised to sell all that he had and give to the poor, the young man, if he had lived in a tower, would have answered that he had as good a right to his cash as others had, and the poor might go to thunder!

Mine enemy wants to know if I considered that A, B and C would not have bought up half the county, including half a dozen lakes, unless they had use for them. Like the cow in Mother Goose, I "considered very well," and it led me clearly to the conclusion that no man, or set of men, can make use of half a dozen large lakes, and that pure selfishness was the "basic principle" of their purchase.

I don't care to be constantly repeating that I do not object to a club's owning any reasonable amount of land or water, but I have about the same respect for a "game hog" or a "trout hog" as I have for one of that class who want to monopolize all the shooting and fishing. The war is almost universal against the men who slaughter game by wholesale. Yet they have a legal right to do it, and suppose my enemy in the Tower would sanction it, because they have that right.

DIDYMUS.

ST. AUGUSTINE, Fla.

Warden Loveday and the Chickens.

Editor Forest and Stream:

In your issue of Dec. 25 I notice an article by E. P. Jaques, headed "Those Henry County Chickens." If the writer of the article is correct in his statement that on Sept. 1 there were just seventy chickens in Henry county, they must be all killed off, and the prospects in Henry county are very poor for next fall.

H. W. Loveday, our efficient State Game Warden, is a thorough sportsman, a remarkably fine field shot, and has never been accused of being a "game hog." "Those Henry County Chickens" were killed by a party of four in two days—H. W. Loveday, William Werner and Ed Dillon, of Chicago, and Mr. McAuley, of Atkinson—by special permission of Samuel W. Allerton, of this city, on his farm of 4,000 acres. The seventy chickens represent an average of less than ten birds a day to each gun, and the members of the party claim that the birds were wild, and that they did not kill one bird where they put up forty. It is evident that your correspondent's statistics are off, and that he has neglected his job of chicken census compiler of Henry county. It is possible that the poor success attending the efforts of Mr. Jaques during the past thirty years is due to poor shooting. It is a pity your correspondent was not with the party. He might have learned something.

There are many large farms in this State where chickens and quail are plentiful, because the farms are posted, and the birds soon learn to congregate where they are not molested.

Mr. Loveday has done more to protect game and bring violators of the law to justice during the past season than any of his predecessors have done during their entire term of office; but he can hardly be expected to lay aside his trusty shotgun because he has been appointed game warden, nor should ill-advised attacks upon his standing as a sportsman go uncontradicted.

GEO. T. FARMER.

Ring-Neck Pheasants in New Jersey.

CRANFORD, N. J., Jan. 1.—I have read with much interest your article on English ring-neck pheasants in New Jersey, and would like to state my experience in the same line.

Last spring I purchased some pheasant eggs from a noted breeder, and hatched out fourteen birds from thirty eggs. I raised eleven of them until they reached the size of about 1½ lbs. each, and then I turned them out to hunt for themselves. For several weeks they would return to the yard every evening at feeding time, and feed with the chickens. But as soon as they had finished they would return to the fields and a wild hedge and not show themselves again until the following night. This performance was kept up until one day my Irish setter caught four of them and killed them outright. From that time the others never returned to feed with the chickens. This was in August. On Oct. 1 I took my dog and gun, and back in the fields behind the house found all seven birds. I shot two of the males and left two males and three females, and on Christmas Day I saw four of the birds and should judge by the tracks in the snow that they are still in the same vicinity and are doing well. I intend leaving the balance out for breeding, and may add another brace to the lot in the spring, as I still have quite a few in my runs for breeders for next year.

From my experience with the few birds turned out, I should judge that they are the coming game bird of the country, as they can be raised with very little trouble, and they lie well to the dog. In fact, my experience is that they will let a person pass within 5 ft. of them, and never move, and without a dog they cannot be hunted successfully. As the land they occupy is all posted, I feel that they will pass the winter in safety, and breed next year.

They seem to be a very hardy bird, and I can see where they stand on the corn stacks and pull the corn from the ears. Of course, if there is very much snow and

ice, I shall feed them through the winter, but think they can get along very nicely if let alone.

If you so desire, I will let you know how they pass the winter, and also write you an article on breeding and raising pheasants.

C. W. JOHNSON.

Photographs at the New England Show.

BOSTON, Mass., Jan. 7.—It has been decided by the management of the New England Sportsmen's Association to set apart a portion of the building as a gallery for the display of a loan exhibition of photographic art, and this department promises to become one of the most interesting features of the exhibition. Ample and well-lighted space will be devoted to the display of photographs pertaining to sportsmanship, viz.: live game animals and birds, shooting, fishing, canoeing and camp scenes and views of athletic and field sports and contests. Enlargements of such subjects are particularly desired.

The co-operation of all amateur photographers and others who may be interested is cordially invited. All expense of transportation will be defrayed, and such contributions as may be received will be promptly returned at the close of the exhibition.

Conditions.

1. Views may be of any size and framed or unframed, but must all be mounted, no single mount to be less than 8x10 in.
2. Mounts may bear the title of each subject upon the face; but in every case the title, also full name and address of the exhibitor, must appear distinctly upon the back of each mount or frame. Any printed or written descriptive matter, if sent, will be displayed if deemed of sufficient interest.
3. Exhibits too heavy for mailing should be sent in one package by express. Prepaid postal or express charges will be refunded and return expenses prepaid.
4. For purposes of classification, etc., all such exhibits should be sent to the association's receiving room, Pierce Building, Copley square, Boston, Mass. (Room 6), as per inclosed label, not later than Feb. 1. In cases where it is found impossible to prepare exhibits by this date, they may be received later.
5. The right is reserved to reject advertising photographs, also subjects inappropriate or not sufficiently interesting for such an exhibition.
6. The association will take the utmost care of exhibits, but cannot be held responsible for any loss or damage either in transportation or during the exhibition.

This department will be personally in charge of Mr. Joseph Prince Loud, president of the Boston Camera Club, who will welcome correspondence from any person desiring to contribute, together with suggestions as to reaching any photographer who might be interested in this feature of the exhibition.

All communications relative to this department should be addressed to Mr. J. P. Loud, 85 Water Street, Boston, Mass.

News from the Yukon.

FROM a letter written by Mr. J. B. Burnham from Fort Selkirk, on the Yukon, under date of Nov. 24, we make these extracts:

I have written you by the regular mail, which still costs \$1 per letter from here, and may cost the same all winter, but have a chance to send this out by parties going up the river. I wrote of the loss of two of our boats. Thank God, we have recovered both, and, instead of just having barely enough provisions to get through with, have enough to last us a year. The boats, which were carried away by ice from a point where we were about to camp, on Nov. 7, were found frozen in six miles below here on Nov. 17, having drifted in all about fifteen miles.

We have two stoves now, one having been given us yesterday by parties going out short of grub.

There is undoubtedly a great scarcity of provisions at Dawson; but plenty at Fort Yukon. We have had it 40 degrees below zero here twice, but don't mind it at all, feet, hands, faces and ears well protected. It is dry and crisp, and makes one feel full of ginger. The coldest last winter was about 60 degrees below, so we are confident that we can stand any degree of cold with comfort. The early winter seems to be about as cold as later here. Forty degrees below is called very cold weather here for any time of the winter. All going well and in best of health.

An Ohio Game Ground.

WITH three friends, Dr. J. S. Phillips, Dr. R. J. Phillips and Mr. William Littell, the genial secretary of the Duquesne Kennel Club, I spent two days hunting in Columbiana county, Ohio, about fifty miles from Allegheny, Pa., on Dec. 7 and 8, and this was the result: Forty rabbits, one squirrel, five pheasants and seven quail. I think this is a good lot of game for two half-days' hunting in a place I thought there was no game. There were plenty of birds, the dogs flushing about nine different coveys of quail and numerous pheasants. If this winter shall not be too severely cold, there will be plenty of birds next year, as the game laws are very well observed in that section of the country.

PHIL. F. SIMONS.

The Sportsmen's Exposition.

The Sportsmen's Exposition opened in Madison Square Garden, New York, last Thursday night, and will continue until a week from to-day. There is the usual extensive and varied display of those things which delight the sportsman's eye, and the show is full of interest throughout. There are this year new competitions, the list now comprising fly-casting, rifle shooting, bowling and billiards.

A Cuvier Reward.

THE Cuvier Club, of Cincinnati, offers a reward of \$10 for any evidence that will convict for violation of the law forbidding possession or sale of game in close season. President Alex. Starbuck or Secretary J. B. Scheide-mante will be prompt to give his attention to any such cases.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

Camp of the "Lone Kingfisher."

Little Presque Isle River, Michigan.

(Concluded from page 30.)

ONE of the Bessemer party—a young fellow whose name I have forgotten—was going down the river next morning "a-troutin'," and learning that he would not object to "an ole feller like me" for a companion, we arranged for a trip about three miles below, and probably as far as the falls, about four miles from the railroad bridge. I was over at their camp early in the morning, before the berry pickers had started for the berry patch, and when about ready to start we saw the Chicago party, with McLaughlin, disappear in the woods at the head of the gravel pit, where an old "tote road" led down to the falls. We struck into the same road soon after, as it was the only route by which we could get below without taking to the woods and brush, but we saw no more of them during the day. We followed the tote road probably a mile and a half through the woods, and into an old burning for a quarter of a mile or so, and then struck to the right for the river, another quarter of a mile away, through a growth of low bushes and briars and over old charred tree trunks and limbs that infested the way, which condition of things necessitated energetic language to make the going a little easier.

At the river we started in with plain worms for bait, as the banks were so lined with a growth of drooping alders—they nearly always droop over the water when you don't want them to—that in most places it was impossible to cast a fly. However, when I caught the first trout I used a fin as fly and bait nearly all the rest of the day, varied occasionally with a grasshopper for a change of diet.

I have found that when a trout can't be inveigled by a ventral or an anal fin from one of his brethren, by giving it the "sarcumventin' twitch," it is not much use to try any other lure, and I have figured it out that there is about as much science in fooling a wary old trout with it as there is in the much glorified "drop-it-on-the-water-like-a-snowflake" business—the time-frayed, old chestnut of the fly-fisher, especially when the fly is barred by the "bresh." This is a digression.

We fished along down the stream for over an hour, not covering more than a half mile in distance (two miles I made it out in hard work), taking a trout now and then; but the sport was rather unsatisfying, owing to the difficulty of making our way through the bushes along the bank.

In many places we could not get our rods over the water at all, and of course it was a plain case that along these stretches of water that we couldn't get at, the trout were lying along under the banks "thicker'n fleas on a Florida dog."

When we happened to find an open place or pool that we could fish comfortably, it seemed that most of the "elusive critters" had moved to the other places that we couldn't fish, or had been yanked out by other cranks earlier in the season, and that reminds me that my partner said he knew of parties coming over from Bessemer in May and June and taking back "loads" of over 400 trout at a time; others 300, 200, and on down to a score or less, as the season advanced. On one day of the previous week there had been thirty-four fishermen, by actual count, along the stream from where we were up to the bridge a short distance above it.

to the bridge and a short distance above it. under a drain like that, and yet there were "quite a few" trout left in it, and we managed to fool one occasionally, and were satisfied.

My partner had spent a season or two in a lumber camp not far from where we then were, and to him the stream and surrounding country were as an open book. When we got down to within three-quarters of a mile or so of the falls it was well into the afternoon, and he said it would hardly pay us to go on down, as the country got rougher and rockier and the stream harder to fish, and as I had about enough of it and each of us had a fair basket of fish, we climbed the bank and sat down on a log to rest and eat a few crackers we had left. I sweetened my portion with some luscious red raspberries picked from a patch of nearby bushes, and felt that I had dined sumptuously, considering the opportunities.

The only evidence of life we saw in this dreary waste of fire-ravaged country was a few crows and an old "buck" porcupine that lumbered out of our way and took refuge in a hole under the roots of a blackened and branchless old hemlock standing alone at the top of the bank overlooking the stream. The instinct to kill—inmate in most of us—did not overcome us, and we left the old fellow in peace and unharmed, to live out his life according to "porcupine lights." Besides, I was told, after we had ranged around the camp fire that evening, that there is a clause in the Michigan State law protecting porcupines at all seasons, for the reason that they are about the only animal a starving and lost man in the woods can kill for food without weapons.

We struck out into the burning and found the tote road (at least, my partner found it) 50 yds. or so from the stream—a mere blind trail through waist-high bushes that I never could have followed—and headed for camp.

He nosed out the windings of the blind path, hidden most of the way by overgrowing bushes, with the intuition of a fox hound, till we got into the green timber, where the road was broad and plain, and we reached camp a little before sundown, tired, hungry and hot, but happy, for we had passed a very pleasant day together and had t out enough for all. The Chicagoans had come in long before us, broken camp and taken the afternoon train back to Gogebic Lake.

I dressed twenty-six trout at the foot of the spring basin that evening, two of about three-quarters of a pound each, five or six of half a pound each and the others on down to the limit of 6 in. in length, and my partner's basket looked as well filled as mine; probably there were thirty fish in it. However, I did not ask him how many he had taken.

I stayed in camp the better part of the next day and

rested, toted up some wood for the evening camp fire, and sat on the log in front of the tent and smoked and cogitated, when I was too lazy to do anything else. Meantime I ate some more trout. (You see, I had not been where I could get any trout for a couple of years, and my trout tooth had become "powerful pesterin'," and I was trying to pacify it and make up for lost time.)

I fished a little in the shank' of the afternoon, just to keep my hand in, and when I got supper I ate a few trout—to keep my hand in, as it were.

That day the gravel pit camp broke up and went home, and the following day my near neighbors pulled up and took the morning freight for Bessemer, leaving me for company only a few inquisitive, restless bluejays (did any one ever see a bluejay sit still in one place for ten seconds?) and Mister Frisky and Mister Sassbox, the two little squirrels that had, as it seemed, become a part of my camp.

I sat late that night in front of my camp-fire, solitary and alone—the first time in a camping experience of over thirty years—with only the mellow "hoo-hoo" of a great owl back over the ridge, and the restful melody of the rippling spring branch to break the utter silence of the night.

The camp fire burned down, the fire in the old pipe went out, and I went to bed in a reminiscent and contented frame of mind and slept the sound and dreamless sleep that comes always to him who loves the woods and is content with mother earth and balsam boughs for a couch.

I was up with the sun next morning, and after the usual ablution in the cold water at the outlet of the spring basin I made my coffee and fried my bacon and trout with nothing to disturb the quiet of the morning except the snickering and scolding of Mister Sassbox, who sat on a limb a couple of rods away, taking a keen interest, as he made it appear, in the breakfast proceedings.

As this was to be my last day on the stream, I thought I would try and get a mess o' trout during the forenoon to take back to the boys in the main camp; and after clearing up the breakfast things and leaving some scraps for Sassbox and Frisky I went up the railroad a half mile to where the creek ran through some meadows—a sort of prairie country—but a few rods in places from the track.

The stream along through the meadows was narrow—3 to 4 rods. wide—deep and sluggish, except for an occasional short, rocky riffle, and then another stretch of deep, dark water below, with no perceptible current.

In some of the pools two and three miles below the bridge, where the water is from 10 to 30 ft. deep, it looks almost black, and yet the trout are very little darker colored than some I have taken out of streams as clear as spring water.

The meadows had been a famous part of the stream for big trout earlier in the season—fish that would run from 1 to 2½ lbs. and over—but, like the waters below, it had been fished to death.

I fished carefully along the meadows and down through some woods to the beginning of the cut, where the creek took a square turn to the right and kept on in a wide loop along the base of the ridge, shaped something like a horseshoe, around to the camp, which was not more than forty rods across the heel of the shoe from where I then was. I had been around this loop once, another day, and I didn't care to tackle it again, as the stream was rocky, rapid and shallow, except for a few small pools not far above the big spring, where I had taken my first trout. Besides, the day I fished around it, a distance of half a mile or more, I got into a tangle of weedy vines and "bresh" that I thought I never would get out of, and it was only by the hardest kind of work that I got myself out, and to the brow of the ridge, which I followed, completely "bushed" down to the camp. I didn't want any more of the loop, and I reeled up and quit for the season, with my trout tooth almost appeased. I had enough of fishing—but not enough of fish for the boys back in camp—for I had taken but three measly little fingerlings under 4 in. in length, and these I had returned to the water in accordance with the requirements of the fish law, but with a vehemence not probably in accordance with its intent.

The boys would get no trout, and I would have to go back to camp and sneak in the back way, as it were, and meekly take the scoring I was sure they would have laid up for me, and which would doubtless be "a-comin'" to me if I brought them no trout.

On getting back to the camp I spread my blankets and bedding out on the bushes to sun and air awhile before packing up, and meantime, having a few dressed trout in a pan sitting in the shallow water at the side of the spring, covered with another pan with a stone on it to keep the varmints out, I built a fire and prepared my last trout dinner of the year.

While sitting "a-straddle" of the table peeling the backbone out of the last trout, an ominous rumble of thunder in the west signaled the approach of one of the hasty storms "indigenous to that region," and from former experience I was warned that I hadn't much time to waste in packing my bedding into the canvas bag and getting it under shelter of the tent. Back over the ridge I could see a dark cloud rising and spreading and getting blacker as it came up, the thunder muttering at intervals and getting louder as the storm came on.

I finished my dinner in a hurry, gave the tin cups, plates and pans a "lick and a promise" with the dish towel, packed everything but the axe into the provision box, and covering it with a piece of green cedar bark, peeled for the purpose the first day, got into the tent as a few big, scattering raindrops sounded the prelude to the downpour that I could hear roaring through the woods as it came over the ridge.

For a matter of three-quarters of an hour I sat on the balsam boughs, with the canvas bag of bedding for a back-rest, and smoked the old brier root and enjoyed the music of the rain as it beat fiercely on the little tent, keenly alive to, and relishing at the same time, the boom and crash of the thunder and the blinding flashes of the lightning as they battled for the mastery in the black clouds overhead.

My spirits always rise with a thunderstorm, and the blood flows with a quicker throb, for it seems as if the invisible Ruler of all were rehearsing a symphony on the grand organ of the universe, with the stops all wide

open, to show us mortals the sublime power of the instrument when the Master is at the keyboard; but I may say that during a recital of this kind, with a pouring rain accompaniment, I had rather listen to and enjoy it under the shelter of a good tent.

The storm passed on, rumbling and growling, toward the east; the sun came out again brighter than before, it seemed, and I got out to sniff the freshened odors of the woods, made more fragrant by the recent pelting rain.

It was time, however, to think of getting the outfit over to the railroad track, for the train going my way would soon be due.

I took down the little tent, still saturated with water—but not a drop had gone through—and rolled it in a bundle by itself to be dried when opportunity offered; then three trips took the "calamities" to the railroad, and it only remained to go back and take a parting drink out of the big spring.

The spring is a remarkable one in volume, purity and coldness—almost, if not quite, as cold as our spring at the main camp on Presque Isle Lake (42 degrees), and as clear as it is possible for water to be. It gushes out between two great boulders at the foot of the ridge in a stream as large as an average sized man's thigh, and flows into a natural basin 9 or 10 ft. long and about as much across, the water near the inlet being probably 18 in. in depth. At the lower end of the basin it narrows into a strong stream, large enough, as it looks, to run a small mill, and finds its way through a dense tangle of overhanging and small bushes into the creek—dignified somehow into a river—about four or five rods away.

The section men of the railroad have thrown some old bridge timbers across the basin, just clear of the water, making a very convenient sort of a platform on which they walk out to fill their water barrel to take with them to their work along the track, and it was a mighty handy arrangement for the campers, too, as I found.

I filled my old "tank" with the delicious water, drank from an old broken beer bottle left there by some bibulous camper whose notions of the fitness of things must have been a trifle warped, and as I turned to go Mister Frisky popped up on his log a few yards up the side hill, skurried along a few feet, and stopping with a jerk as sudden as a cockroach, doubled himself up sideways and scratched his starboard ear with his starboard hind-foot—estimated at thirty strokes to the second—and then another jerk brought him on end, front face, and eyeing me curiously, as much as to say: "What! Going away? Well, good-by, old friend. Come back some time with more crackers."

I took off my hat and waved it at him in token of parting in good fellowship, but he must have misunderstood the demonstration, as he flipped off the log backward, as it looked, and that was the last glimpse I got of Mr. Frisky.

Mister Sassbox didn't make his appearance, and I was disappointed, for he and Frisky had been my friends and eaten at my board, as it were, and I was hoping that he would flirt out on a limb of his favorite tree near my fireplace and give me a good "sassin'" as a farewell.

Anyhow, I'll not soon forget my two little four-footed friends of Lone Kingfisher Camp, on Little Presque Isle River, for their cunning capers and friendly ways had been a fund of entertainment for me whenever I was around the camp, and I was sorry to leave them.

Back at the track, I tied my old red "bandanner" on a pole, so it would hang between the rails, and waited, not more than ten or fifteen minutes for the train.

The engineer—long may he live to pull a throttle—stopped 'er just at the right spot, and a brakeman and that level-headed, big-hearted conductor, Steve Connor, got out and helped me hoist the outfit into the baggage car, and we pulled away from Little Presque Isle with real regrets on my part, for I had spent the better part of six days there in unalloyed enjoyment and comfort, and—it would be a whole year before I could expect to inveigle another trout or find another camping place so entirely to my pleasement.

I mention the stopping of the train to take me on, only to show the accommodating spirit of the trainmen of the Chicago and Northwestern Railway Co. They will stop the train anywhere in the woods where there is a stream that an angler wishes to fish, and he has only to signal the engineer and they stop and take him on; and they make friends by it for themselves and the company they serve. May they live long in the land and prosper.

Ormes had promised to be ready, on the arrival of the train that Saturday afternoon, to start out to the lake with his team, and I was to go out with him, but when I got off at Marenisco I found he had to wait for the afternoon freight for some oats and baled hay that he wanted to take out to the resort. It took advantage of the enforced delay to hang the wet tent on a neighboring fence to dry out, and to get some supplies for the boys, who had sent the order in by one of the guides at the resort a day or two before. When the freight arrived—an hour late, as is usual when one is in a hurry—and we were ready to start, it was past 6 o'clock in the evening, which meant that we would have the worst part of the road to drive over in the dark. It was about dark when we got to the "floating corduroy," and for an hour we let the patient horses plod along, trusting to their better "night eyes" to keep the road rather than to our ability to see it; but Ormes is keen of sight, a very skillful driver, and knows the road perfectly, and this, with the intelligence of Blossom and Old Bill, kept us from coming to grief at several of the bad places along the road. Ormes said when the moon got up we would get along at a better pace and with less difficulty, and soon after we got glimpses of it, as it seemed to dodge through the trees off to our left, and our spirits rose with it; but in ten minutes it was hidden in a bank of black clouds, and the road was darker than before it had come up. The darkness was so intense that it was only when we came now and then to a spot where the woods was more open than usual that we could see the dim outlines of the horses; but Ormes said he could drive through by midnight, however dark it might be, and we kept on—jolt, jolt, bump, bang—over roots and rocks, into mudholes and chuckholes, till my back was so warped and strained holding on that I wished for a ball and socket joint in it to ease some of the shocks, when a wheel would drop with a thud into some unusually deep chuckhole. It was

a profound mystery to me, and is yet, how Ormes ever managed to keep in that road.

When we came to the old roofless lumbermen's shanty at the side of the road, a couple of miles from the State line, we stopped in the opening where the darkness was a little less dense, to rest the tired horses and hold a consultation as to the advisability of keeping on or camping out till morning. As it had clouded up everywhere overhead and got darker, if anything, and we had the very worst part of the road yet ahead of us—from the State line out to the lake—we decided to camp for the rest of the night, and a feeling and smell of rain in the air hastened the conclusion.

I fished a piece of candle out of the provision box, and lighting it, we explored around the old shanty till we found some pieces of boards, which I split up with the axe, and soon had a fire going. We gathered wood enough to make a roaring big fire that cast a good light for several yards around. Ormes cut some tent poles in the neighboring bushes, and we soon had the little tent pitched on a level, grassy spot just back of the fire. Then with a part of a bale of hay well shaken, the rubber piano cover, the mattress, blankets and the big comfort, we made a bed "good enough for the Joneses," and Camp Ormes was ready for the expected rain.

By this time the horses had cooled off and had to be watered and fed, but where the water was to come from I couldn't quite make out. Ormes got a bucket from the wagon—he always has one along—and with the remark, "There's a lake back there a piece in the woods," disappeared in the darkness behind the shanty and soon came back, noiselessly as the flight of an owl, with a bucket of fairly good water, from which I took a drink myself, but it was as "stump water" compared with the spring water I had been used to for the past week; still, it was water; and I was powerful dry. The ease with which Ormes found his way to the lake was to me another kink in his "woods larnin'," but he said he had been there before and couldn't very well miss it. However, after all, it seemed to me that he must have owl eyes, to make his way through the woods when it was so pitch dark that he couldn't see the end of his nose; besides, the blackness must have been more intense after he got out of the firelight behind and beyond the old shanty.

But some persons can see better in the dark than others, and Ormes is one of 'em.

With the horses taken care of, our work for the night was about done. Last, we stowed the hay and some other things under the wagon, the oats and messbox in the tent, replenished the fire and turned in. Ten minutes or so after it began to rain—a steady, straight-down rain—and in ten minutes more the soothing patter on the canvas and in the surrounding woods had put me to sleep and the fire out, and I knew no more till morning. We were awake at daylight to find it still raining steadily, the dripping woods musical with a melancholy melody, and the outlook about as dismal as it well could be. We put on our slickers and got out, to be greeted with a dejected whinny from the drenched and disconsolate-looking horses; but they were soon livened up with some oats, and while they munched them contentedly Ormes and I packed the canvas bag, loaded the things into the wagon, and with the wet tent spread over in such a way that it would shed most of the rain, were ready to tackle "that road" again. We had intended to build a fire and brew a pot of coffee and fry some bacon, but it was raining too hard to get a fire going without a good deal of trouble and loss of time, so we ate a slice of raw "side meat" and some crackers, and made believe that we had ordered quail and toast from an imaginary waiter, and it quieted the craving of the inner man just the same.

When the horses had finished their oats we "up anchor" (hitched up) and got under way—this may be taken partly in a nautical sense, as a good part of the road was under water—and went bowling, or rather bumping, along in fairly good humor, albeit the rain was coming down in a steady fashion that threatened to hold on till we reached camp, if not all day.

The road was bad enough even by daylight, and we were glad we had passed a comfortable night in the tent instead of groping our way blindly along it the past night, in the dark and rain. To any one who has been over the road from the State line out to the lake, after a good, long rain, a description of it would be of little interest; to any who have not been over it, a description that would do it justice would be impossible, unless a new set of adjectives and "cuss words" could be invented to fit the requirements of the case; and yet it is a fairly good road in dry weather. So I will pass over the episodes and details of our "voyage" from our night camp to the lake, and say only that we got there without losing any of our cargo and in good spirits, because it stopped raining when we were within half a mile or so of the lake.

But—"great airth and seas!" as Uncle Lisha would say—here we are nearly back to camp, and I have forgotten to tell how many trout I caught. In answer to the universal query that one runs against when caught with a fishpole on his person—"How many did ye ketch?"—I will say that while I was on the stream I took out of it 107 trout that would not fall below the legal limit of 6 in. in length, and a good many of them were over that. Besides, probably fifty or sixty more of 3 and 4 in. that I returned to the water, to swell the count of some trout hog that will fish the stream next year, mayhap before the season opens.

I ate trout early and late, at every meal, till toward the last I have a notion that some spots were "a-sproutin'" along my lateral line, and I felt kinder skeery and wary, like an old trout, so to speak. My trout tooth got its "satisfy," but at this writing it is a trifle in evidence again, and from now on it will keep "a-pesterin' of me" more or less till I get on a trout stream next year—unless I have it pulled out, and I am afraid to chance that kind of a remedy, for the roots of the old thing reach clear to the heart, and are still "a-growin'," metaphorically speaking.

When the horses were put away in the little log stable near the landing, we transferred our cargo to a boat left for us, and pulled up and across the bay to "Stagg's dock," in front of the camp, arriving there some time after 8 o'clock in the morning.

Ormes went on over to the resort, and I climbed the

bank, to be met with a frigid stare from the boys (a set-up job on me, for the occasion, as I learned shortly); but they thawed out when they learned I had brought some salt pork and a few other delicacies from town that they were much in need of. They had run out of two or three of the camp necessities, chargeable to the improvidence and utter worthlessness of the "new coon" whom old Mack had sent in his place for the trip—but who didn't fill it—and they were a trifle out of sorts in consequence; but the supplies I brought out, notably the contents of a mysteriously bound box, expressed from Cincinnati by old Temp to the Colonel, put them all in good spirits again, and I reckon it was largely due to that box that I escaped a court-martial, or hanging to the first handy limb, for not bringing them some trout.

A good-sized breakfast made me forget all about the discomforts of the trip over "that road," and Frank Cannon and I set about planning for a trip over to Pappoose Lake next day after bass, and mayhap a maskinonje or two.

"Old Hickory's troutin' trip" to the Little Presque Isle River was a realized dream, to be stored away among other reminiscences, but it will abide in memory as one of the "pleasant episodes o' life," as old Sam would say, for I spent nearly a week there in perfect peace and content, and happy "clean through."

And now, Bre'r Doc, if you can find any entertainment in the foregoing prosy details of a trip in which there was little to interest any one but the subscriber, I will be more than satisfied; however, I am afraid my gregarious proclivities have received a serious backset, for next year the "sperrit" will no doubt move me to meander off miles from the main camp and make another Camp of ye Lone KINGFISHER.

Fishing Up and Down the Potomac.

Trout near Washington.

DANIEL WEBSTER was a trout fisher, and probably used the fly; at any rate, a friend of his told of being awakened once by Webster, who was standing by his bedside, and who proceeded to go through the pantomime of casting, striking, playing and landing his fish. Not a word was spoken, and he left the room. The narrator added that day was devoted to fishing.

Webster manifested the importance he attached to the recreation, as well as his faith in restrictive legislation, when he said: "It has so happened that all the public services that I have rendered in the world in my day and generation have been connected with the general Government. I think I ought to make an exception—I was ten days a member of the Massachusetts Legislature, and I turned my thoughts to the search of some good object in which I could be useful in that position, and after much reflection I introduced a bill which, with the consent of both houses of the Legislature, passed into a law, and is now a law of the State, which enacts that no man in the State shall catch trout in any manner other than in the old way, with an ordinary hook and line."

Of course, most of his trout fishing was done among the granite hills of New England, but he was not obliged to entirely deny himself indulgence in his favorite pastime while in Washington, and legend has it that he made many trips to Difficult Run, a small stream which empties into the Potomac from the Virginia side a few miles from Georgetown, and at that time full of brook trout. His host on these occasions is said to have been Mr. Powell, who lived in that vicinity, and whose descendants still live in this, and his wonderful baskets have lost nothing in these many years in size or number. Mr. Charles Lanman, giving some of his personal reminiscences of Webster, with an account of numerous of their excursions, incidentally mentions having sent to Mr. Webster, for a breakfast he was giving some friends, two dozen trout, which he (Lanman) had taken in Difficult Run, "only fifteen miles from the metropolis."

It was reached then by driving; over the Aqueduct or chain bridge it is not a long ride. The easier way now is over the Washington and Ohio Railroad toward Round Hill, which crosses Difficult Run a few miles beyond Vienna.

The run is well named, as there are portions of its length even now that in their summer foliage are as impenetrable as a jungle, and the heat and mosquitoes, on one of our trips rather late in the season, we found as irritating as in a cypress swamp.

One need not now risk the discomforts of a trip along its banks for trout, for they are no longer to be found here. The clearing away of the forests since Webster's times has let the sun down to the lands on either side, and the water becomes so heated in midsummer that the trout no longer bide; besides the heat, the cultivation of the soil in its valley muddies the stream with every shower, and for most of the year it is not attractive. It is said that local sawmills along its course in former years had something to do with the destruction of the trout, but these could be easily replaced if the water was any longer fit.

Into Difficult numerous small tributaries empty, and these have mostly some native trout near their headwaters, where cool springs and shade a-plenty keep the water low enough to satisfy these little arctic aristocrats.

Piney Branch, one of these small streams, runs past Vienna and reaches Difficult below, but near the railroad. It was within two or three years a sure card for a brace or two. New owners who object to strolling anglers have purposely destroyed the haunts and holes where the trout hid, that there might be no attraction for the vagrant rod.

Strange what a red rag it is to some people, and how unjustifiable their prejudice! Two places an angler avoids if he can: Where there are no fish, and where he thinks he is regarded as a trespasser. His one effort is to get as far away as possible from people—the fishing is generally better—and he enjoys best, with a congenial chum, that day spent in the depths of the woods, with only blue sky and green trees and a crystal stream, with a hungry horde, for other companionship. Of course, under such discouraging methods most of the trout disappeared from Piney Branch, but one of the Difficult

land owners said there had been a few left, but that recently a tomato cannery had been erected up the Branch, the refuse of which was thrown into the stream, "and now," he moaned, "my cows won't even drink the water." This is only mentioned as an awful example, by way of warning, of the swift retribution which is liable to overtake those unhappy, inhospitable creatures whose hearts are hardened against the gentle angler.

Little Difficult and Wolf runs, which reach Difficult above the railroad crossing, also have occasional trout, and are pleasant enough fishing, but the gem of the lot is Snake Den Run. This is an ideal trout stream, looking much like a New England brook, with its stony bed and green coverts, though with much less fall than most of the latter, as it is this side even of the foothills of the Blue Ridge.

Colvin Run, the most considerable of the series of tributaries to Difficult, has furnished the larger catches, and ought next year to give good sport. A resident on its upper waters procured 500 rainbow trout from the Fish Commission for a private pond which he had constructed; but the sappers and miners of dikes, the muskrats or crawfish, tapped it soon afterward, and all the trout found their way into Colvin Run. These will be three years old come next spring. Then, last year, at the solicitation of Mr. Jesse Middleton, 500 more rainbow trout (yearlings) were placed in this run, so it will afford additional interest next season, as a test both of its water and the Western trout. As these sometimes thrive in water of 82 degrees, they may be able to survive the heat of the waters of Difficult Run, and again stock this once famous stream.

A couple of anglers from Baltimore come down to this little network of runs very early and very late each season for a day's fishing; and two or three from Washington generally manage to get a day here in the spring. Native speckled trout (*Salvelinus fontinalis*), or char, as we are told we must call them now, have been taken here in late years of 13 in. A double brace of this length were caught in one day here not many years ago, but this is the modern record for this locality, and other days and other anglers never came near it, though fair creels up to ten and a half were not uncommon.

But only an enthusiast wants to make the trip. It means a long tramp and delicate, careful work, and strikes far apart.

A veteran angler has been known to so far succumb to the very hard work and a prematurely sultry spring afternoon that a liberal application of cold water was necessary to restore him.

When one has to have recourse to such heroic measures as applications of cold water to an angler, it may be guessed how desperate the situation, how complete the exhaustion.

Further up the line a dozen miles is Leesburg, and near this has been for a good while a private preserve called Harrison's. It is fed from a mammoth spring, and large rainbow trout thrive in the short and sharply descending stream to the Potomac. A couple of years ago a spring freshet flooded its banks, and after it had subsided, dead trout above 3 lbs. in weight were found in an adjoining cornfield over which the flood had poured. President Cleveland was a visitor to this preserve once or twice, and good catches were reported. The place, however, has been recently purchased by a New York gentleman, it is said, for a thoroughbred stock farm, and he may not care for trout.

As it is private, it is of little interest to the general angler, except for the comfort of knowing that trout will thrive and grow above 3 lbs. so close to Washington.

HENRY TALBOTT.

ANGLING NOTES.

The Bullhead and the Miller's Thumb.

THE following is translated from Bulletin de Pêche et de Pisciculture Batique—Paris, September, 1897:

"We, in France, entertain scarcely any doubt that this poor little, despised fish (the bullhead) forms a large part of the fish food supply of Americans, and that in certain parts of the United States it is so abundant that it is considered as injurious. Our confrere in New York, FOREST AND STREAM, in its number of Aug. 21, 1897, and under the signature of Mr. A. N. Cheney, gives to the subject some interesting details.

"In 1895 there were consumed in the State of New York alone 200,000 lbs. of bullheads, which were caught in the State, and four times as many taken outside of the State. Imagine how large a number of these little fish had to be caught to make a total of 1,000,000 lbs. They are so numerous in all the streams that they are caught in large quantities by even the most primitive means, but especially with hook and line. In France, on the other hand, bullheads are very rarely caught with a line, but in America that is the method of self-destruction which they seem to prefer. They seize a line to which are attached several hooks baited with a morsel of meat, and with such eagerness that four, five and even seven are caught at one time.

"Mr. Cheney cites a remarkable example of the bullhead's greed. During a fishing tour which he made to one of the Adirondack lakes, in northern New York, he ran out of bait. It thereupon occurred to one of the fishermen with him to bait the hook with a tiny bit of sponger which served for the purpose of bailing the boat. At once the bullheads seized upon this novel kind of food, which surely could not have been appetizing, with as much apparent pleasure as if the hook had been covered with a worm or bit of meat, and the sport continued, all the time attended with the same good luck, and with that economical sort of bait, so that it was no longer necessary to freshly bait the hook after each catch."

When I got thus far I turned to FOREST AND STREAM of Aug. 21, to see if I had actually said anything of the sort, or anything that could be tortured into such a statement in a free translation, for that is more than Hank Wilson would declare as truth—when beyond the influence of a camp-fire. I find that I simply related Hank's experiment of putting a piece of sponge on Commodore Witherbee's hook, but no bullheads were taken on it.

Willing as I am to accept his statement that he killed a Rocky Mountain goat in the mountains of Essex county, New York, not long after an old ram strayed from some farmer's flock, I happened to be present during the sponge episode, and I regret that Hank's joke should have been taken seriously in France through an imperfect translation of what I wrote.

The writer in the French Bulletin, Mr. C. de Lamarche, comments further upon the article in FOREST AND STREAM, and adheres in the remainder of the article to what I really said in his translation from English into French, except that he assumes that the threatened destruction of salmonidae by bullheads is more widespread than the facts narrated would warrant. He concludes: "In France bullheads will never be so abundant as to present the signal inconvenience arising from their numbers on the other side of the Atlantic, and they will not, therefore, cause the trout to disappear from our streams. They will, rather, furnish them an appreciable means of support in their food supply. Let us, then, suffer the Americans to call down the severity of laws upon the bullhead, and let us, when the occasion offers, be content to catch with a line that very ugly, but very interesting little fish, in order that our savory dishes of fried gudgeon may be thereby embellished."

It is, perhaps, scarcely necessary for me to point out where I have been misquoted, as my article will speak for itself; but the fish that Mr. de Lamarche writes about forms no part of the fish food of this State or the country. In writing of the bullhead, he means the freshwater sculpies (*Cottus gobio*), Miller's thumb or blob. The bullhead I wrote of belongs to another species, another family and another order, called also horned pout, one of the catfishes, and specifically *Ameiurus nebulosus* (Le Sueur) or *A. catus* (Jordan & Gilbert, 1883). This is an entirely different fish from the Miller's thumb, and grows to 2lbs. or more in weight, and is an excellent food fish when it is in condition. I never even heard of any one eating the Miller's thumb or mufflejaw, except, perhaps, the Ichthyophagous Club members, when they were trying most every thing that swims or crawls or lives in the water. In the first place, the Miller's thumb is not large enough to bother with, as it grows only from 3 to 6 in. in length, and while it is common enough, one never finds them unless they are searched for, and we have so many edible fishes that no one would take the trouble to search for blobs, and I have never known one to take my hook.

Mr. de Lamarche credits me with saying that New York furnishes 200,000lbs. of bullheads in one year and four times that amount was furnished outside of the State. What I did say was that the bullhead product in New York was four times greater than that of any other fish from State waters, except the shad; but it is safe to say that Mr. de Lamarche does not half state the case when he makes the bullhead product in this country 1,000,000lbs., for it is a favorite and cheap food and the fish are very prolific and are easily caught with hook and line, and they are so generally distributed that if a water contains any kind of fish it is pretty sure to contain bullheads.

Mr. Harmsworth's Gift.

The cable informs us that Mr. A. C. Harmsworth, of London, has presented the steamship Windward to Lieut. Peary, to be used for Arctic exploration. Mr. Harmsworth will have the ship thoroughly overhauled and put in order and sent to this country. I have told in this journal how Mr. Harmsworth happened to be in this country tarpon fishing (he afterward wrote of his experience in Florida waters and it was published in FOREST AND STREAM, and while at Naples read in a newspaper that Mr. Jackson wished to undertake a journey toward the pole. He hurried back to London, and told Mr. Jackson to fit out an expedition and send him the bills. Then Mr. Jackson did so, and the bills amounted to \$125,000. It was Jackson who found Dr. Nansen, or Dr. Nansen found Jackson, for I do not quite know how to state the fact that they met, and Dr. Nansen came home in the Windward. When the ship went north for the last time, to bring Jackson home, Mr. Harmsworth wrote me that he was going in her with a party of friends, to be left to explore some trout waters in Siberia. Within a year past Lieut. Peary told me that if we had had a Harmsworth in this country all that could have been known about the North Pole would have been known long ago. One of the New York daily newspapers, in an editorial article, says today: "The thanks of the whole American nation, or that portion of it that appreciates generosity and heroic achievement—and does not that mean the whole?—are due to Mr. Harmsworth."

He could not help doing a generous act like that, for he was born to do such things, and as two of his three hobbies are Arctic exploration and fishing, it is quite natural that his generosity should at this time be directed toward the North Pole hobby. Mr. Harmsworth has promised me some notes for FOREST AND STREAM on his fishing in India when he can take the time to write them.

Fish Protection in 1734.

My friend Mr. Harry S. Brown, of the New York Herald, discovered and sent to me a copy of an interesting ordinance in regard to fish protection in New York city, passed in 1734, which reads as follows: "Ordinance of the Common Council of New York city, 1734. Be it ordained that if any person or persons whatsoever do, from henceforth presume to put, place or cast into the pond, commonly called Fresh Water Pond, belonging to this corporation, any hoop net, draw net, purse net, casting net, cod net, bag net or any other net, or nets whatsoever, and shall take or catch any of the fish within the said pond therewith, or by any other engine, machine arts, ways or means whatsoever than by angling with angle rod, hook and line only, every person so offending against the tenor of this law shall for every offense forfeit and pay the sum of 20 shillings, current money."

Mr. Brown writes me that Fresh Water Pond was filled up about 1800, but it was about midway of the island, or a little to the west of midway, and not far north of Canal street. I was not aware that the fight to exterminate the fish of this country began so early, but the net fishermen must have commenced their work

previous to 1734 to have made it necessary to pass such an ordinance, the language of which shows conclusively that its framers knew just what to pass to reach the root of the trouble. It was not until the comparatively recent codification of our State game laws that angling was again defined to be with rod or hook and line held in the hand; but with such a pattern set for the law-makers it is rather surprising that it was not followed at an earlier date.

A. N. CHENEY.

Sport near Home.

I WAS startled from a sound sleep at 3:30 one morning in October last by a cautious knock at my chamber door. "Who is there?" I growled, thinking to frighten the wits out of the villain who would dare disturb my slumbers at such an unearthly hour. To my surprise the small voice of my twelve-year-old youngster replied: "Get up, pop. I've got a lot of grasshoppers, and know where there are some fine black bass, but we must get after them early."

This was more than I could stand, so I hurried on some old clothes and found downstairs the little fellow had all the fishing tackle in readiness, besides our two bicycles, as we had to ride about a mile and a half. It seemed strange as we left with our wheels, for the night was so dark it was impossible to see the front tire, and it threatened rain. After going about a mile, my boy leading the way, with no serious mishaps except occasionally striking a rock in the darkness and falling off, the rain came on. It seemed to grow even darker, but the rain only dampened our clothes, and not our ardor.

We reached the woods, dark and thick, through which we had to travel by path to the little lake. Shouldering our wheels, we stumbled along, losing the path at every turn, but the little fellow had been there before, and believe, with his sense of location, could have led the way blindfolded. We reached the lake, which we could scarcely see for darkness and heavy mist, and after standing our wheels in some brush, we felt our way along the sloping bank, endeavoring to find an opening through which we might cast our grasshoppers. We soon found a short path. We did not see it, but were conscious of the opening as the foliage brushed from our faces and we felt the hard path under our feet. We groped our way down this path a few feet, and leaning a little over the water, the bushes cleared away for a small distance on each side—just such a place as you always find on the shores of lakes and ponds where the boys and enthusiastic anglers make their frequent stand.

Up to this moment matters had gone on smoothly, considering the difficulties we had to contend with, the rain and the pitch darkness. There was no such thing as "seeing." Our eyes were useless. We were obliged to use our sense of feeling to its utmost capacity. I never thought, when I took my fine bass rod, with its numerous eyes so close together, of the experience there was before me, as it took me exactly three-quarters of an hour to thread the line through the eyes on my rod. It was then about 5 o'clock. Wallace, my son, had gone away into the darkness to cast from some position of his own choice. The rain continued steadily, and I could not see the water less than 5 ft. below me. I cast my line with great difficulty, being guided entirely by the dropping of the grasshopper on the water, then drawing cautiously in and raising my pole straight up in front of me till I could feel the line swing against my outstretched hand, when I would learn if my grasshopper was still well hooked, and carefully cast again.

In this way I must have fished for an hour without a single nibble. The day was dawning very slowly, and the heavy mist was trying hard to raise from the pond. The rain had nearly ceased. I had become somewhat discouraged and reckless, as a fisherman generally does when he has fished for an hour and a half without a bite. I had put two grasshoppers on my hook instead of one, thinking to attract the fish better in the darkness. I could see, through the mist, Wallace sitting on a stone round a turn in the pond. I imagined from his position that he had lost interest, and I called out to him asking if he had caught anything. The only answer I received was a cautious "cis-s-se" between his teeth, which I misunderstood, thinking maybe he had had a bite and did not wish to be disturbed. Casting my eye across on the other side of the lake, I saw that a nice open, grassy bank ran down to the water, giving free space to cast in, and not noticing the excited gesticulation of the youngster, I hastened to the spot and out of sheer desperation put four fresh grasshoppers on my hook. I could now cast freely from 40 to 50 ft., and as I did not get a rise I gave up the idea of catching a fish and continued casting, with the feeling that I was at least getting good practice. A beautiful cast threw the bunch of grasshoppers fully 50 ft., gracefully dropping on the water. They had scarcely disappeared below the surface, when, to my surprise, my pole was almost jerked from my hands. Coming to my senses, and giving a short, quick jerk, I hooked the fish, which soon proved his identity by jumping fully 2 ft. out of the water.

He made a beautiful fight, but was well hooked; so I played him cautiously up and down the shore for exactly fifteen minutes before I conquered and raised him onto the bank. He was a beauty, and curled up on both sides of my reel, being much too large to lie flat on the bottom. It was a large-mouth bass and weighed plump 2½ lbs. after reaching home. I caught two more small ones quickly, and before Wallace had reached me, for he was hurrying around the edge of the pond with suppressed excitement in his face, which I mistook to be caused by his seeing my sport in catching the fish.

The day was now breaking the best it could on so dark and dull a morning. Sounds of the farmers awakening to their early toil filled the air. A lot of chickens were making a great noise, leaving the roost in a barn about 200 ft. up the bank, and several dogs began to bark savagely, and the youngster said: "Pop, we better go now; they don't bite here so late."

Looking at my watch, I saw we would just reach home in nice time for breakfast, so I hurriedly did up my tackle, pulled our wet wheels out of the bushes and hurried home.

The underbrush was wringing wet, likewise ourselves, by the time we emerged from the woods out on to the

main road. Up to that time I was totally innocent of having done any wrong or run any risk, when something prompted me to ask Wallace why it was necessary to get to the place at so early an hour. He laughed as if to split his sides, and replied: "Why, because you have to leave the place early," and added: "Pop, I thought we were done for sure when I heard the dogs bark." Then he pointed up to two large chestnut trees on each side of which were posted signs: "Fishing prohibited under penalty of the law." "You young rascal," I said, but he had mounted his wheel and was going fast toward home, still enjoying the joke. WM. W. HART.

NEW YORK.

Sportsmen's Association of Cheat Mountains.

PITTSBURG, Pa.—*Editor Forest and Stream:* The association was chartered under the laws of West Virginia in 1886, and took a fifty-year lease for hunting and fishing on 57,000 acres of land and water, afterward adding 7,000 acres. The property is 3,200 ft. above sea level, in Randolph and Pocahontas counties, West Virginia. It is reached by a beautiful drive of twenty-six miles from Beverly. Sixteen miles is up the charming Tygart Valley to the foot of the mountain, and then for ten miles up and over the Staunton and Parkersburg pike to the club house.

The valley is under more or less cultivation, but the surroundings are immense tracts of timber extending for miles and miles. The club house is of logs, two and a half stories high, 40x60 ft., with outbuilding for the superintendent, his family and the wardens. The house is furnished with all the comfort any sportsman could expect—clean beds and good victuals.

Wild turkeys, pheasants, squirrels and deer are quite numerous, with an occasional bear or wolf thrown in. It is estimated that we have 200 miles of trout stream, all more or less supplied with fine fish. We are not awaiting the depletion of our streams, but have taken time by the forelock and established a hatchery. In a short time I believe we can turn loose 500,000 trout annually.

Last year we tried raising Mongolian and English pheasants, and considering that our superintendent was not an expert, I feel that we did very well. But it was only an experiment, and whether or not we will follow it up I cannot say. Our membership is limited to 200, and, I am pleased to say, is fully taken, and by a lot of men as clever and gentlemanly as can be found. Occasionally some one dies or desires to drop out, in which event the stock must be offered to the club. In case the club declines to purchase, the owner can then dispose of his shares, but the purchaser must be elected a member before the transfer be made.

J. H. STEWART.

Wakeman Holberton.

Mr. Fred Mather writes: "For over ten years Holberton and I planned fishing trips, but they ended with the plans. Yet we enjoyed the planning, which, after all, is no small part of the enjoyment. We ate many a dinner at our favorite restaurant, in order to arrange details, which somehow were never carried out, but he was a man who enjoyed a game dinner, and perhaps we lost nothing by not fishing together. The day might have been plagued with an east wind, filled with fog and rheumatism, or the boatman might have failed us; but, if the fish were or were not on the feed, Holberton and I would have had a good day."

"Comrade Holberton was one of the best known anglers in New York city. For many years he was a salesman in the fishing tackle house of Conroy & Co., and then went with the firm of Abbey & Imbrie. His plate of "Standard flies," which has been lithographed, is a recognized standard, and brought order out of chaos. He was the organizer of the Oratani Snow-shoe Club of New Jersey, secretary of the New York City Association for the Protection of Game, and has contributed articles to FOREST AND STREAM on moose hunting, fishing and other field sports.

"He was an artist, and not only painted trout flies, but trout, bass and other fishes, and some of his pictures sold for good prices.

"Holberton went to the front in 1861 as a volunteer and worked his way up to a first lieutenantancy in the 72d New York Volunteers, and was honorably discharged for disability in '62, and was afterward breveted captain and major for gallant and meritorious conduct. Some three years ago he had a paralytic stroke, and was forced to retire from active work. I was to visit him on Jan. 27 next and arrange for some loach fishing in the Hackensack River next March."

The National Fish Commission.

From the New York Times, Jan. 7.

THERE seems to be something more than rumor in the assertion, not denied at Washington, and likely to be affirmed by an early batch of nominations sent from the White House to the Senate, that the President will name for Fish Commissioner a man who can by no stretch of the imagination or conscience be regarded by the President or by any other man who can read the law as legally qualified to hold that important position.

The law which the President has sworn to execute prescribes that the Commissioner of Fish and Fisheries shall be "a person of scientific and practical acquaintance with the fish and fisheries of the seacoast and inland waters." Senator Elkins has a constituent, not a "person of scientific and practical acquaintance" with anything in particular, but simply acquainted with Mr. Elkins, and having a well-developed desire to have a place with a large salary. This man's acquaintance, such as it is, with fish and fisheries, has been obtained in six months by reading more or less diligent. Senator Elkins has jocularly referred to the fact that he has had his candidate "coached" in order to enable him to comply with the law and get a place.

There are several candidates for this office. None of them is quite so ignorant, in the view of the law, as the candidate of Mr. Elkins. Several of them have been well educated and carefully trained in the service of the United States and with the Fish Commission. They are

properly equipped for the place and for the satisfactory discharge of its duties.

Amazing as the unpalatable report from Washington must be to all men who desire to see the President act courageously and wisely in making such appointments, it seems to be determined beyond the possibility of adverse argument that Senator Elkins shall make this appointment and that a totally unfit man will get the place. President McKinley knows the law. Senator Elkins undoubtedly knows it. So does the man who has been studying six months to become a "person of scientific and practical acquaintance with the fish and fisheries of the seacoast and inland waters."

If Senator Elkins's coached candidate shall be appointed by President McKinley, will not that appointment look like a deliberate surrender of his prerogative and his independence to a Senator who is not above contempt for the law? A President who reads the newspapers cannot plead ignorance of the total unfitness of Mr. Elkins's candidate. Under the circumstances the appointment of this West Virginia man at the behest of Mr. Elkins will be about as disgraceful a performance as has been reported from Washington for many years.

And yet it is insisted that there is no chance for anybody except Elkins's man. Will Senator Frye stand calmly by and allow the law which he procured to be put upon the books to be violated by the President?

Anglers' Tournament.

To be held at Madison Square Garden, Jan. 13-22.

RULES GOVERNING THE CONTEST.

Rule 1.—All contests shall be governed by two judges and a referee. In case of disagreement the referee shall decide.

Rule 2.—No one shall be permitted to enter any contest, except those "open to all," who has ever fished for a living; who has ever been a guide or has been engaged in either the manufacture or sale of fishing tackle.

Rule 3.—All persons competing for prizes shall pay an entrance fee of \$2 for each event, or \$5 for three events, and \$1 for each event in excess of three. No entrance fees will be required in the ladies' and press contests.

Rule 4.—The order in which contestants shall cast shall be determined by the judges. The contestant must be ready when called upon by the judges.

Rule 5.—The leader and fly in each contest must be intact at the time of record by the judges, and the length and weight of rods must be recorded.

Rule 6.—Arrangements shall be made by the judges to accurately determine the point at which the fly or frog falls.

Rule 7.—Contests shall be called promptly at 3 P. M. and 8 P. M.

Rule 8.—After the contestant has taken his place on the stand his time shall be counted from the moment he says "Ready," and the first cast thereafter shall count. The longest cast during the five minutes succeeding the word "Ready" shall be taken as his record for distance.

Rule 9.—The rod must be held in one hand, and shall not exceed eleven and one-half (11½) feet in length, except when otherwise specified.

Rule 10.—The barb and point must be removed from all hooks used.

Rule 11.—Trout flies on hooks not smaller than No. 12 shall be used, unless otherwise specified. Leaders, which must be of single gut, shall not be more than nine (9) feet in length, or less than six (6) feet, unless otherwise specified.

Rule 12.—Time will be allowed, in case of accident, to make repairs, at the discretion of the judges.

Rule 13.—The switch, or Pritchard, style of casting will not be allowed, except in the class devoted to that method of casting.

Rule 14.—All difficulties or disputes arising and not provided for in these rules shall be decided by the judges.

DESCRIPTION AND ORDER OF CONTESTS.

Thursday, Jan. 13. Afternoon from 3 o'clock.

No contest. The tank and platform will be open for practice.

Evening at 8 o'clock.

Class A.—Black bass fly-casting contest. Distance only to count. A No. 4 fly to be used, which will be furnished by the committee. Open only to those who have never cast more than 75ft. in any similar contest.

Friday, Jan. 14.—Afternoon at 3 o'clock.

Class B.—Fly-casting contest. Accuracy only. Distance 40ft. Open only to those who have never cast more than 75ft. in any single-handed fly-casting contest. After the contestant has signified his readiness, he shall make five (5) consecutive casts at a buoy. The contestant will then commence to cast with his back to the buoy and at any moment, at his option, shall wheel around and make a single cast at the buoy. Five of these casts shall be made. The distance in feet and inches at which the fly drops from the buoy at each cast shall be noted, and the sum of all these distances, added together and divided by ten, shall constitute the score. The contestant having the lowest average shall be declared the winner.

Evening at 8 o'clock.

Class C.—Light fly rod contest. Distance only. The rod must not weigh more than 5oz., with an allowance of ½oz. for solid reel seat. Open only to those who have never cast more than 75ft. in any similar contest.

Saturday, Jan. 15.—Afternoon at 3 o'clock.

Class D.—Light fly rod contest. Distance only. The rod must not exceed 4oz. in weight, with an allowance of ½oz. for solid reel seat. Open only to those who have never cast more than 75ft. in any similar contest.

Evening at 8 o'clock.

Class E.—Obstacle fly rod casting. Distance only. Open to all. Rods and length of leaders unrestricted. A horizontal bar, under which the cast must be made, will be placed in front of the contestant at a distance of 30ft., and 6ft. above the level of the tank.

Monday, Jan. 17. Afternoon at 3 o'clock.

Class F.—Ladies' fly-casting contest. For distance only. Unrestricted. Open to all. No fees will be required in this contest.

Evening at 8 o'clock.

Class G.—Obstacle fly-casting contest. For delicacy and accuracy. Open to all. There will be placed on the left side of the tank a bush overhanging the water 3ft., and above the surface 3ft., distant from the casting platform 30ft., and on the right side of the tank a similar bush, under like conditions, distant from the platform 40ft. The contestant will be allowed five casts at each bush. The contestant who places the fly most delicately and nearest the side of the tank, under either of the bushes, shall take first award.

Tuesday, Jan. 18. Afternoon at 3 o'clock.

Class H.—Fly-casting contest. Distance only. Open only to those who have never cast more than 75ft. in any similar contest.

Evening at 8 o'clock.

Class I.—Switch or Pritchard style contest. Open to all. Rods and length of leader unrestricted. An obstacle, 12ft. high, will be placed 15ft. back of the contestants.

Wednesday, Jan. 19. Afternoon at 3 o'clock.

Class J.—The press fly-casting contest. Open only to members of the press. Rods and length of leader unrestricted. No entrance fees will be required in this contest.

Evening at 8 o'clock.

Class K.—Single-handed bait-casting contest. For distance and accuracy. Open to all. Five casts shall be made with ½oz. rubber frog, to be furnished by the committee. Free running reel to be used. No limit as to rod or line, but the line must not be leaded or weighted. For accuracy five casts shall be made at a buoy placed 60ft. from the casting point. The casts to be made with the ½oz. rubber frog, and for each foot that the frog falls from the buoy, a demerit of one shall be made; the sum total of such demerits, divided by five, shall be considered the demerit per cent.; the demerit per cent. deducted from 100 shall be the accuracy per cent. The average distance cast, added to the percentage for accuracy, shall constitute the score.

Thursday, Jan. 20. Afternoon at 3 o'clock.

Class L.—Black bass fly-casting contest. Open for all. Distance only to count. Flies tied on No. 4 hooks furnished by the committee to be used. Rods and length of leader unrestricted.

Evening at 8 o'clock.

Class M.—Fly-casting contest. Distance only to count. Rods and length of leader unrestricted. Open only to those who have never cast over 96ft. in any similar contest.

Friday, Jan. 21. Afternoon at 3 o'clock.

Class N.—Light rod fly-casting contest. Distance only. The rod must not exceed 4oz. in weight, with an allowance to be made of ½oz. for solid reel seat. Length of leader unrestricted.

Evening at 8 o'clock.

Class O.—Fly-casting contest. For accuracy only. Distance 60ft. Open to all. Rods and length of leader unrestricted. After the contestant has signified his readiness he shall make five consecutive casts at the buoy. The distance in feet and inches at which the fly drops from the mark at each cast shall be noted, and the sum of all these distances added together and divided by five shall constitute the score. The contestant having the lowest average shall be declared the winner.

Saturday, Jan. 22. Afternoon at 3 o'clock.

Class P.—Light rod fly-casting contest. For distance only. Open to all. Rods must not exceed 5oz. in weight, with an allowance to be made of ½oz. for solid reel seat. Length of leader unrestricted.

Evening at 8 o'clock.

Class R.—Expert fly-casting contest. Open to all. Distance only. Rods and length of leader unrestricted. The prizes in each contest will be a handsome gold, silver and bronze medal, donated by the National Sportsmen's Association of New York.

Tournament Committee.—Wm. C. Harris, Chairman (American Angler); Robt. B. Lawrence, Gonzalo Poey, Secretary; Frederick Engle, Chas. A. Bryan.

THE MAN IN THE CLOCK TOWER.

The High Seas.

FROM my eyrie up here in the Tower I can look away beyond the Narrows and out to sea, that boundless sea the poets sing about. And now what bothers me is to know how the United States is going to enforce the new law forbidding pelagic sealing. As I understand it, seals are *feræ naturæ*, wild animals, and when they are found on the high seas they belong to nobody nor any power, dominion or Government, any more than the Mother Carey's chickens do when they flit over the ocean.

And how, in the name of maritime and international law, is the United States Government going to exercise jurisdiction over you and me when we want to take seals on the high seas? These are questions. We all believe that pelagic sealing ought to be squelched, but why should not Great Britain and Russia and Japan do their part? If the question shall ever come into the courts (mark my words and put me down for a prophet), the Supreme Court will throw out any prosecution of pelagic seal fishermen, on the ground that the United States has no jurisdiction. What is it all to me? Well, one of these days, when they think that perhaps they can run the Tower without my help, I may want to do a little sealing on my own account. Meanwhile, I don't want all the sense ruthlessly legislated out of certain fragments of poetry which linger in one's memory from schoolboy days—that grand apostrophe of Byron's—

Man marks the earth with ruin—his control
Stops with the shore.

And Barry Cornwall, who, though he never went to sea, or at least before he had been to sea, wrote one of the very best sea poems in the language, and knew more about the freedom of the sea than an anti-high-seas fishing Congress appears to, we shall have to revise his couplet:

The sea! the sea! the open sea!
The blue, the fresh, the ever free!

The Buffalo and the Trophy.

I read an editorial in last week's FOREST AND STREAM which, for rasping antithesis, stands by itself alone. Its subject was the killing of a buffalo.

The killing of the buffalo as it was done in the years not long gone as a matter of time, yet long gone as a matter which is somewhat dimmed in the rapid swirl of changing events in the current of time, is set forth in sharp contrast to the killing of a solitary buffalo, bought in the market of the world—a narrow market, exclusive in many ways, and yet a market in that there is something to be sold for a price on the one hand, and the purchaser with the price on the other. The whole order of killing for profit or killing for sport is reversed. In respect to either, one goes forth, captures his game and then settles for it from the standpoint of business or of sport. But the recent debutant makes his beginning where all others end. One may desire to gain possession of the buffalo to preserve it, another may wish to kill it to have the personal gratification of killing a majestic animal, and still another may wish to kill it from the one consideration of the profit to be gained, as he would consider any other business venture. And beyond all the absurdities apparent on the face of this extremely absurd and extremely regrettable affair, is that it is a consequent to certain antecedents distinct in a way, applauded by the world, accepted near and far as a true emblem of sport and also its true incentive; that is to say, not the hunting in itself and the purposes as hunting was understood a few years since, but the hunting for the sake of trophies. In other words, it ceases to be the sport as it was once understood. Personal gratification must be augmented. In addition to the excitement of the sport and the pleasure of success, there must be the further claim to the needs of

vanity in the material and ostentatious parade of a trophy. The latter demands the adulation of all comers, as the sport is a secondary matter when compared to the praises of a lifetime, or the profit of a sale, as the case may be. The sport was but the interest of the individual and the affair of the moment; the trophy was his pride throughout the ages. So in natural order it has come to pass that the pleasure of a moment should give way to the pleasure of a lifetime. Many hunters went forth with a willingness to forego the pleasure of the moment for the greater one of possessing the "trophy" which would bring a lifetime of adulation and envy and glory.

Now, with the most profound respect for all concerned, I maintain that the man who bought his buffalo and had it carted out to a convenient place to kill it in his own way and at his own leisure differed not a whit in kind from the man who has a professional guide to lead him to a moose, or buffalo, or what you please, to kill it to a reasonable certainty. The man who bought his victim and had the killing elaborated to a matter of fixed routine, merely carried further the arrangements of the man with the guide and the moose; the former knows where the guide is, the latter knows where the moose is—the man comes and the moose is killed. There is no question of the unlikeness of kind; it is a question only of degree. The man who killed his buffalo continued the affair where his brother, the moose hunter, left off. The moose was not tethered; the buffalo was. There you have the technical difference.

Before I dismiss this subject, I wish, with a due submission, to pay my respects directly to that class of specialists which has been growing larger as the big game grows costlier and scarcer—that class which strives for all the prestige of the hunter after the hunted no longer exist or are beyond the compass of the individual to personally capture. In my remarks, once for all, I desire to explain that I concede due value to a trophy emblematic of individual prowess, something that represents hardship, courage, novelty, manly fortitude, or one that represents food added to the public supply, etc. But this is a digression.

And these are my reasons: There are only a few considerations which render a trophy valuable. I am speaking now of a trophy in the proper sense. The first is that it may represent a journey into a far country, wherein the hunter may have incurred great danger from ferals, hostile natives, savage beasts, dangerous rivers, etc., conditions all of which imply a struggle with opposing forces. Moreover, such a journey may have cost large sums of money in conducting it and a long time in making it. The trophies from a far country thus being symbolical of hardship, novelty, danger, etc., on the one hand, and contributing to the general fund of scientific information on the other, and thus in a way working a public good, would be indeed a genuine article.

Contrast that with the trophy hunter of to-day nearer home, who does not consider a trophy as a proper incident of the hunt, but as being the purpose of it. Let us suppose that a hunter has a desperate struggle with a grizzly, or buffalo, or moose, or deer, etc., and that he takes home the head or hide to commemorate the event. Here again we have a trophy. It is inseparably associated with the deeds of the individual. In short, it is essentially an emblem of a conquest or a conflict under conditions which dignify and distinguish it above the commonplace. But how different is this in its essence from the common state of things. The idea of a real trophy is almost lost—to the general public it is quite so. The head of a buffalo is, colloquially, quite as likely to be called a trophy as it is a head, the public considering them as equivalent terms. Furthermore, we have trophies because they represent animals which are rare, or because I killed it, or because I wish to have the prestige for a few hundred dollars that my more practical brother sportsman got only by personal effort.

Of course this amiable weakness, to be up to date in appearance, was the source of the keen demand for heads as mural ornaments. And, of course, supplementary to this was the keen desire of a class for "trophies" made while you wait. Here we find the people who give the trophy hunter his inspiration. Would so many men enter the wilderness of Maine, kill a moose, take his hide and head as a "trophy," and leave the meat to rot, if the head did not have such a commercial value? No, surely not. And yet, with the unreasonableness of caste, the head-hunter would scorn his more humble brother who potted the moose illegally for food, although the latter was fulfilling more the true purpose of the public will, as much so as a man could who was doing an illegal act, if it were illegal.

Let us trace the growth of the evil and note how insidiously has been the growth of it. As heads and horns were trophies when taken under the conditions which made them such, we may look to them as first giving employment to taxidermists. There were those who readily saw much of ornament in them, if nothing of the nature of a trophy. The majestic heads, their rarity, the general admiration they excited and the constantly growing scarcity of them, impelled many to possess heads for mural adornment alone. Thus they have now largely lost their original significance of trophies and have become a matter of purchase and sale with fixed market quotations, as are potatoes or cabbages. One can go to any taxidermist of note and purchase any kind of head which he pleases, and the transaction will have not even a remote relation to sport, no more than would a purchase of steak or clams or clothes. And yet nothing is more common than to read that Mr. So-and-so ambushed a deer or a moose, with the aid of his guide, and took the head home for a "trophy." A trophy of what, pray?

Let us wave a farewell to the genuine trophy and welcome the advent of the trade trophy, that which is not a true trophy, but which we will make into a trophy by force of insistence. Let us hail with joyous acclamation the trophy which represents the destruction of immense quantities of valuable food each year or each day, as it may happen.

Any one who has read the columns of FOREST AND STREAM knows that the State owns the game within its boundaries. As a property it is a valuable property. It is a food supply. The most stringent laws are necessary to conserve it. It is a valuable adjunct to the State's

assets. As a matter of public good, men are allowed to partake of it under certain restrictions which are supposed to prevent injury to the general ownership. What, then, are we to think of the men who kill great animals and leave them to rot, taking only the head or skin? There are many hundreds of pounds of food wasted. There is just so much taken from the available food supply. But you say, "sport." I say that sport is not sport which injures the property of our fellows. I may have sport in improving that property, in making it available for public use, or, if you please, in taking pleasure in hunting down the game; but there the sport ends and responsibility begins, for I must take care that my sport is not wanton destruction of the public needs. The basic purpose of game, in the eye of the law, is for food, and the sport is merely an incident of it. It is not the thing itself. To kill wantonly or for ornament, leaving the food part of the animal to spoil, is exalting the pleasure of the accidental individual above the public weal. The legitimate purposes of the game as food supply come first, the pleasure or profit of the individual comes afterward.

There is no game-animal in America to-day which can with good reason be slaughtered wantonly, and such animals as are offered to the sportsman's consideration require no distinguished powers of physique or skill in their capture. Railroads, professional guides, camp comforts which make camping a recreation instead of a hardship, modern rifles and ammunition, etc., make hunting an unmixed pleasure instead of a venture made up of labor, danger and hardship.

The taking of heads is now an industry, as any one can readily learn by going into the markets where such goods are sold. We inveigh against the head-hunters who are robbing the Yellowstone Park or other places where the animals are so few that the eye can witness their rapid extermination. There is that other class which is equally culpable, the trophy hunter who is accessory to the pillager and makes the latter's vocation possible. If there was no market there would be no head-hunters.

The hunter who kills his game legally, takes it home or gives it to his friends, and then preserves the trophies appertaining to the hunt, has done nothing to warrant complaint, but he who kills and wastes is a foe to all true sportsmen.

Fixtures.

BENCH SHOWS.

Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.

Jan. 18.—Butterly Bench Show Association's show, Grand Rapids, Mich. Miss Grace H. Griswold, Sec'y.

Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.

March 1.—Mascoutah Kennel Club's show, Chicago. L. Lincoln, Sec'y.

March 9.—St. Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.

March 15.—Northwestern Kennel Club's dog show, St. Paul, Minn. E. D. Brown, Sec'y.

FIELD TRIALS.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss. W. S. Bell, Sec'y.

Jan. 17.—Brunswick Fur Club's ninth annual hunt, Barre, Mass. Bradford S. Turpin, Sec'y.

Jan. 24.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal. J. M. Kilgariff, Sec'y.

Jan. 24.—Champion Field Trial Association's Champion Stake, Tupelo, Miss. W. B. Stafford, Sec'y.

Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

Dogs as Draft Animals.—IV.

Netherlands.

AMSTERDAM.

MR. EDWARD DOWNES, Consul at Amsterdam, reports as follows:

Dogs are used extensively as draft animals in this consular district. There is strong opposition on the part of the various societies for the prevention of cruelty to animals to the use of dogs for such a purpose. This opposition was recently manifested by a number of petitions presented by these societies to the Provincial States of North Holland, requesting that the use of dogs as draft animals be prohibited. These petitions were, however, rejected by the Provincial States on three grounds, viz.: (1) Very many people depend for their livelihood on the use of dogs as draft animals, and a prohibition of such use would work a great hardship on the owners and users of the animals. (2) Because, as dogs are the chief means by which these owners and users secure their living, it is only natural that they should take good care of them and avoid all cruel treatment. (3) Because the laws of the country regarding the ill-treatment of dogs are numerous and severe.

In connection herewith it may be stated that occasions do arise which require the intervention of the Society for the Prevention of Cruelty to Animals.

The general Government prohibits cruelty to dogs and punishes all proved violations of the law; further, it does not go. All other regulations fall within the sphere of the provincial and municipal governments.

The general Government prohibits cruelty to dogs and punishes all proved violations of the law; further it does not go. All other regulations fall within the sphere of the provincial and municipal governments.

According to the laws of the Province of North Holland, the use of dogs as draft animals is allowed, but despite this fact a municipality within the Province may prohibit such use. In the city of Amsterdam, dogs can not be used as draft animals. When they reach the city limits, the drivers must detach them and drag or push their carts through the city.

According to Article XXXII. of the regulations of this Province, all dogs used as draft animals must be provided with a suitable muzzle of strong wire. Drivers of dogs must always give the right of way to other vehicles. When a horseman, carriage or wagon approaches from before or behind, the man in charge of

the dog or dogs must drive his cart to the extreme side of the highway, place himself in front of the dog or dogs, and remain there until the other vehicle or vehicles have passed.

In this country little or no attention is paid to the breed of the dog; the strength of the animal is the chief consideration. There is no regular method of training.

The harness consists of a leather collar, which is connected to the cart by ropes; no bit is used. One, two or three dogs are used for one cart; sometimes they are fastened before the cart, but oftener under it. The carts have only two wheels. The Amsterdam Society for the Prevention of Cruelty to Animals informs me that the lack of a regular method of training and the crude method of harnessing the dogs frequently result in abuses, necessitating the society's intervention.

Switzerland.

BERNE.

John E. Hinnen, Vice-Consul, sends the following report:

The use of dogs as draft animals is limited, inasmuch as the local authorities in Switzerland can grant or prohibit such use. The use of dogs for draft purposes is prohibited as follows: To pull persons, children under ten years excepted; hitching by means of the collar; female dogs which are pregnant.

In the canton of Berne their use is permitted, and in the city of Berne the following police regulations exist: (1) Dogs must be at least 65 centimeters high, of strong build, and well fed. (2) They shall be hitched conformably to the purpose, but not in shafts or forks. (3) They shall not be used alone, but only as an aid to pull.

There is no special training; the dog is simply hitched to the cart until he becomes accustomed to the service, which generally takes very little time.

The harness consists of a breast collar, to which the pulling straps are fastened and guarded by another strap around the body.

Two and four-wheeled carts, not too heavy, are in use here. Milkmen generally prefer the former and butchers the latter.

The dogs used are, with a few exceptions, all bastards of the Bernardine race; the pure breed are not employed as draft animals.

HORGEN.

William Streuli, Vice-Consul, reports as follows:

Dogs are not used as draft animals to any extent in this district, except in the cantons of Schwytz and Zurich. In the former canton the dog is employed here and there by messengers from village to village, and by rag and bone gatherers. It is, however, a small, mountainous canton, offering not much occasion for that sort of canine employment, consequently public attention has not been drawn to the matter there sufficiently to furnish evidence of general facts.

In the canton of Zurich, it is the precinct of the capital that shows the largest use of the dog for that service, viz., 213, according to the last official counting. They are employed as draft animals mostly by dairymen, green grocers, gardeners, fruit venders, etc., to carry their products to the city in the morning.

The exceptional large use of dogs for the purpose in this canton has induced its government to draw up a set of regulations, which contain, I believe, nearly everything that may be desirable to know about the subject. The following is a translation:

Professionalism.

WHILE in North Carolina a few weeks ago, Mr. D. E. Rose, in a pleasant way, asked the kennel editor of FOREST AND STREAM why he assumed such an unfriendly attitude toward professionals. He was laboring under mistaken inferences. After so much explanation of the distinction between professionalism in its true sphere and professionalism which seeks to monopolize all branches of sport, it was rather astonishing that so much concerning it and us was misunderstood.

However, to make our position clearer, a brief explanation is here set forth, although the substance of it, in one form and another, has already been published in our columns.

Let us consider it as it concerns the dog world. Professionalism, as a matter of business in legitimate channels, no one can justly object to. We uphold it. Professionalism, however, is not sport. It is an adjunct to sport, and as such has its proper place and usefulness. The handler trains and boards dogs, handles them in the trials, and, if need be, looks after the making and filling of entries, etc. That is the business side of the matter, and the professional is strictly a man of business. So far he is a useful member.

The clubs are interested in the trials, on the other hand, as a matter of sport. To them belong the arranging of the competition, the selection of judges, the fixing of dates and the securing of grounds, etc., and the giving of a prestige and establishing of an equity which will win the confidence of the public as to the value of the competition. This is the non-professional feature of the field trial interest. Now, when a professional handler invades it, and has a voice in the election of officers, the appointment of judges, the selection of grounds and the value of prizes, he has an advantage over his competitors, is out of place as an interested party, and is entirely out of all harmony with the equity of a competition.

Some professionals would be content with a more or less silent club membership, while others would be content with nothing less than full dictation in all the interests that concerned them as professionals. The professional club member who talks sport or business on occasion, he who resolutely gives advice as a club member and profits by it as a competitor, soon causes a falling off in club membership.

When a club member is subjected to annoyances, and is shorn of all privileges but the one of paying his dues, he has no reason to be a member longer. He does not enjoy his sport by proxy. It has been the history of all field trial clubs that, when professionalism gained power and became dominant, they declined or ceased to exist.

It is a favorite retort among professionals that field trials could not exist without them. Granted, but what

of the results? The club member has lost a few days' pleasure when the trials are out of existence, and the professional has lost a large chunk of bread and butter. If field trials ceased to exist, the men who profited by the business features of the competition are the ones who are the real losers.

In pointing out these truths, we always thought that we were conferring a kindness on those who might be gainers by it. All our policy is in favor of legitimate business interests, but we maintain the rights of sport apart from the monopoly of professionalism. In one case it is a legitimate occupation; in the other it is a harmful parasite.

Unskilled professionalism we have always felt free to criticize, and to that we feel sure that those who really are skillful will not demur. Loud shouting, senseless whistling and tricks which are unwarranted, etc., have no support from this journal.

In the bench show world a case in point is the contemplated organization for the giving of bench shows, considered at the recent Brooklyn show. It enters into the matter on a basis of pure professionalism.

Professionalism in sport soon degenerates into cliqueism, which guards its own interests to the exclusion of others. When, years ago, shows were held as a matter of business or speculation, the whole substantial kennel world opposed such so emphatically that the speculative show was suppressed. The industry of organizing a show that a few might have a job and a profit proved distasteful to the fanciers at large. The sportsmen have not yet been schooled to a point at which they can take their pleasures vicariously. They are becoming schooled to a point whereat they object to making their pleasure tributary to a business which is masquerading as a part of their sport.

Westminster Kennel Club.

THE judges at the forthcoming New York show will be: St. Bernards, Newfoundland dogs and pups—Miss A. H. Whitney. Great Danes—J. Blackburn Miller. American foxhounds—Dr. A. C. Heflinger. Pointers—Charles Heath. English setters—William Tallman. Irish and Gordon setters—George Jarvis. Sporting spaniels—Andrew Laidlaw. Collies—Robert McEwen. Poodles—Charles D. Bernheimer. Bull dogs—not certain. French bull dogs—E. D. Faulkner. Boston terriers—Arthur Mulvey. Beagles—H. F. Schellhass. Bloodhounds, mastiffs, wolfhounds, deerhounds, greyhounds, English foxhounds, Old English sheep dogs, dachshunde, all terriers (except Boston terriers), whippets, Italian greyhounds, toy spaniels, schipperkes, Pomeranians and miscellaneous—George Roper, England.

The special prizes make a list of larger and more valuable rewards than have ever been given at an American show. The Westminster Kennel Club will give a special prize of \$20 each for the best exhibit of four of the following breed, entered and owned by one exhibitor, namely, English bloodhounds, mastiffs, rough and smooth coated St. Bernards, Great Danes, Russian wolfhounds, greyhounds, foxhounds, pointers, English setters, Irish setters, Gordon setters, field spaniels, cocker spaniels, collies, poodles, bull dogs, bull terriers, Boston terriers, dachshunde, beagles, smooth and wire-haired fox terriers, Irish terriers, Scottish terriers, black and tan terriers, Yorkshire terriers, pugs and toy spaniels.

There will be winners' classes at this show for bloodhounds, mastiffs, rough St. Bernards, smooth St. Bernards, Great Danes, wolfhounds, greyhounds, pointers, English setters, Irish setters, Gordon setters, field spaniels, cocker spaniels, collies, curly-coated poodles, bull dogs, bull terriers, Boston terriers, dachshunde, beagles, smooth fox terriers, wire-haired fox terriers, Irish terriers, Scotch terriers, Black and Tan terriers and pugs.

Club trophies and medals are given by the English Bloodhound Club of America, American Mastiff Club, Old English Mastiff Club, Great Dane Club of America, National Greyhound Club, Pointer Club of America, Gordon Setter Club of America, American Spaniel Club, Collie Club of America, Poodle Club of America, Bull Dog Club of America, French Bull Dog Club of America, Boston Terrier Club, American Dachshunde Club, National Beagle Club, American Fox Terrier Club, Irish Terrier Club of America, American Scottish Terrier Club, Bull Terrier Club of America, Irish Setter Club of America.

There is a generous list of premiums for 233 classes. In important breeds the divisions run like this:

English bloodhounds, novice, dogs and bitches, \$10, \$5 and medal; junior dogs, \$20, \$10, medal; bitches, same; free for all dogs, same; bitches, same. Mastiffs, like classes, same awards. Rough St. Bernards, dogs, puppy, \$10, \$5, medal; novice, same; junior, \$20, \$10, \$5; free for all, same. Bitches, like classes and awards. Smooth St. Bernards, same.

Great Danes, same. Newfoundlands, free for all dogs and bitches, \$10, \$5, medal. Russian wolfhounds, novice dogs and bitches, \$10, \$5, medal; dogs, junior, \$15, \$10, \$5; free for all, same; bitches, same. Deerhounds, free for all, dogs, \$15, \$10, \$5; bitches, same. Greyhounds, novice dogs and bitches, \$10, \$5, medal; junior dogs, \$15, \$10, \$5; free for all, dogs, \$15, \$10, \$5; bitches, junior, \$15, \$10, \$5; free for all, the same.

Pointers, puppies, dogs and bitches, \$10, \$5, medal; novice dogs and bitches, same; junior dogs under 55lbs., \$20, \$10, \$5; over 55lbs., same; free for all, dogs, \$20, \$10, \$5; junior bitches, under 50lbs., same; over 50lbs., same; free for all, bitches, same; field trial class, dogs and bitches, \$15, \$10, \$5.

English setters are divided into puppies, dogs and bitches, novice dogs and bitches, junior dogs, free for all dogs, junior bitches, free for all bitches and field trial class of dogs and bitches, with awards as in corresponding pointer divisions. Irish setters, same. Gordon setters, same.

Spaniels—Irish water, junior dogs and bitches, \$15, \$10 and \$5; free for all, dogs and bitches, the same. Chambers, same classification and prizes. Field spaniels, puppies, dogs and bitches, \$10, \$5, medal; novice dogs and bitches, same; junior dogs, black, \$15, \$10, \$5; other color, same; free for all dogs, same; junior bitches, black, same; other color, same; free for all, same. Cockers,

puppies, dogs and bitches, \$10, \$5, medal; novice, same; junior dogs, black, \$15, \$10 and \$5; red or liver, same. For full premium list write to Superintendent James Mortimer, Room 310, Townsend Building, No. 1123 Broadway, New York.

United States Field Trial Club.

TRENTON, Tenn.—*Editor Forest and Stream:* The entries to the third annual championship trials are as follows:

E. A. Burdette's English setter bitch Ann of Abbottsford (Gladstone's Boy—Bohemian Girl).

Same owner's English setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie).

Charles B. Pineo's pointed dog Yy Rip-Rap (Rip-Rap—Pear's Dot).

H. B. Ledbetter's English setter dog Marie's Sport (Gleam's Sport—Marie Avent).

Charlottesville F. T. Kennel's English setter bitch Pin Money (Ct. Gladstone IV.—Daisy Croft).

Charlottesville F. T. Kennel's pointer dog Tippo (Rip Rap—Monterey).

P. Lorillard, Jr.'s, English setter dog Count Gloster (Eugene T.—Gloster's Girl).

Del Monte Kennel's English setter dog Sam T. (Luke Roy—Betty B.).

Eldred Kennel's English setter dog Tony's Gale (Antonio—Nellie G.).

Ashford & Odom's pointer dog Von Gull (Kent Elgin—Fannie V. Croxteth).

W. B. STAFFORD, Sec'y.

The International Trials.

STEVENSVILLE, Pa.—*Editor Forest and Stream:* I have this only to say, in answer to Mr. Davidson's article. It is too personal to merit more than passing notice. The Club's investigation as to the reasons that prompted the awards will prove or disprove his assertions.

I thank you most heartily for your article on "Field Trial Transitions," as well as your exposition of the substance and meaning of my criticism of the judges' awards.

W. W. McCART.

POINTS AND FLUSHES.

The field-trial prospects for such trials as are fixed to be held at New Albany, Miss., are not at all promising in respect to the number of birds to be found there. The subjoined extract from a letter, under date of Jan. 2, written us by Mr. J. H. Johnson, Guyton, Miss., explains the matter more in detail: "I fear our trials will be a failure this year, on account of scarcity of birds. Mr. Buckle had to move from his training grounds at Grand Junction because of no birds. Mr. Mayfield writes me from Mooresville that three small coveys in a day's tramp is his luck. I am only finding about two coveys to the brace where formerly I found seven or eight. Mr. Bell wrote me to investigate the grounds at New Albany, but I learned on the 22d inst., while en route for this place, that there were very few birds there."

Yachting.

IN discussing the new Yacht Racing Union of North America, all of the British journals lay stress upon the fact that two American clubs, the New York and the Eastern, are not in accord with the movement, and they seem to consider that this disposes of the whole matter. If these journals were in any way posted in American yachting, they would understand that neither of the two clubs named has any material influence to-day on yacht building or racing, and that their attitude toward the many racing clubs of the country is a matter of very little importance. While their co-operation is desired, and would be fully appreciated, it is in no way necessary or essential to the success of the new organization. The Union was formed for the purpose of promoting yacht racing on the broadest possible basis, of inter-club and open events, instead of closed club racing, and of improving the racing rules. The New York Y. C. has nothing whatever to do with open races or with the smaller classes, which are practically the only ones which race at present; the few races which it holds are open only to the larger yachts enrolled in its own fleet. These races are limited to two regattas each year and the cruise runs, with a few extra events for private cups. The "annual regatta" brings out upward of a dozen yachts of various rigs and sizes, one or two in a class. The "fall regatta" is represented by a circular sent out to owners each year announcing the event, and asking for entries, the race not coming off in consequence of no responses being received. The cruising runs of the club in August usually bring out a fair fleet, with three to six boats in each of a number of classes, and for the first three or four days, possibly until the Vineyard is reached, there is fairly good racing. The races for special cups, in racing trim, have dwindled to mere perfunctory affairs, as witness the Goelet cup race in both divisions last year.

In yachting legislation the New York Y. C. has never taken a prominent part. The best of the rules on its books to-day have only been placed there long after they have been adopted and tested by smaller clubs. Apart from special legislation relating to the America's Cup, the only racing rules originated by the New York Y. C. for many years are the two relating to maneuvering for the start and limiting draft, both of which have been generally condemned by yachtsmen.

The New York Y. C. was formally invited to take the lead in establishing a national organization, such as has since been formed without it, and after full deliberation it accepted the report of its special committee in the matter, and refused to have anything to do with the scheme. In this report the committee brought out most emphatically the point we have made above—that the New York Y. C. is not a racing club, but devoted to other branches of yachting, such as cruising, conveyancing, etc.

The Eastern Y. C. is, to a certain extent, in Boston waters what the New York Y. C. is in New York, the premier club, the largest, wealthiest and most distinguished, but it also has little to do with yacht racing. Since the disappearance of the larger racing yachts, it has lost the prominent position which it assumed through its splendid work in 1885, 1886 and 1887 in the production of Puritan, Mayflower, Volunteer, with other noted yachts, such as Sachem, Pappoose, Baboon, all distinctively Eastern Y. C. craft. To-day it enjoys a good membership and a comfortable house and station; but, so far as yacht racing or racing legislation is concerned, it has no influence at all. The power in the East has passed into the hands of the union of many small clubs. It makes the rules, builds the yachts, gives the prizes and manages the races, just as the Sound Y. R. A. does about New York.

On general principles it would be a good thing if both of these clubs were in the new Union, but at the same time it is not plain that they would be of any direct benefit. The present racing rules, under which at least 80 per cent. of the races in the United States and Canada are sailed, have been made practically without the aid of either club, and presumably the work of improving these rules can go on in the same way. There are already, both in Boston and New York, enough clubs to more than fill the fixture list each season, so that nothing would be gained if both of these clubs joined the Union and opened their races to all neighboring clubs. The advantage, as we see it, is entirely the other way. The yacht racing and the rule making are now in the hands of the different associations and of the Union, and if individual clubs wish to share in either they must needs join. The functions of these large clubs are materially different from those of the numerous smaller ones. There is a place in New York yachting for the New York Y. C. as the oldest, richest and largest of American clubs, and a similar place for one club in Eastern waters, well filled by the Eastern Y. C. They do their work in yachting, and the Union and local associations each does its work; there is no reason why any antagonism should exist, but at the same time it is absurd to ignore the real life and activity of American yachting to-day simply because it is outside of any two clubs.

It evidently has not occurred to the British journals that their argument applies very close to home. As a matter of fact, the relations of the Royal Yacht Squadron and the British Y. R. A. are not widely different from those of the New York Y. C. and the new Y. R. U. The Squadron recognizes and tolerates the Y. R. A. It could not well do less, considering the age and power of the latter, but it does little more. Like the New York Y. C., it declines any too intimate connection with the many smaller clubs. It makes its own rules and holds its close regattas under handicaps of its own peculiar kind. It has never cordially co-operated to make the Y. R. A. a success; but the latter seems to have worried along for over twenty years without it, and we have little doubt that the Y. R. U. of North America will be able to follow its older prototype to a successful majority.

If the plans already published of the new Bath steam yacht are really correct, and not cooked over from old pictures of the Eleanor, our surmise of last week will prove only too true. These plans show an enlarged Eleanor, just as Eleanor was an enlarged Sagamore. All the objectionable features of the latter's design, so far as appearance goes, were increased in proportion in the enlargement from 160ft. lwl. to 208ft., and the same dire result is likely to follow the enlargement of Eleanor's design to 258ft. lwl. The drawings, so far as they go, show the same unfair and shapeless sheer, round amidships and straight at the ends, and the characteristic "dishpan" stern of the Bath boats. If the yacht were only intended to potter around home, like Electra, Anita, Alicia, Dungeness and Columbia, it would not matter so much; but, on the other hand, she is intended for foreign cruising, and will cruise next summer in European waters as the latest and finest effort of American yacht designers. No doubt she will be big and comfortable, like Eleanor, with ample light and ventilation below, and a good seaboard, but these are only the requirements of a commercial vessel. To be worthy of the name of yacht, she should have the externals that are commonly associated with that class of vessel.

Through the Sound in an Oyster Sloop.

By the time Faulkner's Island was abeam matters had assumed an interesting aspect. Whitecaps were the rule, not the exception. The wind had steadily increased, and though Susie yawned at a great rate, yet she made excellent weather of it. We wondered if the wind would come much stronger, but concluded it had about reached its height; that was where we made a monumental mistake. Many a boat of Susie's size would have had at least one reef in the mainsail, but we kept on full mainsail and jib. In this manner we sailed until Corn Field Point Lightship was sighted. We then decided that the time had certainly arrived to reef.

Sam watched his chance, and at the proper time he shoved the tiller hard down. Like a swallow on the wing Susie circled on a huge roller until her bowsprit pointed into the wind. Stanley and I trimmed the mainsheet until the boom was plumb amidships. Susie's bow rose until the bowsprit pointed heavenward at an angle half way between the western horizon and the zenith. Then down, down she plunged, burying her bowsprit as far up as the cutwater. Her stern soared high on a rolling billow until it was at an angle the same as the bow had been. The sails slatted and banged viciously, ropes hissed and snapped, and the wind shook the flying jibboom as a terrier does a rat. Sheets of spray doused us from head to foot. Stanley and I quickly lowered the mainsail. Sam shoved the tiller hard up, the jib was trimmed to windward long enough to drive the bows around to our course, and Susie commenced to fly on her way once more.

Now that we were headed on our course, Stanley and I took our time about reefing. As the wind was undoubtedly increasing in strength we tied in two reefs. When our task was finished we hoisted the double-reefed sail and went tearing on our way again.

Bub now came on deck, and selecting a spot forward of the cabin house he laid down. Here the motion of the boat was less severe than in the bows or stern; Bub, therefore, was soon feeling well enough to ask questions. Said he:

"I say, Sam, was you ever out when it was as rough as this before?"

"Why, Bub, this isn't rough."

"Well, if this isn't rough then I don't know what you call rough. Just see how it used me. Why, I haven't had malaria for over a year before!"

Everybody laughed at this, and Stanley said: "Queer kind of 'malaria,' Bub; looked a good deal more like seasickness to me than anything else."

"Ah, what you giving us? Seasickness your granny! Why I

was never seasick in my life," sneered Bub in disgust. He and Stanley then argued the scientific difference between malaria and seasickness for fully an hour. The argument might have lasted indefinitely had not there been something of greater importance to occupy the attention of all hands.

The wind had now reached a really dangerous height, and the sea had a wild, angry look. While the sun shone bright and clear and no cloud could be seen, still there was a cold glare about him that was entirely unnatural. Gust after gust the wind came howling over the water. It wrenched the crests from the angry seas and hurled them in misty cloud patches through the air. When one of the gusts would strike Susie the boom and flying jibboom would lift high in the air and the mast would bend like a reed. The seas—huge, rolling, white-crested monsters—came seething, lashing and foaming astern in countless numbers. At times they would appear on the point of toppling over the stern and of overwhelming our gallant little ship, but, buoyant as a cork, she would lift high on the tops of their broken crests, only to sink again into the blue, briny valleys down their furthest sides. The clear, sharply-defined sand cliffs of Long Island, with their green crests, were rapidly lifting to view, for we were overhauling Rocky Point at a good ten-knot clip despite our shortened sail. I could tell by the expressions on their faces that Sam and Stanley were anxious; I felt nervous, but said nothing.

We were almost off Rocky Point when we saw a large keel catboat standing across the Sound toward the Long Island shore. She was close-reefed, and every time she fell into a hollow of the seas she disappeared so that but half of her sail showed above the waves. She crossed our stern half a mile to windward, and we could see that every one of her crew of five was stripped and ready to swim. As they did not signal or show signs of distress we kept on our way.

With the exception of two schooners under reefed sails, this yacht was the only sailing craft of any description we saw from the Thimble Islands to Plum Gut. Soon after passing her we reefed the jib and slacked the peaks of the mainsail. We then lashed the skiff more securely, saw that the hatches were battened down tightly, dropped the companion slide into place, and made everything as snug and tight as possible. We were very anxious as to what our reception would be in Plum Gut.

When our precautionary preparations are finished we notice that Susie seems to be making better weather of it; although the seas are unenlivened by increasing in size. The wind, however, appears to have reached its final height. We are congratulating one another on this fact when our ears are greeted by an ominous, hissing, sweeping sound. We glance fearfully over the starboard quarter and behold an immense wave moving down with irresistible force upon us. It appears fully twice the size of any we have yet met. As it advances, lofty and white-maned, it roars like a sullen lion and hisses like ten thousand serpents. We are filled with apprehension as to whether Susie will be able to withstand its mighty force. On, on it sweeps, until it is but a few yards away. Now we sink to the bottom of a valley of liquid blue, a snow-crested mountain of blue frowns pitilessly down upon us; it topples, falls, and roaring like Niagara it buries our gallant little ship in a hissing, boiling cauldron of yeasty foam. Staggered, Susie pauses as though to gain strength; then, like a maddened Amazon, she shakes herself, and with a tremendous heave she bursts through the foaming sea. With streaming decks she soars up, up, up to the topmost height of the huge, rolling mountain of blue. As she sinks into the next indigo valley she meets a reception somewhat similar to the first, though not quite so harsh.

Three times were our decks swept fore and aft by monster waves within a distance of a mile. Then the seas became smaller, and, although they yet ran very high, they were as pigmies compared to giants when measured by the tremendous ones that had boarded us.

Sam has spent eighteen years of his life on the Sound, yet he declared the seas we met that day to be the largest he had ever seen. One of the pictures accompanying this yarn is that of a wave snapped with the camera by Bub. It was taken before we met the largest waves. We would have tried a shot at one of the latter but for the fact that our plates had all been exposed. Nobody seemed to care about filling the plate-holders again just then. We had more serious matters to engage our attention about that time than taking pictures. In Sam's opinion, the giant waves we met for a mile were those of a tide rip. He also thinks we were lucky in having the tide in our favor, otherwise we might have swamped.

Much to our surprise and gratification we found the sea in Plum Gut smooth in comparison to what we had already met. The wind seemed not to blow so hard, so we shook out the reefs in the mainsail and jib, and Susie raced through the water like a runaway horse.

We were half way through Plum Gut when we met a large steam yacht. Her launch, with a party of fishermen aboard, was plunging into the waves on Midway Shoal. We thought we saw a number of fish taken, but were not sure. The little vessel seemed to have all the sea she needed. She would be exposed to full view on the crest of a wave for a moment, then she would drop completely out of sight into the hollow of a sea. We voted unanimously that she would surely have broached to and sunk had she been compelled to have faced the tremendous seas with which Susie had successfully coped.

Once through Plum Gut, we found the water comparatively smooth. True, it was choppy, and as Susie tore on her way with lifted saucer her lee rail was awash and her shapely bows smashed the snappy waves into snowy atoms. The westerling sun had lost its stony glare of the morning, and it shone with a warm, mellow light. The sea showed not the faintest tinge of green, but it was of the deepest indigo, and all a tremble with millions of flashes and sparks, as though strewn with countless diamonds, pearls and emeralds.

We were half way to Gardiner's Point when we met a large, handsome naphtha launch. She was pure white and fully 50ft. in length. Her bright, polished brasswork glowed and flashed radiantly as she jumped a full third of her length out of water upon meeting the advancing waves. Bareheaded and in spotless white duck, a man lolled in exquisite ease on the launch's stern. He indolently waved his right hand as we passed. The reason he waved his right hand instead of his left one was plainly evident. The left arm encircled the waist of a lady, who, also clad in spotless white, lounged by his side.

Stanley was so overcome by this sight that he immediately started in to devour all the canned goods aboard. Before meeting the launch he had complained of a feeling of qualmsiness. The sight of that blissful couple, however, completely cured him. Even Bub forgot his malaria, and he voraciously devoured half a can of baked beans, half a loaf of bread, enough butter for three men, and a can of apricots. He had just begun on his second can of condensed milk when Sam and I entered a protest. We wanted another square meal ourselves; so, while Sam steered, I went below and passed out part of the cargo to him.

It was nearly 3 o'clock when Eastern Plain Point was abeam. From here we headed the boat for what we took to be the entrance to Napeague Harbor. After sailing half way across from the point to Long Island we became convinced that what we had taken for Napeague Harbor was Fort Pond Bay. We then hauled close on the wind, and engaged in a snappy beat to windward until we sighted the fish factory on Hicks Island, near the entrance to Napeague Harbor. After passing the outer red buoy and the inner red and black one, the lead-line was brought on deck and we kept the lead going until we had safely entered the harbor.

The fishermen have stuck cedar poles along the edge of the crooked channel that leads into the harbor. These must be left on the port hand when entering. Boats drawing less than 8ft. of water can safely enter the harbor when the water is not too rough. The bottom can plainly be seen, and it seems not more than 5ft. below the surface; but on account of the extreme clearness of the water the true depth is very deceiving.

Upon entering the harbor we found the water as smooth as a mill pond. After passing three or four fishing sloops, which were moored to stakes driven in the mud, we hugged the east shore of the harbor close, and sailed well down to its southeast end. We anchored off the end of a wrecked pier in 14ft. of water. Susie had made the run from New Haven in a trifle over eight hours.

It was eight bells when sails were furled and everything was made snug. The sun was still so high that all hands voted to take a ramble ashore. A person had told Stanley fabulous stories of certain flocks of yellowlegs to be found along the beaches and in the marshes that border the harbor. Therefore Stanley decided to carry along with him his new Winchester pump-gun.

We pulled the skiff well up on the beach and started off along the shore. We were surprised and pleased to find such a peculiar-looking country. Indeed everything was so strange and interesting that it almost seemed as though we were in a foreign land. We could hardly realize that the mightiest city of the Western Hemisphere was but a hundred miles or so away. It was strange to see vegetation growing profusely out of pure white sand. Stunted trees, mostly beach plum, flourished to such an extent as to be almost impenetrable in places. Under foot the ground was carpeted thickly with diminutive cedars, short grasses and running vines. Creeping plants, bearing yellow, daisy-like flowers, and dwarfed poison ivy, were also very plentiful. In many places the sandy hills bore no vegetation, however, but stood mute monu-

ments to the mighty force of the winds which sometimes sweep over that almost desolate country. These piles of sand resemble huge drifts of snow in their pure whiteness. Here and there the wind had scooped out immense hollows in the sides of some of the hills. This caused their upper edges to curl over and to resemble the crests of huge rollers about to topple on the beach. Sparsely scattered here and there could be seen the rude, unpainted shanties of fishermen. Some of the roofs of these shanties were thatched with salt meadow grass.

It is but half a mile across the narrow neck of land that separates Napeague Bay from the ocean. We could plainly see the flagpole on the roof of the life-saving station, so started to walk in that direction. After walking a third of the distance to the beach we made out a road ahead. On the further side of the road we could see the railroad track which skirts the line of low sandhills. We knew that by gaining the top of one of the sandhills we would be able to look down upon the ocean, for we could plainly hear the rumble of the surf from where we then were.

Why Stanley should clothe himself in a heavy black sweater and wear a thick skull cap with a tassel attached to a cord leading from the crown of the cap, so that the tassel dangled up and down near the center of his back or swung crazily to and fro as he walked, is entirely beyond my comprehension. However, clad in this outlandish manner and carrying a Winchester shotgun, he resembled more a wild and bloodthirsty pirate than a civilized oysterman from Greenwich. He no sooner heard the roar of the surf than away he went, gun in hand, on a dead run in the direction of the sandhills. He had almost reached the road when we beheld a horse and open carriage approaching along the road. Suddenly the horse stopped, pricked up its ears, snorted, jerked its head around with a snap, and fastened its inquiring eyes on the white-capped driver who occupied the carriage seat. After gazing at its driver in a "what-the-devil-do-you-call-that-thing?" manner for a while, the animal jerked its head around again and stared with wild eyes at the long-legged, long-armed apparition that was sailing over the landscape ahead. He then snorted twice, and, much to the consternation of his scared driver, he tried to turn a back handspring into the carriage. Not succeeding in this, he tried his utmost to turn the whole combination around in a 3ft. circle. While the frightened animal was engaging in these interesting contortions, it was plainly evident that his driver too was half scared out of his wits. He probably mistook Stanley for the advance guard of a gang of highway robbers who entertained questionable designs against him and his outfit. Be this as it may, he heaved a mighty sigh of relief when Stanley sailed across the road ahead of his horse at a Star Pointer clip. As the man drove by we saw that he was one of the crew of the life-saving station.

After gaining the top of the nearest sandhill, Stanley rested the butt of his gun on the ground and struck a remarkably ungraceful attitude. A fisherman's shanty stood a short distance away, and we saw a man come to the door and level a pair of marine glasses at the black scarecrow on top of the hill. Like a flash he suddenly disappeared in the shanty. Probably he had gone after a gun.

After reaching the side of Stanley we also stopped, and struck attitudes of wonderment if not of grace. Further than the eye could see the blue summer ocean basked beneath the summer sun. A dazzling sandy beach extended from the base of the sandhills to the water's edge and stretched away for miles on either hand. Tremendous ocean surges ceaselessly rolled landward in blue, swelling hills. When on the point of striking the shore they reared themselves in stupendous, snowy-crested combers, which paused and threateningly shook their white manes in the air, then fell thundering on the beach. Away to the left and to the right the sands were smothered in floods of pearly foam, which swept seething far up on the beach, only to retire again. Filled with the softest rainbow tints, a gauzy curtain of mist drifted away to seaward from the breaker's edge. Thrilled and awed, we gazed enraptured upon the grand, majestic sight for a long time, and no one spoke. Then a flock of gulls flew by and mingled their plaintive cries with the solemn roar of the surf; this broke the spell. Stanley ran down the hill to the water's edge, and the rest of us followed him.

We strolled along the beach a ways, and picked up shells and stones. Some of the stones had been worn into curious shapes by the continuous action of the water upon them. We also saw a number of flocks of snipe and plover. Stanley tried in vain to get a shot at some of them; they were very wild, and it was utterly impossible to get within shooting distance of them.

After walking along the beach for half a mile or so we came to a fisherman's shanty. It was one story high, and built of plain boards which had never known paint. There were two doors. One faced the ocean, and from the other one could look across the sandy hills and see Napeague Harbor and the glittering blue waters of Gardiner's Bay.

Two dories were drawn well up on the beach near the shanty, and a number of nets were stretched on the sand to dry. We were examining the dories when a fisherman appeared in the door of the shanty and we engaged him in conversation. He invited us to seats on a bench in the shade of the shanty, and we accepted. We found this to be the home of four surf fishermen; and after a half hour's conversation with them we concluded they must earn a good living. They told us that they iced their fish as soon as the day's catch was landed, and always shipped them to New York city by the first train. This they could easily do, as the railroad was but a stone's throw from their dwelling, and they had but to flag a train when they had any fish to send away. They fished on the sandy bars, which could be plainly located by the brownish appearance of the water a short distance outside the surf. They were very intelligent men, and kept themselves in daily touch with the world's doings through the New York papers, which they received regularly.

"If you had only been here this morning you could have seen us go out through the surf," said the man who appeared to be the generally recognized spokesman of the fishermen. "We didn't find the fish in any numbers, so came in early. We thought some of going out again this afternoon, but backed out. Too much surf, you see."

"You don't always have so much surf then?" I asked.

"No; it don't often run so high unless there's a storm. We always have plenty of surf, though, even in the quietest weather. Take it in an old southeaster, and you won't find an uglier stretch of lee shore from Maine to Florida than Napeague Beach."

Besides two or three kittens, the fishermen had a couple of handsome water spaniel puppies for company. While making ourselves acquainted with the puppies we were surprised to hear a colt whinny, under our feet it seemed. He was stabled in the cellar under the shanty.

We talked a while longer with our new acquaintances, then I arranged to run over in the morning and snap them with the camera while going out through the surf in their boat. Stanley and I then started off along the beach in the direction of the life-saving station. We left Bub and Sam talking with the fishermen, they having decided to return to the sloop by the route we had taken to reach the shore.

The Dismasting of Republic.

THE following interesting story of the dismasting of the schooner Republic is told by Mr. Stinson Jarvis in the Tribune:

The schooner Republic, owned by George Matthews, of New York, which arrived last week at Manning's slips, in the Erie Basin, has experienced one of the most curious kinds of wrecking that ever happened to a yacht or any other kind of vessel. The story of the voyage, a record of disagreement, dismay and disaster, makes good reading, though the wrecking was of a kind which no yachting novelist would dare to use in his fiction, because the facts are almost too strange to be believed. The appearance of the hulk as it floats beside the wharf, with its huge bowsprit on deck and its broken masts lashed on each side of the skylights and companionway, tells a great deal without words. At the bow the planking of the bulwarks and the timbers of the rails have been pulled out of her. Not a sign of a bobstay appears on the stem. Long strips of sheet lead are closely nailed down the whole length of the stem, where the butts of the forward planking pulled away from it. Amidships the starboard bulwarks are smashed flat to the deck. Huge bits of galvanized ironwork, 3in. in diameter, that were once crossstrees and davits, lie twisted and curled up as if the steam hammer of a rolling mill had been used on them. The jury rig still stands on her, as it was set up while at sea off Cape Fear—an interesting piece of work for a yachtsman, and evidently set up by sailors and men who knew their business. A sailor on board told this story of the cruise:

"It was the curiousest kind of a trip I ever made. We went out here last summer, and they gave us quite a send-off as we listed our hook at the Atlantic Yacht Club and dropped down the bay. The yacht had been chartered from the owner, Mr. Matthews, by some people who had bought mahogany-growin' lands in South America. They say there was English money in the thing, and, as near as I can recollect, the name of the firm that sent their agent aboard was Kean, Van Cortlandt & Co. Our old man at that time was Capt. Whittier; but, Lord love ye, we've had enough captains

aboard this craft to sail her by themselves, if they could be all put to work at once. Whittier was great for discipline, and a mighty good sailor, too, and he didn't want no back talk from the agent. He was kind of sot in his ways of runnin' the vessel, and I guess the agent was sot in his ways of thinkin', so, the first thing we knew, old man Whittier left the vessel when we put into Kingston, Jamaica.

"Well, we had two or three more captains before we got through in the South. The agent had to go ashore and inspect the mahogany lands to make his report to the firm, as we supposed. I forget the name of the skipper that come into Mobile with us, on the way home, but at that port Capt. Randelet took charge, and on the way up the coast we got some breezes that 'ud frighten you. Some of the squalls was great. And they would shift round and change their grip quicker than a trained terrier. Gee! they would blow the shingles off the lee side of a barn! Of course, the only canvas we showed was close-reefed, and we was staggerin' along, rippin' the horn through the head seas, and about every third wave we was blue water to the foremast.

"Capt. Randelet was keepin' a pretty close watch all round, and after awhile made out that the vessel was straining at the stem. The bobstays showed signs of pullin' out of her altogether, and the skipper ran in under Cape Fear to try to get some shelter, while the whole crew worked at settin' up some riggin' forward to hold the masts in. This was to be in case the bobstays pulled out. Well, we dropped the big hook, and it held her all right, though we didn't get much shelter, and there was a devil of a sea runnin' all the time. And you'll know what a sea there was when I tell you what happened.

"We didn't have time to set up more stays to the foremast, and then a big pitch aft pulled the whole front out of her, as you may say. The bobstays came up, and both masts jerked aft. The bowsprit rose straight up in the air, turned a somersault on its heel, and swung inboard after the falling masts. Do you see that big stick there? Now, that boysprit, 3ft. in diameter, fell just where you see it, with its small end p'intin' for the stern. We just lashed it where it fell, and that tells of the turn it took in the air. Why, talk about miracles! There was ten of us on deck at the time, and not a man was hurt! How do you account for that? You will know the amount of heavy steel rigging and ironwork that came flying inboard with the bowsprit. Then there was the shrouds on both sides of both masts. Any one of them would kill you if it caught you in-falling.

"And here's one more thing that none of us can explain. The mainmast fell and smashed into three pieces, the piece still in the step, this middle part that is lashed to these skylights, and the masthead is overboard. Now you can't find a spot on the decks or rail where that mast could have fallen. The cabin top, just aft of it, hasn't been even scratched. Here's a line of skylights between the two masts, and not a single pane of glass was broken or a brass rod turned out of place. That long Spanish cedar gig hanging there in the davits was not touched. She used to belong to W. K. Vanderbilt's Alva, the steam yacht that got run into and sunk in the night. The other two, the longboat and the dinghy—well, there they are, and you can't find a mark on them. That break in the starboard bulwarks was not made by the foremast, because this big stick fell where you see it now, close to the skylights and along the deck.

"We fellers in the fo'e'sle has been puzzlin' out this thing all the way home, and, though we was all on deck at the time, there ain't one of us that knows how them tons of timber dropped and smashed up without breaking a boat or leaving a mark.

"While we were clearing away the wreckage and trying to get some of the raffle on the decks cleared up a bit, the schooner Florence and Lillian saw us, and hove up to speak to our old man. They wanted us to go aboard and leave the yacht where she was. But our skipper only asked the schooner to send out a tug as soon as it could weather the sea, and then we set up a jury rig. To the 8ft. stump of the foremast we lashed the boom of the foresail, as you see it standing there, and we gave it four rope shrouds on each side and a forestay. But the jury mainmast was not so easy, because the big stick had cropped off exactly at the deck. Here we had to lash the broken spars to each side of the skylights, and then put a cross-timber between them, to which the foot of the jury mainmast could be lashed. We used the foregaff as a mainmast. Afterward two trysails were hoisted and a sort of a forestayvial forward. Under this canvas we were sailing into Southport, N. C., when the tug met us and towed us to Wilmington.

"But the damage did not stop there. When Capt. Randelet delivered over the vessel, a new captain came aboard and made a fire in the saloon fireplace, the day bein' extra cold. But the stovepipe had got knocked out of place down South, and the first thing he knew the inside staterooms was all ablaze. He called a passing tug that had her fire hose handy, and she put out the fire. But everything in the staterooms is spoiled with fire and water.

"As to the wreckage, the experts have been here and made their report. She will want new sticks everywhere; booms, gaffs, topmasts and jibboom, as well as new canvas from end to end. The talk in the yards is that it will cost \$10,000 to put her as she was before, and I'm told that the charterers have to pay for it all, because the agreement was wrote out that way."

Around the yards it is said that a nice point in marine law may come up. It is said that the defense may be that the Republic was not in a reasonably fit condition to perform her work; that her mainmast was in a bad condition, and that she was too old for the service of that long voyage. The Republic is sixteen or seventeen years old. In 1885 she was lengthened 15ft. by Mumm, and in 1893 she received a new stern from the same builder. She is 112ft. long over all, with a water-line of 98ft. and a 23ft. beam. Her model is a very powerful one, and since her drydocking here the experts have reported her oak hull to be now in excellent condition.

Cythera.

IN a letter to the Marine Journal, in which, by the way, he pays the highest compliment to the yachts designed by Mr. A. Cary Smith, Capt. F. F. Norton writes as follows concerning the very doubtful yarn of the loss of the yawl Cythera in the March blizzard, which we noted a few weeks ago. Capt. Norton's statements confirm our impression of the story of the alleged survivor:

I noticed in your columns a recent editorial article in regard to the loss of the yacht Cythera in the blizzard of March, 1888. I was at that time in command of the yacht Iroquois, owned by T. Jefferson Coolidge, Jr., of Boston, and sailed from New York in company with the Cythera, bound for Savannah, Ga. The wind being from the eastward, we beat out by the Hook and stood away down the beach on the port tack. We parted company during the night, and I never saw Cythera again. The gale struck us about 10 o'clock the following night, but being warned by the movements of my barometer and all the appearances of the weather, of the coming of the usual revolving storm, which happens off this coast at that season, I was all prepared for it.

The wind had gradually worked around from the east by way of the south to southwest during the day (Sunday), and I was, when the northwest wind came, forty miles southwest by south from Barnegat. I immediately hove the yacht to on the starboard tack under storm trysail set on the mainmast. We were not far from the western edge of the Gulf Stream, and drifted into it in a short time. By 2 A. M. on Monday the wind was blowing very hard and a tremendous sea was working up. I attempted to use oil bags in the usual way, but could not make them work satisfactorily and gave it up. I then thought of the fore-castle closet, and taking a 5gal. can of oil which we had on board for that purpose, I made a small hole in it and let it run into the bowl and kept a man there to pump it out every few moments. The oil coming up under the stem and spreading out to windward, formed a most perfect protection.

When daylight came on Monday morning the wind was blowing fearfully. The top of the ocean was as white as a snowdrift, and the Iroquois was the only speck on it. She was lying lee rail under most of the time, but doing most beautiful work. The wind increased, if possible, all Monday and Monday night. Tuesday morning it had got around to about north-northwest, and at times seemed to moderate. About 10 A. M. I kept off before the wind and set fore-trysail, and scudded for seventeen hours, averaging eleven knots under the two trysails. I finally ran out of the storm and got fine weather and arrived at Tybee in less than six days from New York.

Now, my opinion in regard to this story you mention, that the sailor Engleson tells, is that it is all a yarn. I think your idea in regard to the loss of the yawl is about right, and I have always advanced the theory that, as Cythera was bound to Bermuda, and the wind, when it struck from the northwest on Sunday night, was a fair wind for her port of destination, they kept her off and undertook to run head into the southeast sea still running from the wind of Saturday. The northwest wind coming so heavy, and probably no preparations having been made to heave the vessel to, she ran under, and washing off skylights or companionways, foundered. And as to a man floating on a cabin door, even for an hour, when the whole surface of the ocean was being blown away like smoke, as it seemed, is an improbable story.

The New Steam Yacht for Col. Payne.

THE steel steam yacht just contracted for by Col. Oliver H. Payne with the Bath Iron Works is described as follows by the New York Herald:

The yacht will have an extreme length of 300ft. 6in.; l.w.l., 258ft.; beam, 35ft.; depth of hold, 20ft. 6in.; mean draft, 15ft. Triple expansion engines giving 3,000 I. H. P. will drive the yacht, which will have a single screw, and she will be constructed to withstand the pounding of the heaviest seas.

The contract calls for a minimum speed of fifteen knots under natural draft. This is expected to result in an actual speed of sixteen knots, which can be increased by forced draft. Her bunkers will carry 480 tons of coal, or a ten days' supply. Col. Payne was so much pleased with the bark rigging of the steam yacht Eleanor, in which he took a party of friends last summer on a three months' cruise about European waters and to the North Cape, that he has adopted a similar rig for his new craft. The sails give steadiness when the boat is under steam, and in emergency would enable her to make fair speed under canvas alone.

A bachelor and a lover of blue water, Col. Payne has not provided for any big salon on his boat, and his idea seems to be to secure ample deck space and freedom at sea rather than large rooms in which to entertain. Unlike Mr. Goelet's and other yachts in which the salon extends the whole width of the ship, making an apartment as large as that of a country house, Col. Payne's vessel will have a deck space of 6ft. in the clear between the rail and the housings on either side. This somewhat narrows the rooms, but on the other hand, when one stands on the quarter-deck and looks forward, instead of being confronted with the side of a house extending across from rail to rail, he will have an unobstructed view of the entire length of the ship and an unbroken promenade from stem to stern.

In the interior arrangements the officers and entire ship's company are located forward, while the apartments of the owner and his guests are in the after part of the vessel. The housing structure, which extends about 160ft., leaves a quarter-deck of 60ft. long and the full width of the ship, and an ample fore-castle deck forward, the two, as noted, being united by a clear space of 6ft., along either side the entire length. Occupying the extreme forward part of the structure is the dining room, 30ft. long by 17ft. wide, and in the extreme after part are the owners' room, 16ft. square, and two guest rooms, each 16ft. by 10ft. Each of these has separate toilet room, with bath. Between the dining room and these staterooms, along amidships, stretch the engine room galley, laundry and drying rooms and pantries. Communication between all without exposure in bad weather is secured by an inside passage traversing the entire length on the starboard side. A stairway adjoining the dining room gives access to a smoking room 16ft. square in an upper structure 22ft. long, the rest of which is devoted to use as a chart room and the room of the captain, who is thus placed in the eye of the ship.

From the owner's and guests' quarters aft, a broad staircase leads down to handsome apartments on the main deck. Here are six staterooms for guests, four of the rooms being 14ft. square and two of them 14ft. by 10ft., each having a private bathroom attached. Aft of these apartments are servants' rooms. Just forward of this portion of the ship assigned to guests is the engine room. Here is the steering engine, appliances for evaporating salt water, the plant by which the vessel is lighted with electricity and the apparatus for making ice for the tables. For cold storage there is an arrangement in the forward hold, with rooms for preserving fish, flesh and fowl. Sticking to the main deck, however, one passes forward from the engine room between two coal bunkers, holding 280 tons, into the fire room, equipped with four tubular boilers of Scotch iron, and still forward of this another coal bunker, with 140 tons capacity. All the rest of the space on this deck forward is occupied with the officers' mess room and the rooms of the captain and engineer and their subordinate officers, space for the crew and petty officers' quarters. The ship is amply protected with water-tight compartments, and in the stem and stern are trimming tanks by which she can be lifted or depressed fore and aft. From davits above the main deck swing six boats. Two of these, on either side astern, are 28ft. lifeboats; two forward are 28ft. launches—one of them steam—and the two amidships are an 18ft. dinghy on the port side and a 28ft. gig on the starboard.

Capt. C. W. Scott, who sailed the Eleanor, and who superintended the construction of that vessel, will command Col. Payne's new yacht. He and the chief engineer will live at Bath while the yacht is being built under supervision of her designer, Mr. Ridgeway Hanscom, and remain until its completion, which, under the terms of the contract, will be March 1, 1899. The handsome cabinet work, upholstery and general finishing will be done in New York. The new vessel will be fully equipped in time to join in the New York Yacht Club cruise of next year, after which Col. Payne will take some of his friends across the ocean on her and make a prolonged trip in foreign waters.

The Foundering of Vineta.

THE following account of the loss of a well-known German racing yacht is from the Field. We cannot agree with the Field's conclusion, that the overhangs caused the garboards to open; but, considering the construction of the yacht, it seems more probable that the plank fastenings gave way generally about the waist and bilge. The yacht was of composite construction, with steel frames and only single skin, caulked, as we understand, in the usual manner. As mentioned by the Field, she was badly strained in her first season in racing in a heavy sea, as then reported, the screw bolts that held the planking to the frames giving way. She was very thoroughly repaired and has since been in regular service.

It will be remembered that, prior to building the second Meteor, his present racing craft, the German Emperor owned a twenty-rater, a vessel of thirty "sail units," called Vineta, which was constructed at Kiel from designs by Mr. G. L. Watson. In one of her first races on the Fjord of Kiel, Vineta was severely strained in the short, choppy seas, off the Stollergrund, a bank at the mouth of the Fjord of Kiel. No subsequent patching seems to have done her any good, though she was raced with great skill in the regattas on the Solent two years ago, under the command of Cant. Arenhold.

When the present Meteor was being built on the Clyde, his Imperial Majesty presented Vineta to his brother-in-law, Prince Ferdinand of Schleswig-Holstein-Glücksburg. Vineta was launched in the year 1895, when there was an exceptionally strong class of twenties at Kiel. In addition to Mr. Robert E. Loesener's Elisabeth, built at Hamburg from designs by William Fife, Jr.; Count Douglas's Ellen, constructed on the Clyde, and Lord Lonsdale's Dragon, there was an importation from America which made her debut that season—the late Baron von Zedtwitz's ill-starred Isolda, built by Herreshoff, which subsequently caused her owner's death on the Solent, in a collision with the Meteor.

At the close of last season Vineta was given in exchange by Prince Ferdinand of Schleswig-Holstein-Glücksburg for Mr. Robt. E. Loesener's schooner Elisabeth, *nee* Pelican. After laying up Vineta for several months at Messrs. Oertz and Harder's yard on the Elbe, her new owner decided to send the vessel to the Mediterranean in order to compete at the regattas there. Leaving the Elbe in tow of one of Messrs. Sloman's steamers, bad weather was encountered off the Dutch coast, and Vineta, though battened down and made tight, foundered in the North Sea, after parting the hawser by which she was towed. No lives were lost, and the vessel was fully insured. It is possible that while pounding in the heavy seas, the overhangs caused Vineta to open her garboards.

YACHTING NEWS NOTES.

The Crescent Iron Works has contracted to build a steel steam yacht for a New York yachtsman from designs by Lewis Nixon. She will be similar to the steam yacht Josephine, of 150ft. over all and 19ft. beam.

The 20-footer Shark has been sold by Messrs. Rouse and Hoyt to F. M. Hoyt, owner of Syce, who will take her to Bermuda.

The Yachting World, in addition to its regular weekly issue, publishes a handsome special "Xmas and Mediterranean Number." It opens with an interesting summary of the origin and growth of steam yachting by Mr. Dixon Kemp; Miss Edith E. Hughes, one of the "Solent sailoresses," has an article, "Yachting Reminiscences," and Mr. C. N. Boyn writes on the "Coupe de France," the French international yachting trophy. There are other interesting articles on the Mediterranean and various yachting subjects, and many excellent illustrations.

We have received from the Thomas Laughlin Co., of Portland, Me., its large and complete catalogue of marine hardware, blocks and fittings. The company manufactures or deals in everything connected with the construction of ships, yachts and boats, for which purposes it has an extensive plant in Portland.

Yampa, schr., arrived at Southampton on Jan. 10, after a rough passage of nineteen days from New York.

Canoeing.

Phil-o-rum's Canoe.

We are indebted to Mr. R. Easton Burns for the following, written by Dr. William Henry Drummond for the annual dinner of the Province of Quebec Fish and Game Club. The moral is one that all canoeists should lay to heart.

PHIL-O-RUM'S CANOE.

"O ma ole canoe; w'at's matter wit' you, an' w'y was you be so slow?
Don't I work hard enough on de paddle, an' still you don't seem to go—
No win' at all on de fronte side, an' current she don't be strong,
Den w'y are you lak lazy feller, too sleepy for move along?"

"I 'member de tam w'en you jomp de sani' as deer wit' de wolf behin'
An' brochet on de top de water, you scare heem mos' off hees min';
But fish don't care for you now at all, only jus' mebbe wink de eye,
For he know it's easy git out de way w'en you was a-passin' by"—
I'm spikin' dis way jus' de oder day we'n I'm out wit' de ole canoe
Crossin' de point w'ere I see las' fall wan very beeg caribou,
W'en somebody say, "Phil-o-rum, mon vieux, w'at's matter wit' you you'self?"
An' who do you s'pose was talkin' w'y de poor ole canoe shesef!"

O yass, I'm scare w'en I'm sittin' dere, an' she's callin' ma nam' dat way,
Phil-o-rum Juneau, w'y you spik so moche, you're off on de head to-day;
Can't be you forget ole feller, you an' me we're not too young,
An' if I'm looking so ole lak you, I t'ink I will close ma tongue!
You should feel ashame! for you're alway blame, w'en it isn't ma fault at all,
For I'm trying to do bes' I can for you on summer-tam-spring and fall.
How offen you drown on de reever if I'm not lookin' out for you
When you're takin' too moche on de w'isky some night comin' down de Soo!

De frise tam we go on de Wessoneau, no feller can beat us den,
For you're purty strong man wit' de paddle, but dat's long ago, ma frien'
An' win' she can blow off de mountain, an' tonder an' rain may come,
But camp see us bote on de evening. You know dat was true, Phil-o-rum!

An' who's your horse too, but your ole canoe, an' w'en you feel cole an' wet,
Who was your house w'en I'm upside down an' onder de roof you get,
Wit' rain runnin' down ma back, Bapteme, till I'm gettin' de rheumatecz,
An' I never say not'ing at all, moi-meme, but let you do jus' you please!

You t'ink it was right, kip me out all night on reever side down below.
An' even "Bon Soir" you was never say, but off on de camp you go,
Lefin' your poor ole canoe behin' lyin' dere on de groun'
Watchin' de moon on de water, an' de bat flyin' all aroun'!

O dat's lonesome t'ing hear de gray owl sing up on de beeg pine tree,
An' many long night she kip me awake till sun on de eas' I see,
An' den you come down on de morning for start on some more voyage,
An' only t'ing decen' you do all day is carry me on portage.

Dat's way Phil-o-rum rheumatecz she come, wit' pain ronnin' troo ma side,
Wan little hole here, noder beeg wan dere, dat not'ing can never hide.
Don't do any good fee me up agen, no matter how moche you try,
For w'en we come ole an' our work she's done, bote man an' canoe mus' die!

Wall! she talk dat way mebbe mos' de day till we'er passin' some beaver dam,
An' wan de young beaver he's mak' hees tail come down on de water flam!
I never see de canoe so scare, she jomp nearly two, t'ree feet.
I t'ink she was goin' for ronnc away, an' she shut up de mout' toute suite.

It mak' me feel queer, de strange t'ing I hear, an' I'm glad she don't spik no more,
But soon as we fin' ouse'f arrive over dere on de noder shore
I tak' dat canoe lak' de lady an' carry her off wit' me,
I'or I'm sorry de way I treat her, an' she know more dan me, sapree!

Yass! dat's smart canoe, an' I know it's true, w'at she's spikin' wit' me dat day.
I'm not de young feller I use' to be w'en work she was only play,
An' I know I was comin' closer on place w'ere I mus' tak' care,
W'ere de mos' worse currents de las' wan too, de current of Dead Riviere!

You can only steer, an' if rock be near, wit' wave dashin' all aroun',
Better mak' leetle prayer, for on Dead Riviere some very smart man get drown;
But if you be locky an' watch you'self, mebbe reever won't seem so wide,
An' frise t'ing you know you'll ronnc ashore, safe on de noder side!

San Francisco Riflemen.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Dec. 27.—Yesterday wound up the shooting year of the Columbia Pistol and Rifle Club. Some of the contests produced hot competition. This club has developed fine work in several lines of marksmanship, and is probably the only one in existence which fosters all-round shooting. The club has several challenges out, but no one seems willing to accept its "defi."

At the close of the official shooting the members present were divided into two squads, and shot with pistol—5 shots—and rifle—5 shots—for a supper. Capt. Bushnell's team won, with a good margin to spare. Capt. Siebe, proprietor of the Park, had a fine spread laid in an adjoining room, to which the hungry shooters retired at 5 o'clock. At the close of the feast President Rodgers distributed the medals and other prizes to the winners, and, after much speech-making, the festivities closed at 9 o'clock.

Resume of 1897: Columbia target, pistol, and military rifles at 200yds.; in open air; target and military rifles at 200yds.;

Pistol, ten-shot scores, only one allowed each month; best five scores to count; champion class: J. E. Gorman—38, 42, 45, 48, 48—221. First class—M. J. White—37, 43, 49, 50, 52—231. Second class—G. M. Barley—50, 59, 63, 72, 72—316. Third class—A. Hintermann—64, 70, 74, 85, 107—400.

Rifle, ten-shot scores; only one allowed each month; best five scores to count; champion class: A. H. Pape—56, 58, 48, 49, 53—262. First class—E. Jacobson—62, 49, 71, 78, 59—319. Second class

—J. E. Gorman—66, 71, 74, 81, 61—353. Third class—A. Hintermann—111, 70, 80, 111, 86—453.

F. H. Bushnell rifle medal and \$25, \$20, \$15, \$10, \$5; ten best three-shot scores: F. O. Young—4, 5, 6, 7, 8, 8, 8, 9—72 (medal); A. H. Pape—6, 7, 7, 7, 6, 7, 8, 9—73 (\$25); Dr. L. O. Rodgers—10, 10, 12, 12, 12, 12, 12, 12—114 (\$20); O. Bremer—10, 10, 11, 11, 12, 13, 15, 15, 18, 19—134 (\$15); A. B. Dorrell—11, 15, 16, 16, 17, 18, 18, 19, 16—161 (\$10); F. Kuhnle—10, 16, 17, 20, 21, 21, 21, 21, 18, 22—187 (\$5).

William Glindemann military medal and \$20, \$15, \$10 and \$5, best ten scores of ten shots, military count on the Columbia target: E. Jacobson—50, 49, 49, 49, 48, 48, 48, 47, 47—481 (medal); F. O. Young—49, 49, 48, 48, 48, 48, 47, 47, 47—479 (\$20); Ed. Hovey—49, 48, 48, 48, 48, 48, 47, 47, 47—478 (\$15); F. H. Bushnell—48, 48, 48, 48, 47, 47, 47, 47—475 (\$10); A. H. Pape—49, 48, 47, 47, 47, 46, 46, 46, 46—468 (\$5).

Gordon Blanding pistol medal and \$25, \$20, \$15, \$10 and \$5, three shots, best ten scores: J. E. Gorman—5, 5, 6, 6, 7, 7, 7, 8, 8—65 (medal); C. M. Daiss—7, 7, 7, 7, 6, 6, 8, 7, 7—69 (\$25); F. O. Young—8, 5, 8, 7, 9, 9, 8, 8, 8—78 (\$20); F. H. Bushnell—11, 15, 14, 13, 15, 15, 13, 11, 14, 14—135 (\$15); A. B. Dorrell—10, 7, 8, 9, 10, 10, 10, 9, 11—94 (\$10); F. E. Mason—17, 18, 15, 15, 12, 14, 7, 8, 13, 17—135 (\$5).

Howard Carr revolver medal and \$15, \$10 and \$5, six shots, best ten scores: J. E. Gorman—26, 20, 29, 25, 26, 28, 30, 28, 23—263 (medal); A. B. Dorrell—27, 30, 31, 29, 24, 28, 31, 28, 30, 30—288 (\$15); F. O. Young—32, 35, 29, 23, 31, 26, 31, 34, 35—310 (\$10); C. Roberts—40, 36, 35, 27, 36, 30, 32, 40, 38—347 (\$5).

F. O. Young rifle record medal and \$6 and \$4, best single ten-shot scores: Dr. L. O. Rodgers—7, 3, 4, 2, 4, 11, 1, 5, 4, 3—44 (medal); A. H. Pape—6, 2, 4, 3, 2, 6, 4, 6, 7, 4—44 (\$4); D. W. McLaughlin—7, 5, 4, 4, 7, 1, 2, 7, 7, 4—48 (\$4).

Diamond pistol record medal, ten shots, best single score for the year, and two cash prizes, \$6 and \$4: C. M. Daiss—1, 2, 2, 2, 7, 6, 2, 1, 3, 3—29 (medal); J. E. Gorman—3, 5, 4, 2, 3, 3, 3, 1—30 (\$6); F. O. Young—1, 9, 5, 3, 2, 5, 4, 2, 5, 2—38 (\$4).

Capt. L. Siebe's all-comers, all-round medal, best three scores on musket and best ten three-shot scores on fine rifle and pistol: F. O. Young—Scores: Rifle, 72; pistol, 78; musket, 170.

Achille Roos .22-caliber rifle, medal and two ladies' medals and three cash prizes, ten best ten-shot scores: E. Jacobson—9, 8, 8, 8, 9, 9, 9, 9, 9—83 (medal); A. B. Dorrell—7, 8, 8, 9, 9, 9, 9, 10, 10—89 (\$15); Ed. Hovey—7, 10, 10, 11, 11, 12, 12, 12, 12—109 (\$10); Mrs. C. F. Waltham—9, 11, 11, 11, 11, 11, 12, 12, 12—112 (\$5 and medal); Mrs. L. J. Crane—9, 11, 11, 11, 12, 13, 14, 14, 14—124 (second ladies' medal).

Cincinnati Rifle Association.

CINCINNATI, O., Dec. 26.—The regular weekly practice shoot of the Cincinnati Rifle Association was held to-day on the Association's range, Four-Mile House, Reading road. Mr. C. Wellinger was declared king for the day. Conditions: Strictly off-hand, 200yds. range, German ring target. Scores below:

Revolver Shooting in England.

Mr. Walter Winans has been elected a vice-president of the North London Rifle Club, in the place of the late Sir Henry Halford. Mr. Winans is already a vice-president of the South London Rifle Club.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Jan. 18-20.—Hamilton, Ont.—Grand Canadian Handicap. Live birds; \$1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

Jan. 26-27.—Orange Lake, Newburgh, N. Y.—Tournament at Pine Point. Open to all. First day, targets; second day, live birds.

Feb. 15-19.—Hot Springs, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. \$1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 22.—Atchison, Kan.—Tournament of the Atchison Gun Club. Live birds and targets.

March 15-18.—Utica, N. Y.—Tournament of the Oneida County Sportsmen's Association. Live birds and targets. Open to all. Henry L. Gates, Pres.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, \$25, extra; \$1,500 guaranteed to the three high guns; \$600, \$500 and \$400; all surplus added.

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

April 13-15.—Atchison, Kan.—Manufacturers' fourth annual tournament. Added money later. Jack Parker, Manager; Lou Erhardt, Sec'y.

May 17-20.—Tournament of the New Jersey State Sportsmen's Association. T. H. Keller, Sec'y.

April 5-8.—Baltimore, Md.—Annual spring tournament of the Baltimore Shooting Association. Geo. L. Harrison, Sec'y-Treas.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluebirds thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 345 Broadway, New York.

Those subscribers to FOREST AND STREAM who read Drivers and Twisters will learn with regret that Noel E. Money is not going to return to this country in his capacity as secretary to the Ameri-

can E. C. & Schultze Powder Co., Limited. In fact, he's not going to return to this country at all; he has resigned the secretaryship referred to, and has become connected with a business enterprise that will occupy his time fully, that will fill his pocket, and that will keep him on the other side of the North Atlantic Ocean. Noel E. Money has been engaged in business for the American E. C. Powder Co. at Oakland, N. J., for about six years, and during that time he has traveled all over the continent and made many friends for himself and the business he represented. At one time, particularly at Knoxville in '95, Noel Money was one of the best and most successful target shots in the country; latterly he has been devoting himself more to the business of powder making than that of powder burning, with the natural result that his work at the traps was more ragged and irregular than it would otherwise have been. As a live-bird shot, he was at times very good, but he never approached the skill of his father, Capt. A. W. Money (Blue Rock), at this style of shooting, either in precision or regularity. It is no exaggeration, neither is it any flattery, to say that Noel Money's departure from the United States is a distinct loss to the trap-shooting fraternity, who knew and liked him so well.

A certain Milwaukee, Wis., newspaper has been gloating over the fact that none of Chicago's shooters have taken up the challenge issued on behalf of Dr. J. L. Williamson, of Milwaukee. The tone of the article printed in its issue of Dec. 24 does not, we feel sure, reflect the sentiments of Dr. Williamson, who is too good a sportsman to countenance any such "blowing." It should be remembered, too, that the challenge emanating from Milwaukee was by no means wide open, as all good challenges should be; its terms demanded that the Chicago man accepting the challenge should come to Milwaukee and tackle the doctor on his own grounds and among his own friends. The part of the article of Dec. 24 that touches upon challenges to Elliott and Gilbert reads very funny, and shows how very little the writer of the item really knew. It runs as follows: "The challenge will remain open until Jan. 2, and then if no acceptances are received, Dr. Williamson may challenge J. A. R. Elliott, of Kansas City, for the Du Pont trophy, and Fred Gilbert, of Spirit Lake, Ia., for the Cast-Iron medal he won from Elliott last fall." In the first place, Gilbert had at that time a challenge in for the Du Pont trophy; and in the next place, Gilbert has never shot for the Cast-Iron medal, neither has Elliott ever held it. (Since writing the above, we learn that Dr. Williamson has offered to go to Chicago and shoot any Chicagoan. Bravo! Doctor.)

The South Side Gun Club, of Newark, N. J., tried a new sort of handicap at its annual New Year's Day shoot. The system was as follows: Each man shot at 50 targets; the number of breaks was subtracted from the total shot at, giving the number of misses; allowances were then apportioned thus: Each man shot at as many targets as he had missed out of the 50, plus one for every five of those misses. Thus, if a man missed 10 out of 50, he shot at 10 plus 2 for his allowance. The trouble with this system is that it is hardly equitable where the calibers of the shooters differ materially. For instance, according to the allowance (and each one receives extra targets in the same proportion), a man has to break over 83 per cent. of such allowance to enable him to reach a highest possible; that is, a man with 10 losses, or 15 or 20, must break 10 out of 12, 15 out of 18, or 20 out of 24, or 83.3 per cent., to reach the highest possible. Thus a man who averages anything over 83.3 per cent. has a distinct advantage over the man that doesn't.

The secretaryship of the New Jersey State Sportsmen's Association is now in the hands of T. H. Keller, the late secretary, W. H. Huck, having resigned owing to pressure of business. Mr. Huck took hold of the association's affairs when it was first attempted last year to resuscitate trap-shooting interests in the State of New Jersey. He leaves the post of secretary with the knowledge that the association is now in a satisfactory condition as regards its financial status, and also with the knowledge that he has left a worthy successor in his stead.

As will be noticed elsewhere, the New Jersey State Sportsmen's Association claims the dates of May 17-20 for its annual tournament. The location where the shoot will be held is not decided upon as yet; in fact, the Executive Committee of the association has a hard nut to crack in deciding that point. It will also be noticed that a change has been made in the by-laws regarding the make-up of teams for trophy contests, viz.: Each member of a team must be a resident of the county where the club holds its shooting meetings, or of the counties adjoining that county.

Irby Bennett, of the Winchester Repeating Arms Co., has been spending the holidays in his old home at Memphis. Of course, he has been having a good time, what with trap-shooting and some hunts after ducks. In a recent letter he states that "returns from different clubs in Mississippi and Arkansas are encouraging. I had three friends at Wapanoca yesterday, all of whom killed their limit—50 ducks. I am going to take a try at the ducks again this week, and expect to have fine sport, as the flight is now fine."

The annual meeting of the Cobweb Gun Club, of New York, was held on Thursday night, Jan. 6. The following officers were elected for 1898: President, A. C. Bage; Vice-President, W. Cashau; Secretary-Treasurer, George W. Thompson, Jr.; Captain, Grant Nichols; Lieutenant, Fred Kerker; Directors, D. M. Van Cott, P. F. Ferrigan, P. F. McKean and J. Elliott. The club will hold its monthly live-bird shoots as usual at Baychester on the first Thursday of every month.

Rolla Heikes is not allowed to remain long in undisputed possession of the Cast-Iron badge. Charlie Budd, of Des Moines, Ia., will now try (on Feb. 22, it is said) to carry back that emblem of a championship to Iowa, a State that recently held all three of the live-bird championships, but which at this date holds only one, viz., the Kansas City Star's cup. Well, the race on Feb. 22 will be quite a warm one, and it is to be hoped that the day will be more propitious than was Jan. 1.

We understand that a proposition will be made to Gilbert by some Philadelphians to shoot a race, or a series of races, with J. L. Brewer. We know that there is an intense desire on the part of many people in that city and in the vicinity of this city to see these two men matched. There is no intention of running a bluff on Gilbert, but if he or his friends evince the slightest desire for such a match or series of matches, they can most surely get one.

Lou Erhardt announces that the "Manufacturers' Fourth Annual Tournament" will be held at Atchison, Kan., April 13-15, under the management of Jack Parker. All communications regarding same should be addressed to Lou Erhardt, Atchison, Kan. Mr. Erhardt also states that the Atchison Gun Club will hold a tournament at live birds and targets on Washington's Birthday, Feb. 22.

Owing to the late hour at which it was started, and also owing to the large number of entries in the event, the 20-bird handicap at pigeons, held on the Keystone Shooting League's grounds, Holmesburg Junction, Pa., Jan. 1, was continued on Monday, Jan. 2. The shoot finally ended in a victory for J. H. Vandergrift, who scored all his twenty pigeons from the 30yds. mark. He won first money, \$75; second money, \$50, went to I. W. Budd, with 19.

John Wright, of the Brooklyn Gun Club, has been persuaded by his friends to take under his wing the running of an invitation live-bird shoot, professionals barred, at Dexter Park, L. I., on Feb. 3. Admission to the grounds for shooting purposes on that date will be by invitation only; if you want to be in it, you had better see Mr. Wright and secure an invitation. The programmes will be out in less than a week from this date.

The shooting season of the Pastime Gun Club, of Detroit, Mich., has just closed, and the class prizes were distributed as follows: Class A medal, Renick; Class B, Hartz; Class C, Weber. The medals are awarded to the man in each class who makes the best 15 scores in the club shoots during the year. All three of the above shooters used Peters' cartridges loaded with King's Smokeless.

A correspondent from "way out West" asks us for the address of Jack Fanning. We thought that Jack had gone home to the Pacific Slope for a short vacation, but here he has been winning second average at the annual New Year's Day shoot of the Audubon Gun Club in Buffalo. Letters for Jack should be addressed to him at Batavia, N. Y.

C. W. Tuttle, of Auburn, N. Y., was in the city the latter part of last week. He found time on Saturday afternoon to run over to Brooklyn and break a few targets over the Brooklyn Gun Club's magatrap. Notwithstanding the puzzling background, a particularly hard one for a newcomer, he smashed enough to show that hand and eye were working well together.

The New Year's shoot of the Schenectady, N. Y., Gun Club was a very pleasant affair from what we can learn. In addition to the scores on sparrows and pigeons given elsewhere, a 25-target event was shot. The scores show that pigeon and sparrow loads are not the best for targets. Keller and Sanders were high with 20, while O. R. Dickey couldn't get above 19.

Elliott defeated "One-Barrel" Murphy at Gloucester, N. J., on Saturday last, Jan. 8, by the score of 88 to 82. Ferd Van Dyke, who witnessed the match, says that the first 50 birds trapped, i. e., the first 25 for each man, were as fast as any he ever saw. After that the birds were nothing more than moderate. The score of this match appears elsewhere.

C. E. Teel, who has been identified with the sales department of the Hunter bicycle, at 310 Broadway, under W. Fred Quimby, is now with Tom Keller, at 88 Chambers street, the interests of the Peters Cartridge and the King Powder companies being his especial care.

Fred Gilbert did some practice work on live birds on Saturday last, Jan. 8, at John Watson's Park. He shot at 35 birds, scoring all but one. If he can do as well as that at Dexter Park on Saturday of this week, he'll come very close to taking the Du Pont trophy home with him.

Ferd Van Dyke has left Philadelphia temporarily, and will be found on exhibition at the Winchester Repeating Arms Co.'s space in the Sportsmen's Exposition, as one of Mr. D. Daggett's lieutenants.

C. C. Beveridge, of Newark, N. J., sometimes called "The Dominic" by his friends, is shooting rather better than ever. He has bought a Remington gun, and is "breaking 'em outer sight." Result: A chip on his shoulder.

The Keystone Shooting League, of Philadelphia, has elected the following officers for 1898: President, James Wolstencroft; Vice-President, W. M. Pack; Secretary-Treasurer, George Pack.

In connection with the Wolstencroft-Bartlett match at the Keystone Shooting Club's grounds, Holmesburg Junction, Pa., Saturday, Jan. 15, there will be an all-day open shoot at targets.

On Wednesday, Jan. 5, Rolla Heikes and Charlie Young shot a friendly race at 100 live birds per man, Heikes winning by 90 to 84.

EDWARD BANKS.

JAN. 11.

Reading Notes.

Koch versus Kurtz.

A shooting match took place at the Kurtz House shooting grounds, Dec. 29, 1897, between J. W. Kurtz and George Koch, for \$5 a side, loser to pay for the birds. Ten birds were shot at, the distance being 27yds. rise, 50yds. boundary. Mr. John Ganter acted as referee. The score was as follows:

Koch.....1102000202 5 Kurtz.....0002010011-4
Following the Koch and Kurtz match, three sweeps were shot at 10 targets each.

Events:	1	2	3	Events:	1	2	3
Coldren.....	8	8	10	Kurtz.....	5	7	6
Shultz.....	8	8	8	East.....	3	5	3
Bossler.....	7	6	6				

New Ringgold, Pa.

The second tournament under the auspices of the New Ringgold Gun Club, which was organized in November, was held Dec. 29 and was a success and attracted the sportsmen in the coal region to New Ringgold. The following events were shot at 25 live birds:

No. 1.	No. 2.	No. 1.	No. 2.
H G Kimmel.....	15	J G Sallade.....	15
Boyer.....	10	Daniel Gerber.....	8
Rock.....	2	H S Leiser.....	13
Reichelderfer.....	15	Keefer.....	16
Geo W Gerber.....	15	W C Leiser.....	13
H W Sallade.....	16	Eckert.....	9

Nettles Defeats Hawkins.

The second live-bird match between Frank Nettles, of Royersford, and Charles G. Hawkins, of Pottstown, took place Dec. 28, 1897, on the grounds of the Twin City Gun Club at Royersford, Pa. The match was won by Nettles, with the score of 16 to 6. The conditions were 20 live pigeons per man, 5 unknown traps, A. S. A. rules.

Keystone Gun Club.

The Keystone Gun Club, of Lebanon, Pa., has elected the following officers: President, F. H. Reineohl; Vice-President, J. A. Bollman; Secretary, Al G. Reizenstein; Treasurer, Ed Risser; Captain, A. C. Smith; House Committee, John A. Bollman, Morris High, Peter Atkins; Steward, Wilson Wentzel. The club is in a flourishing condition, having 150 members.

Boyetown, Pa.

The Boyetown Gun Club held a shoot on its grounds Dec. 30, with the following scores. All events, either targets or live birds, were at 10 each:

Events:	1	2	3	4	Events:	1	2	3	4
Benner.....	10	7	5	5	H Wein.....	5	6	4	4
Trumbour.....	8	7	5	7	Nuss.....	5	6	6	6
Schealer.....	8	7	3	4	Nettles.....	1	5	5	6
Wm Wein.....	6	4	4	4					

Events Nos. 1 and 2 were at targets; Nos. 3 and 4 at live birds.

Topton, Pa.

The first annual live-bird tournament of the Climax Gun Club, of Topton, Pa., was held on the club's shooting grounds at the Dryville Hotel. Shooters were present from Reading, Topton, Hancock, Temple and Allentown.

No. 1.	No. 2.	No. 3.	No. 4.
Geo B Yoder.....	10211-4	0	10201-3

J Wertz.....	02220-3	2	

Nos. 1 and 4 were at 5 birds, \$1.50; No. 2, \$1 miss-and-out; No. 3, match for \$5 a side.

Lebanon versus Pottstown.

The fourth match between the Keystone Gun Club, of Lebanon, and the Shuler Shooting Association, of Pottstown, came off on Jan. 1 on the beautiful grounds of the Shuler Club, and resulted in a victory for the visitors. The high winds made good shooting out of the question, and many birds that were hit hard dropped dead out of bounds that would under ordinary circumstances have counted. Each team was composed of 12 men, who shot at 10 live birds each. Trumbauer carried off the honors of the day by killing 10 straight. A return match will take place at Lebanon, probably on Feb. 22.

Mr. Smith, of the Lebanon team, stated that the Lebanon Club was organized two years ago, and has shot six matches, winning four and losing two, one with the Shuler Club and one with the Williamstown Club. The members are all well-known and popular citizens of Lebanon. The score of the match was as follows:

Lebanon Gun Club.	Shuler Gun Club.
Bollman.....	2022002222-7

South End Gun Club.

Twenty shooters participated in the New Year's Day shoot of the South End Gun Club, of Reading, Pa., an unusually large number for a cold day. A high wind was blowing right in the faces of the shooters, making high scoring difficult. The programme consisted of 15 events, all at targets, with the following results:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	10	10	10	10	10	10	10	10	10	10

A. FINK.

ON LONG ISLAND.

Hell Gate Gun Club.

Dec. 28.—The Hell Gate Gun Club closed its season of 1897 to-day, twenty-five members putting in an appearance at Dexter Park for the last club shoot. Conrad Weber was in the lead for first prize by one point prior to the commencement of to-day's shoot; his nearest competitor was Henry Forster with one point less. As the scores given below will show, Forster made one more point to-day than Weber did, thus tying him for first prize. After the conclusion of the club shoot, the two shot off for first prize. They shot at 10 birds, each killing 7. Then they went at it miss-and-out, and Weber won in the fifth round. Scores were:

Thirty yards, 7 points:	Twenty-eight yards, 7 points:
Eugene Doenck.....	220*12*111-7
P Woelfel.....	0211121222-9
Fred Frostel.....	2102011111-8
Twenty-eight yards, 6½ points:	
Emil Steffens.....	1102111012-8
Twenty-eight yards, 6 points:	
Ernest Metz.....	1122122222-10

Jan. 4.—The Hell Gate Gun Club held its annual meeting this evening at 1998 First avenue, New York city. The club entered upon its sixth year to-night, having been organized on Jan. 4, 1892. The chief business before the meeting was, of course, the election of officers and the distribution of prizes. The club was originally organized with nine members, but has now reached the limit according to its constitution, which only allows a membership of fifty. The monthly shoots at live birds are held at Dexter Park. The average attendance at the monthly shoots during the past season was a fraction over thirty, 3,180 birds having been trapped in the contests for yearly prizes. The club uses the point system of handicapping, a system that gives the poorer shots as good or even a better chance than the good shots. The prizes were twenty-three in number and were an elaborate lot; they were mostly donated. Among them were a smoking and poker set donated by William Sands; a porcelain clock, donated by the president of the club; a set of silverware, donated by Mr. Lipnack, of Dexter Park; \$25 cash, donated by the club; cartridge boxes, gun cases, etc. There were so many prizes that only a few of those present—all prize winners, of course, showed up—failed to get something. Nearly all those who got prizes this year promised to donate to the prize list next year.

The following officers were elected for 1898: President, John H. Voss; Vice-President, P. Woelfel; Treasurer, C. Weber; Financial Secretary, J. Schlicht; Recording Secretary, E. Doenck. Messrs. Voss, Weber and Doenck were all re-elected unanimously for their sixth term.

Below are the club records for the year:

Handicap, yds.	Birds, points, shot at.	Birds killed.	Points made.	Per cent.	Prize.
E Doenck.....	30	100	81	81	12 or 13
Gus Nowak.....	30	7	80	51	5
F Frostel.....	28	7	100	87	17
John H Voss.....	28	7	110	94	17
Wm Sands.....	28	7	90	71	11
Edw Payntar.....	28	7	100	69	6
P Woelfel.....	28	7	110	72	5
John Schlicht.....	28	6½	100	73	18½
E Steffens.....	28	6	100	75	17
L T Muench.....	28	6	100	65	8
Dan Valenti.....	28	6	60	34	3
Henry Forster.....	28	6	110	89	25

Brooklyn Gun Club.

Jan. 1.—The Brooklyn Gun Club had no special shoot announced to-day, but six members got together and had a quiet shoot on the club's grounds. The weather was extremely cold and the wind high. Woods did the best work, breaking 77 out of 90 shot at. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	10	10	20	20	20	Targets:	10	10	10	20	20	20

Smith.....	7	8	7	15	18	15	Skidmore.....	7	7	7	15	14	

Jan. 8.—To-day was the last shoot for the monthly cup offered by the club for competition during the year. Up to to-day only one man, C. W. Billings, had two wins for the cup. The conditions were that the cup should go to the man winning it the greatest number of times during the year. There were 13 entries in to-day's event, and five men tied on highest possible.

The weather was all that could be desired for good scores, there being no wind and quite a fair light; but the air itself was very raw and penetrating. As a result of the favorable conditions, everything was in favor of the men with good handicaps, and it is noticeable that of the five ties for the cup not one needed all his targets to carry him up to the mark. J. S. S. Remsen shot in much improved form, scoring 22 and 24 out of his two 25s, while Dominic Beveridge scored two 23s. Dutcher, who had to break 14 out of his 20 extra targets, just failed to do the trick, losing his last target and going out with 49.

Below are the totals for each 25:

	1st 25.	2d 25.	Handicap.	Total.
* C C Beveridge, 7.....	23	23	4	50
* T Baron, 8.....	20	23	7	50
* J Swan, 10.....	22	22	6	50
* C W Billings, 12.....	23	18	9	50
* H Nelson,				

IN NEW JERSEY.

Walsrode Gun Club.

Dec. 25.—The Walsrode Gun Club, of Newark, had a big day on this date, this being the club's regular Christmas shoot. The grounds are at Wiedenmayer's park, Newark. Several events were shot at targets, the scores made being as given in the table below:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Schraft	7	4	5	5	5	5	Wagner	6	2	2	2	2	2
Perment	9	9	7	9	9	9	Knodel	5	5	5	5	5	5

R. Baar	1021122111	9											

Jan. 1.—New Year's Day saw a few members of the Walsrode Club at Wiedenmayer's park. Four events at live birds were shot, and also three at targets. The scores in the table below show the records made. Nos. 1, 2, 3 and 4 were at live birds, No. 2 being at 7 birds; the other three were at 10 live birds. No. 5 was at 10 targets, "walking match"; Nos. 6 and 7 were at 10 targets, known traps and angles. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6	7
Schraft	7	7	10	3	5	5	Hebeler	4	4	4	4	4	4	4

H. REINHARDT, Sec'y.

Boiling Springs Gun Club.

Jan. 1.—The regular monthly club shoot of the Boiling Springs Gun Club was held to-day on the club's grounds at Rutherford, N. J. Fifteen shooters took part in the club event, a 50-target handicap. Dr. De Wolfe was high with 48 out of 53, Billings coming next with 47 out of 60. Scores were:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6	7
Huck	0	0	0	0	0	0	Hebeler	4	4	4	4	4	4	4

Asmus	6	7	4	7	5	8	Black	6	3	3	3	3	3	3
Hatfield	3	4	4	4	4	4								

Jan. 5.—This afternoon the Boiling Springs Gun Club held the first of four bi-weekly shoots for a gold watch, the dates for these shoots being the first and third Wednesdays in January and February. The event is at 50 targets, unknown angles, \$1.25 entrance, handicaps being readjusted every two weeks. To-day's event had 15 entries, the winner being Capt. Money, who broke 49 out of 57. Beveridge, with 7 extras, and Chris Wright, with 6 extras, both had a chance to tie him, but failed by one break. Below are the scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6	7
T. H. Keller	7	1	1	1	1	1	Hyde	6	8	9	9	9	9	9
Spiegel	15	1	1	1	1	1	Adams	6	5	7	4	6	6	6

W. H. Huck	6	1	1	1	1	1								
G. Piercy	6	1	1	1	1	1								
C. R. Wise	7	1	1	1	1	1								
Capt. Money	7	1	1	1	1	1								
C. W. Billings	8	1	1	1	1	1								
E. Banks	2	1	1	1	1	1								
E. Jeanneret	12	1	1	1	1	1								
Hatfield	17	1	1	1	1	1								

Dutcher, Wright and Beveridge were the only ones to shoot their handicap besides Capt. Money, no one else being able to total 49; Dutcher had to break 20 straight, but retired on missing his second target.

Several sweeps were shot during the afternoon, all being at unknown angles, Sergeant system, with the exception of No. 8, which was at five pairs:

was at five pairs.

The South Side's New Year's Gathering.

Jan. 1.—The South Side Gun Club, of Newark, N. J., has for many years in succession kept open house on New Year's Day. To-day was no exception to the rule, and the result was a very pleasant shoot in spite of the weather. The air was very cold indeed, and the wind blew strongly from the northwest. Among the shooters who turned out to try their skill was Col. R. H. Breintnall, who at one time was a most familiar figure at the traps anywhere in New Jersey. To-day he started in badly, but pulled himself together when it came to unknown angles in the handicap, and ran 35 out of 37 at that style. This excellent finish gave a total of 51, one more than was needed for a highest possible. He

was chased well up by Warren Smith with 49, Asa Whitehead and Ike Terrill with 48, and J. Fleming with 47.

The system of handicapping was somewhat novel, and is well worth describing, judging from the results in the matter of scores. Each man shot at 50 targets, 25 known and 25 unknown. The totals were all figured up, and then each man was awarded as many extra targets as he missed, plus one extra target for every five or portion of five that he missed. Thus Breintnall and Warren Smith each broke 40 out of 50; they received 10 targets for those that they lost and one extra for each five of the 10, or 12 in all. The shoot was for a gun, and as shown below, Breintnall won the prize:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6	7	8	9	10
Breintnall	12	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
W. Smith	12	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Whitehead	19	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
I. H. Terrill	22	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
J. Fleming	18	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
W. M. Smith	17	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
T. Dukes	20	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Dawson	25	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
L. Thomas	36	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
*C. M. Hedden	10	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

*Withdrawn without shooting his allowance of 24. Ten sweeps, all at 15 targets, were also shot during the day, the results of which are shown in the following table:

Events:

WESTERN TRAPS.

The Stove-Lid Badge.

CHICAGO, Jan. 8.—The low, steady sizzle recently heard over a portion of this section of the country, gentle reader, is caused by Rolla O. Heikes, who is still frying eggs on the Cast-Iron badge at his own fireside at Dayton, O. Charlie Budd wishes to transfer the cookery from Dayton, O., to Des Moines, Ia., and on Feb. 22 will go to Dayton to see Mr. Heikes about it. It is not yet permitted to know which one of them will secure the further culinary rights, but it is interesting to see another Richmond in the field now and then. Let us put the Cast-Iron badge into circulation, if this be possible.

Chicago Is Scared.

The plain truth about the challenge of Dr. J. L. Williamson, of Milwaukee, to shoot any Chicago man, 100 birds, \$100, is that all Chicago is scared. The tall doctor from Milwaukee has agreed to modify the challenge so that he shall shoot here and not in Milwaukee; but even on that basis we are unable to find a man who will come out of the hole and do battle for his own, his native land. There is no Bozarris in this neck of woods to coax the boys to strike for their altars and their fires, or for anything else that is usually considered valuable. They are all scared. Elmer Neal, the young crack of the Garfield Club, has been out of the city for a few weeks, but is expected here to-day for at least a short stay. Great pressure will be brought to bear upon him to induce him to do something for the honor of Chicago, but at this writing nothing definite has been done to warrant the hope of a race. This is pretty bad, but we can't help it. Winter is just coming on, and we need our money for coal.

The New Reporter.

The new reporter covered the intercity team contest at Denver, Jan. 3, between Denver, Colorado Springs and Pueblo, in the local papers in the following way, which gives some news, but leaves us in doubt whether the shooting was done at targets or live birds, and whether the contestants used rifles or shotguns, all or part of the time. He states:

Denver Won—Easily Captured the Shotgun Match from Colorado Springs, Jan. 1.—The special shotgun match shot off at Sedan Park, Saturday, was won handily by the Denver team, the team from Colorado Springs being beaten by a score of 57 to 50. After the conclusion of the contest, which lasted all day, Bryan Haywood tendered the marksmen a banquet at the D. A. C.

Score of the team shoot: A cipher means a miss, the figure 1 that the target was shattered with the first barrel, and figure 2 with the second barrel.

Denver.	Colorado Springs.
A B Daniels . . .2122122122—10	A J Lawton . . .2010111111—8
J S Sedan . . .1121212221—10	C L Funk . . .121100210—7
S Adams . . .111120121—9	A D Mermod . . .111011220—8
B Haywood . . .222202222—9	W R Mason . . .2121012212—9
D L Mechling . . .0111212211—9	I W Garrett . . .0221122202—8
E F Thomas . . .2111222112—10—57	P Bergemer . . .1111221111—10—50

Denver Won—Crack Rifle Shots Contested at Sedan Park Yesterday, Jan. 3.—The intercity pigeon shoot at Sedan Park closed yesterday, Denver winning the contest by the close margin of one point from Pueblo.

Haywood and Daniels composed the Denver team, while Funk and Mermod represented Pueblo. The shoot was for a wager of \$1,000, but before the commencement the wager was doubled. Bryan Haywood saved the day by making a score of 96. The score in full was as follows:

Denver Team.—Haywood 96, Daniels 81; total 177.

Pueblo Team.—Funk 88, Mermod 88; total 176.

No race can be shot for less than \$1,000, in the eyes of the new reporter.

Olathe Team Shoot.

The team shoot of the Olathe, Kan., Gun Club and the ensuing banquet New Year's eve were both pretty big affairs. Sixty men were present and shot in the team contest, under Capt. Frank Hodge and Will Walker, 30 men on a side. The race was at targets, and the Hodge team won by 19 birds. At the New Year's banquet 100 guests were seated, and toasts followed the banquet until the ringing in of the new year.

Cold at Duluth.

New Year's Day at Duluth, Minn., was very cold, and the team race between Duluth and Superior was deferred on that account, the Superior men not appearing. A few of the faithful gathered at the grounds of the Central Gun Club and shot in spite of the weather. Scores:

- No. 1.—Warren 10, Loud 9, Nelson 7, Hart 6, Greener, Jr., 5.
- No. 2.—Nelson 8, Hart, Loud, Warren and Greener, Jr., 7 each.
- No. 3.—Bowstring 9, Warren and Nelson 8 each, Hart and Loud 6 each, Greener, Jr., 5.
- No. 4.—Loud 8, Nelson and Hart 7 each, Warren and Bowstring 6 each.
- No. 5.—Hart 9, Nelson 8, Loud and Bowstring 7 each, Warren and Bowstring 6 each.
- No. 6.—Loud 9, Nelson and Bowstring 8 each, Warren 7.

New Year's at Findlay.

The Findlay, O., Gun Club held their New Year's shoot with the following scores, made in ten 10-target events:

Events:	1	2	3	4	5	6	7	8	9	10
Livingston	8	5	5	5	5	5	5	5	5	5
Robinson	7	8	8	7	6	6	10	9	7	4

Funk	4	4	5	5	5	5	5	5	5	5

Salina New Year's Shoot.

The Salina, Kan., Shooting Club met New Year's Day for a little shoot, and among the scores were the following, at 20 birds:

Fred Eberhardt 13, Mart Stevenson 11, Charles Brown 9, John Gates 7, Joe Ollinger 10, Mack Stevenson 8, W. J. Hughes 5.

Del Norte Annual.

Del Norte Gun Club, of Colorado, met in annual meeting Dec. 31, and chose the following officers: J. H. Collins, President; W. H. Cochran, Vice-President; E. E. Dorsey, Treasurer and Secretary. Cash prizes of \$25, \$15 and \$10 were arranged for the New Year's shoot.

Holidays at Frisco.

A little trap-shooting enthusiasm was stirred up at San Francisco during the holidays. On New Year's Day Otto Feudner, of the E. T. Allen Co., accepted the challenge of Henry Stelling, of Davisville, for a 100-bird race at live birds. Stelling lately defeated H. Ruhstaller, of Sacramento, in a similar race. At this season of the year the duck shooting is good not far from Frisco, and this fact militates against the sport of trap-shooting.

Fine Weather at Chicago.

It is unsafe to say anything about Chicago weather, but just at present we are having the finest winter weather imaginable, and the lovers of the trap never had a better winter season for their purposes. The air is cool, but clear, and the temperature just low enough to make the birds fly without freezing a shooter to death. It may be remarked, in passing, that this would be fine weather for some one to shoot a race with D—r. J. L. W—n, of Milwaukee.

E. C. Challenge Cup.

CHICAGO, Jan. 8.—The challenge race between Old Hoss Stannard and A. C. Paterson, for the Cook County Trap-Shooting League E. C. challenge cup, was shot this morning on the grounds of the Calumet Heights Gun Club, at Grand Calumet Heights, Ind. The day was cool and bright, with a strong, driving wind from the left quarter. The traps at Calumet Heights Club are situated on the beach at the extreme southern end of Lake Michigan, and throw the targets over the waters of the lake. At this season of the year ice mounds, varying from 10 to 25 ft. high, raise above the water; these, together with the background of water and sky, tend to make a deceptive background for a shooter not accustomed to similar surroundings. The targets thrown to the left quarter, heading across the wind, would shoot up high, and were largely undershot, while those thrown to the right quarter would duck toward the ground, and were often overshot. All of the

targets thrown were unknown angles except those in the shoot of reverse pull. It was expected that better scores would have been made, especially by Mr. Stannard, but owing to the background, together with the fact that he has had a severe cold for the past few days, he was possibly not at his best, though the shooting was by no means easy.

Following are detailed scores of the contest:

Forty targets, unknown traps and angles, one man up:

F P Stannard . . .01111 01111 11100 0111—15

Von Lengerke versus A. Kleinman.

About one year ago several shooters of our city, who were returning by train from a live-bird shoot which was held at Watson's Park, got into a discussion as to the advantages or disadvantages of a person shooting live birds standing at 30yds. or 10yds. from the traps. The result was that a forfeit was posted, which was subsequently withdrawn, with the understanding that a race was made between O. von Lengerke and Abe Kleinmann, to shoot a race of 25 live birds for the price of the birds and something better. O. von Lengerke was to stand at 10yds. and Abe Kleinman was to stand at 30yds., both from the center trap of five traps. The race to be shot on Watson's grounds, and Abe Kleinman was to select the day. It is said that he desires a day when the wind blows strong in the face of the shooter at the score, possibly figuring that most birds trapped in such a wind will prove incomers and hence handicap his opponent. It would seem that during the past year we might have had several such winds, but if we did not, we hope such conditions may prevail and that the race will be shot soon.

Dwight, Ill.

A grand shooting tournament is announced to be held at Dwight, Ill., on Thursday and Friday, Jan. 27 and 28, and is to be at live birds and targets; American Association modified rules to govern; no bang, no bird; any shooter on a tie has the privilege of drawing his part of money won. In all events of 12 entries or over, moneys divided 40, 30, 20 and 10 per cent.

Shooting will commence at 9 o'clock. Warm meals will be served on the grounds.

Elgin Gun Club.

CHICAGO, Jan. 1.—The Elgin Gun Club held its regular New Year's shoot to-day on its grounds at Elgin, Ill. There was a good crowd in attendance to enjoy the occasion, in spite of the cold weather. Several of the boys from Chicago—namely, R. Kuss, F. E., I. R. and E. S. Graham and John Ruble—were well entertained by the club's members.

Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	20	15	20	15	12	10	20	10	10
Bennett	8	9	13	8	5	5	5	5	5	5	5
Kuss	7	14	13	14	15	10	10	7	14	10	6
W. Dannel	7	13	18	14	18	13	11	10	15	8	7
A. Vance	8	15	19	12	15	12	11	9	15	7	9

A. C. PATERSON.

Some Ideas for Pigeon Shooters.

St. Louis, Jan. 4.—Editor Forest and Stream: I want to make a few remarks about trap-shooting, and if you will give the following a space in your paper I shall consider it a great favor.

If one goes back about twenty-five years, what improvements have been made since that time! The artificial bird trap, from the glass ball to the bluerock, has improved greatly. Now we throw them in the air with electric traps. Why can't we make an improvement on the live-bird trap? I am against the ground trap and its rules. The trap is filled, the shooter steps out and says "Pull!" and throws the gun to his shoulder; the trap opens, and very frequently the bird doesn't fly. The shooter covers the bird, and as soon as it opens its wings it is killed. Now then, sometimes the bird flies up 2 ft. and drops down again; the man shoots; overshoots the bird; never touches it; then he takes the other barrel and kills it on the ground. I don't call that scientific shooting. Any eight-year-old boy, with a little practice, can do that. That is no credit to a professional.

I have a different plan. Dig a ditch, 20 or 30 ft. long, 2 ft. wide and 2½ ft. deep. Put a cellar frame around it and make two trap-doors, 3½ ft. high, out of hard wood, 1 in. thick, and fasten them with hinges to the frame just like we have them now for artificial birds. Then take a coop of birds behind the trap-door, and it takes only a man and boy to do the work. When the shooter is ready, he gives the man the signal and he will throw up the bird in the air; "unknown birds" from different places. If the shooter hits the bird and it falls behind the trap, but is not dead, and is apt to fly again, the trapper will inform the referee, and the shooter can catch his bird. No man to be allowed to shoot a bird on the ground.

Then there is another advantage. Two men can do the work in half the time it takes four men to tend to ground traps. Here is another thing. For instance, you want to shoot "double birds." From ground traps they seldom fly together. By my plan they are forced to fly. One thing more I want to mention. I think all shooters ought to hold the gun below the elbow and shoot unknown traps, as it would give them more practice in handling a gun when hunting than to have it ready at the shoulder. I have handled shotgun and rifle for about fifty years, and am at it yet, so I thought I would send you some of my ideas gotten through much experience. I wish some club would take hold of these ideas and give them a trial. I think they would give satisfaction and become universal.

AUG. JUNGE.

Catchpole Gun Club.

WOLCOTT, N. Y., Jan. 5.—For the first time since the game season opened on Sept. 1, the members of the Catchpole Gun Club faced the traps to-day. For some unknown reason the attendance was very small, but every member of the club loves the sport, so that from now on a much better attendance is expected at the club's weekly shoots, which are held every Wednesday. Following are the records for the day:

Events:	1	2	3	4	5	6
Targets:	15	10	10	10	20	20
Seaman	9	7	10	9	9	9
Wadsworth	11	8	7	7	14	14
Valty	11	8	7	7	14	14
Cosad	6	8	10	10	10	10
Gillett	10	10	10	10	10	10
Egnor	10	10	10	10	10	10

E. A. WADSWORTH, Sec'y.

The Executive Committee of the Interstate Association will meet on Monday, Jan. 17, in Madison Square Garden, to receive a report of the Tournament Committee outlining its plan of action as regards target tournaments for the season of 1898. So far, nothing is known as to what that plan will be, and consequently no contracts for target tournaments have as yet been closed with any of the many clubs that have made application to the manager of the association for tournaments this year. The action of the Interstate Association's Executive Committee is, therefore, awaited with much anxiety by very many shooters in the States.

Trap Around Buffalo.

Audubon Gun Club.

BUFFALO, N. Y., Dec. 25.—The Audubons spent this afternoon after the manner of other Saturday afternoons, viz., by holding their regular weekly shoot at Audubon Park. In the club badge event, No. 3 in the table below, C. S. Burkhardt won in Class A, B. Tolma in Class B and W. R. Eaton in Class C.

Nos. 6 and 7 were at live birds. In No. 6, 10 live birds, C. S. Burkhardt again carried off first honors. No. 7 was at three pairs of live birds. In this event Edwards and R. H. Hebard divided the honors.

Below are the scores:															
Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	15	25	15	20	10	6	Targets:	10	15	25	15	20	10	6
Edwards ...	7	9	16	12	15	6	5	E Winch'r...	13
B Talsma	22	Mack	3	10	13
J J Reid ...	5	8	13	5	13	8	..	Wheeler	12
W R Eaton..	14	9	9	Dr Carol	14	14
J E Lodge...	7	9	10	4	W E Garbe...	5
C S Burk'ht	20	21	0	4	4	R H Hebard..	16	8	6

Jan. 8.—Several of the old reliables were out to the regular weekly shoot of the Audubon Gun Club to-day at Audubon Park, Norris and E. C. Burkhardt tied for first place in the shoot (Event No. 3) for Class A badge, but the former won on the shoot-off. Talsma and Jacobs tied for Class B, which Talsma won in the shoot-off. Norris was in good form yesterday, and he made a clean score of the shoot at five pairs. In the last event, at seven birds, C. S. Burkhardt and Fanning divided the money, each making a clean score.

Following are the scores at the club shoot:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	15	25	10	15	7	Targets:	10	15	25	10	15	7

Fanning.....	8	13	19	8	12	7	Jacobs.....	13
O'Brien.....	4	7	10	3	10	4	A Kennedy.....	11	4	...
J J Reid.....	9	9	11	7	11	6	E P Reynolds...	14	7	6	6	6	...
Winchester.....	8	9	18	5	L W Bennett...	14	6	6	...
B Talsma.....	9	9	18							

No. 4 was at 5 pairs; No. 6 at 7 live birds.

BUFFALO, N. Y., Jan. 1.—The annual New Year's Day shoot of the Audubon Gun Club, of this city, was a success, notwithstanding the extremely cold weather, thirty-eight shooters taking part in the ten events decided during the day. Among those from a distance were: Jack Fanning and W. L. Colville (Dick Swiveller), of Batavia, N. Y.; B. A. Bartlett, of Jamestown, N. Y.; Dr. Overholt and Wingate, of Hamilton, Ont.; L. V. Byer, Wride and Simon Glover, of Rochester, N. Y.

Glover won first average with 124 out of 140 shot at; Fanning was second with 1

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR, 10 CTS A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 22, 1898.

VOL. L.—No. 4.
No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the FOREST AND STREAM. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

WILDERNESS HOMES.

We all like to go into camp, and imagine that health and joy may be found in sleeping on the balsam twigs of the forest or even on the hard ground of the arid plains. So it is that a camp always possesses a great attraction for those who are fond of outdoor life. People bring back from their outing photographs of their camps, if of nothing else, and when a new tent or a new camping outfit of any description appears, it is sure to excite interest.

It is naturally enough therefore that at an exhibition such as is now being held at the Madison Square Garden there should be seen many forms of camps and shelters. There are log cabins, open log camps, canvas tents and shelters and two Indian wigwams or lodges of birch bark. These conical tents of the form commonly called tipi were the universal movable dwellings of the North American Indian at the time when the white man came, and have often been spoken of as the warmest, dryest and most comfortable movable shelter known. Those here shown are of the form employed by the Algonquin people, and should therefore be called wigwams, an Algonquin word, while tipi is the Dakota name for the dwelling of the same type, but skin-covered instead of roofed with bark.

It will be remembered that at the last Sportsmen's Exposition the FOREST AND STREAM showed a complete Blackfoot Indian camp of the old buffalo days, and following out this idea the Maine Central Railroad and the Bangor & Aroostook Railroad have set up the conical lodges of the forest Indians, covered with sheets of birch bark. An appearance of realism is given to one of the lodges by a fire in it and a kettle hanging on a tripod over the fire. The sheets of bark which cover the lodge poles of these wigwams appear to be laid on the frame individually and fastened in place, so that the tents, while having this appearance of the ancient shelters, are not made in the old way. Wigwams as put up here with nails and tacks are of course permanent structures.

Shelters such as these are still used by the Algonquin people of the North—of Minnesota and Wisconsin, for example—where the covering is made in long rolls, which are conveniently done up for transportation in canoes. "The largest and longest when unrolled reaches around the lodge poles at the ground from one side of the door to the other; the next one in length fits around the lodge poles above the lower strip, lapping a little over it, so as to shed the rain. One still shorter goes on above this and so on to top of cone. At both ends of each strip there is a lath-like stick of wood to keep the bark from splitting and fraying. The pieces of which these strips are composed are neatly sewed together with tamarack roots."

This description, although written of the Ojibwas of the North, applies precisely to the methods employed by the Penobscot Indians, whose descendants, now present at the Garden, have constructed the wigwam shown there. None of the present generation of Penobscots have used these birch bark homes, yet they know how to make them, and if time had been given them would have constructed these wigwams in the old way, using no pieces of iron in putting them together, but only birch bark, sewn with roots and tied with cedar strings. These Penobscot Indians from the Moosehead Lake are intelligent, English-speaking people, who seem quite well qualified to hold their own with their white brethren.

Of the various tents and shelters of canvas which are on exhibition here an interesting one is a double tent

with a vestibule entrance, which is said to be water and insect proof, two features which, if justified by practical working, should be of very great value in many localities in this land of ours.

While it is easily possible for the young and enthusiastic to go into camp without shelters of any kind, yet there are many older men whose advancing years warn them to take all the comfort possible while they are camping. Such observers at the Madison Square Garden will feel an especial interest in all these outdoor homes.

SNAP SHOTS.

The combination of twenty corporations controlling the fisheries of the Great Lakes into one gigantic trust representing a capital of \$5,000,000 will, we are assured, result in great benefit to the Government, which will be saved hundreds of thousands of dollars annually now spent in replenishing and preserving the fisheries. This means, if it means anything, either that the trust will so restrict the catch that the stock will replenish itself naturally, or that the fishing combination will undertake the task of restocking on its own account and relieve the Government of the expense. This is interesting, but not exceedingly plausible. Corporations do not as a rule willingly assume the expense of doing what they can get the public to do for them. No fishing combination made up of men of the species which now inhabits the earth will ever stock the public waters so long as they can induce legislatures to make appropriations for the purpose. Theoretically, however, if the accepted economic principles of fish stocking be well founded, it would be a good business investment, for a concern controlling the Great Lakes, to prosecute at its own expense the work of restocking; and doubtless if a fishing corporation having actual control of the waters, and an actual investment of \$5,000,000, were brought face to face with the necessity of replenishing the fisheries supplies, its directors would undertake the enterprise.

There are two classes of people upon whom injunctions and exhortations are vain and void. One is of the folk who shoot at human beings for game in the woods. The other is of those who send money to publishers and neglect to give name and address. It is always a safe rule when ordering FOREST AND STREAM for a year to specify the person to whom it is to be sent, adding also his post-office address.

Mr. Van Name's proposed system of Government game reservations has a suggestive illustration in a paragraph of the Massachusetts Fisheries and Game Commissioners' report, which has just come to hand. Mr. Van Name's scheme contemplates the acquisition by the National Government of a series of tracts of wild land, in such States as may be selected, to be set apart and protected as game refuges, where the birds or mammals might breed in security, unmolested by man. The overflow from such breeding grounds, and the passing of increased numbers of birds to and from a reservation on their migrations, would restore and maintain the game supply. That this is an actual fact and not theory has been demonstrated in the Yellowstone National Park and the wonderful game supply of the Park and adjacent territory. It is illustrated anew by the Cape Ann experience of Massachusetts.

The Cape was by an act of the last Legislature exempted from the law permitting shooting during an open season. On the Cape the birds are protected the year around. The result of one year's experience is such a replenishing of the game supply as to win warmest support, even among those persons who were at first opposed to the protection. Mr. J. Loring Woodfall writes the Commissioners that never was a law enacted that has received more respect than the one making the Cape a reservation; and he adds: "It is working wonders; we have seen more birds this year than for many years—so much so that one would almost believe that the birds themselves knew of the restrictive law. I attribute the increase to the discontinuance of shooting and consequent taming of the birds, which is particularly noticeable. When the law was enacted I was frequently told that it would amount to nothing; that the Italians and Finns—workmen in the quarries—would

continue shooting Sundays, as they were in the habit of doing. The selectmen had some large notices printed on cloth, which were posted through the woods, warning violators, and wonderful have been the results. So well has this law succeeded here that I sincerely hope that some other sections of the State will ask for the same protection this winter. I believe that in this way we can finally accomplish what the market-men have prevented in other ways."

Whether a game reservation be a national or a State institution matters not, so that it shall be a refuge and efficiently protected. We would rejoice to see States take the initiative without awaiting action by Congress. The beneficent results of the Massachusetts and Montana reserves would just as surely follow from like expedients in Michigan and Minnesota and elsewhere. In the two States named, as in most others, there are vast tracts of wild land, practically worthless for any other purpose, which might be acquired and dedicated to the public in this way. When we reflect upon the increased multitude of shooters and the inadequate, halting, inefficient and insufficient precautions taken to conserve the supply, we may begin to realize our monumental and continental folly as a nation in having failed to have done already just this thing. Why should game reserves be enterprises of individual and club initiative only? Now that the system of withholding vast territories from general public shooting is growing with such tremendous bounds, why should not the people, as represented by their Legislatures, take a hand in the withholding on public account?

The Montana game wardens for the western part of the State need looking after, according to the Anaconda Standard. It is said that shortly before Christmas some one killed a buffalo not far from Livingston, Mont., and shipped the carcass into Butte. The person who owned it tried to sell it to several restaurant keepers, but these, having the fear of the law before their eyes, declined to purchase, and the carcass was finally sold to a wholesale butcher living on Park street. The Montana law extends protection to the buffalo for a period of ten years, and provides that any one killing one of these animals is subject to a fine of not less than \$200 or more than \$500, or may be imprisoned in the county jail for not less than two or more than six months, or may be both fined or imprisoned. The law further provides that the possession of the skin or the meat shall be prima facie evidence that persons having it killed the animal. There seems, therefore, an opportunity for the local game wardens to bring to book both the man who killed and him who purchased this buffalo, which, it may be assumed, has wandered from the National Park. A couple of years ago there was a lot of fine indignation manifested in Montana because some Red River half-breeds got into and almost exterminated a small bunch of buffalo ranging south of the Missouri River on Dry Fork, which for a number of years had been looked after, and so far as possible protected, by the cowboys who worked that range. We believe that the killing of this buffalo was the moving cause which led to the deportation by United States troops of a lot of Crees and half-breeds who were settled and farming in Montana. Most of us will sympathize with the punishment of men who kill buffalo in contravention of the law, but they should not save up all their indignation for Indians and half-breeds, when white men, who understand the law and the real magnitude of such an offense, are guilty of the same misdemeanor.

A young Briton, named Crosbie, residing in Mexico, had an insurance policy for \$10,000 in a California accident insurance company. He went out hunting one day with two companions, and during the hunt was discovered by one of them, wounded with a rifle ball through his breast. He explained that he had shot himself accidentally; and died. The company successfully contested payment of the policy, on the claim that Crosbie had willfully gone into danger, and that there was no proof that his death was accidental. The last contention may have been a good one, but unless Mexican hunting grounds are as full of thought-it-was-a-deer man killers as our own Maine, Michigan and Minnesota, the claim that a man who goes hunting willfully puts himself in peril of his life is most extraordinary and foolish.

The Sportsman Tourist.

Just About a Boy.—II.

WHEN Saturday came I went to the dam, equipped for fishing. The boy was there ahead of me, and had already seined a lot of his favorite red horse minnows, and was keeping them alive in a little pond he had built where the waters from a spring trickled down the hill.

"Hello. You're on time 'n' I'm all ready. Got lots of bait for both of us. Got a new pole, too. What d'ye think of her?" he asked, without giving me time to get a word in edgeways.

I took the pole, a stout lancewood, and examined it. It was perfect in every particular except weight, and I told him it was a trifle heavy, I thought, otherwise all right. "Well, you see; I kinder thought I might bust a little one 'fore I got ust to it, so I got this one. Could 'a' got a littler one, but I was a little leery about it. Reckon she'll do. Hain't half so heavy as my old cane, anyhow," he sagely remarked, as he fondled the new rod and tested the spring of its bending length.

"Here, put some of these in your hat," he continued, scooping up a double handful of fine minnows. I pushed my bait box around and he dumped them in, but put his own in his hat, because they were handier there according to his notion. The minnow net he stuck through his belt, letting it dangle without any brails. He could cut the latter anywhere along the stream, so he did not bother himself with the extra weight.

"Ready?" he asked. "Yes," I answered, and we started into the stream, shoes, trousers and all, for he had his on this time perforce, as there were houses on each side of the stream. We waded out to a bar that reached partly across the river below the dam, and then the boy showed his knowledge. "Here, you wade about four steps straight toward the dam, and you'll find a big flat rock there, where the water is waist deep. Get up on the rock, and it will only come half-way to your knees. When you get there, throw your bait right where those two little currents meet, an' you'll get a Balaam, for they's a place where they stay down in amongst the rocks there. I know, 'cause I've dove down there and been all over the bottom. You must throw right ed-zackly where I tell you, or you'll get fast, for they's a big old cottonwood stump jammed in among the rocks on this side about 2ft., and the rock bottom goes down in a straight step-off on the other side, and they's only about 3ft. of clear water between the two. It's about 9 or 10ft. deep, and they's a current at the bottom that goes up stream toward the dam, 'cause the water falls and makes sort of an undertow. Go ahead."

I did as directed, and found the rock as described, and caught some fine fish of 6 or 7lbs. weight before the boy shouted to "Come on, this is petered out." By questioning I found that the boy had actually been all over the bottom of the river, right up to the very falls of the dam, unmindful of a strong undertow that had drowned several men.

He seemed to think nothing of the danger he exposed himself to by taking chances among those currents.

"It's easy to swim in there if you know how," he said. "All you got to do when you want to get out is just come up to the top quick, then turn on your back and float out with the top current, that's going downstream all the time, 'cept right up by the fall, and there the top current goes upstream and the undertow goes down. You can feel the difference soon as you strike it; so, if you are close to the fall, dive and stay down till you meet the undertow comin' back, then shoot to the top 'n' turn on your back, and you're all right. I mighty near got caught once, though, 'fore I found out about the currents," he added reflectively. "I got shoved down and yanked back up five or six times, but I just held my breath and reckoned I could keep it up till I got into the right current. Had a purty close call, though."

We were slowly wading along down stream as we talked, and each picked up a good fish here and there among the eddies until we got near the foot of the rapid, half a mile from the dam. "Now come here 'n' I'll show you another place," said the boy. "Throw right over there, just above that old maple on the bank. They's a deep place just below there, and the current has cut away back under the roots. Some day the maple is going to tumble in and spoil that hole. I come down through here one day and didn't get a bite from the dam clear here nen I got a three-pounder out of this hole, nen I got a nother, 'n' a nother, till I stood here and caught twenty-nine of 'em, all about the same size and 'bout three pounds weight. I didn't know they was a hole there then, but I found it out afterwards, and I always catch about the same size fish there, 'bout 3lbs."

I had cast into the place indicated, and almost before the minnow struck I had a fish which, when landed, was sure enough "bout a three-pounder." We caught several more there, and they ran just about the same size, and I found that the hole could be depended on for "three-pounders" almost every time.

"Now, less get out and walk down to the big walnut trees," said the boy. "They ain't any use fishing in this still water below here. Might get a few, but it's too slow. I like swift water, so the fish will run when you get a holt of 'em. 'Tain't no fun to fish in still water."

I thought the boy spoke more wisely than he knew, for he had the true sportsman's instinct, and only needed a few hints properly administered to show him that he was really enjoying life just about in the right way.

We climbed the bank wet and dripping, walked down stream along a path that the boy seemed to know would come to the river again at about the right place.

"Mighty good place for quails and rabbits up there about three miles," the boy remarked, as we crossed a little creek. "If you are here this winter I'll show you some fun. I know right where to find 'em, 'n' without a dog too. Don't like a dog to hunt with anyhow," continued the young savage. "Makes too much noise, nen they always run ahead and scare everything up before you get close enough. Best way is to trail 'em."

"How can you trail quail?" I asked.

"Easy. They leave lots of signs, even if they hain't any snow on the ground. They kind of flutter in the dust like a chicken does in the middle of the day, and they always come to about the same place at the same time every day, if they hain't hunted too much so's to scare 'em away, nen they go to some other place and begin all over again."

This was news to me, but I found out that the boy was a regular Indian in his ways of hunting, and whatever he said about game or fish of that section I learned to depend on as accurate, for he knew the habits of wild creatures as few people do. He loved them, and only killed what he could use, and later I have seen him pass a covey of quail after he had all he wanted and never pay any more attention to them than he would to a tame chicken, except to remark, "I'll see you later, my beauties," and he generally did it too.

When we reached the lower riffles we waded in again and fished to the island before lunch time, then I suggested that we climb out and have a little lunch, a proposition that suited him exactly.

"We'll go to my camp here and have as good a feed as though we was home," he said, as we tied our fish in a shady spot and climbed upon the island. "You see I fish here a good deal, and I've fixed up a kind of a camp, so I'm at home like. 'Tain't much, but we can get a bite to eat all right," he said, as he led the way toward the center of the island, where the bushes seemed so thick that one could scarcely get through them. To my surprise the boy twisted and turned about, always with a clear path under our feet and easy traveling until we reached a little open space where three giant cottonwood trees grew close together. "You see I cut a trail in here so I could get in without much trouble. Had to wind around to make it blind. If I'd cut it straight everybody would come right into camp, but it winds around so that you can't see any trail at all unless you know where to go."

That, I thought, was certainly an Indian way of hiding camp and leaving the front door open, trusting to the blindness so common among civilized people for protection.

"Now we'll have a feed right," said the boy, as we reached his "camp," which appeared to be only a snug little opening in the middle of the thicket; but as he began to brush aside innocent looking little bunches of leaves and twigs I saw the same Indian methods displayed again, for under each pile reposed some essential camp article, and no two in a place. A coffee pot appeared, then a frying-pan, tin plates, spoons, knives, forks, and last, but not least, he scattered a few bits of bark and revealed a hollow space dug under the base of one of the cottonwoods, and in this hole a wooden box. Opening the box he brought forth a bag of oiled canvas, and this in turn produced coffee, sugar, salt and a generous slab of bacon, each tied up in a separate oiled bag.

"Hain't got any bread just now," he remarked; "got to bring some down too. Eat the last up a few days ago."

I had plenty of lunch in my basket, and with fresh fish fried with the bacon and hot black coffee we made a meal that was fit for kings.

"I got a little tent over yonder too, so I'm pretty much at home down here rain or shine. Got another outfit cached up the river too. Got a stove up there and a shovel, besides a little tent and plenty of grub. You see I don't like to pack stuff with me, so I pack it out and hide it, and then I'm fixed." Truly the boy was a half wild person in those days, and his soft step wandered through all the byways of his domain and he was king.

After our lunch he stowed things away, and deftly hid them by making the surroundings appear perfectly natural, and I would never have suspected the existence of a camp there when he got through.

"Now less go home. I've got all the fishing I want if you have," he said, after we had rested and talked an hour after dinner. "You go ahead 'n' I'll kind o' kick the leaves over your trail," he said, as we were ready to leave. I went down the windings of the trail and then discovered that he had cut the bushes about half off on one side and bent them down over the cut to hide it and show only an ordinary broken bush, perfectly natural in the woods, and thus had cut his trail into camp.

When we got back to town I invited him up to the house, to come in just whenever he felt like it or wanted company on a trip, and that is how we came to be close friends and travel "pardners" in all these after years, for the boy came in often and was always ready for a trip somewhere. Of these trips I must tell you another time.

EL COMANCHO.

The Camp at Hopkins'.

INTO our lives each summer comes a blissful period of oblivion from business, when we congregate at the place where, ten years ago, we landed one summer evening and lay ourselves down under the light of the full moon, with the sand for a bed and the sky for a blanket. Each year we have renewed the acquaintance with the spot which, on that summer evening, we seized in the name of the O. C. C.

But it was not until the last year that we obtained permission to build a cabin there; and, once having obtained that permission, it was not long before, standing about 20ft. from the bluff, there could be seen a small camp, painted a dark red, resembling a peanut stand or a night-lunch car. But, notwithstanding its unpromising exterior, the interior affords a cozy, comfortable, substantial place in which to spend our idle moments.

The spot itself is beautiful. A creek, barred across its mouth by sand, filled with weeds and rushes, its banks lined with fine groves of chestnut trees. Now and then a gloomy pine or hemlock stands along its margin; the bend shows a small grove of birches, rising white and cool against the high, brown bank, their delicate foliage faithfully reflected in the murky water.

Westward, a half mile or more, a long point of land, green and brown by day, violet at evening, stretches into the lake until it stands black against the sunset sky; eastward, the shore seemingly ends in a clump of graceful willows. Veritable flirts are these willows, flinging

their favors to every passing zephyr, wooing the evening land breeze, throwing kisses to the lake.

Sometimes a stray duck enters the creek. Perhaps the woodcock will greet you on a warm summer day with his scornful whistle, as you disturb his noonday siesta. The rattle of the kingfisher is a constant sound; anon he entertains you by poising gracefully over the lake, moving not an inch, but, with rapidly fluttering wings, seems a toy suspended on a string. Old Daddy Longlegs, the great blue heron, is a frequent visitor, and woe unto the unwary, goggle-eyed frog who comes within reach of his long beak. Between Daddy Longlegs and Mr. Pickerel, Goggle-eye leads a much-disturbed and precarious life; indeed, although there may be a goodly number of frogs in the early summer, they soon disappear, and it would perhaps be impertinent to ask Mr. Heron or Mr. Pickerel what becomes of them.

Of the shy, small bird-life of the woods, one may see quite a little. He may greet the scarlet tanager in the spring, and watch him as he reverses the procedure of the trees, and turns from red to green as the season advances. He may catch the pewee's plaintive whistle, the clattering of the woodpeckers, the lisp of small warblers, and spend a pleasant and profitable afternoon with the birds in the woods.

As one strolls cautiously along, the shrill squeak of the hilarious chipmunk may be heard on every side. The red squirrel ceases his pressing labors and chatters and scolds in wicked squirrel language at the intruder. Both of these animals are more friendly, however, upon a more intimate acquaintance, and the chipmunk makes himself very much at home in the vicinity of our camp. The red squirrel is more shy, but even he passes part of his time speculating on the nature of the cabin and its inmates from a nearby stump. Mr. Chipmunk sits for a half hour at a time on the fence, watching every move with his bright black eye, seemingly a very interested spectator. The chipmunk is very aristocratic, and prefers the best brand of building paper for making his nest, and helps himself without asking permission.

In this respect, as well as in many others, Chipmunk differs from the wood-mouse, who disdains building paper, and goes in for quilts and blankets. Of course, from the standpoint of two-legged, indolent monsters who put up the paper and furnish the quilts, it is an unremunerative task to keep Messrs. Chipmunk and Mouse supplied with building material, but undoubtedly the little fellows do not take that fact into consideration. But, with all their faults, we love them still.

Mr. and Mrs. Mouse live in a luxurious home under the bottom rail of the old fence in front of the cabin. Sometimes, when friend Bink's supper is placed outside upon the ground, Mr. Mouse, all uninvited, scurries out and helps himself. Bink, although a most good-natured dog, dislikes to share his supper with any one, and with snap and growl sends Mr. Mouse back into his stronghold in great haste. Mouse cannot stand the temptation, however, and shortly he is back again, and with much fear and trembling and many short and hasty journeys, each time taking a little food in his mouth, he finally gets enough for his supper, and perhaps also for breakfast-to-morrow.

Should one prefer, he may take the canoe and paddle silently along the rushes. Here he may become acquainted with the saucy, flippant marsh wren, and watch him as he describes his short arc above the rushes and pours out his little, tinkling, bubbling song. If you explore the rushes for his home, you will find perhaps five or six nests, but of these but one is used. How the wren scolds and chatters as you approach an unused nest! And how strangely silent when the real nest is in danger! His home, shaped like a cocoanut, containing the five or six eggs of so brown a color as to appear almost black, is really a work of art. It is surely a snug retreat for the children when the raindrops patter and the wind sings through the sedges.

Then you may watch the sora rails, those long-legged, long-billed, wedge-shaped birds, running about among the rushes. Perhaps after a search you will find, snugly built in the bottom of a clump of sedges, the nest, containing ten to thirteen eggs of a light coffee color, speckled with reddish brown. How that little bird covers the big nestful of eggs is a mystery, but cover it she does, and well, too. The eggs of the Virginia rail, about the same in number and of the same size, are of a light flesh tint, speckled with the same reddish brown. If one would test the expertness of the grebe, he may amuse himself by frightening him with puffs of smoke from his pipe. He dives before the shot reaches him!

Jim Crow and his ally, the bluejay, make the woods their home, and every night and morning Jim makes a meal upon the dead fish along the beach. In the course of a season the crow cleans up a great deal of filth, and in this he is ably seconded by the snapping turtle. Large snappers are found in the creek, which is an ideal place for them, and frequently they are seen upon the beach, dining on the dead fish. All in all, the snapping turtle is not a nice fellow. Aside from his diet, which is extremely disgusting, he has an ugly bite and an atrocious smell of musk. One which we caught on the beach one day would bite so hard as to leave deep marks in a hardwood stick; and when we let him go the pail in which we kept him went with him. We had no further use for it.

A careful search among the pines will reveal the nest of the bluejay, with its complement of four or five dark brown eggs, spotted with red. The jay is a handsome fellow, and he knows it; but he will insist upon spoiling the good impression created by his fine coat with his harsh squalling.

In the twilight the screech owl comes forth and moans his ditty. It has been said the cry of the owl resembles the wail of a lost spirit. We have never heard a lost spirit wail, and consequently cannot say as to the truthfulness of this statement; but we will say that he sounds as though he were bothered by mosquitoes.

It is said that there is no great loss without some small gain, and upon the same principle it may truthfully be said that there can be no great pleasure without some small pain. This is so in the case with life at camp, although there is nothing worse to mar the pleasure than that small bit of animated cussedness, the mosquito. We have tried, individually and collectively, to express our contempt for the mosquito, but it was a failure. Whence

comes the mosquito we know not; as to where he goes we are positive. He can only exist in a warm climate.

Rise from the supper table, take a paddle from the rack, and off for a canoe trip on the lake. The lispings, gurgling waves impart a restful motion to your boat. Paddle slowly toward the sunset. A streak of red, shading into orange and light yellow; an expanse of pale blue, deepening toward the zenith, the water faithfully reflecting the warmer tints, and to the northward tossing a cold green against a purple sky. When you are far enough out, the lighthouse, two miles away to the east, flashes a red gleam across a violet expanse of dancing water; then the glorious full moon looks over the woods and sends you a bar of molten silver. Watch the western colors fade, and the woods take on a dusky hue, and presently you will catch a gleam of light from among the trees. When you would return, point your prow toward that light, and there you will find the boys, talking low from behind huge clouds of fragrant smoke, rolled from the restful bowls.

As the season advances, what a change occurs! Perchance, as you glance from the cabin door some cold fall morning, the lake lies still and gray and sullen beneath a burden of purple mist. At night the sun sets, red and angry, behind the point. The wind comes singing, fresh and strong, across a tumbling waste of steel blue breakers. The trees wave leafless branches, and mutter and groan, and the surf pounds incessantly upon the beach. The little bunch of ducks, hanging limp and lifeless from the white birch in front of the cabin, sways in the rising wind.

Inside there is a smell of clam chowder and coffee. As the darkness falls, this is succeeded by the fragrance of tobacco. The guns are cleaned and put away; then comes the tinkle of guitar and the song. Soon the fire snaps and roars unaccompanied; the flicker of the light upon the wall of the cabin ceases, and the camp is wrapped in slumber.

Natural History.

Muffins and Ragamuffins.

We call our sparrow pensioners ragamuffins, though really having a very good opinion of them, and we give them muffins as often as we can, since discovering their preference for this form of bread.

Once there appeared in *FOREST AND STREAM* a story of a "Feathered Foundling," and as this closed with a discouraging outlook for the foundling's love affair, a further report may be acceptable.

They are quite well, those same two sparrows, and now the summer is dead and buried beneath autumn leaves and wintry snowflakes, it amuses us to recall incidents connected with a big three-story cage.

To begin with, we were, by a visit to Europe and by other matters, separated from our birds for eleven months, an indulgent friend taking charge of them. To our surprise we found this period was insignificant in the memory of the sparrows, for restored to this room they at once resumed their familiar ways, and, on the cage being opened, flew to perch on former favorite places. The Foundling went straight to the shoulder of the Philosopher who had, three years before, rescued him from a Brooklyn cat, nestled there a moment, then hopped to his beard and insisted on receiving bread from between his lips, just as of old. Within one hour we became convinced the birds had forgotten nothing during an absence of nearly a year from our study.

In the spring of 1897, after two years' courtship, Dick won his suit, as we had assured him he would do, in the fullness of time. The honeymoon was sentimental, spiced with occasional tiffs, in which Loulou generally came off victor because Dick suffered with palpitation of the heart, due, possibly, to the anxiety he endured while urging his suit. Melancholy and sentimental Dick irritated the gay, matter-of-fact bride, who sometimes relieved her mind by suspending him in mid-air. There were three degrees of this chastisement. When we saw Dick hanging plumb, held in his mate's beak by the tip of his tail or a wing, we knew her temper was ruffled; if Loulou dangled him to and fro, a more advanced stage of wrath was indicated; but if she jerked him up and down this expressed severe displeasure. After a fight in which feathers were made to fly, regardless of decorum or chivalry, friendly relations were re-established through Dick's humble repentance and adoration of the arrogant little beauty who, while gently scolding him, preened her wings, those satin-smooth, glossy wings, which were the despair of poor, amorous Dick! She was on the perch; he, beneath it, softly pecked at her tail while whispering his flatteries, and she liked him to thus kiss the hem of her garment. Contrary to the reputation of female birds, this one developed a good voice, and sang, does sing, sweeter melodies than birds of her feather are supposed to attempt. She likes to show off before visitors, and on certain occasions has sung by request. One afternoon when a friend was taking coffee with us and Loulou was picking crumbs from the carpet, I said: "Come here, pretty Loulou, and sing to me." She flew to the table at which I sat, perched on a book and warbled her sweetest notes; then away she went. Again I invited her and once more she came to my side and repeated her song. It is very funny when this little songster scolds her own throat because it does not quite respond to her ambitious intentions.

This birdie, believed to be the prettiest sparrow in Brooklyn, has had many admirers, but is not a flirt. She and Dick each have favorites among the numerous visitors that flock around their cage at the window, but their liking does not seem to be influenced by sex. Friendship exists among all creatures. When Loulou's admirers are in sight we know it by Dick's attitude of haughty contempt and defiance, expressing "Vagabonds, what care I for you? You can't come in here! This is my house, she is my wife." On one occasion he was loudly scolding a would-be rival, but seeing this had no effect, he took in his beak one end of his paper carpet, raised it slightly and gave it a rattling shake. At the

noise, away flew the obnoxious party, but soon returned. Dick at once repeated his former effective action, and off went the intruder. Within an hour we saw the Foundling repeat this several times with various birds, proving that he was observant and calculating.

We have been much interested in the diversity of character shown by birds that flock to our window, and are obliged to acknowledge that, as in the human family, those lacking self-confidence and persistence fare badly and appear depressed and shabby, while the plucky, stick-to-it sparrows are fat and sleek.

As soon as we scatter bread for their visitors, our birds summon them with shrill calls, but some pensioners have a fixed idea that whatever is in the cage is better than the portion served to them, and all have decided they prefer muffins to any other bread. On this point Dick and Loulou agree with them and therefore resent the determined efforts of certain acquaintances to possess themselves of large pieces placed in the cage bars. The exhibition of ill-nature on the part of the feathered urchins, called forth by one particular puffy kind of muffin, is sometimes positively disgraceful and heart-rending. In the absence of muffins the tribe is better mannered, and having summoned his guests Dick keeps his back toward them, that they may feel quite free to feast, also encouraging them with cheerful remarks, which, with Dick's patient assistance, I have endeavored to learn so as to reduce the expression to English spelling. The nearest we can get to it is "wickoo-too-choo," and this we interpret as "Pray help yourselves!" But on muffin days this cordiality is tinged with reserve.

Dick's original wooden house in which he was brought up by the Philosopher forms the third story of the cage, and notwithstanding his tender infatuation he has never been willing to give up that cozy corner to his lady-love; but she, having a will of her own, entered again and again. Furthermore, she had an eye to the future, so her mate scolded and coaxed in vain when she chose to make herself at home in his old bachelor chambers. Then he resorted to tricks. A favorite one was to tear from his carpet a scrap of paper, and, with this in his beak, enter the door with a great pretension of wanting to stuff up some chink. If his spouse did not then vacate the premises a pitched battle ensued. Generally she humored Dick by hurrying out; but as the spring advanced she showed such eagerness to occupy the nest that I carefully explained to her her right to it, and suggested the expulsion of her mate if he would not listen to reason. That night Loulou slept in the nest, as if she had really grasped the sense of our words. She now began to take life seriously and arrange Dick's old nest to her fancy. He, too, gave himself great importance. On one occasion I carried to the cage some muffin wrapped in a piece of old white china silk; the silk I kept in my hand and put the muffin between the bars. Dick pushed it out, went to the nest and brought from it a small scrap of the same kind of silk I held, uplifting his beak that I might see just what he had. Clear language, this—he preferred silk to bread, even muffin, at that moment. I cut the silk to pieces and put it in the cage bars, and within ten minutes every piece was in the nest. Next day, while Loulou was eating cuttlefish and seeds, Dick dashed into the nest and brought down to the basement of the cage one of Loulou's new silk sheets. He had seen a pretty feather-girl outside, and, with the sheet in his beak as an offering, began that love-dance in which his wings and tail become so suggestive of a butterfly that we call it "doing the butterfly." In the midst of the performance Loulou came upon the scene. Instantly Dick dropped the silk and ran to the seed-box as if very hungry. Such dissimulation!

By way of studying their perception of color we gave the young couple pieces of black and of white muslin, mixed. Not one black thread was carried to the nest; in like manner all other colors were despised when white could be had. The male bird did most of the work, and frequently brought to his mate, for approbation, the morsel of stuff he proposed adding to the pile. If she ignored his approach, he went on with his work; but if she snapped her beak angrily, he let his offering drop to the ground and did not venture to place it in the nest.

On the 27th of May Loulou kept her wings in a state of agitation, as chicks do when begging to be fed. Oh, the little fluttering wings!—messengers of some one coming. And next morning a great event occurred, coupled with calamity. At peep of day Loulou's first creation was dropped by her on the floor of the cage, she being on the perch while the bad Dicky was cozy in his nest, which he had insisted upon occupying—the monster! Here was a domestic tragedy! The Philosopher showed his Foundling the broken shell and told him such hard truths that the culprit kept himself in a corner while his mate moped on a perch. We put the broken shell in the nest, as an indicator of what should be. Dick threw it out, but passed the day stuffing the nest and conciliating his companion.

At exactly the same hour on the following morning there was a repetition of the scene, with like results, and again on the third day, but this egg remained intact because we had padded the floor. We placed it in the nest, and the little mother, in a burning fever, went there to comply with her duty. Presently Dick coaxed her out, and remained in her place. Soon she returned, and discovered he had broken the egg. Out she came, her large, expressive eyes full of sadness, and all day she remained in a corner, her feathers bristling, her head under one wing; and Dick's blandishments found no response.

Just one month later Loulou laid three more eggs, on consecutive days, this time in the nest; and now the Foundling proved himself a wicked infanticide, for he deliberately broke the eggs, one by one, and threw them out. Why? He did not tell us; and whatever reasons he gave to the little mother proved unsatisfactory, for she subjected him to several prolonged hangings and jerked him up and down so violently that he screamed for mercy; she also scolded him fiercely every time he had the audacity to declare his unalterable affection for her; and not for three or four weeks did we hear her sing a note.

When the days grew long and warm, many birds brought their chicks to this window, sure of a meal, and we were greatly interested in seeing our couple show

more consideration for the weak than for the strong. They never objected to a bird's taking food from their cage to feed its young, and any adult that had been maimed, or appeared ill, was treated with equal consideration. As for the young birds themselves, Dick pushed bread out of the cage to them, as he used to do when only a year old. Seeing his great liking for chicks, we felt at liberty to remind him that he alone was to blame for having none of his own.

Sparrows do not, like men, worry over their offspring to the day of their death; in fact, they quickly abandon them to their own resources, and many perish in consequence. Only the strong survive. The weaklings seek a sheltered corner, pick up the crumbs more easily reached, and are beaten back into eternity by the first heavy rain which breaks over them. Early one morning two little feathery heads peeped up above the sill to look through a window-pane. The pretty things begged for food—could any one resist? We threw up the window and the chicks flew from our reach; but while pretending to pick up something in the distance, they watched us as we crumbled soft bread in front of the three-story cage, and as soon as we withdrew the small strangers came to enjoy the offering. These twins were not robust, and soon they came within the room, on the bench where the cage rested, and there, with their heads tucked under their wings, stood napping, propped against each other, now and then waking to pick up the crumbs strewn for their benefit. It would have been easy to catch them while they slept, but such an abuse of confidence would have been unpardonable.

Alas for the twins! After they had spent five days with us, always flying away at dusk to some favorite night corner of their own, a heavy rain caught them in transit, and never again did the little fluffy balls prop each other up close to the Foundling's cage.

A lone chick came next, and was so tame after three days that it alighted on the sofa cushions and on the table at which I was writing. This birdie also perished, appearing no more after a heavy rain-storm.

The Foundling had taken a great fancy to the chicks; their fate, perhaps coupled with remorse for his crime, affected his health and temper; he grew very thin, gave up singing and took to habitual fretting, even scolding us when we reproved him. A few days ago I caught hold of his tail, sticking out through the bars. He immediately turned and pulled the lace on my dress. Here was retaliation in kind.

Sparrows cannot be induced to eat fruit of any description, but have a strong liking for lettuce. The charming, docile Loulou, whom every one loves, will peck at a lettuce leaf for ten minutes at a time, while Dick prefers to rub himself against it to moisten his feathers. Possibly he has read on his newspaper carpet, "Use lettuce cream," and desires to improve his complexion by polishing himself on the unadulterated article.

ALICE D. LE PLONGEON.

BROOKLYN, Dec. 21.

Game Bag and Gun.

Shots Across the Snow.

WITH the closing of the year the hunting season in New Brunswick came to a close also, and now the shy capricious caribou and the reminiscent moose are safe for many moons to come from the pursuit of honest men.

While out hunting on the Gaspereaux barrens with the Indian guide Jim Paul during Christmas week I had a chance to test the .30-30 on a herd of caribou. I picked out for the experiment the two best specimens, one of them a bull with a fair set of antlers. Each of these caribou was hit within 6 in. of the shoulder. They were doubtless fatally wounded, but failed to succumb until they had received one of them two, the other three additional shots, all placed in vital parts of the body. None of the bullets went through the body, but mushroomed as soon as they struck the flesh, and being so light in weight showed very limited penetration. The experience confirmed me in my belief that while the .30-30 is about as sure a hitter as any rifle I ever handled, it is not as sure a killer as the larger calibers. On the 29th ult. we found a very large freshly shed moose horn, which shows that old bulls are apt to drop their horns at a somewhat earlier date than has generally been supposed.

The Provincial Government has been engaged during the past four or five years in procuring specimens of the game animals and birds of the Province, until now there is to be seen in the Crown Land office a very complete collection. Until recently they had not secured a suitable specimen of a bull moose to be mounted whole and placed on exhibition. On the 21st ult. the famous guide Henry Braithwaite was commissioned to find a large moose for this purpose. He was accompanied on the trip by the well-known local sportsman William Chestnut. I have just received a letter from Billy, dated at Richey's Camp, Little Sou'west Lake, Dec. 27, in which he states that the moose has been secured and is a remarkably fine specimen; also that they would haul it out as soon as there was sufficient snow.

Many of our American friends who made their headquarters at Edmundston during the past hunting season will have a lively recollection of the genial proprietor of the leading hotel at that place, Felix Herbert. Felix, with Dave Bates as guide, has just returned from an extended moose hunt on the headwaters of Green River. They brought in one moose and two caribou. The moose, after being wounded, gave Felix a chase of eight miles before he was finally brought down. There were several feet of snow in the country where they hunted, yet they climbed a mountain the top of which was entirely bare, apparently the result of subterranean heat.

E. W. Forbes, Robert Walcott and R. C. Storey, three sportsmen from Massachusetts, returned from Doaktown the other day after a brief stay upon the barrens. They shot two caribou, one of them a fairly good specimen of a bull.

Mr. Charles S. Bird, of East Walpole, Mass., who has

been hunting on the Tobique, failed to secure his moose, owing to deep snow and shortness of the trip. He had as guide George E. Armstrong, of Perth Centre, who writes me that he has been cruising out new ground for next year's operations, and that "the country we was in was nothing but moose tracks!" Mr. Armstrong is a most efficient and reliable guide, whom I can recommend without reserve to visiting hunters. He has been for some years a guide in Maine, but will henceforth hunt in New Brunswick.

Mr. C. C. Hills, of Cleveland, having shed upon us the light of his countenance for a season, has flickered away to his Southern home. Mr. Hills manufactured three caribou into venison, and hit a bull moose in the neck, but the moose is still at large. Mr. Hills will look him up next fall.

The New Brunswick Legislature meets in annual session next month. I look for the following changes to be made in the game law: Each hunter to be allowed a maximum of one moose, two caribou and three deer; non-resident guides to pay a license of \$20. A map of convenient size for sportsmen is shortly to be issued and the Government have in contemplation publishing a hand book, which will give full and accurate information as to all the various game resorts. An effort is also being made by local sportsmen to induce the Dominion Government to remove the prohibition upon the export of game so far as to permit venison to be shipped when accompanied by the sportsman who owns it.

FRANK H. RISTERN.

FREDERICTON, Jan. 6.

Maine Commissioners' Report.

An Abstract as furnished to "Forest and Stream" by the Commission.

THE Commissioners say in their annual report just presented to the Governor that never before in the history of the State have inland fish and game interests been so much discussed by the people and the press as during the year just closed. The laws for the protection of fish and game have always been difficult of enforcement, and those charged with their enforcement have never escaped severe criticism.

It is a fact, however, that there has been less violation of the game laws this year than ever before since fish and game became abundant.

The State has four well-equipped hatcheries and feeding stations, viz., at Edes Falls, Caribou, Auburn and Monmouth.

At Auburn a cottage has been built during the year for a residence for the superintendent and a hatching house erected at Caribou, and new dams have been built at these places.

Two hundred and thirty-five thousand trout were raised; 450,000 land-locked salmon, and 146,000 Penobscot River salmon, which were planted in 121 different bodies of water in the State; besides, several hundred thousand trout and salmon were raised and planted by private enterprise, the State having furnished the eggs for hatching.

The catch of fish, land-locked salmon, white perch, pickerel and black bass has been exceptionally large. The guides report that those fishermen whom they have guided have caught more than fifty tons of trout and salmon. The outlook for future fishing was never so good in recent years as to-day.

The law for the registration of guides has worked well, and is held in great favor by the Commissioners and a large majority of the guides and true sportsmen; 1,316 guides have been registered since the law went into effect, July 1.

From the annual report of the guides the following facts appear:

Total number of days guides have been employed, 51,918.

At \$3 per day the usual price would amount to \$155,754 paid in wages to the guides; \$50,000 has been paid to the taxidermists of the State.

Number of residents guided.....3,384

Number of non-residents guided.....7,125

Total number of moose killed.....250

Total number of caribou killed.....239

Total number of deer killed.....8,947

Total number of bears killed.....160

Non-residents who have employed guides have spent in the State at least \$2,000,000.

Residents of the State who employed guides expended at least \$175,000.

This is a matter for congratulation, that more than 3,000 of our own citizens have preferred to spend their vacation and money in the State instead of other States or countries.

The guides report their other occupations besides guiding as follows:

Three hundred farmers, 35 woodsmen, 1 express agent, 1 engineer, 3 game wardens, 18 hunters, 1 harness maker, 1 hostler, 3 hotel proprietors, 7 jack-at-all-trades, 2 jewelers, 74 lumberers, 9 merchants, 16 millmen, 2 mechanical engineers, 1 pension attorney, 4 painters, 1 professional loafer, 1 postal clerk, 42 river drivers, 2 reporters, 10 surveyors, 8 spool makers, 2 students, 5 gum pickers, 8 steamboat proprietors, 10 taxidermists, 9 teamsters, 27 trappers, 1 trial justice, 1 farmer and postmaster, 1 bushwhacker, 1 bottoming chairs, 7 blacksmiths, 8 mechanics.

One thousand and nineteen were born in this State. Three have died—two by drowning.

The youngest is fourteen years of age and the oldest seventy-eight, who has been a guide for more than half a century.

They are registered from fourteen of the sixteen counties, as follows:

Two Androscoggin, 173 Aroostook, 10 Cumberland, 175 Franklin, 11 Hancock, 18 Kennebec, 1 Knox, 52 Oxford, 340 Penobscot, 270 Piscataquis, 136 Somerset, 5 Waldo, 108 Washington, 2 York, 13 Lake Umbagog Association guides.

In the several fatal shootings of persons while hunting, no registered guide has been connected. Five have been caught poaching, and one surrendered his certificate.

The Commissioners have held monthly meetings at

the State House, and have attended forty-one hearings on petitions of taxpayers to close certain lakes, ponds and streams.

From the foregoing abstract it will be seen that Maine has a marvelous industry in her inland fish and game, which should be well cared for.

CHICAGO AND THE WEST.

Off for the Far Gold Country.

CHICAGO, Ill., Jan. 6.—My old trout fishing companion and snowshoe chum Charlie Norris starts next week for the gold country of the far Northwest, and goes by what many would consider the most risky route at the dead of winter, the back door trail overland from Edmonton. His party will not go to Dawson City, but will adopt the far more sensible plan of keeping as far away from that crowded point as possible, and doing some prospecting in the country at the head of the Pelly River and its tributaries. This region has been aimed for by many men out of Dawson, who have been driven back down the Yukon by the failure of their supplies. The objective point of this party will be Lake Frances, about 400 miles from Dawson City. This will keep them in a field as yet practically new, and in the heart of a range for which it is as safe to predict gold now as it was for the Klondike three years ago.

The party, of which Mr. Norris and Mr. Alex. Dierks are the organizers, will number about a dozen, nearly all of whom are carpenters or mechanics. They take a prospecting drill and material for a light saw mill (a shaft and circular saws and belting). Emil Karatowski, C. J. Johnson, Chas. Youngberg, Gus Anderson, Otto Baggely, Frederick Howson and Chas. Parker, members of this party, left last night for Edmonton. Mr. Norris and Mr. Dierks will leave next Tuesday. The party will buy their provisions at Edmonton, Alberta, the end of railway travel, and will there purchase toboggans for horse use. Each man will buy four horses, and with this equipment they think they can take in a year's supplies.

All this sounds grotesquely impractical in view of all that we read about the deep snows and the awful cold of the Yukon region, but there are many reasons for thinking it not so unwise after all. The fact is there is a lot of country between Edmonton and the Klondike which is very little known to most of us, but which is very well known to a lot of other men, and has been so known for fifty years or such matter. They have been washing gold along the Saskatchewan and Peace rivers for about thirty years, and the maps are dotted with the significant letters "H. B. P." (Hudson's Bay Port), showing that the trader and trapper has already taken the brunt of the first trail. Mr. Norris and his party will be governed somewhat by Mr. Ogilvy's government report, he having made this same trip and declared it perfectly feasible. It is very much shorter than the Mackenzie River trail, and over a more practicable country. There is a post at every hundred miles or so, the snow rarely lies more than a foot to 2 ft. in the lower reaches, and the thermometer rarely goes below 45 degrees below. Most of the road is by river, and of course winter is far the best time for such a trip, as any one will know who has experienced the delight of crossing lake, stream and swamp by snowshoe, where by foot he would have been hopelessly lost.

The route of the Norris party from Edmonton is to Little Slave Lake, thence to the Peace River. Part of this is farming country, though most of us didn't know that. They go up the Peace River to Halfway River, and up that stream for some distance to the crossing to the Nelson River. The Nelson River runs into the Liard, and the Liard into the Mackenzie, but the Liard runs far back into the mountains, near to the headwaters of the Pelly. Hence the party after getting on the Nelson will descend the Nelson to the Liard, and go up the Liard into the mountains. Here they will have the hardest part of the whole journey, fifty miles of mountain travel to the Frances Lake and the head of the Pelly. They are told that over much of this country there is winter range for horses, and expect that their stock can paw snow for grass over a good part of the trail. The total distance from Edmonton to the head of the Pelly is only about 900 miles, and the party hope to make it by April. It sounds a long way, 900 miles, but it is only ten miles a day for three months, or fifteen miles a day for two months. It all depends on the condition of the ice and the depth of the snow. Rivers should freeze smooth, but they don't, and snow should follow the average of precipitation, but it doesn't. Of course this means snowshoeing all the way, and the men must camp out, do their own cooking and their own packing—no light proposition for bad winter weather. I do not believe they will get to the head of the Liard with all their horses, but they may get part way with all, or quite through with a few. Unless the horses can find food along the trail the project will not do, for a horse cannot pull enough feed besides a man's outfit to go very far into a snow-bound region. Dogs cost \$25 each at Edmonton, I understand, or \$125 for a team of four with sledge, and the Norris party decided upon horses on the understanding that over this country they were more practical.

The route above mentioned is one that may be patronized more after this year. Should Mr. Norris and his friends find themselves in possession of a good saw mill at the head of the Pelly, and should there be a demand for boat lumber there as there has been at the east side of the Dyea trails, they would not need to dig gold, because they could saw it out. The head of the Pelly is about 200 miles or so east of the mouth of the Hootalinka, where Mr. Burnham wrote he might possibly winter. There is a lot of geography lying around loose up in that country.

Last September a Mr. Warmolts and a party of eight started for the Klondike via Edmonton and the Mackenzie River route. They got frozen in at Ft. Resolution, some hundreds of miles north of Edmonton. Mr. Warmolts and one friend came back and are now in town, intending to go back in the spring and finish the trip.

Mr. Warmolts says they got a lot of fur-lined clothes and things which they had to throw away. He said the cold was not so dreadful. He and others say that some of the Klondike outfits sold by certain firms are weirdly useless. The Norris party, outfitting at Edmonton, will have the advantage of being in the country of men who know the land and the life and its necessities. Charlie Norris I know to be a good woodsman and snowshoer, and excellent in a canoe or boat. The party has much to argue for its success in the undertaking before it, and many will envy them the trip, whether they strike gold or not.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The Massachusetts Association.

BOSTON, Jan. 13.—*Editor Forest and Stream:* Another year has been added to the record of the Massachusetts Fish and Game Protective Association, and while it has not been a particularly exciting one, considerable routine work has been done, and much good has been accomplished in educating public sentiment to a better understanding of the laws and their proper enforcement in the interest of fish and game protection. The annual meeting was held at the Copley Square Hotel, Wednesday, 12th inst., and was largely attended. Col. Horace T. Rockwell, the president, was in the chair, and Secretary Kimball was as usual at his accustomed place. The meeting was notable for the presence of many of the older and still active members, including ex-presidents Benjamin C. Clark, E. A. Samuels and George W. Wiggin, gentlemen who are always foremost in extending and aiding the work of the Association. William D. Wright and George B. James, Jr., were elected to membership, and several proposals were referred to the membership committee. The report of Treasurer Kimball showed the finances to be in good condition. The receipts were \$1,937.54, and the expenditures \$1,348.48, leaving a balance more than sufficient to cover bills unpaid when the accounts were made up. The permanent invested funds amount to \$2,635.70, an increase of \$150 over last year. This report of the treasurer was considered to be a very gratifying one, and met the hearty approval of the members. A committee was appointed to conduct the ballot for the officers for the ensuing year, and they subsequently reported the following elected: President, Horace T. Rockwell; Vice-Presidents: Edward A. Samuels, Benjamin C. Clark, Heber Bishop, George W. Wiggin, C. J. H. Woodbury, Robert S. Gray, J. R. Reed; Treasurer and Secretary, Henry H. Kimball; Librarian, Edward H. Branigan; Executive Committee: John T. Stetson, A. R. Brown, Charles Stewart, William B. Smart, Rollin Jones, J. S. Duncklee, John N. Roberts, Sidney Chase, Charles G. Gibson, Edward E. Small, Loring Crocker, A. C. Risteen; Membership Committee: Arthur W. Robinson, W. B. Hastings, Thomas H. Hall; Fund Committee: Warren Hapgood, George O. Sears, Charles C. Williams. President Rockwell thanked his associates for the compliment paid him, and briefly outlined what he believed to be the policy of the Association. This was to continue the work of educating public sentiment to the observance of the laws already on the statute books, and while not attempting any new work the Association should always be ready to resist any encroachments upon the laws as they now exist. While we all admit there may be room for improvement in the direction of further protection of fish and game, the laws are fairly good as they are, and it is for the public interest to retain what we already have.

Brief addresses were made by Mr. Charles F. Chamberlayne, ex-President Clark, Arthur J. Selfridge and Judge Bolster upon matters connected with fish and game protection. President Rockwell announced that the annual dinner—the event of the year—would take place at the Copley Square Hotel on Tuesday evening, Feb. 8, and that as usual an attractive programme would be offered for the entertainment of the members and their guests.

WILLIAM B. SMART.

The Boys and the Cow Moose.

BOSTON, Jan. 17.—It seems that after all the Maine Fish and Game Commissioners are being blamed a good deal for not having brought the boys who shot the cow moose in the Moosehead region last summer to justice. It will be remembered by those who read the report of the meeting of the Maine Sportsmen's Association in the FOREST AND STREAM last week, that the chairman of the Commission, the Hon. L. T. Carleton, defended the course of the Commissioners in letting the boys escape on the ground of their youth. He had not the heart to send mere boys to jail. The Hon. J. F. Sprague, of Monson, attacked the Commission, and claimed that the case would not be dropped. A special dispatch to the Boston Herald from Augusta says that County Attorney Hayes, of Piscataquis county, who belongs to the Sprague faction, has given notice that at the meeting of the Governor and council, Jan. 25, he will apply for extradition papers for Stanton W. A. Forsman and Walter G. Merritt, the two students who shot the cow moose at Cauquogomac last July.

I have a letter from an Augusta, Me., gentleman of prominence in fish and game and legal circles which says that there is a feeling that Mr. Carleton has taken the enforcement of the law too much into his own hands; that the statute is plain enough; does not provide for the excusing of boys who shoot cow moose in close time and then conceal their deed by sinking the carcass in a lake. The letter suggests that if the sons of rich men—students—are to escape imprisonment for illegal moose shooting, then the law is of no use anyway. It will be interesting to see if Gov. Powers will ask for requisition papers from the State where the boys belong.

I have another letter from a Maine lumber camp, well into the woods, the home of many deer, which says that these animals are wintering well thus far. There is not yet snow enough to prevent their roaming where they please. The observer thinks that the number left is large, ten times as many as were killed in that section during the open season.

SPECIAL.

THE SPORTSMEN'S EXPOSITION.

THE fourth annual exposition of the National Sportsmen's Association, in progress in the Madison Square Garden as these pages go to press, is of all spectacles now delighting Greater New York the most brilliant and crowded. The vast amphitheater of the Garden is filled with a bewildering collection of displays to delight the sportsman's eye, excite his enthusiasm and empty his pocketbook. The trade exhibits cover the entire range of field and camp equipment, and represent most effectively the excellence, variety and completeness of up-to-date arms, ammunition and sporting appliances, as is shown in the following detailed notices of all the principal exhibits.

The show this year is in perhaps larger degree than ever before a trade display, and the commercial features of it are those which are most conspicuous and insistent, being intended to receive and receiving chief attention. Nature is on view, but sparingly, and nature chiefly in effigy. Even the Maine and Adirondack camps, which give a grateful woodsy flavor to the show, have their disillusion for the visitor, when it is perceived that they are stuffed full of railway folders and the business cards of hotels.

One pleasant feature of the Exposition this year, as always, is the meeting and greeting of town sportsman and woods guide. The friendships formed in camp are likely to be enduring, and one has but to linger in the Maine or Adirondack quarters to hear many an effusive welcome and many a hearty word of pleasure at the meeting once again.

The Cleveland Target Company.

Just to the left of the main entrance, under the boxes, is the exhibit of the Cleveland Target Company, the manufacturers of the bluerock target, the bluerock expert trap and the magautrap. The latter machine is the main portion of the Cleveland Target Company's exhibit this year. Paul North says that it's the only thing, barring his expert traps, to throw bluerocks from, and that therefore that's the thing he wants to show the public, the expert traps being already so well known to those interested in such matters. As in past exhibitions, so in this one, the space occupied by the exhibit

Cleveland Target Company.

is upholstered in the bluerock colors—orange and black—colors that readily catch the eye and that light up well in the evening. The magautrap and Paul North are of course one of the centers of attraction. Seated on the bicycle saddle that is a part of the machine, Mr. North pedals away and explains the workings of this automatic trap for throwing flocks of bluerocks into the air at one and the same time. To show the evolution of this machine from the first model made by the inventor, A. W. Jenkins, of Norristown, Pa., the first model itself, the one the company bought from Mr. Jenkins, is also on exhibition. A comparison of the two models will show how many improvements experience, skill and mechanical ingenuity can suggest on what appears to be a first-rate working model.

Another article that Mr. North is showing is the paper target for patterning guns on, a sample of which is put in each barrel of bluerocks sent out from the factory after this date. This paper target will be found to be very popular with gun clubs, and there is no question but what quite a demand will be created for them as soon as the shooting public becomes aware of their existence.

E. I. du Pont de Nemours & Company.

The E. I. du Pont de Nemours & Company are to be found at their old stand, just inside the main entrance on the left of the hall. The background for the exhibit is a handsome cabinet of white wood work picked out with gold. The firm's name appears in a scroll over the cabinet, the gold letters standing out well against the white background. Underneath the scroll are the words "Wilmington, Delaware," the home of the company, while the age of the firm is shown by the figures "1802-1898," also in gilt. The two halves of this cabinet are filled with sample kegs of the firm's products tastefully arranged, the colors of the different kegs harmonizing far better than one might have supposed. In the center of the cabinet is a pyramid of powder kegs,

monsters at the bottom, but growing "beautifully less" as the top of the cabinet is reached.

In a glass showcase in front of the exhibit are arranged all the raw materials that go to make up the different kinds of powder manufactured by the firm. There are the saltpeter, sulphur and charcoal of black powders,

E. I. du Pont de Nemours & Co.

with samples of the finished products. There also are the raw materials for the manufacture of gun cotton and the Du Pont Smokeless shotgun powders, now so well known to all shooters. The prismatic powder, both "army" and "navy size," as well as the spherohexagonal and other curiously shaped pieces of powder, will attract more than ordinary attention, being something that one does not often meet with, and which at the same time speak volumes for the care and chemical skill that has been expended in bringing the finished product to the excellence now conceded for it.

M. Pierre Gentieu is once more in charge of the exhibit, and most courteously exhibits no trace of annoyance when called upon to answer the same old question fifty times an hour while the Exposition is in session.

The Hazard Powder Company.

The Hazard Powder Company has secured a position where they are bound to be among the first to catch the visitor's eye. The space occupied by this firm's exhibit is on the right as you enter the Garden. The revolving Japanese umbrella, a veritable family umbrella in size, lit up underneath with numerous electric lights, and with the name of the company in huge gilt letters hanging from the brim, cannot fail to capture the eyes of the visitor to the Exposition as soon as he gets fairly inside. The lanterns swinging from bamboo poles at each corner of the exhibit also add much to the picturesqueness of the whole. The background for the exhibit is some gorgeous Japanese tapestry hangings, the oriental features of the exhibit being thus well carried out.

But right here that oriental business ends, and American inventiveness in the shape of something really novel steps in. The *piece de resistance* of the whole exhibit is a bicyclist, built out of kegs that ordinarily contain the powders manufactured by this company, mounted on a bicycle, and actually reeling off mile after mile on the machine, to the intense satisfaction of the beholders. This idea is fathered by Mr. Jno. L. Lequin, secretary of the Hazard Powder Company, who evolved the plan without the least effort. Speaking seriously this "man-

Hazard Powder Company.

of-kegs-on-a-wheel" is one of the very best things in the show, and is most distinctly a novelty. The rims of the wheel, we should add, are not surrounded by rubber tires. For this occasion the tires have been removed, and in their place are tires of curved tubes of glass, sectionalized and filled with samples of the various black powders manufactured by the firm, and also with samples

of its well-known Blue Ribbon brand of smokeless powders.

The exhibit is in charge of Mr. Lequin, assisted by Messrs. B. H. Norton and E. S. Lentilhon, the assistant secretary of the company.

Lafin & Rand Powder Company.

The exhibit of the Lafin & Rand Powder Co. is under the charge of Mr. E. A. Armstrong, assisted by Mr. Ed Taylor and his son, E. H. Taylor.

The chief feature of interest in the exhibit, to ordinary spectators at least, is the working model of the company's mills at Wayne, N. J., known as the Passaic Mills. This model was designed and built by Mr. George Lyon, the master mechanic of the Wayne works, and is a perfect specimen of a working model. With the aid of a small electric engine, every piece of machinery in the little houses on the model is kept moving, the wheels in the mills revolving slowly, as in actual powder making. It is an easy matter, by looking at this model and listening to the explanation of the different processes through which the raw materials—charcoal, saltpeter and sulphur—pass before becoming the finished article known as black powder, to grasp the use of every building in the model of the mills.

The exhibit of the company is divided into two sections. One half is occupied by the model above referred to; the other half is office-like, with three cases of quartered oak bounding it on three sides. In these cases are shown the different varieties of powders, black and smokeless, manufactured by the Lafin & Rand Powder Co., as well as the raw materials used in such manufacture. One case holds the saltpeter, sulphur and charcoal of the black powders. Another case shows samples of the blasting powders and black sporting powders manufactured by the company. The third is of perhaps more interest, as it contains samples of the smokeless powders for which Lafin & Rand are noted. Some of them are: For the .22cal. rifle; for the .30cal. U. S. rifles, '96 and '97 models; .45cal. Government rifles; No. 1 and No. 2 W-A smokeless for sporting purposes; 6-pounder rapid-fire gun; 3.2in. rapid-fire gun, and powder for use in mortars. The powders for the rapid-fire and mortars are more like badly discolored macaroni than "grains" of gunpowder. As a matter of interest it might be well to state that a "grain" of smokeless powder manufactured by Lafin & Rand for the Government's 10in. gun is a hollow stick of a semi-transparent material 30in. long and about 1in. in diameter, with a hole down the center about 1-3in. in diameter!

Adorning the rear wall of the exhibit is the diploma awarded to the company at the recent exposition in Nashville for gunpowder, and Mr. Armstrong pointed

Lafin & Rand Powder Company.

out with pride that with that diploma went the only gold medal awarded for gunpowder at that exposition.

Also on the walls are nine panels of oak; on each of these panels, and in letters of gold, are the names of the nine mills owned and operated by the Lafin & Rand Powder Co., together with the date of the foundation of each. The nine are as follows, in order of "birth": Orange Mills, near Newburgh, N. Y., 1808; Schaghticoke Mills, Schaghticoke, N. Y., 1813; Moosic Falls, Moosic, Pa., 1849; Platteville, Wis., 1855; Empire Mills, Kingston, N. Y., 1855; Rushdale Mills, Jermy, Pa., 1865; Passaic Mills, Wayne, N. J., 1875; Cherokee Mills, Turck, Kan., 1888; American Mills, Pompton, N. J., 1895.

In addition to the above, a large number and variety of kegs and cans adorn the exhibit, and show the manner in which the different products of the firm are put on the market.

Tatham & Brothers.

Messrs. Tatham & Bros. have gotten up in a most tasteful manner a pretty exhibit of the article manufactured by the firm. It may be hard to realize that such a prosaic article as shot can be arranged in such a manner as to appear artistic; but really the exhibit placed in charge of Messrs. Frank M. Foye, Joseph McGraw and other employees of the firm of Tatham & Bros. is more than pleasing to the eye.

A curiosity in the shot line is exhibited by the firm in the shape of the smallest shot ever made. This shot is so fine that it looks very much like particles of fine black sand; but on closer inspection, and with the aid of a pair of good eyes, it can be seen that this apparent dust is a conglomeration of perfectly made and perfectly round particles of lead. In fact, it is shot, just as much as No. 6 or No. 7. The size of this shot may be grasped in a measure by the following figures: It takes 162,304 pellets to weigh 1oz. This shot is not made for sale, but is simply a curiosity.

The "Extra Fine Dust Shot," 24,256 pellets of which weigh only 1oz., is another curiosity, but it suffers in comparison with the above-mentioned specimen of shot-making. "Fine Dust," a brand of shot that runs 7,568 pellets to the ounce, is manufactured and sold by the

firm for the use of taxidermists. From "Dust" and No. 12 shot up to BBB, TT, FF and OOO, every size of shot is shown, while for the vast majority of the shots known by numerals the firm also has a half size, such as 6½, 7½, 8½, and so on.

The model of the shot tower, filled with specimens of different kinds of shot and mirrors, adds much to the neatness and attractiveness of Messrs. Tatham & Bros.' display.

Winchester Repeating Arms Company.

Mr. David Daggett, who has charge of the exhibit of the Winchester Repeating Arms Co., has a large staff of assistants, but he needs them all. The company's space is full of attractions for the crowd of sightseers who visit the Exposition, and Messrs. Ferd Van Dyke, W. Maynard, B. A. Bartlett, J. A. R. Elliott and L. J. Alston, Mr. Daggett's assistants, are kept very busy. A willing and able volunteer is also always on hand in the shape of Mr. W. R. Clark, from the factory at New Haven, Conn. Mr. Irby Bennett has also been in attendance this week, having arrived from Memphis, Tenn., on Jan. 17.

About the newest thing in the whole exhibit is a 16-gauge repeating shotgun, model '97, the first of the kind ever made. The "Winchester Brush Gun," a repeating shotgun, model '97, and the "trap" and "pigeon" guns, all model '97, of course, for the older models are no longer made, are also on exhibition, and attract much notice.

The development of the repeating rifle is shown in a stand of old-time weapons. The first form of a repeating rifle ever made in this country was the "multiple charge" rifle, made in 1825. This rifle held ten loads, placed one on top of the other, and was loaded from the muzzle. The next repeating rifle to come before the public was the "volley rifle"; this was the first rifle ever made with a tubular magazine under the barrel. The cartridges for this rifle were wrapped in consuming envelopes, and were the first of their kind. The next step was the "volcanic rifle," built by Smith & Wesson in 1854. Then came the Henry rifle, manufactured by the New Haven Arms Co. in 1864. This rifle differed from the "volcanic rifle" in that it had the Henry extractor and that its magazine was loaded at the muzzle. This rifle was followed by the Winchester of 1866, which has been so improved upon that the model '95 rifle now shown, with all its improvements, is something entirely different and far more serviceable.

Specimens of the gunsmith's art are shown in the many different cases that stand upon the space occupied by the W. R. A. Co. The Lee sporting rifle, .236cal., and the Lee musket are always sources of interest to lovers of small-caliber weapons. Then there are light-weight arms of the models '86 and '94, and a specimen of a rifle specially designed for use by boys. In the show-cases can also be found a single-shot Winchester weighing 5½lbs.; sectional rifles of the '86 and '95 models, showing the mechanism of the locks, breech action, etc., and also a sectional rifle of the model '73. These latter specimens are of more than ordinary interest, and are well worth examining. As a novelty, also, a rifle with an aluminum stock is shown, the metal making the weapon much lighter than it would otherwise be if made of wood.

In a case that stands at one corner of the company's exhibit are some highly finished arms, the workmanship being of a very superior quality, while the tracery of the engraving and the finish in gold, silver and platinum is beautifully executed. Close by is a stand of guns with barrels twisted and bulged out of shape, the idea of this portion of the exhibit being to show what immense strain may be put upon the barrels of the repeating shotgun without actually bursting the barrels itself. In mentioning the various makes of rifle shown by this firm, it will not do to pass over the specimens of schuetzen rifles on exhibition; these guns are worthy of the name they have won for the firm that makes them.

Another small glass case shows working models of the "trap" gun and a repeating rifle, the mechanism and manner of working the gun being automatically shown by means of an electric motor. Next to this case is the mutoscope, showing Rolla O. Heikes in his act of rapid firing and rapid smashing of bluerock targets. This mutoscope is always in use, and is certainly a feature of the Winchester exhibit.

In the glass case around the base of the main portion of the exhibit are shown many things of interest, chief among them being the samples of bullets showing the different results obtained by firing into sand and wood; the bullets themselves are transformed into fantastical shapes by the operation, and a good idea may be gained of the crushing force of a soft-nosed bullet in the body

of a moose, deer or bear, by examining the specimens on view. Long blocks of solid-heart pine and oak show the penetrating powers of the small-caliber army and navy rifles now in use.

There is no denying that the exhibit of the Winchester Repeating Arms Co. is full of interest.

Remington Arms Company.

The space occupied by the Remington Arms Co. is well taken up by a full line of exhibits of the guns and rifles manufactured at Ilion, N. Y., the company's headquarters. Mr. W. H. Grimshaw is in charge, and he is assisted by Mr. G. E. Humphrey, both of them hailing from Ilion.

Some remarkably pretty and cheap specimens of guns

Remington Arms Company.

are shown, particularly the 16-gauge hammerless guns now on the market. These guns are light and easily handled, and are bound to become favorites for field shooting and in the brush. These guns, like all the others now made by the firm, are built with either straight or pistol grips, and will shortly be brought out in all three grades now made by the firm—Nos. 1, 2 and 3.

In hammerless ejectors, the exhibit contains some capital specimens. One case of specially fine guns will draw much favorable comment from those who know what a good gun should look like, and what it should be. The "ordnance steel" barrels, blued, make the guns very racy-looking, if such a term can be used about gun barrels. The guns in this case are not just specimen guns; they are merely samples of the work turned out by the Remington Arms Co. at its factory in Ilion, N. Y.

Another case contains specimens of sporting and schuetzen rifles, some of the latter being worthy of special mention, owing to the exquisite finish imparted to them by the company's experts. Along with these fine rifles is displayed another of the firm's specialties, the wicked-looking derringers, "compact and reliable." These are .41cal., rim-fire, have a chequered rubber stock, and weigh 11oz. only. As a Western man said when looking at them: "They're small, but, oh! my."

In the same case with the derringers and rifles are some samples of the auxiliary rifle barrels. These barrels extend the entire length of the shotgun barrel, and are held firmly in place by a thumb nut at the muzzle. They shoot accurately up to 500yds., and can be inserted into any shotgun barrel, and taken out again with perfect ease, thus turning a shotgun into a rifle at almost a moment's notice. The auxiliary rifle barrels weigh about 2lbs.; thus a 7¼lb. gun becomes only a 9¼lb. rifle.

When ordering these auxiliary rifle barrels, it is only necessary to state caliber and grain of cartridge required.

Hovering around the exhibit of the Remington Arms Co. may be found its popular traveling salesman, A. G. Courtney, who has much to say about the goods he represents. He is also talking about the single-trigger, double-barreled gun soon to be brought out by the firm.

Union Metallic Cartridge Company.

The Union Metallic Cartridge Co., better known as the U. M. C. Co., occupies a prominent place immediately to the left of the main entrance. In the center of the exhibit rises a vast pyramid of original packages of paper shot shells, a total of 201,000 empty shells in original packages being needed to make the pyramid com-

plete. Each step in the pyramid is marked by a 1-pounder shell, the whole being surmounted by some 6-pounders. At each end stands a 4in. shell, looking fully as powerful as it is said to be. The base of the pyramid is covered with royal purple cloth, on which appears the firm's name in gold letters. At each corner of the base are boxes of gun wads, topped with glass bowls containing the gun wads that are special features among the many manufactured articles produced by the U. M. C. Co. at its works in Bridgeport, Conn.

The space occupied by the firm is square on two sides, the third side being circular, so as to conform to the contour of the Garden. The pointed end is toward the main entrance, and here are grouped four showcases and a pedestal that carries specimens of 1-pounder, 6-pounder, 4in. and 5in. shells; the polished drawn brass cases and the bright steel points of the shells show off to good advantage. In the four showcases are displayed other products of the U. M. C. Co. One case contains primers and caps of all kinds now in use, either in this country or in very many of the foreign countries, for America sends such articles all over the world. Another case contains boxes of a vast number of varieties of ammunition for pistols and small caliber rifles. Still another case shows every variety of sporting or military rifle ammunition manufactured by the U. M. C. Company; and very deadly and effective do the .303 and .236 ammunition look. The fourth case is an interesting one, particularly to the shotgun enthusiast. In this case are displayed many kinds of ammunition for the shotgun. Sectionalized loaded paper shells are shown with the powder and method of wadding clearly seen through celluloid sides that have displaced the paper of the case for this purpose. To punctuate the three corners of the space occupied by the U. M. C. Co. are three palms, while two very pretty standards of white and gold woodwork support four electric lights on each, the light being soft and diffused by reason of the opal globes that cover the lights themselves. On either side of the pyramid stand two rapid-fire guns, a Driggs one-pounder and a Hotchkiss of the same caliber.

Of course, Mr. J. A. H. Dressel, secretary-treasurer of the Sportsmen's Association, is nominally in charge of the exhibit, but he is far too busy a man to be always on hand. Thus the main portion of taking charge of the U. M. C. Co.'s exhibit is under the direct control of "U. M. C." Thomas, the company's ballistic expert, and his assistant, John J. Halliwell, a budding ballistic expert under Mr. Thomas's care, but a full-blown expert with the shotgun and the company's factory-loaded ammunition.

Von Lengerke & Detmold.

The exhibit of Messrs. Von Lengerke & Detmold is a very varied one. Guns, fishing tackle, bicycles, and sporting goods of all kinds, go to make up a list of articles that is so large that the firm require all the space it has taken to display them to the best advantage.

Attention is easily attracted to the exhibit by the signs of E. C. and Schultze powders in large letters of gold, electric tracery being used at night to bring out the above letters prominently. Below these letters are to be found the members of the firm and its numerous employees, busily engaged in showing various portions of the exhibit to the many spectators who gather around the space occupied by the firm.

On each side of that space is a glass case, lined with

Winchester Repeating Arms Company.

Union Metallic Cartridge Company.

satin of a golden hue, on which are laid out specimens of the fishing tackle maker's art that would drive Izaak Walton nearly crazy. The rods alone are something special in their line. There are salmon and grilse rods of wood, and split-bamboo rods for trout and bass. The short, heavy rod for tarpon fishing is also in evidence. The newest thing in rods, something that is really only "just out," is a rod of split-bamboo, called the Imperial rod. John S. Wright, who has charge of this part of the exhibit, will be pleased to show this rod to anybody who loves a good rod and knows what such a thing is. In leaders Mr. Wright says that he won't take a back seat from anybody, and we believe him, for the specimens he has on exhibition are beauties. The reels, artificial baits and such make a good showing in the cases, the reels especially being something to examine well. Another novelty in these cases are the butterflies, artificial, yet true to life, made for fly-fishing purposes.

In bicycles Carl von Lengerke, who has charge of this part of the exhibit, has his hands full. He shows a long line of '98 model Crescents, Tigers and Wolff-Americans. The variety of wheels is rather bewildering, but the wheelman cannot fail to find plenty to interest him in this part of the exhibit. There are tandems, sociables, roadsters for men, women and children, and racing machines; plenty to choose from, and plenty to examine, with Carl von Lengerke to explain the different makes and their own particular specialties.

The gun exhibit, designed by Justus von Lengerke, is under the direction of Gus E. Greiff, who knows how to handle one of those articles himself. The firm's specialty in this line, the imported Francotte, is shown in this exhibit in all its beauty and perfection of workmanship. Messrs. Von Lengerke & Detmold show samples of all the different grades of these guns that they are agents for in this country. There are the cheaper grades up to the gun worth anywhere from \$400 to \$500. In this latter class are some perfect specimens of the gunsmith's art. Highly finished, with the most delicate engraving on the locks and breech mechanism, and with stocks of walnut that for figuring can be equaled, but never beaten, these guns are bound to call forth admiration from even the most superficial observer. But when the expert handles them, although he notes these special features, his eye is most attracted by the skill with which all the parts have been fitted together, each part meeting the other and locking so closely that only a minute inspection can disclose their meeting place. The single-trigger double-barreled Francottes will be found to be of special interest.

The letters in gilt and electric tracery—E. C. and

Schultze—tell plainly enough that the firm of Von Lengerke & Detmold handles those standard powders. As a matter of fact, the firm is the United States agent for these brands of smokeless, and exhibit samples of the same at its space at Madison Square Garden.

In sporting outfits Messrs. Von Lengerke & Detmold show a great variety: gun cases, shell boxes, etc. In hunting boots they have a goodly show, two glass cases holding hunting footgear of all kinds. Chief among these are the Smith horse-hide hunting boots and shoes,

Peters Cartridge Company and King Powder Company.

manufactured by M. A. Smith, of Philadelphia, and which are practically indestructible. The live-bird trap patented by C. Allen, of New Brunswick, N. J., exhibited V. L. & D., is one of the simplest and best we have ever seen.

As assistants to the above-named gentlemen will be found Theodore Baron and Eddie Morehouse. Notwithstanding this large staff of helpers, there is very little time for idleness on the part of any of the employees of the firm while the Exposition is open.

Bridgeport Gun Implement Company.

The Bridgeport Gun Implement Co. does not make any display this year of the vast variety of gun implements manufactured by it, and from which it takes its name. Mr. H. B. Cannon, who has charge of the exhibit, has made a decided change this year, and exhibits only golf clubs of all varieties, manufactured by his company under the direct instruction of John D. Dunn, the celebrated golf expert, who is too well known in golfing circles to need any introduction, and who is now regularly employed by the B. G. I. Co. to look after its interests in the matter of making golf clubs.

The space occupied by the B. G. I. Co. is turned for the nonce into a sort of arbor, with birch trees at each corner, a small hedge and rustic fence around it. Inside on a lawn-like piece of green cloth are some rustic chairs and benches. On the green cloth lie a few golf balls, and leaning against the fence are golf clubs of every description. Judging from the manner in which these clubs are taken up and examined, swung in the air, and apparently scientifically tested, there are a great many golfing enthusiasts patronizing the Sportsmen's Exhibition. In this line of goods the B. G. I. Co. has no competitors this year; no other line of golf clubs is to be found in Madison Square Garden.

The chief specialty is the "one-piece" club, a club

made entirely of one piece of wood, handle and head. It is built from a model designed and patented by Mr. Dunn himself. The mashies, brassys, etc., should be seen to be understood, for FOREST AND STREAM cannot enter intelligently into a full description of all the many good points attributed to them, and described by Mr. Dunn and Mr. G. B. Matthewson, who have charge of the exhibit under Mr. Cannon's direction.

Peters Cartridge Company and King Powder Company

The two Cincinnati firms, the Peters Cartridge Company and the King Powder Company, have an exhibit in the shape of a neat little reception room. They also exhibit their New York agent, Tom Keller, and his assistant, C. E. Teel, late of the Hunter bicycle. Messrs. Keller and Teel are always ready to tell what they know about the goods they represent, and find plenty of listeners, for both the goods and the agents are popular quantities in this part of the country.

There is one part of this exhibit which is missing, and which was always popular with New York and New Jersey sportsmen. We refer to the absence of Milt Lindsley and his wife, Mrs. Lindsley, both of whom would have been more than welcome at Madison Square Garden; but we understand that the duties of manufacturing King's Smokeless have a prior call, so New York and New Jersey get left.

Three-in-One.

G. W. Cole & Co., as usual, are prominent in the Garden with their mystic sign of "3 in 1," the catchy title given to a most excellent compound for preventing and removing rust, manufactured and sold by the above firm.

An abundance of sample bottles of this oil are given out daily, and no pains are spared to bring "3-in-1" before the public. For guns it is claimed to have no superior, particularly for such guns as are being used or are likely to be used for shooting on or near salt water. Among other properties claimed for it is the one of a good bicycle lubricant. It is clean to handle, and by no means offensive to the nostrils. "3-in-1" has apparently come to stay.

Leroy Shot and Lead Works.

The Leroy Shot and Lead Works makes a good display of its products. A pagoda of ebony and gold, lighted well from the top with electric lights, holds the specimens of every kind of shot manufactured and put upon the market by this well-known firm. From OOO down to No. 12 and Dust shot, every imaginable size and make of shot is exhibited. The variety of sizes of the shot may be gathered from the fact that OOO run eighty-five to the pound, while No. 12 has 1,963 pellets to the ounce! Dust shot is made and sold for taxidermists' use. The size of a pellet of OOO is .38in.; of a pellet of No. 12, .04in.

The name under which the different kinds of shot manufactured by the Leroy Shot and Lead Works are known to consumers is the Eagle brand, a name that has become well known from the excellence of the quality of the article made by the company.

Taxidermy.

Scattered about through the Garden, and cheek by jowl with booths containing shoes, jewelry, preserves, soda water, beer tea, pianos and lemonade, are a great variety of examples of the taxidermist's art, many of which have done duty at previous expositions. In the same space that C. & G. Gunther's Sons occupied once before they exhibit this year a large collection of skins, robes and fur clothing, while ranged about the interior of the pavilion that they occupy, and so high above the ground that no satisfactory view of them can be had, is a row of heads of deer, caribou, mountain sheep and other animals. These are perhaps of some value for decorative purposes, but are too far away from the spectator to give the big-game hunter any great amount of satisfaction.

The exhibit of W. W. Hart & Co. is easily the largest in the Garden. Most of the pieces are already familiar to those who have attended previous shows, but the pair of tigers quarreling over an antelope, to which we called special attention two years ago, deserves mention as still being far the most effective group in taxidermy on exhibition here. The calling moose in a space near the Madison avenue entrance is also more than a year old, as is the roaring lion, but both are artistic in pose and in modeling. A new group, also showing excellent work, consists of a tigress and cub in a cage. The mother is lying partly on her side, with her head resting

Wm. W. Hart & Co.

G. W. Cole & Co.

on outstretched paws, while the cub, sitting on its haunches, is staring out at the front of the cage. In both figures the anatomy is well worked out, and the expression excellent. The face of the tigress especially shows a repressed viciousness that is quite remarkable. True artistic feeling is expressed in this work.

Bridgeport Gun Implement Company.

In the space of the Brunswick-Balke-Collender Co., manufacturers of billiard tables, are to be seen a number of fine tusks of ivory, as well as a cleaned elephant skull, in which the tusks are still in place. Some of these tusks are long and heavy.

The Fly-Casting Tournaments.

If the number of people who sat on the hard seats which rose above the fly-casting platform, and who waited each day until the fatiguing detail of enrolling and assembling the contestants was gone through, represented the patience of the angler, as pictured by Walton, it should serve to illustrate to the world that those who love the sport of angling are patient people—for the delays were many and long. Mr. Gonzalo Poey was there, as active as a flea, in assisting the contestants, but even he could not hurry some men.

There was a zinc-lined tank in the gallery filled with water. It was about 8ft. wide, a few inches deep, and from the caster's stand reached out to 115ft., the stand being about 1ft. above the floor. So far all was good, but back of the stand was a coarse wooden floor, into which several hooks caught, and we saw Reuben Leonard smash the tip of his rod by being thus caught on the back cast.

The rules and regulations were printed last week, and

in accordance with those the first contest took place on Jan. 13, at 8 P. M.

Class A.—Black bass fly-casting contest. Distance only to count. A No. 4 fly to be used which will be furnished by the committee. Open only to those who have never cast more than 75ft. in any similar contest. Judges, D. P. Kennedy, Lody Smith; Referee, John G. Landman.

W. N. Goddard, 86ft. 9in.; N. C. Thorne, 77ft.; W. H. Hammett, 70ft. 6in.; Eddie Mills, 68ft.; Daubeney Brandeth, 65ft.; Victor R. Grimwood, 51ft. 6in.

The casting of Eddie Mills was a surprise. Here was a bright-eyed boy of fourteen, in knickerbockers, who was erroneously reported in some of the daily papers as only ten, who exceeded the records of Reuben Wood in his first trials in Central Park in New York city. In this, as in all his subsequent casts, the lad received rounds of applause.

Friday, Jan. 14, at 3 P. M.

Class B.—Fly-casting contest. Accuracy only. Distance 40ft. Open to all. After the contestant has signified his readiness, he shall make five consecutive casts at a buoy. The contestant will then commence to cast with his back to the buoy, and at any moment, at his option, shall wheel around and make a single cast at a buoy. Five of these casts shall be made. The distance in feet and inches at which the fly drops from the buoy at each cast shall be noted, and the sum of all these distances, added together and divided by ten, shall constitute the score. The contestant having the lowest average shall be declared the winner. Judges, I. B. Stewart, Fred Mather; Referee, H. C. de Rham.

P. C. Hewitt, 189in., 18.9 per cent.; E. R. Hewitt, 204in., 20.4 per cent.; D. Brandeth, 210in., 21 per cent.; W. N. Goddard, 219in., 21.9 per cent.; R. C. Leonard, 231in., 23.1 per cent.; C. M. Roof, 246in., 24.6 per cent.; W. H. Hammett, 285in., 28.5 per cent.

This was a very pretty contest, and all the casters showed some delicacy while casting, although that was not a condition required by the rules. Mr. Hewitt, the winner, and Mr. Roof are especially graceful casters, and the accuracy of the former was uniform. Mr. Roof made one wild cast of 5ft., which injured his otherwise good score. Similar stray casts of 3ft. spoiled the chances of Mr. Brandeth, and they all made one or two wild casts, Mr. Hewitt having one of 4ft.

Friday, Jan. 14, at 8 P. M.

Class C.—Light fly rod contest. Distance only. The rod must not weigh more than 5oz., with an allowance of $\frac{1}{4}$ oz. for solid reel seat. Open only to those who have never cast more than 75ft. in any similar contest. Judges, R. N. Parish, Lody Smith; Referee, C. G. Levison.

W. N. Goddard, 83ft.; Eddie Mills, 74ft. 6in.; C. M. Roof, 74ft.; W. H. Hammett, 67ft. 6in.

Here little Eddie Mills came out second, and beat his record of the day before by over 6ft., but did not appear half as proud of it as his father did.

Saturday, Jan. 15, at 3 P. M.

Class D.—Light fly rod contest. Distance only. The rod must not exceed 4oz. in weight, with an allowance of $\frac{1}{4}$ oz. for solid reel seat. Open only to those who have never cast more than 75ft. in any similar contest. Judges, I. B. Stewart, R. B. Lawrence; Referee, Fred Mather.

P. C. Hewitt, 88ft. 6in.; W. N. Goddard, 86ft.; F. N. Peet, 79ft.; Eddie Mills, 69ft.

As there had never been a similar contest the rule barred none except those who are excluded by Rule 2, which says: "No one shall be permitted to enter any contest, except those 'open to all,' who have ever fished for a living; who has ever been a guide or has been engaged in either the manufacture or sale of fishing tackle."

Saturday, Jan. 15, at 8 P. M.

Class E.—Obstacle fly rod casting. Distance only. Open to all. Rods and length of leaders unrestricted. A horizontal bar, under which the cast must be made, will be placed in front of the contestant at a distance of 30ft., and 6ft. above the level of the tank.

Judges, Joseph Wilcox, R. N. Parish. Referee, Hon. Daniel O'Reilly.

R. C. Leonard, 71ft.; P. C. Hewitt, 69ft.; E. R. Hewitt, 62ft.; C. M. Roof, 61ft.; F. N. Peet, 59ft.; W. N. Goddard, 54ft.

This is a remarkable record of distance under the difficult conditions. Some of the contestants dropped on one knee, others on both knees, and they assumed various postures. To their right were deer heads and horns on a level with their feet, part of an exhibit on the main floor below, and this prevented swinging the rod low down to make the back cast upward and the forward one with a horizontal, rising swing, and so there was an obstacle not provided for in the rules. The platform had been removed or there would have been more lines and leaders festooned on the bar than we saw, for this was not infrequent.

An incident of Saturday was the appearance of a lady who practiced for the contest on Monday afternoon, but the hour of going to press forbids a report of the work of the ladies.

The Camps.

Maine is represented this year by two camps. One is of the Maine Central Railroad, in charge of Miss Fly-Rod Crosby and Capt. F. C. Barker; with them are Russell Spinney, Ben Guild, James Wilcox and Will Douglas. The other exhibit is of the Bangor & Aroostook Railroad, in charge of G. M. Gray, of Oldtown, with whom are William Atkins, of Oxbow; Jo Francis, of Oldtown; Clarence Morris, of Kineo; Charles Nicklus and wife, of Kineo; B. J. Woodward, of Dover.

The Adirondack representation is headed by Sec'y E. E. Sumner, of the Adirondack Guides' Association, from Saranac Lake; and with him are Fremont Smith and W. L. Ring, of Loon Lake; A. H. Billings, of Lake Placid; Warren Cole, of Long Lake; Chester McCaffrey, of Paul Smith's; E. J. Chase, of Newcomb, and Chris Goodsell, of Fulton Chain.

The Indian Belle at the Sportsmen's Show.

We have received from a contributor, whom diffidence has prompted to withhold his name, the following lines, evoked by a visit to one of the Maine camps. Though somewhat lame in measure, they are marked by a true and poetic, not to say tender, feeling which entitles them to place here:

Hair like the wing of a raven;
Eyes twin diamonds of coal,
Burning brightly, yet tender,
Piercing the innermost soul.

Lips of the color of rubies,
Hiding those pearly teeth,
Unable to utter a falsehood,
True as the heart beneath.

Called by thy tribe "The Beauty,"
Well dost thou bear thy name;
From Maine's evergreen forest
Widely has spread thy fame.

Famed alike for thy skill in dancing
The "Mimac," with its intricate whirled,
And the work of thy nimble fingers—
Thou fairest of Indian girls.

By thy ways, so winning and graceful,
Thou hast captured the high and the low;
And most surely none will deny
That thou art the belle of the show.

Noble maid of the forest,
Child of an Indian chief,
Though thy race has heavily suffered,
Mayest thou never know grief!

Illinois Protective Interests.

Warden Loveday, of Illinois, is back from his trip in the southern part of the State. His deputy, J. E. Slocum, has commenced thirty-five prosecutions at Mt. Vernon, mostly for illegal shipping of quail. They found the birds shipped in egg cases under a layer of eggs, found them shipped in butter tubs, in barrels of dried apples, barrels of hickory nuts, and even, as I stated last week, sewed up in the carcasses of rabbits. The country dealer would seem to be not without his canniness.

At Staples, Minn., last week a warden seized 2,200lbs. of illegal partridges. Agent Fullerton seized still another shipment at the same point, this consignment of three boxes of venison, one which contained ten saddles, another eleven saddles, and a third five saddles, besides twenty-five partridges. The number of illegal partridges seized by the Minnesota Commission now runs into the thousands. More than a ton of confiscated game has been received at St. Paul after seizure at the single town of Staples.

The Ohio trespass law was put into effect last week at Tiffin, when Dr. J. W. Hayford was arrested on a warrant sworn out by W. H. Davidson, charging him with hunting on lands of another person. The farmers of that locality are in arms against shooters, and are urging their arrest. Dr. Hayford was bound over in the sum of \$100.

The Banner Record.

The report of Warden Chase S. Osborne, of Michigan, for 1897, shows a total of 579 cases brought under the game and fish laws. This record is thought to exceed that of any warden in the United States.

The Banner Seizure.

The heaviest seizure of illegal game recorded for this year, or perhaps for many previous years, was made by Agent Fullerton at St. Paul on the morning of Jan. 9. Mr. Fullerton and his assistant made a midnight search in the railroad yards, and ordered opened a sealed car which they had reason to believe contained illicit game. The yardmaster accommodated them, and they discovered that their biggest expectations were more than realized, for the shipment was found to contain more than 100 dozen ducks, billed out to Chicago. Fifteen boxes were opened, and each was found to hold seven dozen birds. At \$10 a bird the figures would run up to some \$10,000 on this take.

"Forest and Stream."

Sea and River Fishing.

Men I Have Fished With.

LXI.—Dr. Bashford Dean, Ph.D.

The Lakes of Long Island.

THERE are charming lakes on that terminal moraine which is called Long Island, but they have never been written up to any extent outside of the dry reports of the Fish Commission, although they abound with a variety of fishes to entice the angler. The trout fishing in historic Massapequa is about gone since the city of Brooklyn included it in its water supply, and now permits are issued to more men to take trout in its waters than there are fish in the lake. Those of us who fished in it when it was the private property of the Floyd-Jones family will do so no more.

I had been running the State hatchery on the island for a little over three years when a young man about nineteen years old presented his card and an order from Commissioner Blackford to me to give him every possible facility for his work. He was Prof. Bashford Dean, instructor in biology in Columbia College. He distilled the salt water of Cold Spring Harbor and worked up the deposit, weighed and treated it to all manner of things which had never been done to it before; made microphotographs of the food of the oyster and pried open their shells and into their internal economy regardless of their feelings, and actually made enlarged drawings of their gills, hearts, livers and other organs to publish to a world whose main interest in an oyster is to first know if it is in season, and then to dispute whether lemon is superior to vinegar on Rockaways, Blue Points, East Rivers and Shrewsburies.

I hold a decided opinion on this last question, and waited long for the young professor to intimate a preference for lemon, or for black pepper over red, when I would arise and kindly suggest that when his palate was a few years older and had reached a proper age to discriminate he would not adhere to such heresies. But he never referred to these subjects, and stuck to his photographs and microscope. He showed me that the mouth of an oyster is back at the hinge of the shells; how its four rows of gills lay under the mantle, and how the beating of its heart could be seen just above the adductor muscle, which closes the shells. Also how the motion of the gills and hair-like appendages sent currents of water and food back to the mouth, and then traced out the digestive organs, as if an elephant had been under the scalpel. These things are interesting to know, and evidently this unassuming young man knew a lot about the anatomy of the oyster, but I soon found that an oyster to him was like the noted primrose on the river bank, only this and nothing more, and he couldn't distinguish a Shrewsbury from a mill pond or a Blue Point. I could do it, and this illustrates the fact that we each have a little bit of knowledge that all the world has not.

His investigations were continued during 1886 and 1887, at the hatchery, when a broader field was opened for him. Mr. John D. Jones, who gave the State the ground for the hatchery, erected a laboratory on the harbor for biological study, under the auspices of the Brooklyn Institute of Arts and Sciences, of which Mr. Blackford was treasurer, and Prof. Dean took charge of it for the first year, and it was a surprising treat to me to see him draw on the blackboard any symmetrical animal like one of the crabs, with chalk in each hand while he talked of its nervous and digestive apparatus.

He had to give this work up and go to Europe to study the methods of oyster culture there for the U. S. Fish Commission, and his reports were published.

In July, 1889, Mr. Blackford wanted an examination made of the two principal lakes of Long Island. It was to be a complete examination into the flora, fauna, depth, temperatures and areas, with a report on the needs of each lake in the way of vegetation and animal life. Prof. Dean, now an A.M., volunteered to work the botany and invertebrates, while I did the fishes, and we both took a whack at the depth, temperatures and areas.

The work was most congenial. Several weeks' outing, with something to be learned and perhaps added to human knowledge. Not only this, but I rejoiced to know that while my companion in the investigation was to be a man high up in his specialties he was one who was really companionable, for I once spent a fortnight in the wilderness with a man who was entirely destitute of humor and insisted on talking on dry subjects in which he alone took interest. I knew that outside his studies Dr. Dean never alluded to them, never "talked shop," and that he had a keen sense of humor, without which no man is companionable to me, and the prospect was pleasing.

We were not to camp, but what was nearly the same were to stop in hotels among strangers, and spend evenings together, and a life spent in angling and fishculture, with its necessary reports on the latter, has put all fish talk in the category of "shop," and in camp I love the song, the joke, and anything except a discussion on fish. Dr. Dean was my ideal man, for I never talk about fish if I can help it. Outside his classes he never referred to the vermiform appendix of the oyster, nor the alimentary canal of the lobster; he shut up on these subjects when he put up his scalpels, thus following that most excellent advice, "put up or shut up."

If a man happens to be engaged in an occupation in which other people are interested they are apt to think that he knows nothing else, and they think they do him a favor by talking to him on the subject. As a fishcultivist of several years' experience, I will candidly say that there are about six men in America with whom I can profitably talk on fishculture; that is all. In camp I want to leave business behind and enjoy life untrammelled by it, and I don't want a companion whose talk is of politics, religion, science nor fish, and Dr. Dean filled the bill.

There was Lake Ronkonkoma, an Indian name said to mean white sand, situated in the middle of Long

Island, something over fifty miles from either end, and on the top of an extended gravelly ridge which projects eastward from the high land on the north side of the island. The lake is oblong, its greatest length being north and south, and it covers more than a square mile. It is fed by bottom springs, and has something like an inlet in the shape of a broad, irregular arm, which projects to the northwest. There is no outlet, evaporation and filtration taking all the water. Perhaps it may feed some of the numerous trout streams on the south side of the island.

The lake is in the wild, unsettled part of the island, where the deer still range, and no portion of "the island of shells," Seewanhacka, as the aborigines called it, contains more fables and traditions than Lake Ronkonkoma. There was no bottom to this lake, and a tide rose and fell once in seven years. I had picked up this information from various sources, and on the way down imparted it to my companion.

"That's very curious," said he, "for one would hardly expect deep ponds on the island, because in all glacial drifts small ponds hollowed out in the soft clays and gravels are not apt to be deep, for no matter how powerful may have been the eroding force of the waters, the shifting nature of the drift gravels would in time fill up any deep pockets that might have been formed. Surely would this be the case on Long Island, where the gravels, boulders and clays which were deposited by the melting ice mountains from the north were not merely reground, washed out and sifted by the glacial torrents, but were continually smoothed over by the pounding sweep of the ocean."

"Your reasoning seems correct," I replied, "but Long Island is singular in one thing: ten times more water flows from it than falls on it, and the query is, where does it come from?"

"Are you certain about this statement?"

"Positive. I've been all around the island and tested the temperature of every stream of importance that flows from it. It has an area of 1,682 square miles, and the average rainfall is from 40 to 55 in. Take a medium of 47 in., figure it into gallons, and the Nissequoque on the north, and the Conetquot on the south will more than carry it all. Then on the south side there are about three good trout streams to the mile from Valley Stream to Patchogue, a distance of over thirty miles, not to mention the minor streams. I don't know of an equal area in America which contains more large trout streams than Long Island. Mark me, I don't mean trout waters, for in the Adirondacks and in other parts of the country there are more trout waters within the area named, but they are lakes, and I only mean flowing brooks and rivers. I am prepared to assert that there is at least ten times the amount of water flowing from the island than can be accounted for by the annual rainfall."

"Then it must come from the north and pass under the Sound in crevices of the rock."

"No doubt of it, for there are fresh-water springs in Long Island Sound," and so we argued the time away until the railroad dumped us at a station called Ronkonkoma, and a stage took us through the sand and scrub oaks to The Towers, a hotel on the lake which has since been burned.

Our first work was to find the depth of this lake which "had no bottom." I had known of such lakes in Vermont and New Hampshire, where the hills are higher and the lakes are proportionally deep; but I also knew that when prying Fish Commissioners carefully sounded them they seldom found over roof of water. I had 200 ft. of thin linen codfish line, thin so as to better resist currents and the drift of the boat, and this was carefully marked with white cord at every fathom, and blue at every five fathoms for ready reckoning. In the morning a few ignorant natives winked and grinned at the idea of two duffers coming to their lake to find out what they had never been able to find, but some more sensible ones saw us off and were willing to withhold their verdict. The water at this time was up to the shrubbery on the shores, although my men, who had planted fish in the lake a few months before, reported the existence of a sandy beach of some 20 to 30 ft. all around the lake. It was now near the last week in July, and Dr. Dean remarked: "The seven years' tide seems to have come in a few weeks this year."

"Yes, but we must reserve that question until after we sound the lake. These people here don't see how two strangers propose to find out more about this water in a week than they have learned in a lifetime, and they half resent our intrusion of their domain. They don't realize that they have been satisfied to catch fish in the depths and shallows, and where their fish lines found no bottom they were content with the tradition that there was no bottom. I have no faith in the tide theory, but we must not jump on them with both feet. If we don't find bottom at 200 ft. we'll get more line."

The Doctor; I call him Doctor here because that is one of his titles, never mind what I call him on the lakes, but I have seen him in print as Dr. Bashford, Dean of Columbia College; that's the penalty of bearing a surname which is also a title. Said he: "This is glorious! To get down among these musty old myths and traditions and bust 'em."

"Will you please give me the correct orthography of 'bust,' and also please parse 'bust 'em'?"

"With pleasure; the orthography and parts of speech are closely allied to the phrase which you used a moment ago, when you wanted the oars, and said: 'Gi' me um.' You will see that the boomerang can be used for other purposes than to kill a rabbit behind a bush."

On a similar occasion Falstaff said: "No more of that, Hal, an' thou lovest me." We were not even, for there was a balance against me.

We went around the lake and put flags at every roof, in order to sound at the intersecting lines. This took a whole day, and at night our troubles began. Time and again we explained that we had made no soundings, and as often we saw significant glances exchanged. The duffers had toiled all day and done nothing. That was very satisfactory to a few, but among those interested, who lived on the lake, were Mr. W. H. Warner, a maker of metal tubes for scientific instruments, and Hon. James R. Ferguson, a lawyer. To these gentlemen we explained our day's work.

The next day we began by guessing our distance at roof, from the shore and sounding around the lake; and then, getting our ranges from north and east, sounded the lake at the intersection of all the lines until we came to a deep hole, which we worked out two days later. Two pounds of lead and a registering thermometer, weighing almost as much, told us that the lake then had a depth averaging 15 ft. all over, with the exception of a deep hole in the southwestern part. This is about 50 ft. from the shore, opposite the residence of Mr. H. B. Kirk, and the sides are shelving. This hole was probably 200 ft. long by 50 ft. wide. I say probably because our boat was not anchored, but drifted with the wind. The bottom was of clay, and was not deeper than 65 ft., and the bottom temperature was 38 degrees Fahrenheit. The surface water was 88; the air nearly the same, while at the bottom of the sandy plain which formed the main body of the lake the thermometer registered 78.

The next day we were to fish and to look up the other animal life before going into a hunt for aquatic vegetation and the water-breeding insects, but just as we were about to put off for our work Judge Ferguson and some friends stopped us. Said the Judge: "Would you object to our using your sounding line in the deep hole while you are fishing?"

"Glad to have you do it, Judge. We are only after facts and have no theories to sustain. We will be glad to have you use our sounding line, and when you get the deepest water just buoy the line and note the depth. We are satisfied with our soundings."

There was a crowd at the landing when we came in before sundown. They looked the line over and talked, while we went up to the hotel. Then came Ferguson and others. The Judge said: "I don't doubt your measures, but the boys here can't believe 'em. They say they've put out over 300 ft. of line and never touched bottom, and as I sounded with your line and took your measured fathoms as a standard I wish to ask if there is any objection to letting our boys measure your line?"

Dean said: "We will only be too glad to have you do it. It will help us much. We have no other object than to get at the truth. You have the number of fathoms marked on our line, but I would prefer that you measure them with your own tape."

We sat in the hotel when the party came back. "Your measure is all right," said Ferguson, "65 ft. is the deepest water we could find."

And then arose the bartender. I had not seen him before. Said he: "This lake is over 500 ft. deep, an' I know it. What's the use of you two fellers comin' down here for a few days an' tellin' us how deep it is. I guess we know our own country better 'n you do. Why I killed three deer here last fall, an' if I hadn't been busy all summer I'd 'a' caught more fish than all of these fancy fishermen that come down here. But about that deep water; 65 ft. ain't half the depth of that hole, an' I'll bet \$10 it ain't."

We had mapped out the hole and sounded every square yard of it; obtained specimens of the clay from it, and recorded the temperature, and these things may be found in Eighteenth Report of the New York Fish Commission for the year ending Sept. 30, 1889. I replied: "I don't care to bet, but if there is deeper water than we have found we want to know it, and I will give you \$10 per foot for each foot you can show me above 70."

"Golly, but I'll make about \$50 offen you to-morrow," he said, but he never demanded any money. The fact was that they had used 1/2 oz. sinkers and paid out line as the boat drifted, and there was "no bottom." The next thing to investigate was the mysterious seven-year tide. Our soundings had caused a commotion, and the billiard room was visited nightly to hear the news; we brought up the subject, and the argument ran along after this fashion:

No. 1—"You see it's this way: the tide rises for seven years, and then it takes just as long to fall, you see—"

No. 2—"No, you ain't got it right. I've allers heard that it took seven years to rise and fall, while in your way it 'ud be fourteen years. It's just seven years since I rented my farm, an' the water was high then an' it's high now."

No. 3—"That's so, Jo; I remember we went a-fishin' that year, an' you reached over to haul in a big bass an' plumped overboard, an' had to swim where we can wade at low water."

To help along I remarked: "Last spring my men reported low water here, and they had to wade out to get into the boat."

"You're right," said the bartender, "I helped 'em carry the cans." And then they waxed warm over it. No one had kept a record, but they resented my friend's suggestion that the annual rainfall could influence the "tide" in any way, and they did not relish our doubts about the ancient tradition any more than they did our finding less than 70 ft. of water in a bottomless lake.

We heard it night after night, and listened respectfully, leaving them to fight it out, which they may be doing yet. We fished with flies, bait, trolling spoon and gill nets, and recorded the following species: Sunfish; both species of black bass; the small pike-perch, for which we have no popular name unless it is sauger, which I have read, but never heard spoken, it is *S. canadense*; bullheads; rock bass; yellow perch and mummichogs, or killies. Not a pike, pickerel nor a shiner. The latter would be a good fish for the others to feed upon. Our dredge brought us many mollusks, crustaceans and insects, which the Doctor recorded. These and the water plants amused those of the natives who had been annoyed at our discoveries, and they "didn't see the use o' huntin' up little no-count things like them." But we had a record of every bit of animal or vegetable life in the lake which was large enough to be held by the bolting cloth with which the miller sifts flour.

Then we went to Riverhead to look into Great Pond. This is some miles from the village, but Mr. J. H. Perkins not only put a boat on it for us, but loaned us a horse and buggy each day. If they will stock this lake with black bass it will be a better lake for an angler than Ronkonkoma. It is much deeper and colder, the bottom springs being sufficient to sustain brook trout.*

Here we found the fresh-water mussel (*Unio*) the usual Long Island crustaceans and insects. Of plants

there were a variety, some not found in Ronkonkoma—the most interesting to me being the wild celery and water soldier, both in bloom on the last days of July. Of fishes we took pickerel, sunfish, golden shiner, yellow perch, bullheads, suckers, eels and "mummies." If the two lakes could exchange black bass for golden shiners (*Notemigonus*) it would be of mutual benefit.

As scientists in search for information we used dredges of bolting cloth for top and bottom, gill nets and angling appliances. The pond has no houses near it. There is a shed and picnic ground labeled Hunter's Camp, but no one fished the lake while we were there, and we had the only boat on it. Our gill nets were drying on the bushes one morning as we got out of the buggy, and I saw a man dodge in the brush. He evidently knew Mr. Perkins's rig, and when we returned at night he was at the hotel and took me on one side.

"What luck on the pond to-day?"

"About thirty suckers, all of one kind, though; I don't think there's but one species in the pond; some sunfish, perch and five pickerel. We kept one pickerel for our breakfast and sent the other edible fish down to Mr. Nat Foster and Mr. Perkins. We were quite successful in capturing insect larvae and crustaceans."

"What's them?"

"The worms which turn into water beetles; crawlers that grow to be devil's darning needles, and other little things."

"I see; that's a nice song and dance you're givin' me, but I see a gill net on the bushes and another in the water. I'm a town constable, and mistrusted that them bags o' your'n had nets in 'em when they was throw'd outen the baggage car, an' I've had an eye on you to see that you didn't get away afore I got evidence ag'in ye, an' I got it to-day, an' can put ye in the lock-up to-night an' get yer nets in the morning. O, I've got ye an' ye can't squirm out of it. Now you come along o' me peaceably an' then I'll come back an' get the other feller, who's sick up stairs. Somehow you got to windward of John H. Perkins, but you can't fool me."

This was charming; it was an adventure, and I was a criminal. Dean had returned with some trifling ailment and retired. Supper would not be called for an hour. I was in the custody of a man whom I admired for doing his duty, but it was plain that explanations to him would be useless. Mr. Perkins was the treasurer of Suffolk county, and there was fun ahead. He had gone home to supper, and after making the constable think that I was trying to bribe him with all sorts of entertainments, including supper, he relented so far as to take me to see Mr. Perkins before locking me up for the night. I did not sleep in the jail, and that vigilant constable, whose name is unfortunately forgotten, never troubled us more. I hope his zeal led him to protect his district against all violators of the game laws as it did when he arrested me. The only question is: Would he take the same course with his neighbor or friend?

Around the lake the huckleberries grew in profusion. We were approaching the Hunter's Camp and picking a few when the Doctor saw a boy eating berries near the landing. The boy said: "These berries ain't got no taste."

One glance and my scientific friend called out: "Don't eat any more of those berries; they're not huckleberries, they're poison."

The boy stopped eating and the Doctor added: "These are what they call 'kill calf' berries, and may be known by—" and here I fail to get the essence of his botanical lecture on the differences of leaf and stem, but the boy was dangerously sick for three days and recovered. Dr. Dean missed these fishing days while watching him, but I rowed my own boat, trolled a spoon and took several pickerel of fair size and gave my new friend, the constable, six fish which aggregated nearly 19lbs. He no longer looked at such gifts as an attempt to bribe him, and did not offer to arrest my partner.

We were just in time for the annual darky camp meeting, some miles from Riverhead, and we got there. To tell of the fun that we outsiders had on one night would fill a book. Religion is not a thing to be ridiculed, but there are people who do things in its name that "make the judicious grieve." Just why we enjoyed this darky camp meeting may be questioned by others. To the two "duffers" who were exploring the inland waters of Long Island it laid over any of the "coon" songs of May Irwin.

White visitors chipped in the most of the money collected, and it was worth our dollar to hear them sing:

"Go tell yo' mother an' all her kin,
They'll never cross Jordan with all their sin;
Sing, sweet Christian, an' let me in.

"You can dig my grave with a silver spade,
But I'll rise in the coming day;
You can fasten my coffin with chains of gold,
But I'll rise in the coming day.

"For hell is deep an' hell is wide,
It ain't got no bottom an' ain't got no side,
An' none can shun it but the sanctified,
But I'll rise in the coming day."

Dr. Dean came on earth in 1867, and was educated at the New York City College, Columbia College and in Munich, graduating in '86, second youngest in fifty, and in '91 was instructor in biology in Columbia, and professor of biology six years later. He has visited every country in Europe except some of the smaller principalities, and while he was investigating oyster culture in Europe for the U. S. F. C. he wrote me the most genial letters, filled with humorous descriptions of men and things, often illustrated with his pen. He could, probably tell more stories of men he has fished with than I can; for it would include Arabs, Turks, Portuguese, Italians, Swedes, Frisians, Russians, Chinese, and a lot of other men with salient points of character. Just how he found time to write me so much while he was studying at the same time and writing a book on "Fishes, Living and Fossil," delving into the embryology of *Amia* and *Chimera*, which he was the first to describe, I can only guess. Perhaps it was a relief for him to think in a different direction.

*For all these data those who are interested may consult the report mentioned.

While we were fishing in Ronkonkoma I made some trifling remark about a catfish having nine lives, when the Doctor said: "You can kill them easily if you know how. In the brain of all vertebrates there is a structure of unknown utility known as the pineal gland. In the fishes and other so-called lower forms it is connected with a cavity between the parietal bones, and in the sturgeon and catfish it is easily found under the skin. A pin or a splint inserted there will kill the fish instantly. Herbert Spencer demonstrated that it is the vestige of a third eye, and he found in some lizards a lens, pigment and traces of a nerve in this pineal gland."

Some weeks ago Mr. Hough referred to killing a catfish in this way with a broom straw, but did not enter into the anatomical reasons for the hole, which probably exists in all fishes, and no doubt an eel could be killed in this manner.

We had talked of eating a Chinese dinner for several years, and on Dec. 11 last I piloted the Professor through Chinatown and up stairs in a Pell street restaurant, within rifle shot of FOREST AND STREAM office. There we partook of bird's nest soup, chicken with lychees, shop-suy, yung to (canned fruit), canned lychees (something like muskmelon), guck yin (I don't know what that is) and souchong tea. There was enough for a dozen laboring men, and the bill was proportionately large. The "shop suy" was a delicious stew, and the tea was fine.

Before the dinner the Professor said in his purest Chinese, "John, you catchee cocktail?"

"No gottee cocktail."

"Well, you catchee Chinese wines, some sid-lee or some mow-jen?"

John was suspicious; we were strangers, and he had no license. He said: "No gottee wine." But after the bill was paid, with a little trinkgeld, backsheesh, pour boire, or whatever it is in Chinese, he said: "Good-by, when you come again I catchee Chinese wine and cocktail." And then the curtain fell to slow music.

FRED MATHER.

Fishing Up and Down the Potomac.

Quantico.

In colonial days Quantico River was a great commercial highway, and Dumfries a metropolis with mansions and churches of brick imported from Great Britain and landed at its doors. Its tobacco warehouses and its trade in the domestic staples, as well as foreign necessities and luxuries, were among the most important in the country.

To-day Dumfries is 'way up on Quantico Creek, and an occasional longboat for pulpwood or cross-ties, or a sand barge is nearly the extent of its business as a port. Lines of travel and traffic have changed and left it to one side, that is all.

The old Telegraph Road to Richmond, sometimes called Washington's Road, probably because he could have taken no other, is little more than a memory, since the double threads of steel rails have fastened Richmond into the pattern of our commercial network, and gone all round Dumfries.

At the mouth of the Quantico, on a fine beach, well above the Potomac, stands a little village of a dozen or two houses, the northern terminus of the Richmond, Fredericksburg & Potomac Railroad, and its junction with the Washington Southern to Washington. If you write to this place, you must address Potomac City, for so Uncle Sam has named the post-office, but the railroads do not recognize this name, and your ticket reads to Quantico, and the telegraph office will refuse your message unless so addressed.

Ruins of extensive wharves on the south bank of the mouth of the creek bear silent witness to the former value and extent of its transfer business, for here schooners and steamers took all the freight and passengers from the South destined for the West, North and East. Quantico was a busy, thriving trading point and a pleasure resort. A railroad reached it from Washington, and its occupation was gone.

Millions of tons more traffic, and thousands more passengers than ever, pass through it, but stop only long enough to change engines, while Quantico sleeps.

Its site is now mostly owned by a Baltimore capitalist, as is the very large hotel, almost unused. The railroad company, to secure a reliable supply of water for its engines, sunk an artesian well about 1,000 ft. and secured a fine flow of very clear, palatable water, said to have valuable medicinal properties. Some day Quantico may again become a trade center. Stranger things have happened. Fifty feet of water in its Potomac channel, 150 miles of water carriage nearer than Norfolk to the great West. Why not this the coaling point for the world? At least one man has dreamed he saw from out of nothing this greatness rise. A sanitarium and a port, it needs but one thing more, and that a little matter of capital.

A few miles up the creek, on the north side, is a mine of pyrites, from which a baby engine, on a narrow-gauge road, brings the glittering sand and dumps it on the rude wharf for boats, or on a platform near the railroad, to be conveyed to distant works and there used in the manufacture of sulphuric acid.

During the war Quantico was a fortified point, and on the hill overlooking the town are the remains of earthworks and a dismantled Confederate cannon. Its carriage has long since disappeared, and the inhabitants tell of some man who long after the war attempted to break up the gun for old iron. He put in a bursting charge of powder, drove a wooden plug into the bore, and then drove stakes into the solid ground in front of the muzzle. It went off all right, but did not burst according to programme. By a fatal coincidence, as it pointed toward the town, his own house was just in range, and that wooden dummy shell went screaming over the startled village and tore out one end of his house, fortunately with no damage to its occupants. But his enthusiasm was gone. Besides, his neighbors had had enough of the war, and objected to any further bombardment of the place, so his project was abandoned, and the old gun lies there

yet, still pointing its empty muzzle over the town, and out to that water which now needs no guard.

At the mouth of the stream, on the south side, just at the point of the low bluff, the tide runs swiftly in and out, and here the white perch are plenty, except at lowest tide, and many evenings we have found good sport here with the fly, within 3 ft. of the rocks. The white perch do not run large at this point, but, without moving, one may cast to the left toward the decayed piles of the old wharf, where the water is still, and a sunken fly or a bait of any kind will take very large yellow perch.

Two hundred yards out, in 30 ft. of water, is a spot known locally as the Perch Ground, where the record catches for the lower river have been made.

One warm day in midsummer Mr. Jesse Middleton and a friend took here 550, averaging above ½ lb. in weight, and quit, tired of the monotonous slaughter, at 2 o'clock. This with rods and bait, principally crab.

Among the piles mentioned, or anywhere up the beach, around the cove and beyond the railroad bridge, are sunfish and perch of both kinds; not always plenty, but always some.

Across the mouth of the stream, on the north side, at the pyrites, or so-called new wharf, though it is old now and little used, is one of the best places on the Potomac for white perch. They are taken under the wharf in five or six fathoms of water, and the fly is, of course, useless. These perch are of the largest, toward 1 lb. in weight, and wonderful catches have been made here with hand-lines. To those who care for bait fishing, there is no place on the river known to the writer or any of his friends, where one runs a better chance of getting a good string of perch every day in the fishing year. Of course the Little Falls country is better during the spring run.

On the north side of Quantico Creek, just inside the railroad bridge, a sandspit pushes out into the channel, and over this the tide at times runs like a mill-tail, and here the rockfish and white perch love to feed.

The rockfish, like the very large perch, are very shy, and mostly frequent deep or swift water, and there are few places where they can be found near enough the surface to take the fly. These places, and the right conditions of water and weather, are so far apart on the Potomac that not many are caught in this way, though they are as gamy as can be, and take the fly in a way to glad the heart of an angler, when they come at all. But they are so coy.

A school of a dozen will start for the fly at once, and catching sight of the angler, disappear as if by magic, and no efforts of his will induce them to show again. This, to be sure, is only an admission of a lack of skill, for the perfect angler would have kept out of sight. There is but one answer to such a suggestion—"Try it."

But at this sandy point just mentioned, one does not need to keep out of sight for the white perch, for the writer and his chum have stood here almost in touch, and casting across the current, one with three flies and the other with four (on No. 10 hooks), and taken a perch on each fly, almost with every cast, varied occasionally with a rockfish somewhere in the procession.

If the dropper, next in hand, be taken first, an instant's delay will secure, almost with fail, a fish for each of the other flies. The school, seeing the captive being hurried and the loose flies dangling behind, make a rush for part of the feast. If the tail fly is taken first, this is not so likely to happen, as the school do not get ahead of the victim, who is being assisted ashore, and the unoccupied flies on the now rigid line do not have so tempting a movement as when trailing on the loose end of the cast.

Further up the creek, where the channel runs at the base of a rocky bluff, there are many of the long-eared sunfish, large and lively, which have their homes in the little caves and under the big rocks. Here, too, are a good many white perch. Across the channel on the marsh side, where the grass is tall, with little runways through, and pools of clear water and a mud bottom, there are swarms of yellow perch, and a boat may be anchored at patches of the grass beds within reach of the deeper water, and yellow perch taken all day long with bait.

Further up the creek, where the pools are shallower, and spatterdocks and cattails afford a quiet shelter, may be found a good many chain pike, or jack, as they are called here, a name borrowed from our English cousins, who call any pike under 5 lbs. a jack; and these are only 22 in., and lack a good deal of weighing 5 lbs. They afford first-rate sport in the early spring and late fall, but disappear as effectually in midsummer as if they had migrated. It is said that one weighing 8 lbs. was caught with a seine lately, nearly opposite this place, in a Maryland stream flowing into the Potomac; but this has not been verified.

In the shallows of the upper marsh above Quantico, where there is plenty of nice, rich mud, the prying carp have feeding grounds which they keep creamy in the longest drought. To those who know how to catch carp—for that is a science by itself—there is good sport to be had here, but no better than at other points on the Potomac. It is full of this fish, which, valuable as it is, is of no use to the subscriber except to feed bass. In seining for bass and other native fish for distribution in the Illinois River bottoms, the United States Fish Commission secure large quantities of carp, which are usually destroyed. The Commission one year reported that these carp sold readily in the Chicago market for 8 cents a pound, nearly double what any other native fish would bring at that time. A comparatively late report of the Illinois Fish Commission, giving an account of the fish handled by four large firms at a point on the Illinois River, showed that nearly half were carp, above 150,000 lbs. in one year.

He is a plucky enough fighter when hooked or struck, but his refusal to take ordinary baits at all, and his shy way of taking even his own favorite boiled potato, or cornmeal paste and garlic, tied up in mosquito netting, has ruined the patience of many a good still-fisher, and sportsmen are pretty generally prejudiced against him. Besides he has bones, and no fish has a right to bones but the shad.

There is a fair fishing shore at Quantico, and many shad and herring are taken here in good seasons, but these are of little interest to the angler, save as a curi-

osity or a meal, as they do not seem to feed while in fresh water. At any rate, no lure we know will tempt them to take the hook, though their cousin, the tailor, will sometimes show great fondness for the fly. Years ago, before the Potomac was overfished, and the shad weighed 14lbs. instead of 5lbs., as now, shad were frequently taken with the fly—it is said. Since we found within the last year such interesting sport with the pickarel and the fly we have renewed hopes of the shad, and mean to teach them something new this season, if we can.

HENRY TALBOTT.

CHICAGO AND THE WEST.

The Florida Congress.

CHICAGO, Ill., Jan. 8.—Mr. August Hirth, of A. G. Spalding & Bros., the first delegate appointed by the Governor of Illinois to the Florida Congress of Fisheries, will start for Florida the latter part of next week. Commissioners Bartlett and Cohen, also appointed, will hardly both go, or at least did not so intend at last accounts. Should the three be present, Illinois would certainly have cause to feel confidence in her delegation.

Big Haul for Protection.

I often speak of the long-continued fight between the wardens and the illegal net fishermen of Lake Winnebago, Wis.—a war which has lasted for years and been fought with the utmost stubbornness in spite of changes in the statutes of the State and all sorts of efforts to avoid or evade the law. Yesterday the wardens made a big haul for protection on Winnebago, Capt. Johnson, with a posse of twenty wardens, succeeding in capturing twenty miles of nets in different parts of the lake. All these nets were destroyed, and the fish taken from them were confiscated. Arrests of more than twenty fishermen will follow. This coup, in face of the determined and at times murderous resistance of these lawless men, is certainly encouraging to any one who has watched this long struggle, and who has had the principle of law-abiding citizenship at heart. It is thought that the blow will be so severe for the market fishermen that they will not make much trouble after this.

Market Fishers' Trust.

The market fisheries of the Great Lakes each year market over 100,000,000lbs. of fish. Now they have formed a trust, following the trend of the times, and henceforth will combine for the systematic handling of this watery wealth. W. Vernon Booth, son of the old-time fish dealer of national reputation, A. Booth, is to be the head of the trust, although he is reticent about the whole transaction. He did say, however, that the object of the new combine will be not to defy, but to assist, the State fish wardens in their work, and to encourage the annual planting of fish, especially whitefish, in the Great Lakes, which otherwise will soon be barren. Mr. Booth thinks the combine will be a benefit and not a detriment to the small local fisherman, as he can thus always have a market for his catch. He thinks the yearly catch of the combine, with improved methods, may perhaps run as high as 150,000,000lbs. of fish.

There is no doubt that this trust will be a beneficent and amiable influence in the land, so long as it is allowed to do just what it likes in regard to netting fish. It will no doubt encourage the State hatching and planting of fish. No doubt it will also continue to buy brook trout netted all along the shores of Lake Superior by the Indians and the "small fishermen," who will thus indeed find a regular market. If the sportsmen of the country were one-half as well organized as the marketmen, there would be more brook trout for the rod and less for the net.

Hatchery Moved.

The State Fish Commission of Wisconsin, at their annual meeting at Madison, Jan. 5, voted to move the branch hatchery from Milwaukee to Oshkosh, on Lake Winnebago. The hatchery at the latter point will be devoted principally to the raising of wall-eyed pike, the finest table fish native to Western waters.

Deputy Goetter, of Chicago, caused the arrest of F. T. Evers, a fish dealer, at 1000 West Madison street, this city, and the latter was, on Jan. 3, fined \$25 for having in possession under-sized perch.

Deputy Wardens Stone and Johnstone last week arrested Adolph Beauregard at Shell Lake, Wis., for illegal fishing in Long Lake, where he was spearing. He got thirty days in jail, and his spears and outfit were destroyed and his fish confiscated.

At Warsaw, Ind., Josiah Wysong was arrested some time ago for illegal fishing, and was fined \$25. He appealed, on the advice of his lawyer, W. H. Dennis. The case recently came up in the Circuit Court, and Wysong got fined \$75. I advise him to take it to the Supreme Court.

Deputy Warden Ratto, of this city, yesterday caused the arrest and conviction of E. Mallett, a fish peddler, who was selling black bass less than 11in. in length. Mallett was fined \$25 in the court of Justice Quinn, of Hyde Park.

Winter Fishing.

Hand-line and tip-up fishing is in progress in great shape on Lake Minnetonka, Minn., this week, and the law is being violated to some extent. Warden Mann has pursued some of the illegal fishers across the ice, and though he cannot catch them, he has managed to get a lot of their outfits and their fish.

At Day's Ford, on the Kankakee, Indiana, the carp are so thick that the farmers are driving them along to the open places in the ice, and there spearing them with pitchforks by the wagon-load.

Illinois Commission Explains.

CHICAGO, Jan. 15.—The Peoria Star, of Peoria, Ill., came out last week with an accusation charging the Illinois Fish Commission with deliberate unfairness in the administration of the law. The Star stated that Bartson & Hurley, a market-fishing firm, of Peoria, were directly under the protection of the Fish Commission,

who had instructed their warden, Brassfield, not to meddle with Bartson & Hurley's nets. The latter are the heaviest market-fishermen of the Illinois River. The Journal, of Quincy, Ill., interviewed Commissioner Bartlett on this matter and secured from him the following statement:

The commission is not in the least trying to aid a monopoly, but is simply protecting a highly important industry with a fair and proper interpretation of the law.

Messrs. Bartson & Hurley are taking carp and buffalo out of the Illinois River for the Peoria market, into which, during the heaviest season, as much as about a carload of such fish daily is sent on an average.

Mr. Brassfield, the deputy warden, found that Messrs. Bartson & Hurley's seine measured but 1 1/4 in., whereas the law forbids the use of a mesh of less than 2in. Apparently Mr. Brassfield was right in thinking that the use of such seine was violation of the law, but in fact it has been the practice of the commission and experienced wardens to allow 1/4 in. for the tarring of and shrinkage of the meshes, and the Commissioners did not wish to have the important industry of Bartson & Hurley interfered with, where to do so would have simply been to stop their work without just cause. Hence the orders of the Commissioners to Brassfield to confine his work to his own county.

In doing this the Commissioners did not mean any reflections on Mr. Brassfield, for they knew that his intentions were good. They simply knew that he had not yet become familiar with the just interpretation of the law.

Fish Dealers get Concessions.

It seems that not only the fish dealers of the Illinois River, but also of the city of Chicago, are up in arms against the new law, and since they don't like it of course they will have to be accommodated. The wholesale dealers held a little convention here Jan. 12, meeting Commissioners Bartlett, of Quincy; Nat H. Cohen, of Urbana, and A. Lenk, of Chicago. At this meeting the dealers claimed that the wardens have been entirely too active in enforcing the law, and have prosecuted a number of dealers for having in possession under-sized fish. The dealers said they could not always prevent the shipment of such fish to them. The market men then passed the following resolutions as being the sense of their meeting:

Resolved, By the wholesale fish dealers of Chicago, assembled in conference with the Fish Commissioners of Illinois, that all of said wholesale fish dealers will use every means in their power for the purpose of preventing fish sold in this State of the size prescribed by the laws of the State of Illinois, and that said fish dealers will co-operate with the Fish Commissioners in every possible way that will tend to perpetuate and protect the fishes in the waters of Illinois.

Resolved, That the said Fish Commissioners shall instruct their fish wardens that there shall be no prosecutions under the present law against fish dealers for having fish in their possession under the size prescribed by the statute when said wardens are satisfied that said fish dealers came into possession of said fish inadvertently, and without knowing that they were of unlawful size, or where there is no intention of selling said fish or offering the same for sale or in any manner of violating the law.

Resolved, That the said Fish Commissioners instruct their wardens that in all cases where fish under the statutory size shall be found in the possession of fish dealers for the first time, that there shall be no prosecution for such offense, and that said fish dealers advise the dealer of his liability to fine and imprisonment for having said fish in his possession.

Mr. Bartlett advised the dealers that the State Fish Commission did not wish to make the law a hardship, and did not wish to interfere with trade, but wished only to enforce the spirit of the law. Thereafter, he said, the deputies would be instructed not to prosecute dealers for first offenses.

This is concession No. 2 to the market interests this week, and I must confess that I am a trifle puzzled about indorsing the wisdom of my friends of the Fish Commission in these matters. It is much a case of loophole again, and if you give a dealer an inch he will take a mile. It seems to me that if one dealer is allowed to use a net, tarred or untarred, whose meshes measure 1 1/4 in. instead of 2in., he is breaking the law, and so may all others break the law in the same way. If a dealer may be allowed to have short-sized fish in possession one time, it is the same as allowing him to have them in possession all the time. While no man of sanity would claim that the fish laws of Illinois are made for the sportsmen alone, it is no less true that the sportsmen of this State could say a word or two about the concessions wanted by South Water street. We members of the Illinois State Association have met in conference with the game dealers of South Water street, just as the members of the Fish Commission have met the fish dealers. We found, as the Fish Commission has found, that these market-men were entirely willing to let the law alone so long as it was administered to suit themselves. Barring concessions of this sort, they threatened all sorts of things at Springfield. Maybe I am wrong about this, but it seems to me that if we have a law intended for the protection of fish, that law ought to be enforced. If a deputy warden's hands are tied by some restriction or construction of the law, he will certainly grow less diligent in making his arrests, and hence the whole executive machinery of the law comes to a standstill. I modestly venture the prediction that the Illinois State Fish Commission will regret its treaty with the dealers. I venture also to say that we shall now hear no more about the recent numerous arrests and fines for illegal fish selling.

E. HOUGH.

The Florida Congress.

THE Florida Fishery Congress convened on Wednesday of this week. A full report of the proceedings will be given in our columns.

The following persons have announced their intention of presenting papers to the congress. Others who have papers in preparation are asked to send the titles to Dr. H. M. Smith, U. S. Fish Commission, Washington, D. C.:

Dr. Herman C. Bumpus, Brown University, Providence, R. I., "The Importance of Extended Scientific Investigation."

Mr. A. N. Cheney, Glens Falls, N. Y., "The Hudson as a Salmon Stream."

Mr. John N. Cobb, Washington, D. C., "The Undeveloped Fishery Resources of Florida."

Prof. B. W. Evermann, Washington, D. C., "The Fish Fauna of Florida."

Dr. James A. Henshall, Bozeman, Mont., "The Fisheries of Florida."

Dr. Bushrod W. James, Philadelphia, Pa., "International Protection for the Denizens of the Seas and Waterways."

Mr. Geo. F. Kunz, New York, N. Y., "A Brief His-

tory of the Finding of Fresh-water Pearls in the United States."

Prof. Edwin Linton, Washington and Jefferson College, Washington, Pa., "Parasitism among Fishes Considered from an Economic Standpoint."

Mr. William E. Meehan, Philadelphia, Pa., "The Relations of the State Fish Commissions to the Commercial Fishermen."

Dr. H. F. Moore, Washington, D. C., "Some Factors in the Oyster Problem."

Dr. J. Percy Moore, University of Pennsylvania, Philadelphia, Pa., "The Utility and Methods of Mackerel Propagation."

Hon. Fred'k S. Morse, Miami, Fla., "The Florida Manatee, its Habits, Uses and Protection."

Mr. Ralph M. Munroe, Coconut Grove, Fla., "The Green Turtle and the Possibilities of its Protection and Consequent Increase on the Florida Coast."

Prof. Jacob Reighard, University of Michigan, Ann Arbor, Mich., "The Biology of Our Fresh Waters in its Relation to Practical Problems."

Mr. John G. Ruge, Apalachicola, Fla., "The Oysters and Oyster Grounds of Florida."

Mr. George W. Scobie, Titusville, Fla., "The Pompano and Other Fishes of the East Florida Coast."

Dr. Charles P. Sigerfoos, University of Minnesota, Minneapolis, Minn., "Notes on the Ship-Worms."

Dr. Hugh M. Smith, Washington, D. C., "Our Native Economic Sponges; their Nature, Protection and Cultivation."

Mr. Charles H. Stevenson, Washington, D. C., "The Present Inland Range of Shad Compared with Former Times."

Mr. Livingston Stone, Cape Vincent, N. Y.

Lieut. Franklin Swift, U. S. N., "The Oyster Grounds of the West Florida Coast: Their Extent, Condition and Peculiarities."

Mr. W. Edgar Taylor, Louisiana Industrial Institute, Ruston, La., "The Establishment of a Marine Biological Station on the Gulf of Mexico."

Mr. Charles H. Townsend, Washington, D. C., "The World's Seal Fisheries, with Special Reference to the American Fur Seal"; illustrated by lantern slides.

Mr. A. F. Warren, Pensacola, Fla., "The Past, Present and Future of the Red Snapper Fishery in the Gulf of Mexico."

The Kennel.

Fixtures.

BENCH SHOWS.

Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.

Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.

March 9.—St. Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.

March 15.—Northwestern Kennel Club's dog show, St. Paul, Minn. E. D. Brown, Sec'y.

FIELD TRIALS.

Jan. 21.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal. J. M. Kilgarriff, Sec'y.

Jan. 24.—Champion Field Trial Association's Champion Stake, Tupelo, Miss. W. B. Stafford, Sec'y.

Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

The U. S. F. T. C. Trials.

THE trials were run on the club's preserve at West Point, Miss., beginning on Jan. 10. Prolonged rains had fallen for some time previous, so that the grounds were very muddy. However, more rain fell during the week, as is related in its place, and added much to the labor and discomfort of the running. It was an unfortunate condition so far as the comfort of the running was concerned, but it did not mar the work noticeably.

There was an excellent attendance of visiting sportsmen, better than has favored the club in years. The president of the club, Mr. Norvin T. Harris, of Lyndon, Ky., was present, looking well after his long sojourn in Europe and Africa, and full of most pleasing reminiscence of his hunting experiences in those lands. Mr. Edward Dexter, or Uncle Ned, as the boys endearingly call him, was there, and also there were Messrs. H. E. Smith, J. J. Odom, C. F. Eastman and Dr. Geo. Eubank, of Birmingham; Dr. L. C. Bacon, of St. Paul; Messrs. Jas. S. Crane and F. J. Patterson, Dayton, O., who became club members; Mr. Edward A. Burdett, Philadelphia; Mr. Flagg, of Boston; Mr. Ballard, Louisville; Messrs. John L. Barker, Racine, Wis.; R. B. Morgan, Gibson's Well, Tenn.; J. B. Stoddard, Thomasville, N. C., and a number of local sportsmen.

The judges were Capt. Joseph H. Dew, Nashville, Tenn.; Mr. W. B. Hamilton, Columbus, Miss., and W. W. Titus, of Sparta, Miss. They were most painstakingly careful in establishing the equity of the competition, and diligent and patient in conducting it. Their decisions were well received, and they deserved to be so. As a whole, the stake was well managed, though there was more hurry than was pleasing, as there always is when the handlers ride on horseback, a privilege which was accorded them after the first day, in consequence of the muddy condition of the grounds.

The club held its annual meeting on Wednesday evening. It was exceptionally well attended. The officers elected are: President, Norvin T. Harris; First Vice-President, Edward Dexter; Second Vice-President, H. B. Duryea; Secretary-Treasurer, W. B. Stafford; Board of Governors; N. T. Harris, Edward Dexter, F. R. Hutonk, E. A. Burdette, H. B. Duryea, J. M. Essig, C. I. Shoop, J. N. Seale, W. B. Stafford, H. S. Smith, P. Lorillard, Jr., J. A. McIlhenny, George Crocker, Hobart Ames, St. Mark M. Mundy. The club decided to hold but one field trial next year, the winter trial in January, at West Point, Miss. There will be a pointer and setter Derby respectively, one all-age stake for setters and pointers, and a members' stake, the prize of which will be the Hurstbourne cup. The finances of the club were put in good condition, and it was said that the professional handlers who were members had resigned.

The Pointer Derby.

Rarely has there been a Derby, whether pointer or setter, or both combined, in which was displayed so high and so uniform workmanlike qualities and excellence of competition. There were two or three dogs which showed a lack of finish in training, though possessing much merit in a natural way. These very properly were dropped from the competition.

The competition for first honors was very clean and very sound. Each dog's work was remarkably accurate, quick and free from awkwardness and errors. While there was very little of the ranging which consists mostly of going very wide, regardless of much good intermediate ground left unworked, there was a lot of good, useful ranging to the gun, such range as would be of first-class service in actual field work, such range and work as evoke the comment that such field trial dogs would be the ideal dogs to shoot over. There was no loafing, very little pottering, and as to the handling it is but just praise to mention that there was never a professional stake freer from noisy handling and rushing than was this one. It was a pleasure to follow it. It was a stake as stakes should be, fair in its competition, skillfully handled and ably managed.

The winners were: First, Chisholm; second, Young Jingo; third, Doctor Tassie.

The competition between first and second was very close. Both were very accurate and quick in locating and pointing under all circumstances. They ranged usefully wide and with judgment. They were industrious and speedy, but Young Jingo's work had a shade or two more finish to it.

Doctor Tassie's work was round and consistent. He located and pointed intelligently, and his work was uniformly reliable. He worked nicely to the gun and he was obedient.

The handling too was noticeable for its improvement. There was but little noise, there was no friction or scrambling; in short, it was very much as a competition should be. Professional handling in the past has as a rule been noisy and hurried, if furious scrambling at times could be included in that term. It is a pleasure to record a change for the better.

Sepoy also ran a most excellent race, very close to third. Sam's Bow showed high capabilities, and with more experience should be an excellent performer.

There were nine pointers, run as follows:

Del Monte Kennels' b. and w. dog Tick Boy, Jr. (Tick Boy—Jilt —), Frank Richardson, handler, with Charlottesville Field Trial Kennels' l. and w. dog Sepoy (Rip Rap—Queen III.), C. E. Buckle, handler.

J. S. Crane's l. and w. dog Shotmaster (Chum II.—Bar Maid), Geo. E. Gray, handler, with Dr. Chisholm's l. and w. dog Chisholm (Von Gull—Croxie), D. E. Rose, handler.

Charlottesville Field Trial Kennels' l. and w. dog Ghourka (Delhi—Selah), C. E. Buckle, handler, with Geo. E. Gray's l. and w. dog Young Jingo (Jingo—Pearl's Dot), owner, handler.

Del Monte Kennels' b. and w. bitch Fury (Tick Boy—Topsy Kent), Frank Richards, handler, with Dr. J. R. Daniels's l. and w. dog Sam's Bow (Plain Sam—Dolly Dee II.), Geo. Richards, handler.

Wm. Elliott's l. and w. dog Doctor Tassie (Hal Pointer—Kent's Star), a bye, Geo. Richards, handler.

The Derby was for all pointers whelped on or after Jan. 1, 1896. The prizes were: First, \$250; second, \$200; third, \$150.

Monday.

The grounds were wet alike on hill and vale, the flat and bottom lands being tiresomely muddy and heavy. The mud in many places was so soft that it made the going laborious for the dogs and horses, and still more for the handlers afoot. In some of the later heats they rode horseback.

The sky was heavily and darkly clouded, shutting off every gleam of sunshine during the day. Birds were reported scarce, and the party started with the expectation of so finding them, but about twenty-three bevs were found, which was fairly sufficient for the purposes of the trials.

A smart shower delayed the competition a few minutes toward the close of the afternoon.

First Round.

Tick Boy, Jr., and Sepoy began at 8:39. The latter soon pointed, then roaded on, and a bevy was seen to flush; both dogs were out of sight for the moment. Neither was successful in scoring a point on the scattered birds. On some marked birds of another bevy flushed by horses, Sepoy made three points in the woods on bare leaves. Tick stole one point, and flushed to another made by Sepoy. Tick showed a lack of finish. Up at 9:55. Sepoy's work on birds was clean and accurate. Both ranged well, though Sepoy's range was much better to the gun.

Shotmaster and Chisholm were cast off at 10:03. Chisholm found a bevy by good judgment, and pointed it nicely in a cornfield. Shotmaster refused to back, but dropped to wing when the bevy flushed. Chisholm made three good points on the scattered birds in cottonfield and ground unfavorable for pointing, and Shotmaster backed one point. Up at 10:35. Chisholm showed good range, speed, judgment and work on birds. His range was of the useful kind, beating out the likely ground within a proper scope.

Ghourka and Young Jingo began at 10:47. Jingo pointed a bevy nicely in open sedge, and Ghourka backed. In searching for the scattered birds a bevy flushed near Ghourka in the open sedge. Afterward Ghourka flushed a single. Up at 11:30. They ranged with good judgment, Jingo the better.

Fury and Sam's Bow were started at 11:35. Bow pointed a bevy about 150 yds. away and held his point nicely. He next pointed some scattered birds, and Fury chased. He next pointed a single. His range was good. He ran a very meritorious race. Fury was lawless. Up at 12:12.

Doctor Tassie ran a bye with the setter Harwick. They began at 12:21 and ran 30 minutes. Doc flushed a bevy in woods. He backed Harwick's point on a single. He next pointed in woods and nothing was found. He

pointed a single. Harwick pointed a bevy, and Doctor, called up to back, pointed or backed. Both were steady. Up at 12:50. Doctor worked sensibly and cheerfully to the gun. Much of the heat was run in unfavorable ground. The work done was not indicative of Doctor's real merit.

Second Round.

Six dogs were retained in the running, which was resumed after lunch.

Young Jingo and Sepoy were cast off at 1:44. Soon Jingo made a good point on a bevy, and Sepoy backed nicely. Sepoy pointed a single, and Jingo backed; both were nicely steady to shot. Jingo pointed a bevy on the side of a steep bank and was backed. Each made a point on singles. Sepoy next pointed, and nothing was found. Up at 2:30. They ran a very sound race, Jingo having the better of the heat.

Chisholm and Sam's Bow were started at 2:36. Chisholm secured a point on a single and was nicely backed. They were ordered up at 3:33. They worked well, but were unfortunate in striking a stretch of ground which had few birds apparently.

Doctor Tassie and Tick Boy, Jr., were cast off at 3:31. A dense black cloud, rapidly chasing across an already darkened sky, so portended rain that in three minutes the dogs were ordered up and the party scurried to some negro cabins for shelter, thereby escaping a sharp shower. The heat was resumed at 4:05. Tick made game, but roaded away from the bevy. Doctor quickly located and pointed it, something he had no right to do while the other dog was roading. On the scattered birds Tick flushed a single and pointed one, stanchness being secured by a certain degree of coercion. Doctor then rolled up quite a score of work. On scattered birds he made four points, one of which was on a bird in thick grass, and which he nearly caught when it flushed close to his nose, and also he made one point on a bevy. Tick pointed a single, next a bevy, which he broke in on and flushed, thereby spoiling a good piece of work. His unsteadiness somewhat demoralized Doctor. Up at 4:45, with all the work in favor of the latter.

Chisholm and Young Jingo ran 8 minutes, beginning at 4:52. On a marked bevy each secured two points, though there was no special merit in this, the birds lying close-bunched and favorable. Next Chisholm pointed a bevy, and Jingo to one side was drawing on it when it flushed wild. Both showed finished work. They made but little display of range, the work being mostly close.

The Setter Derby.

There were twelve starters in this stake, run as follows: W. G. Graham's b. and w. dog Dick Bland (Sam Gross—Maud Rogers), J. H. Johnson, handler, with Dr. L. C. Bacon's b., w. and t. bitch Alice K. (Anto Gladstone—Speckle Gown), Geo. Richards, handler.

Tobasco Kennels' b. and w. bitch Hurstbourne Joel (Tony Boy—Bonnie Bell II.), S. J. McCartney, handler, with J. A. McLeod's lem. and w. bitch Spot's Girl (Spot Cash—Nannie B.), Geo. E. Gray, handler.

Tobasco Kennels' lem. and w. bitch Tobasco Butterfly (Antonio—Minnie T.), S. J. McCartney, handler, with P. Lorillard, Jr.'s b., w. and t. dog Wise Child (Eugene T.—Maiden Mine), C. Tucker, handler.

Dr. M. F. Rogers's b., w. and t. bitch Pearl R. (Sam Gross—Donna Inez), D. E. Rose, handler, with H. K. Devereaux's lem. and w. bitch Gleam (Spot Cash—Mattie Berwyn), Geo. E. Gray, handler.

H. B. Ledbetter's b., w. and t. bitch Sport's Belle (Marie's Sport—West Wind), Geo. E. Gray, handler, with P. Lorillard, Jr.'s b., w. and t. bitch Lena Belle (Sam—Mamie B.), C. Tucker, handler.

Del Monte Kennels' o. and w. bitch Minnie's Girl (Antonio—Minnie T.), Frank Richards, handler, with J. J. Odom's b., w. and t. dog Sport McA. (Tony Boy—Blue), D. E. Rose, handler.

The prizes and conditions were the same as those of the Pointer Derby, save that they applied to setters.

The winners were: First, Sport McA.; second, Sport's Belle; third, Dick Bland and Minnie's Girl.

Sport McA. has improved much on the form displayed in his previous competitions at Morris and Newton. His competition had excellent features and some faults. He pointed his birds sharply and accurately, and showed capabilities as a finding dog, but he marred his point work by paying too much attention to larks and false scents. While he ranged wide enough, he did not work out his ground with the best of judgment, and at times he was disobedient, or rather it was at times difficult to keep him to the course. He is a very promising dog, however, and if he will but train on experience and age will correct these faults.

Sport's Belle made a good showing, her work on birds being above the average in quality. Her range was about middling, and she made quite a consistent race throughout.

Dick Bland ran a well-sustained race, quite as good or better than Sport's Belle's. He was diligent, and his bird work was commendably good. His range was on an average about middling.

Minnie's Girl sustained her class of work, showing a fair meritorious performance.

As a whole, the competition was weak. There was but little really good work done, a few spurts under favorable conditions being about all. There was no master workman to handle skillfully and easily all the circumstances of the competition, whether the same were hard or easy. The work as a whole was mediocre, and some of it was rank bad, that of Hurstbourne Joel and Tobasco Butterfly being noticeably so from apparent lack of experience and palpable lack of training.

As compared with the Pointer Derby, the Setter Derby was far away inferior in the quality of the competition—the finished work, the ease with which the stake was managed, and the better showing made by the handlers in working dogs which were better schooled.

Tuesday.

The weather was distinctly different from that of the preceding day, better overhead and worse under foot. A heavy rainfall during the night refilled every puddle and stream, and made still muddier mud everywhere. It

added much to the difficulty of the work. There was an oppressive humidity, and the temperature was uncomfortably warm. Birds were found in sufficient numbers in most of the heats.

First Round.

Dick Bland and Alice K. were cast off at 9:02. Dick pointed a bevy nicely in a thicket. Alice roaded in and took the point independently; both were steady to shot. On singles each secured a good point. Dick found and pointed a bevy nicely. This was in a thicket. Alice ran into the bevy and flushed it. Up at 9:42. Dick ran a commendably good heat. He handled his birds intelligently, had industry and enthusiasm, and was pleasingly obedient. His range was a useful one. Johnson handled him quietly, a commendable departure from his previous style. Alice followed Dick a great deal of the time, and her point work was ordinary.

Hurstbourne Joel and Spot's Girl started at 9:50. Joel from the beginning showed certain feverish symptoms of being convinced that her own pleasure governed the purposes of the competition. She pointed a bevy, then chased it. Seeking the scattered birds in woods, she wheeled to a point prettily; no birds were found; McCartney insisted that the point was on a roost, but Joel took the scent and roaded on pleasingly well about 40 yds. to a point on a bevy. McCartney fired both barrels, but it is a matter of doubt whether the dog ever heard the reports. There were two tiny puffs of smoke, with flat, muffled sounds which could hardly be heard. McCartney explained that it was nitro powder without shot. He might have added, without sound. The dog was steady to shot, such as it was. Spot next pointed a bevy; about 30 yds. away Joel pointed, probably on the footscents of the same birds; McCartney, in hurrying to Joel, flushed Spot's bevy awkwardly, but unintentionally; no harm was done. Joel pointed a single, then moved on and flushed it. Sent on, she pointed a few times; nothing found. Spot was lost for a few minutes. Up at 10:34. The heat was run mostly in a thicket, and was rather ragged in character. Joel showed a good deal of ability, but also a lack of proper discipline and experience to the gun; in short, she was very imperfectly trained. Spot pointed well, was steady, but was difficult at times to handle.

Tobasco Butterfly and Wise Child were started at 10:40. Butterfly pointed a single and chased it. Child pointed in woods, Butterfly backed and broke back; nothing found. Butterfly pointed a single in woods and chased it. Child pointed a bevy in woods; sent on, she was drawing on and steadying to a point on a single when a horseman flushed it. Up at 11:31. Butterfly showed but little training, whether in respect to her manner of seeking or in respect to work on birds. Wise Child ran an ordinary heat.

Pearl R. and Gleam ran from 11:40 to 12:47. Gleam showed a disposition to point on false scents. Pearl, after a long run, pointed a bevy, being close on to it, then drew through it, and the bevy was flushed by the handler as he walked up after her. She was lucky in not flushing; it was rather an inferior piece of work. Seeking the scattered birds, each pointed; nothing found. Gleam pointed a single. On scattered birds flushed by horsemen, Pearl made two points, the last one faulty, as she moved out and flushed the bird. Gleam pointed once, Pearl refused to back; nothing found. Sent on, Pearl next roaded to a point on a bevy in a thicket. Gleam at the same time was roading to the left. The dogs were ordered up after Pearl had made her point. Gleam pointed the birds she was roading a moment after the dogs were ordered up. Pearl showed ability to find birds, but her point work was inferior. Also she was disobedient. She had a pretty way of going, and was spirited on point. Gleam showed much indecision.

Sport's Belle and Lena Bell were cast off after lunch at 1:44. Sport's Belle pointed a bevy and Lena pointed on the trail of it. Lena made a point to which there was nothing. Next she pointed scattered birds in a thicket. Sport's Belle pointed or backed. Lena next flushed and was a bit unsteady. Next she pointed, roaded and pointed; Sport's Belle, going down wind, flushed the bird. Up at 2:25. Lena loafed a lot during the heat, and her work on birds was of a weak character. Sport's Belle ranged middling well.

Minnie's Girl and Sport McA. began at 2:30. Sport marred his work in the beginning by fiddling and pointing on larks. His third point, however, was a good one on a bevy. Sent on the single birds, Minnie got two points and Sport got three, his point work being notably sharp and accurate at this stage. Sent on. In woods Sport pointed a bevy; Minnie was lost for a while. She pointed on footscents. Sport backed nicely. Up at 3:07. Sport was fast, covered sufficient ground. His point work was very sharp and accurate, and his style was good. He also found well. Minnie showed useful abilities.

Second Round.

Six were kept in the second round as follows:

Dick Bland and Lena Bell started at 3:31. The latter was treated most liberally in having another opportunity. Dick pointed a bevy and Lena backed. Dick next pointed twice on singles. Lena pointed, drew on and her handler flushed the birds which she had passed. Sent on. Dick was roading nicely on the trail of a bevy when Lena happened to strike the bevy on the side hill and pointed it. Each next made separate points on singles. The birds were scattered about in the open, in a good place apparently, yet neither could secure points on them. Dick made three flushes, Lena one. Up at 4:16. Dick's work was the better in every respect.

Pearl R. and Minnie's Girl began at 4:34. Minnie flushed part of a bevy and pointed the remainder of it. Seeking for the scattered birds, Pearl pointed another covey. Minnie backed. Pearl made three points in succession, one of which was on larks. Minnie pointed up wind of a single bird; Pearl, several yards below, pointed on the same single. Moved on. Minnie stopped to a flush. Each secured a point on scattered birds. Minnie made a point to which nothing was found, and Pearl backed under caution from her handler. On back Pearl seemed very untrustworthy when left to her own will. Up at 5:10. Both showed a fair range.

Wednesday.

There was mud everywhere, and surface water on every level, little and great. Scattered clouds floating overhead in somber heaviness portended more rain, but it did not set in until afternoon. Soon after lunch when Albert Lang and Neb B. were running, a heavy rain set in, lasting about an hour. After that it rained lightly, with a few short intermissions, till near the time the running ended. Birds were found in sufficient numbers for good competition, notwithstanding the bad weather.

Sport McA. and Sport's Belle were cast off at 9:04. Soon Belle pointed a bevy and was steady to shot. On the scattered birds Sport made two sharp points in a cotton field. Belle roaded quite a distance in the cotton field and pointed scattered birds. Sent on, Belle made a point on a bevy in cotton—a good piece of work. Sport pointed; nothing found. A long stretch of country was worked out then without finding. Sport pointed a few times and nothing was found.

This heat ended the stake. Up at 9:50.

The Members' Stake.

This stake was for dogs of members which had never run in a field trial, and owned by amateurs and handled by owners. The prize was the Tobasco cup. Entrance, \$10.

There were but two starters.

Edward A. Burdette's b., w. and t. setter dog Bolero (Cincinnati Pride—Gossip) and Dr. George Eubanks's b., w. and t. setter dog Landseer were started at 10:22. Bolero flushed a bevy. The scattered birds were followed. Bolero flushed a single, then backed. Sent on. Soon Landseer flushed a single bird of a bevy, then pointed the bevy. Sent on. Landseer pointed near the edge of woods, roaded on about 80yds., and the birds flushed wild. Sent on. Landseer in the open drew quickly about on a trail, but failed to locate the bevy. Bolero flushed it, after which he flushed a single. Landseer had the better of the competition in every respect. Up at 11:11.

Landseer won. He showed much merit.

The All-Age Stake.

There were twenty-two dogs which qualified to start, and they were drawn to run as follows:

Theo. Goodman's b., w. and t. setter dog Albert Lang (Count Gladstone IV.—Dan's Lady), J. H. Johnson, handler, with Dr. J. Spencer Brown's l. and w. pointer dog Ned B. (Rap—Lady Grace), George Richards, handler.

P. Lorillard, Jr.'s, b., w. and t. setter dog Count Gloster (Eugene T.—Gloster's Girl), C. Tucker, handler, with A. L. Shonfield's b., w. and t. setter dog Leo Noble (King Leo—Minnie T.), N. B. Nesbitt, handler.

Edward A. Burdett's b., w. and t. setter dog Cincinnati Pride (Cincinnati—Albert's Nellie), Geo. Richards, handler, with T. W. O'Byrne's b. and w. pointer dog Moerlin (Rip Rap—Belle of Ossian), N. B. Nesbitt, handler.

P. M. Essig's b., w. and t. setter bitch Saragossa Belle (Gleam's Pink—Maud E.), J. H. Johnson, handler, with Del Monte Kennels' b., w. and t. setter dog Sam T. (Luke Roy—Bettie B.), Frank Richards, handler.

Fox & Blythe's b., w. and t. setter dog Dave Earl (Count Gladstone IV.—Dan's Lady), J. H. Johnson, handler, with F. W. Dunham's l. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E. Rose, handler.

P. Lorillard, Jr.'s, b., w. and t. setter dog Roland (Eugene T.—Lou), with Dr. Geo. Eubanks's b., w. and t. setter dog Landseer (— — —), J. H. Johnson, handler.

Eldred Kennels' b., w. and t. setter dog Tony Gale (Antonio—Nellie G.), D. E. Rose, handler, with H. R. Edwards's b., w. and t. setter dog Harwick (Topsy's Rod—Opal), Geo. Gray, handler.

Edward A. Burdett's b., w. and t. setter bitch Anne of Abbottsford (Gladstone's Boy—Bohemian Girl), Geo. Richards, handler, with P. T. Madison's b., w. and t. setter dog Rodfield's Boy (Rodfield—Sue Gladstone).

Pontotoc Kennels' b. and w. pointer bitch Sister Sue (Jingo—Rooney Croxteth), N. B. Nesbitt, handler, with Charlottesville Kennels' b., w. and t. setter bitch Pin Money (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

Avent, Thayer & Duryea's b., w. and t. setter bitch Tory Luna (Roi d'Or—Tory Diamond), J. M. Avent, handler, with D. E. Rose's (agt.) b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler.

Charles B. Pineo's blk. and w. pointer dog Young Rip Rap (Rip Rap—Pearl's Dot), Geo. E. Gray, handler, with Charlottesville Field Trial Kennels' l. and w. setter bitch Belle of Hard Bargain (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

This stake was for all pointers and setters which had never won first in an all-age stake at any recognized field trial. The prizes were \$250, \$200, \$150, first, second and third respectively.

The work as a whole was not up to what one might reasonably expect from the reputation of many of the contestants. The handling, too, was not up to the standard, there being excitement and rushing at times. No doubt but that the privilege of riding on horseback, accorded the handlers in consequence of the heavy mud, contributed to a frequent separation of the handlers, and greater haste than was correct. However, much of the competition in this stake was somewhat disorganized, in consequence, and was far from the smoothness observable in the running of the Pointer Derby.

The winners were, first, Cincinnati Pride; second, Tony Gale. Harwick and Pin Money divided third.

Cincinnati Pride proved that his previous honors were well merited. His victory at Newton last fall is still fresh in the memory of field trial supporters. Excellent as was his performance then, he surpassed it in this competition. At no time was he pressed for first honors by any competitor. His competition had no weak places in it—it was uniformly excellent from start to finish. He displayed rare skill, accuracy and finish in all the details of his work. His range was pleasingly con-

ducted, being of a sufficient width to cover all the ground necessary for either field trial or field purposes; he is that sterling article, a field trial dog, and at the same time a field dog. He never went so wide as to leave the sport stranded, and he beat out his ground so intelligently that he always found birds.

Tony Gale ran a very good race; his point work, though, was marred a bit by inaccuracy a few times. He ranged fast, covered a sufficient area of ground, and was successful in finding.

Harwick was fast, his range was quite wide and his point work pleasingly sharp and accurate.

Pin Money had a merry way of going, and she covered a deal of ground. Her point work was fairly good. Her ranging could be conducted with better judgment at times.

Albert Lang and Ned B. were cast off at 12:38, and were ordered up in nine minutes on account of rain. At 1:55 the heat was resumed in the rain, which was then much lighter. Ned pointed, and Albert backed when cautioned. A rabbit was said to be the cause of the point. Sent on. Albert made game, drawing about to and fro, then pointed, but in a few moments moved on, he being some distance away at the time. Ned pointed a bevy in a thicket and Albert backed. Next working on the scattered birds, Albert pointed, then moved on to locate better, and the horsemen following up, flushed the birds. Next in cotton, Albert made two points, Ned one. Albert next pointed a bevy in plum bushes. On scattered birds, both pointed; Ned drew out in bare field a few yards and had the birds accurately pointed. Albert backed. Both were steady to shot. They ranged well, found well and pointed quite accurately. Up at 3:12.

Count Gloster and Leo Noble started at 3:16. Leo made a good pointer on a bevy scattered about in the grass; Gloster backed. Leo pointed a single nicely; Gloster stole the point, flushed and dropped instantly. Gloster pointed a single in sedge. He made a long cast and soon the heat ended. Leo had a moderate range. His point work was good. Gloster's range was irregular. His speed was good and he pointed accurately. Up at 3:43.

Cincinnati Pride and Moerlein started at 3:58. The ditches and streams were full to overflowing. The fields were so soft that the horses would sink in them knee deep, and flounder; therefore the riders were forced to keep to the turn rows and paths. The surface of the ground was so covered or saturated with water that the horses' feet made splashes of mud and water at every step. Ditches and creeks which were ankle deep in the morning were more or less over their banks, and when waded would reach to the girths or higher. A black sky, mud and water everywhere, rain falling and a leaden aspect were conditions far from favorable. Still, birds were found in good numbers. Pride began working with great spirit, range and judgment at once. He found a bevy and pointed it nicely. The birds were not followed. Sent on. Pride cast about at high speed. He caught scent on a high ridge about 200yds. away, cast rapidly about, hit off the direction of the trail and went swiftly to the birds, about 100yds. away, pointed them accurately and held his point till his handler and the judge went to him. He was steady to wing when Richards flushed the birds. Soon Nesbitt called point, but it was in such a bad place the judge could not reach him to observe it. Pride next pointed a rabbit. Moerlein seemed to be entirely disgusted with the cold swims of ditches and creeks, and mud and wet grass, and he beat out a small scope of ground in a listless way. Up at 4:43. Pride's work was a sterling exhibition of high-class work, a term so much abused that it may mean something else than the genuine article. He ranged fast, but according to the character of the grounds, covering all that he should cover as to width, and his bird work was of the highest excellence.

B. WATERS.

Summary of Running.

First Round.

Saragossa Belle and Sam T., Elgin's Dash and Dave Earl, Ang of Abbottsford and Landseer, Harwick and Tony Gale, Sister Sue and Pin Money, Tory Luna and Hurstbourne Zip, Young Rip Rap and Belle of Hard Bargain.

Second Round.

Cincinnati Pride and Gloster, Albert Lang and Harwick, Sam T. and Tony Gale, Sister Sue and Tory Luna, Hurstbourne Zip and Pin Money.

Third Round.

Cincinnati Pride and Tony Gale, Harwick and Sister Sue.

Absolute.

Chisholm and Sport McA. Sport bolted and could not be found until evening, when he was discovered on point. The next day down again, and Sport bolted and was lost an hour. Chisholm won.

Dogs and Sheep.

THE subject of sheep-killing by dogs arouses the resentment of all good dog owners; that is to say, of the reputable owners who exercise care in respect to their neighbors' rights as well as in respect to their own. It is rare indeed when any marauding on sheep is brought home to a well-bred dog. The latter is better schooled, better fed and housed, and is restricted in his liberty in so far as to prevent him from acquiring vagrant habits; therefore he is better kept. He is also better tempered than the vagrants or curs. He also has a high monetary value, and is too valuable to be subjected to the same neglect as the worthless curs whose depredations bring the whole race of dogs into more or less disrepute. If the laws could be so framed that the curs, which in particular abound so plentifully in the country communities, could be legally destroyed, it would be an invaluable gain to the owners both of dogs and of sheep.

The license requirements, while they mitigate the cur nuisance, do not abate it. Until such time as the people require by statutory laws that a dog must have pure race characteristics, as shown by authentic pedigree, or

by other good evidence of race properties, or that he has a monetary value as a practical worker for draft, field or other purposes, in order to have a right to live, the laws will be slow to recognize any very important property rights in dogs. It is true that in a few places the dog is legally considered as being property, but this law is imperfectly supported by public sentiment. Any litigation on the point of property in the dog is more expensive, dilatory and unsatisfactory than any litigation in respect to any other property.

So long as the cur dog is so much identified with conspicuous evil, so long will the well-bred dog suffer from the misdeeds of the cur. The Sun, in a recent issue, treats of some census statistics concerning damages by dogs as follows:

"The dogs in the United States kill nearly 2 per cent. of the sheep in the country every year. They killed more than 600,000 sheep in the year ending June 1, 1890, when the last statistics in regard to the flocks were gathered. The damage done by them is greater than that from any other cause except unexpected storms, in which whole flocks of sheep are killed, and disease. In six States more damage was done to the flocks of sheep than by anything else. In Florida 9,833 sheep were killed by dogs, and only 4,750 by the weather and disease. The number killed by dogs was about 9 per cent. of the total number of sheep in the State. The Florida sheep are not exposed to such changes in temperature as those on the farms in Nevada, where 128,850 died of cold and disease. Only 7,372 sheep were killed by dogs in Nevada in the census year. The enormous number of deaths from changes in the weather was due to unprecedented storms, which caught the breeders unprepared and almost halved their flocks.

"In South Carolina, Georgia, Alabama, Louisiana and Arkansas dogs do more damage to the sheep than anything else, and more than weather conditions and disease combined. In Massachusetts, Rhode Island and Connecticut the number of deaths in the flocks due to dogs is almost the same as that due to disease and the weather. This is true in Mississippi, too. In this State, Maine, New Jersey, Pennsylvania, Nebraska, Arizona and the Dakotas one-fifth as much damage is charged to dogs as to the other chief causes of loss.

"The dogs make the best showing in Vermont, where they killed 3,000 sheep, against 28,000 which died from disease and exposure in an average winter. The Ohio and Michigan dogs have good records, too, for they killed only one-sixth as many sheep as storms and disease. North Carolina and Tennessee dogs are red with the blood of sheep. They killed four-fifths as many as the other causes of death combined. In Kentucky, Texas, West Virginia, Indiana, Minnesota and Iowa the dogs did one-half as much damage as other causes combined; in Virginia, Missouri and Oklahoma, two-thirds as much; in Illinois and Wisconsin, one-third as much, and in Delaware, Maryland, Kansas, California and New Hampshire, one-quarter as much.

"If the winter of 1889-90 had not been a bad one for sheep in Nevada, Oregon, Idaho, Montana, New Mexico, Utah, Washington and Wyoming, the dogs would make a worse showing in the census tables than they do. In these States whole flocks on certain ranges were exterminated, and thus the percentage of deaths due to exposure and disease was raised to 6.95 for the whole country. The dogs killed nearly 2 per cent. of the total sheep population.

"The sheep raisers don't like dogs as a general thing. Many States use the money received from dog taxes to pay for the damage they do. In these States some of the farmers are not unfriendly to the dogs. If a sheep dies or is killed by a wildcat or falls from a ledge of rocks, the thrifty farmer returns it to the proper officers as a sheep killed by dogs. Then he gets paid for it. Sometimes a New England farmer, when he loses a sheep, will collect the value of it from the county and from the owner of the dog that killed it. Sheep-killing dogs become well known in the community where their masters live. Sometimes the dogs are such good hunters that their masters refuse to allow them to be killed, and try to keep them from doing any damage. Such a dog-owner is an easy mark for the unscrupulous sheep breeders. Every time a sheep is killed, dies or disappears, the owner will go to the dog's master and demand pay for the dead animal, threatening to have the dog killed if its owner does not pay up. The dog may be innocent, but because it bears a bad reputation its owner submits. If there are more owners of sheep killers than one, the farmer may collect from each and make a good thing of his sheep. He may collect from the county, too.

"Most dogs that kill sheep are bad dogs all the way through, and sportsmen and farmers unite in trying to get rid of them. A sheep-killing dog is usually a tramp, untrainable, and worthless for hunting. Many of the dogs that kill sheep are ownerless. The farmers shoot them when they can, and sportsmen, anxious that their dogs shall not be accounted bad because of the misdeeds of ownerless curs, help them. Some farmers set traps for sheep killers. The traps are like wolf traps, and are set where a sheep is killed, the body of the sheep being used for bait. Sheep-killing dogs usually visit the scenes of their depredations, as a murderer is said to haunt the spot where he commits a crime. The farmers and breeders count on this, and set their traps accordingly. Sometimes they put arsenic in the carcass, to make sure that the guilty dog shall not escape.

"When a real sheep-killing dog gets into a flock of sheep he kills as many as he can. He does not kill for food, but for fun, apparently, and he finds his prey easy, for the sheep can't fight back, and don't know enough to run. They can't run fast enough to escape, anyway, and their only hope of salvation lies in scattering. This the sheep won't do, but persist obstinately in following the bell wether while the dog kills them."

No Chicago Show.

THE Mascontah Kennel Club last week, in formal meeting, decided upon an indefinite postponement of the mooted bench show.

Dogs as Draft Animals.—V.

RULES REGARDING THE USE OF DOGS AS DRAFT ANIMALS IN THE CITY OF ZURICH.

The use of dogs as draft animals is subject to the permission of the local police, given at the production of a certificate from the district veterinary, stating the qualifications of the respective dog for the respective load. The license is valid for one year only; its renewal must then be supported by a new certificate of qualification. Such a paper must contain a detailed description of the animal, the denomination of the wagon type and the weight of the load. The driver must be ready at any time to produce the license upon request of a policeman.

In order to be qualified for the purpose the animal must be at least two years old, have a normal, strong frame and be well fed. Dogs big with young or giving suck are not qualified.

The weight of a load shall not exceed 240lbs. per dog, inclusive of the wagon. Where the road is ascending or presenting other difficulties, the said maximum load must be reduced or the driver must assist the dog in pulling. Assistance by the driver is presumed or the driver must assist the dog in pulling. Assistance by the driver is presumed for all emergencies.

The harness must be made so as not to aggravate the work of the animal. The use of the "horse collar" is not tolerated; it must be substituted by the so-called "breast-plate." The leather straps must be smooth and shall not be narrower than 5 centimeters (2in.). Harnesses which vary from these prescriptions are confiscated if their make defies correction. To hitch the dog in by the dog collar is not allowed.

The wagon must bear the name and address of the owner. The driver must be over the age of fourteen years. The use of the whip or stick is prohibited. The driver may seat himself upon the wagon, if his weight does not increase the load beyond the allowed maximum, and if it does not endanger public safety.

Dog teams shall not be left without care on public streets and thoroughfares. In towns the local police will indicate special stopping places, and may demand that every dog be provided with a muzzle. If a prolonged stop is intended anywhere, the dog must be unharnessed for the time, and in warm weather the team must be placed in the shade. Thirsty or exhausted animals must be watered. In winter, covers and couch mats must be provided.

Besides imposing an adequate fine for non-observance of these prescriptions, the permission for using a dog as a draft animal may be altogether withdrawn from an obstinate offender.

The dog does not wear any curb or snaffle in the mouth; the guiding strap or line is attached to the collar. The wagon employed is generally a diminutive copy of the common four-wheeled tray wagon.

With regard to the animal, I may add that there is, among a great variety of dogs seen here, a number of big, fine dogs of the size of the Bernardiner, the Newfoundland, the wolf-hound and the mastiff. It is a pity that, as a rule, they are mongrels. The short-haired specimens seem to be preferred by drivers.

Large-sized dogs have ever been used in this part of the country to protect isolated farms and yards. The abundance of these strong animals, mostly idle during the day, and often seen in the streets without their masters, may have led to the habit here of employing them as draft animals to carry milk and other farm products to town.

The use of the so-called butcher's dog for driving cattle to the shambles, is abolished by law, since it is termed "cruelty to animals" by the animal protection societies of this country.

LUCERNE.

Ernest Williams, Consular Agent, reports as follows:

Dogs are used for draft in this part of the Horgen consular district, principally by the men collecting milk from the small farms for the dairies or for the cheese factories. These dogs do not draw the carts themselves, but are used to assist the men, who are themselves between the shafts, the dogs being harnessed to the carts on the outside of the shafts.

The dogs used are of no particular breed, the only requisites being strength and weight. They are probably a cross between the short-haired St. Bernard, the mastiff and boar hound, the color preferred being red or orange tawny mixed with white. They are clever and docile with their masters, but rather savage in disposition. They begin to work at about the age of eight months, and at that age ought to be 56 centimeters (about 22in.) high at the shoulder. They are strong and enduring, and can pull a load of 300 or 400lbs. and work for seven or eight hours a day.

The values of the dogs range from 70 to 150 francs (\$13.51 to \$28.95), but a good dog can generally be obtained for 100 francs.

They do not require any special training. They are simply harnessed to the cart, and in two or three lessons understand what is expected of them.

The harness consists of a leather breast strap, the sides of which are supported in a horizontal position by two leather straps passing over the back, and a bellyband starting from between the two back straps. The traces, which are a continuation of the breast strap, are usually made of iron chains fastened to an iron singletree, which is itself hooked on to the cart. The dogs wear a collar with a chain which is fastened to the shaft close to one of the handles, so as to be more under the control of the master. Sometimes two dogs are harnessed to the cart, one on each side of the shafts, but generally one dog is considered sufficient to drag a cart containing two cans, each holding about 50 or 60 gallons of milk.

The cart consists of two rather high wheels, between which and at a convenient distance above their naves are two long shafts connected to the axletree by springs and terminating in front by handles, as in a wheelbarrow. From the shafts between the wheels hangs, by chains or iron rods, a platform or tray which is only a few inches from the ground, and on which stand the two milk cans in front and rear of the axletree, and maintained in their position by a leather strap passing round them and through staples in the shafts.

Yachting.

THE Yachtsman of Dec. 30 quotes and comments on some of our remarks as follows:

The FOREST AND STREAM appreciates the deputation of Mr. Jarvis to the Y. R. A. as merely an informal mission to exchange general views, and points out that it could be nothing else because no rule in America is settled as yet. It says: "On the other side the whole matter (measurement) is in a very uncertain state; so much so that there would be nothing to gain here by the adoption of the existing Y. R. A. rule."

We cannot just follow this, for our rule would in our opinion just fit what the Americans want. The sail factor might be omitted from the formula, and in that case we think that the hulls would tend to become identical on both sides of the water, for larger sail spreads are demanded by the weather conditions on the other side of the Atlantic. British boats competing in America would then be canvased up to suit, and a close similarity of hull would tend to equal racing.

At any rate, seeing that America has no good rule and wants one, surely it would be well to follow the lead of the Y. R. A., and if it changes to change with it. Of course there would be opposition to this, but what rule will ever be free from opposition? There has never been a rule that has given universal satisfaction, and there will never be one. Would it not be as well then for our cousins to have their struggle over the formidable-looking British formula as over one of their own? It would save such a lot of initial formula making, and it would be an earnest of their desire for a common rating rule.

But we regret to say that we believe yachting in America lacks the very solid foundation of love that keeps it going in our waters, and it will require more, even, than a new rule, no matter how good it may be, to make the sport a national one in the States. We believe there is more love of yachting inherent in the French than in the Americans. What strikes us as being a significant indication of this is the apparent apathy with which the proposal to make a new measurement rule has been received in America. Such a suggestion here would flood our columns with formulae and controversies lasting many weeks each, the death of one merely heralding the birth of another. Tiresome as this is very apt to become, it at all events shows a spirit of keen interest in the subject, which is absolutely lacking in America. One of the first symptoms of decadence in yachting would be the reception of any proposal for a change of rule with indifference.

Without stopping to argue the first point raised by the Yachtsman, we are painfully constrained to admit that there is an unpalatable amount of truth in its final remarks. The utter apathy of the majority of American yachtsmen in matters that concern the vital interests of the sport is most discouraging. There is apparently an entire absence of that deep and widespread interest in the sport which would seek to extend it and to improve all of its details. While the whole country is swept at intervals by a wild wave of yachting enthusiasm awakened by some international event, in the long intervening periods it is impossible to stir up any interest whatever in the plain practical matters which are the foundation of yacht racing. The movements which come up from time to time for the improvement of the rules are the work of a small number of men; they receive no recognition from the great body of yachtsmen, and with a certain set they furnish a subject for sneers and derision. We have been impressed times without number with the marked contrast in this respect between Great Britain and America. There any proposal for a change of the measurement rule, however slight, brings out instantly a lengthy and often heated correspondence in all the yachting journals. Here a similar proposal is passed over with utter indifference by the very ones most deeply concerned in it—the practical yacht owners—and it is a rare thing for one of them to pass an opinion in print.

If proof of this be needed it may be had in the next two weeks in all the journals, both lay and technical, which publish yachting news. The report of the race committee of the Seawanhaka C. Y. C., which appears in our columns this week, has never been equaled as a thesis for the practical and profitable discussion of the measurement question as it stands to-day. The report of the same committee for 1896, with its broad and practical treatment of the active questions in yachting, was a wide departure from the usual perfunctory committee report, but excellent as it was the present one is a decided improvement. Last year the committee was working largely in the conventional lines, with due and proper regard for the sacred fetish of "vested interests," and looking mainly to immediate results in the shape of a general revival of racing on the part of existing yachts. This year it has gone a great way further; it has boldly deposed the holy idol from the place it has so long held to the detriment of yachting, and has declared that measurement legislation to be at all effective must deal exclusively with the future and not with the past; that it must consider the possible yachts which will be built under a new rule, and not the old yachts which cannot be forced to race under any rule, however favorable to them.

While the committee has stopped short of actual factors and formulae, modestly admitting its inability to handle this part of the subject, it has not failed to set forth boldly and positively, and in a manner to challenge controversy, its opinions as to the general object and character of a new and satisfactory measurement rule. The propositions set forth in the report are in no way limited or local, but they relate to the measurement question as it affects every yacht owner and every American club. Published in an English paper, they would simply deluge it with correspondence, to the probable exclusion of other matter for some weeks. Does any one suppose for a moment that they will bring out more than one or two chance letters from American yachtsmen?

WHILE we have omitted the details of the practical trial of the Cox formula in the club last year, as given

in the report, the result is very frankly set forth by the committee, and it should be conclusive as to the possible repetition of such an experiment in the future. The formula was the result of considerable labor on the part of Mr. Cox and a few others, and was put forward in good faith as likely to produce some good results, even though it might not take the place of a new and permanent rule. The result unfortunately has justified the opinion we held when it was first proposed, that it was an absolute waste of time, if for no other reason, because the existing yachts have done with racing. At the same time the work of Mr. Cox and the committee has produced incidentally a good result in that it has led to the abandonment of the attempt to cater to the old boats and to a positive declaration in favor of a different line of action: the search for a rule under which new yachts of more desirable type will be built.

So far as the race committee is concerned, in advancing the matter to the present point it has discharged faithfully a self-assumed task, and disposed of the burden very gracefully; but we are sorry for the new special committee appointed to continue the work.

THE American Y. C. has met with very poor success in its proposed 25ft. class, as of the many yachtsmen present at the preliminary meetings, only two have signed the contract. Mr. B. Frank Wood, of City Island, agreed to build the yachts for \$1,650 each providing at least six were ordered. Messrs. J. R. Maxwell, Jr., and W. H. McCord were the only ones who signed the contract, so the project has been abandoned.

Seawanhaka Corinthian Y. C.

THE twenty-seventh annual meeting of the Seawanhaka Corinthian Yacht Club was held at the town club house on Jan. 11. Com. Rouse, who has been dangerously ill during the fall and early winter, is now absent in Europe, and Capt. William Trotter occupied the chair. The usual reports of officers and committees were read, the trustees announcing the election of a number of new members, bringing the membership up to the limit of 400. In view of the applicants now on the waiting list, an amendment to the constitution extending the limit to 500 was adopted.

The following officers and committees were elected:

Commodore, Henry Clark Rouse; Vice-Commodore, S. Van Rensselaer Cruger; Rear Commodore, Henry A. Van Liew; Secretary, Charles J. Stevens; Treasurer, R. C. Wetmore; Measurer, John Hyslop; Fleet Surgeon, Valentine Mott, M. D.; Fleet Chaplain, George R. Vandewater, D. D.; Race Committee, Oliver E. Cromwell, D. Le Roy Dresser, Walter C. Kerr, Charles A. Sherman and C. W. Wetmore; Committee on Lectures and Entertainments, Frank S. Hastings, Herbert L. Satterlee and Jacob Wendell, Jr.; Committee on Lines and Models, John Hyslop, A. Cary Smith and W. P. Stephens; Law Committee, Wilmot T. Cox, Alfred Ely and W. Kintzing Post.

Trustees—E. C. Benedict, D. Le Roy Dresser, Frederic de P. Foster, Charles J. Stevens, J. Frederic Tams and C. W. Wetmore.

The most important feature of the evening's business was the report of the race committee, a lengthy document covering the entire work of the committee for the past year. Omitting the detailed reports of races, prizes, etc., we give as follows those portions of the report of the race committee which are of general interest to yachtsmen.

Match for 1898.—By agreement between this club and the Royal St. Lawrence Yacht Club, the Declaration of Trust governing the challenge cup was so amended as to provide that no challenge should be accepted until after the expiration of thirty days next succeeding the date of the conclusion of any match, and that the challenged club should be at full liberty to accept any one of the challenges received during this period without regard to a priority of the date of its receipt. After the expiration of this period, the challenge first received is entitled to acceptance as originally provided in the Declaration of Trust.

The match with the Royal St. Lawrence Yacht Club was concluded on Aug. 18, 1897, and the thirty days expired on Sept. 17; on Sept. 16 your committee, on behalf of the club, duly challenged the Royal St. Lawrence Yacht Club for a match to be sailed during the season of 1898, with yachts not exceeding 25ft. racing length. This challenge was duly ratified at the last meeting of the club, and after some delay, resulting from the consideration of an informal challenge from Mr. J. Arthur Brand, of London, Eng., has been accepted by the Royal St. Lawrence Yacht Club for the 20ft. class. Negotiations have been carried on between your committee and the sailing committee of the Royal St. Lawrence Yacht Club during the last two months, which have resulted in the execution of an agreement to govern the match for 1898, a copy of which is annexed hereto. This agreement does not differ essentially from that governing the last match, the only change of importance being that the total weight of crew permitted is limited to 600lbs., and the total number of the crew is limited to four instead of three.

A controversy arose last year as to the interpretation of Article X. of the Declaration of Trust, requiring the helmsmen of the representative yachts to be named in advance of the races. The Royal St. Lawrence Yacht Club insisted that but one helmsman could be named, and the point was finally conceded for the match of 1897 only. Under the agreement governing the coming match, the construction of Article X., which has been insisted on by your committee, has been accepted, and more than one helmsman may therefore be named, and a change of helmsmen be permitted at will. It is probable that the match will be fixed for about the same date as that of last year, namely, about the middle of August, and that the trial races will be held early in July. Due announcement will be made at an early date concerning these events.

Your committee earnestly invites the co-operation of the club in a determined effort to regain the cup. Mr. Clinton H. Crane has volunteered to return from Glasgow, Scotland, where he is now pursuing his professional studies, and to devote his services to the undertaking, and we hope that the financial support necessary will be promptly assured.

Knockabout Class.—For the past two years your committee, impressed by the conspicuous success of the racing in the special 30ft. class, and in other one-design classes in England and here, has had in contemplation the establishment of a one-design racing class under the auspices of the club. This idea took practical form in August last, and negotiations were entered into with designers and builders for the preparation of plans and estimates of cost; and at a meeting held at the Oyster Bay Club house on Sept. 4 last, commitments were secured for the construction of ten boats under the plans, and specifications and bid submitted by Mr. W. B. Stearns, of Marblehead. The interest thus initiated rapidly developed, and has resulted in placing through your committee with Mr. Stearns orders for twenty-two boats, which are contracted to be delivered at Oyster Bay on or before April 15 next, at a base price of \$775 a boat, with certain optional extras not affecting their speed or general character. Several of these boats are already substantially finished, and the work on all is so far advanced as to promise completion well within the contract time. Mr. H. M. Crane, of Boston, has kindly consented to act as inspector for the owners under the contracts, and reports that so far materials and workmanship are highly satisfactory. The class will be known as the Seawanhaka Corinthian Knockabout Class, and the owners of the boats ordered through your committee are as follows: William E. Iselin, Leonard J. Busby, R. C. Wetmore, E. Hope Norton, George Trotter, John Murray Mitchell, John T. Sherman, W. H. Russell, Daniel Bacon, F. S. Hastings, Nelson E. Burr, F. G. Bourne, H. C. Rouse, Frank W. Boyer, George Bullock, W. R. Garrison, John Sherman Hoyt, Kenneth Otis Rouse, Charles Osborne, John C. Scott, E. C. Benedict, C. K. J. Billings.

Through Mr. W. Butler Duncan, Jr., orders for nine additional boats have been placed with Mr. Stearns by members of the Country Club, of Westchester, to be built according to the same plans and specifications as the others, and under the same form of contract as that proposed by your committee. There will, therefore, be thirty-one boats of this one-design class during the coming summer on the waters of Long Island Sound, from Westchester to Oyster Bay and Stamford.

Your committee is also informed that six boats from the same plans have been ordered in Philadelphia, and are building by the Harlan & Hollingsworth Co. In outlining the design for these boats, your committee has sought to combine satisfactory speed qualities with a high degree of comfort for day sailing and adequate accommodations for cruising, and while allowing variations in finish, has been very careful to prevent all differences in qualities affecting speed. The committee has every reason to expect, therefore, that as far as careful design and superintendence can secure such a result, the speed of the boats will be equal. The number of boats ordered and other evidences of widespread sympathy in the objects sought for, lead your committee to anticipate that there will be the liveliest interest in this class during the coming season.

It is the purpose of the committee to organize this interest, and to devote special attention to the racing of these boats. To that end we propose to establish two regular races a week at Oyster Bay, one for Saturday and one for, say, Tuesday or Wednesday: to lay out special courses, and to award not only the usual prizes for first, second and third boats, but also for the best record on points, either for the season or for series of races on some carefully devised system; and for helmsmanship and seamanship. We shall offer facilities for and encourage sweepstake races and interclub matches. While two men could undoubtedly race one of these boats under ordinary conditions, the rules permit a crew of four, and it will thus be seen that there will be ample opportunity for our B class members to serve in the racing crews, and, indeed, probably a most active demand for their services. We cannot imagine a better chance for young lovers of the sport to cultivate their taste and develop their skill as Corinthians than will be offered in this class next season. Before the season opens we shall endeavor to lay this matter before them in more definite form.

Measurement Rules.—In our last annual report attention was called to the importance of undertaking a revision of the present rules of measurement, and the action of your committee there taken and then in contemplation was explained; and it was announced to be "our intention to formulate a rule for practical trial" in the next annual race, and possibly in some special events, which, if found to be satisfactory, "might then be proposed for general adoption." The conference and correspondence with designers and others on this general subject, which had been begun before the last annual meeting, were therefore continued. On Jan. 30, 1897, the following letter was sent on behalf of your committee to several experts in designing, professional and amateur:

NEW YORK, Jan. 30, 1897.—My Dear Sir: Referring to the recent conferences which have taken place on the question of the rule of yacht measurement, the race committee of the Seawanhaka Corinthian Y. C. is very anxious to follow up the matter and accomplish some definite result. With this in view, I wrote, at the request of the committee, to ask if you will not be good enough to give us your views in writing, covering the following points:

1. In contriving a new rule of measurement, what should be the purposes aimed at; that is to say, should the rule tend to the encouragement or development of a so-called "wholesome type" of boat, or should racing qualities mainly be considered and the effort be restricted to such regulations as will insure the development of these qualities along fair lines, without special reference to cruising qualities?
2. Should the purpose be recommended of encouraging a "wholesome type" of boat, what constitutes, in your opinion, such a type?
3. Is it correct in principle, or desirable, to fix arbitrary limits upon any element of speed, as, for example, sail or draft?
4. What elements of speed should be taxed?
5. What cognizance should be taken of the difference between centerboard and keel types?

At a meeting of the race committee held this week, specially to consider this subject, it seemed to be the general view that a new rule should tax L.W.L., sail area and draft, and possibly beam, either separately or associated with draft; and that perhaps displacement should be introduced for what may be called "inverse taxation" or premium; also, that lightness of construction, or factors dependent thereon, such as the ratio of ballast to displacement, might also be considered.

If you will sufficiently interest yourself to answer these inquiries, and especially to formulate for our benefit a definite rule of measurement embodying your own ideas, it will be very much appreciated by the committee. We are inviting expressions of views from several of those who have shown the greatest interest in the subject, and as soon as possible after we receive them, we shall endeavor to make some proposal for final consideration. Yours very truly,
(Signed)

C. W. WETMORE,
For the Race Committee.

Replies were received from Messrs. A. Cary Smith, John Hyslop, W. P. Stephens, A. Cass Canfield and G. H. Duggan. These, together with communications from Commodore Rouse and Mr. Irving Cox (to which particular reference was made on the last report), and from Mr. Gerard Beekman, and some correspondence with Mr. N. G. Herreshoff, were made the subject of full discussion and consideration, which continued into the spring of this year. In view of the pains taken in the preparation of these papers, and their value, full copies of the replies referred to are annexed hereto, in order that they may be preserved on the files of the club for future reference.

In inviting this discussion, your committee had in view not only the formulating of a rule to govern future constructions, but also the end, proposed by Com. Rouse in his letter of Sept. 17, 1896 (annexed to the last annual report), "of promoting a greater interest among yacht owners generally to race their vessels"; that is to say, of enabling the older yachts to compete against the modern with some chance of success. The only formula submitted to us which gave much promise of accomplishing the last-named object was that proposed by Mr. Irving Cox, which is given below. Your committee therefore decided to give this formula a practical trial in the annual race, and special prizes therefor, already referred to, were offered by the commodore.

We omit the details of the race, which are set forth in full, with the efforts of the committee, by direct appeals to individual owners to race their boats. The report continues:

Thus it appears that Iroquois, Uvira and Queen Mab were the only yachts of the older types which availed themselves of the opportunity offered, to which, however, Bedouin would have been added had her class filled.

The result of this effort to arouse interest in the racing of vessels of the older type against the new was profoundly discouraging, and your committee has reached the conclusion that further efforts in this direction are useless, and should be abandoned. In considering the problem of measurement, we think that we should look to the future only, and that a rule should be framed as nearly as practicable on scientific principles, having strict regard to the definite purpose in view, and without consideration for so-called "vested interests." Indeed, in the larger classes there may almost be said to be no vested interests. Racing among such vessels is dead, and a frank recognition of this fact is the first condition of success in devising measures to revive it. To revert to the definite proposals that have been made for a new rule, or the principles that should govern in deciding upon one, we summarize certain deductions that we have drawn from the oral discussions and the papers submitted:

1. There is entire unanimity of opinion that the present rule of measurement is inadequate, and must either be wholly changed or supplemented by detailed restrictions.
2. There is also substantial unanimity of opinion that the end to be attained in the larger classes, say over 30ft. racing measurement, is not speed alone, but seaworthiness and comfort; in other words, the development of a "wholesome type."
3. As to what constitutes a "wholesome type," there seems to be some difference of opinion, but a concurrence in this, that such a boat must be able, if not "to keep the open sea," at least to sail under all except extraordinary weather conditions in safety and with reasonable comfort.
4. As to the specific details of a rule, there is the widest difference of opinion. One proposes to add to the present rule a tax upon over-all length and draft over an assumed normal of these dimensions; another to tax beam and draft in addition to L.W.L. and sail area; another, not to tax beam and draft specifically, but to provide that, if the sum of these two dimensions shall exceed three and one-third times the square root of the area of immersed midship section, the excess shall be added to the racing length, and the converse; another, to leave the present rule unchanged, except by adding certain arbitrary limitations of form, as, for example, that the extreme draft shall be placed at the intersection of the sternpost and keel, that the sternpost shall be straight and the rudder be hung from the sternpost; another, that the ratio or relation of displacement, used as a divisor to sail area, shall be the governing principle in formulating a rule, and that all dimensions shall be neglected; and another, that the L.W.L. shall be multiplied by the square root of the sail area and the product be divided by the cube root of the displacement or tonnage, or by the square root of the area either of the immersed or full midship section, the quotients being the racing measurement and certain constants being used as multipliers to reduce the quotients to conform to the existing classification.
5. A preponderance of opinion favors the idea of placing, in one way or another, a premium upon the increase of the area of the midship section or displacement or bulk, while preserving the tax on sail and waterline length.

6. There is a tendency to favor a system of restrictions upon scantling, at least in wood construction.

7. There is substantial unanimity in the opinion that the restrictions upon the smaller classes, perhaps those under 30ft. racing length, should be different from, and less severe than, those imposed upon the larger classes.

Your committee has reached the following conclusions:

1. That there is pressing need and urgent demand for a change of the rule of measurement at the earliest practicable moment.
2. That an essential element in the rule of measurement to be formulated will be full recognition of the factor of displacement or area of immersed or full midship section, so treated and guarded as that it must produce vessels of moderate dimensions and adequate displacement, while preserving the tax on sail.
3. That in formulating the rule distinction should be made between the larger and smaller classes, dividing them perhaps at 30ft. racing length and leaving the smaller classes comparatively unrestricted.
4. That a scientific system of scantling restrictions for each class should be devised.
5. That a rule, when adopted, should prevail unchanged at least for a certain minimum period.
6. That the material collected is of so excellent a character as to warrant confidence that a satisfactory solution of the problem can be reached.

In advancing the discussions to the present stage, your committee feels that it has done, as a committee, as much as it should undertake with due regard to its other duties, and, moreover, that it is not particularly well qualified to prosecute the work further. The subject is, however, so important and interesting, and the progress made so substantial, that they desire to recommend that a special committee of experts be appointed to take up the further consideration of the problem, with the request that such committee shall make a definite report to the club at the May meeting. While independent action by this club in the adoption of a rule would not be desirable, yet we think the object in view can best be forwarded by independent action to the point of a definite recommendation, before conferences with other organizations are sought.

It is fortunate that, pending the adoption of a new rule, the one-design classes are likely to do so much to stimulate the spirit of racing.

Yacht Racing Association.—The club has continued its membership in the Yacht Racing Union of Long Island Sound, and to cultivate its friendly relations with the other members of the union. Still further progress has been made in systematizing the machinery of racing.

On Oct. 30, 1897, the North American Yacht Racing Union was formed at a meeting, held in New York, of the representatives from a large number of the yacht clubs and associations of the United States and Canada, at which the chairman of your committee presided. The objects of the association are declared to be "to encourage yacht racing and to promote the adoption of uniform racing rules throughout the United States and Canada," and its articles of association provide that "Any yacht club in North America, having a regular membership of over fifty members and over fifteen yachts of upward of 15ft. racing measurement enrolled in its fleet, or any association of yacht clubs, shall be eligible for membership in the union."

The Union has adopted racing rules substantially identical with those now in force among clubs of the Long Island Sound Union. The latter will change its name to the Yacht Racing Association of Long Island Sound, and will adopt the racing rules of the National Union.

The powers of the Union, like those of the Sound Association, are advisory merely, and its action is not binding on any constituent club until ratified. A committee of the Union has been abroad and has conferred with members of the Yacht Racing Association of Great Britain upon the subject of common rules to govern measurement and racing, but no definite results have been accomplished. Until the New York Yacht Club has allied itself with the Union, it is not likely that international negotiation on these subjects will make much progress. We understand that the Union contemplates some definite action on the measurement question next autumn, and this furnished an additional reason why we should pursue the subject actively in order that our influence and co-operation may then be effective.

Your committee is in entire sympathy with the underlying purposes of these unions and associations, so long as they are conducted on the present lines, and recommends that they shall continue to receive the active support of the club.

General Remarks.—Dissatisfaction is an essential condition of progress, and it is in the spirit of this apothegm rather than that of fault-finding that your committee confesses that it has not been contented with the record of the past season. The Corinthian spirit of the club has not yet been awakened as it should be. In our B class we have now sixty-nine members, of perhaps from eighteen to twenty-nine years of age, among whom there must be many ready to avail themselves to the full of the opportunities for sport and instruction that the club has in its power to afford; and these should naturally draw to themselves friends of their own age and similar tastes. Without organization, however, progress will be slow: with it, the club should develop rapidly in numbers and in enthusiasm. Believing that, while much remains to be done, the conditions are most favorable for rapid advancement, we approach the coming season with enthusiasm and confidence.

Respectfully submitted,

(Signed) OLIVER E. CROMWELL, Chairman,
D. LEROY DRESSER,
WALTER C. KERR,
CHARLES A. SHERMAN, Sec'y,
CHARLES W. WETMORE.

Race Committee, Seawanhaka Corinthian Y. C.

Seawanhaka International Challenge Cup.

Agreement covering the special conditions of the match for the Seawanhaka international challenge cup for small yachts, to be sailed by the representative yachts of the Royal St. Lawrence Yacht Club, of Montreal,

Canada, and the Seawanhaka Corinthian Yacht Club, of New York, during the yachting season of 1898:

In pursuance of the provisions of Article XI. of the Declaration of Trust executed by the Seawanhaka Corinthian Yacht Club, dated June 1, 1896, and containing the terms and conditions governing the tenure of the Seawanhaka international challenge cup for small yachts, and the competition therefor, it is hereby mutually agreed between the Royal St. Lawrence Yacht Club, of Montreal, Canada, and the Seawanhaka Corinthian Yacht Club, of New York, that the following special terms and conditions shall govern the match to be sailed during the yachting season of 1898, namely:

Article I.—The courses shall consist of a triangular course and a course to windward or leeward and return. Each leg of the triangular course shall be one and one-third miles in length, and shall be sailed over three times, making a total of twelve miles. The course to windward or leeward and return shall be two nautical miles to each leg, and shall be sailed over three times, making a total of twelve miles.

Article II.—The start shall be a one-gun flying start, with preparatory signal.

Article III.—The races shall be sailed without time allowance.

Article IV.—Yachts must not exceed 20ft. racing length (S. C. Y. C. measurement). The formula for determining racing length measurement under the S. C. Y. C. rules is as follows:

$$\frac{L \times W \times L + \sqrt{S \times A}}{2} = \text{Racing Measurement.}$$

Article V.—A yacht's draft of hull or keel shall not exceed 5ft., and with the centerboard down shall not exceed 6ft. Draft shall be determined when yachts are in trim for measurement. Centerboards shall be so constructed that they can be wholly housed without leaving any projection below the hull or keel.

Article VI.—Yachts shall be measured without crew on board, but instead thereof a dead weight of 450lbs. shall be carried amidships, approximately at the center of buoyancy, during measurement. The total actual weight of the crew, including all clothes, personal apparel and belongings worn by them or carried on board during any race, shall not exceed 600lbs.

Article VII.—Shifting ballast shall not be allowed. (Weighted centerboards shall be considered as fixed ballast.)

Article VIII.—No outrigger or other mechanical device for carrying live ballast outboard shall be allowed.

Article IX.—The factor of sail area, used in determining racing measurement, shall be ascertained by adding to the actual area of the mainsail, computed from its exact dimensions, the area of the fore-triangle. The hoist of the mainsail when measured shall be plainly marked on the mast, and its outer points on the boom and gaff or other spars used to set sail, and the sail shall not be set beyond these limiting points. The fore-triangle shall be determined by the following factors: 1. The perpendicular shall be the perpendicular distance between the deck and a point on the forestay, above which the jib shall not be hoisted. 2. The base shall be the distance between the forward side of the mast at the deck and the point of intersection of the forestay with the bowsprit of hull. Any jib when set must not extend beyond the upper and forward points above defined.

Sails shall be limited to mainsail, jibs and spinnaker. The total area of the mainsail and fore-triangle shall not exceed 500sq. ft. The area of the mainsail alone shall not exceed 80 per cent. of the total area. The area of the spinnaker, measured as a triangle whose base is the length of the spinnaker boom measured from its outer end when set to the center of the mast, and whose perpendicular is the distance from the deck at the fore side of the mast to the spinnaker halyard block, shall not exceed twice the area of the fore-triangle.

Article X.—The spinnaker boom, when used in carrying sail, shall not be lashed to the bowsprit or stemhead.

Article XI.—The helmsman or helmsmen and crew shall be amateurs, and the total number of persons on board shall be limited to four. The helmsman may be changed at will, and as often as may be desired in any race provided that such helmsman shall have been named in writing, as required by the provisions of Article X. of the Declaration of Trust.

Article XII.—The provisions of the Declaration of Trust, so far as differing from, or inconsistent with, the foregoing articles, are hereby waived.

Dated Jan. 10, 1898.

(Signed) ROYAL ST. LAWRENCE Y. C., of Montreal, Canada.
By G. H. Duggan, Chairman Sailing Committee.

(Signed) SEAWANHAKA CORINTHIAN Y. C., of New York.
By the Race Committee, by C. W. Wetmore,
Acting Chairman.

At the close of the meeting the fleet chaplain, George R. Vandewater, D. D., at the request of the chair, spoke on the subject of the young Corinthians and the B class members. The chair named as a committee on measurement Messrs. John Hyslop, A. Cary Smith and W. P. Stephens.

The Marine Exhibit at the Sportsmen's Exposition.

As a representative display of American yachting, there is little to be said of the marine portion of the exhibit this year, there being nothing outside of the trade displays of different firms of launch builders. There is a field for a most interesting and attractive exhibit that would bring numbers to the Garden in a collection of yachting models, trophies and practical appliances on such a scale as to show exactly what the yacht building market affords, but nothing of the kind has been attempted. The joint firm of C. L. Seabury & Co. and the Gas Engine and Power Co. has a prominent space on the center aisle, where it shows a mahogany yacht tender of good model and very handsome finish, also a small Seabury boiler, with sections cut away to show the interior construction. There are also several models of steam yachts, but unnamed, and a handsomely built model yacht.

In connection with its exhibit of auto-motiles and stationary engines, the Daimler Motor Co. shows two of its marine engines of 16 and 4 H. P., and a plain open launch. The Pennsylvania Iron Works, manufacturing the Globe Vapor engines, shows several engines in operation and a very shipshape cabin launch, with a moderate overhang to the bow and a well shaped yachtcounter that is a great relief from the standard round stern of all small power craft. Some small half models are also shown, but with nothing to tell what they represent. The Marine Vapor Engine Co., maker of the Alco-Vapor launch, shows an open mahogany launch of elaborate finish, and also one of its hunting "launches," with cabin house, and rigged with a cat mainsail. One of the engines is shown running by compressed air, to display the operation of the valves. The Truscott Boat Mfg. Co., of St. Joseph, Mich., shows a couple of its marine engines, but no boats. The engines are fitted with propellers in which the blades reverse. The Empire Marine Motor, C. C. Riette & Co., New York, is shown in two sizes: 8 H. P. and 1 H. P., a compact engine with the weight low.

In the Adirondack exhibit are two specimens of the typical "Adirondack boat" by different builders, very light craft, with smooth lap skin and sawn ribs spaced close together. In the Maine exhibit B. N. Morris, of Veazie, Me., shows a handsomely finished canoe of his standard build, with wide, flat ribs like the birch bark, and a light wooden skin covered with canvas, the latter showing a very hard and smooth surface. The construction gives both strength and lightness, with no possibility of leakage. Two similar canoes are shown by Gould Bros., of Bangor, and E. M. White, of Old Town. The Durand Pedal Motor is a new device, built on a different principle from the usual crank mechanism, and from its appearance should be quite effective. It is designed specially for canoes and boats driving a propeller. The motion is oscillating and not rotary, the man being seated abaft and not over the motor.

YACHTING NEWS NOTES.

The issue of the Yachtsman for Dec. 23 forms the Christmas number, and is considerably larger than usual. In addition to many handsome plates of yachts and an extra amount of interesting matter, it has several excellent designs. One of these, the work of F. Shepherd, is a handsome single-hand yawl, of 21ft. l.w.l. Another is a model sloop, of 10-rating, by J. Gordon Kelly. H. J. Dartnell has a design for a 300-ton steam yacht, and Harley Mead has contributed the complete plans of a fast cruiser, of 28ft. l.w.l. The arrangement plans of the steam yacht Anemone, designed by Alfred H. Brown, are given. The cover, in black and red, is the result of a special prize competition; the work of other competitors, in black and on a small scale, being shown elsewhere in the book. The Yachtsman announces that on Jan. 27 it will issue the first number of a monthly magazine, the Yachting Monthly, a supplementary publication, as the weekly Yachtsman will be continued as usual. We congratulate our contemporary upon the success that this new venture indicates.

The annual meeting of the Hull Y. C. was held on Jan. 8 at the Parker House, Boston, the following officers being elected: Com., Harry B. Torrey, cutter King Philip; Vice-Com., Winthrop Thayer, steamer Zuleika; Rear-Com., Louis M. Clark, knockabout Spinsters; Sec'y, William Avery Cary; Treas., John L. Amory; Meas., William E. Sherriffs; executive committee, J. Winthrop Dutton, Edward D. Ver Planck; membership committee, Paul F. Folsom, George A. Dill; regatta committee, Charles Howard Smith.

The annual meeting of the Massachusetts Y. C. was held at the Rowe's Wharf Club house, Boston, on Jan. 7, the following officers being elected: Com., Edwin P. Boggs; Vice-Com., E. P. Boynton; Rear-Com., Louis M. Clark; Sec'y, John S. Clark, Jr.; Treas., Charles G. Cutter; Directors, Henry W. Savage, Robert C. McQuillen, John Shaw, Jacob A. Barbery, Jr.; Meas., Charles H. Dodd; race committee, William S. Crosby; C. Edwin Backus, Jr.; William E. Robinson, Duncan Robinson, T. W. King; committee on admissions, E. M. Dennie, C. L. D. Parkhill, Francis Gray, A. W. Randall, Walter A. Underwood, John Dearborn, J. D. Snell; house committee, William Haskins, E. H. R. Revere, H. S. Potter, S. P. Perrin, Charles H. Cross, 2d.

Louis M. Clark was elected a delegate to the Massachusetts Yacht Racing Association.

The Hudson River Y. C. held its annual meeting on Jan. 11, the following officers being elected: Com., E. Langerfeldt; Vice-Com., C. W. Shutte; Sec'y, A. Y. Buckholtz, and Treas., Charles Grover.

The Columbia Y. C., of South Boston, held its annual election on Jan. 5, the following officers being elected: Com., Edward J. Powers; Vice-Com., Charles E. O'Donnell; Rear-Com., George H. Lloyd; Sec'y, Wm. C. Lepetrie; Treas., Albert E. Justice; Meas., Frederick Pfund; Trustees, Charles J. Rushton, Joseph E. Doherty, Frank H. Graham.

The annual meeting of the South Boston Y. C. was held on Jan. 5 at the United States Hotel, Boston, the following members being elected: Com., E. H. Lansing; Vice-Com., S. Gordon Sawyer; Rear-Com., M. R. Peterson; Sec'y, Daniel F. Carew; Treas., Thomas Christian; Meas., James Bertram; Fleet Surgeon, Dr. Thomas S. Reed; Trustees for one year, C. McKenna and Alvin Wright; for two years, William H. Godfrey, John C. Merry; for three years, Arthur Fuller and Newton B. Stone; regatta committee, Newton B. Stone, Frank Williams, E. B. Walbridge, Vincent B. Johnson, Theo. C. Nicholson; house committee, C. J. Chance, Henry J. Schreiver, P. H. Dacey, W. Wallace Kee, Charles W. Nodwell. The secretary's report showed 259 members, as follows: 215 active, 21 life, 6 honorary and 7 non-resident. Three life members, Benjamin Dean, H. P. Helmer and Robert Bibber, have died during the year. The treasurer reported a balance of \$2,736.77 in the treasury.

The following resolution, offered by W. H. Alderton, was adopted: "Whereas, The Yacht Racing Association of Massachusetts has repudiated its promises and obligations by raising the limits of its racing classes, and refusing 'time allowance' in compensation, and that the South Boston Y. C. desires its delegates to present this resolve before said association and report the same to this club."

In our mention of the yacht built by Fred Medart, in the FOREST AND STREAM of Jan. 1, the design was described as the work of the owner, Mr. Rawlinson. We are informed that it was made by Mr. Young, of New York.

The annual meeting of the Indian Harbor Y. C. was held on Jan. 12, the following officers being elected: Com., Charles T. Wills; Vice-Com., George G. Tyson; Rear-Com., Robert B. Carpenter; Sec'y, Charles F. Stewart; Meas., Frank Bowne Jones; Treas., Richard Outwater; Trustees to serve for three years, Louis R. Alberger, D. Malcolm Winne; regatta committee, Frank Bowne Jones, Chairman; Charles P. Tower, D. Willis Merritt, Charles E. McManus, E. Burton Hart, Jr. The club voted to encourage the new schooner class, and Vice-Com. Tyson offered a silver cup for the first race of the class.

Egret, steam yacht, H. W. Cannon, has been sold to J. F. Zimmerman, of Philadelphia.

The Shackamaxon Y. C. held its annual meeting on Jan. 4, the following officers being elected: Com., John Engle, Sr.; Vice-Com., Edward Campbell; Rec. Sec'y, Henry S. Anderson; Fin. Sec'y, Rollins B. Murphy; Treas., William Gaun; Fleet Capt., Fred Anderson; board of directors, John Engle, William Gaun, Henry S. Anderson, Max Schladersky, S. B. Edwards; regatta committee, James Stiemmer, Egbert Morrison, Robert G. Morgan, S. B. Edwards, William Jones; Measurers, William Cravin, William Wuest, George Le Sage; Steward, William Jones. The annual meeting of the club was changed from March to the first Tuesday in January.

We learn from the January issue of Land and Water that Eastern yachtsmen are falling over each other in their hurry to vote for the continuance of time allowance at the meeting of Dec. 31 last. There was something dropped, with a thud, at that meeting, but hardly what Land and Water predicts.

Canoeing.

Holyoke C. C.

THE Holyoke C. C. has taken a new lease of life. A movement is on foot to build a new and larger club house, to increase its membership from 45 to 150, and to stir up more interest in canoeing. With this end in view, a large and enthusiastic meeting was recently held. All were in favor of the plan, and committees to further the project were appointed as follows:

House.—F. H. Metcalf, E. F. Horton, F. B. Towne.
Land.—E. S. Towne, F. A. Smith, E. B. Piske.
Membership.—L. F. Hayward, H. M. Chase, W. C. Brown.
Boats and Canoes.—T. W. Morrow, C. F. Schuster, C. A. Chase.
The new club house will probably be located near Kenilworth Castle, the Connecticut River at this point being one of the finest places in New England for good rowing and canoeing. The club hopes to have a house costing about \$3,000, and fitted up with all the latest improvements and conveniences.
The officers of the club are as follows: Capt., Henry L. Russell; First Lieut., Edw. T. Newton; Second Lieut., J. M. Ramage; Treas., C. A. Chase; Sec'y, Philip A. Twing; Trustees, C. M. Brown, C. Schuster, R. Wyckoff.

A. C. A. Membership.

Eastern Division.

Percy L. Fish, Taunton, Mass.
Henry H. Fish, Taunton, Mass.
Frank E. Gibbs, Jr., Taunton, Mass.
Henry C. Warnock, Wish-ton-wish C. C., Northampton, Mass.

Rifle Range and Gallery.

Sportsmen's Exposition Rifle Tournament.

NEW YORK, Jan. 17.—It is as yet far too early to say much about the scores in the rifle tournament at the Madison Square Garden, under the auspices of the Sportsmen's Association, which is now holding its annual Exposition in that immense building.

The tournament is under practically the same management as last year, and that is a guarantee that everything has been done to make the running of the tournament a success in every respect. G. W. Plaisted acts again as cashier and official scorer, having for his assistant, W. Wussow. Between them this pair keeps things moving along easily, and there is no delay, save that caused by there being only six ranges and occasionally eight or ten people waiting to shoot at the same time. H. D. Muller, chairman of the tournament committee, is also always on hand to render assistance where it may be necessary. Messrs. Zettler Bros., aided by a corps of assistants, have charge of the gallery, and attend generally to the work at the ranges.

M. Dorrier has recorded a 75 and a 74 so far in the Continuous Match, although the tournament has been running only four days. This competition is always a popular one, but it is never out until the last shot has been fired. Surprises are likely to come any day, and judging from the quality of the shooting material furnished by rifle clubs from far distant cities, the local marksmen are not going to have it all their own way, by any means.

On the Target of Honor, Louis Flach, one of the crack shots of the Zettler Rifle Club, has recorded a score of 75, a highest possible. Still, it is by no means certain that he will not be tied for first prize in this contest, 75s being something that may be looked for from such men as F. C. Ross, Mike Dorrier and Gus Zimmerman. It must be remembered, however, that only one entry is allowed in this competition, and 74s and 73s are easier to make than 75! C. E. Gensch has secured a 73 on this target with a 25 and two 24s, while J. G. Dillin and G. Schlicht each have a 71 to their credit. H. Kraus made three 23s, totaling 69.

In the Bull's-eye contest, another exceedingly popular affair, many targets have been shot, but H. D. Muller is ahead with a bull that measures 11½.

The Individual Championship Match is the contest around which the greatest amount of interest centers. The result of the 100 shots is to designate the champion. Last year Mike Dorrier, the present champion under the Sportsmen's Association's auspices, did not complete his winning total of 2,421 until the last night. This total has already been equaled by R. J. Young, secretary of the New York Rifle Club, an organization that holds its weekly competitions during the winter at Zettler's gallery. Louis Flach has also finished with 2,403. Others have made a very good start and Mr. Young, although sure of a good place on the list, can by no means rest easy until Saturday night comes. Neither Ross nor Dorrier has finished his total, and the result of their efforts is eagerly awaited.

Cincinnati Rifle Association.

CINCINNATI, O., Jan. 9.—The regular weekly practice shoot of the Cincinnati Rifle Association took place to-day. The weather conditions were very poor for good shooting, as it rained all day, and was very foggy at times, all of which made the sighting very difficult. The conditions of the shoots were as usual, viz., strictly off-hand, 200yds. range, German ring target. Scores:

	King Target.	Union Target.
Gindele	23 24 21 22 22 18 22 25 20—217	25 21 24—70
Uckotter	21 12 22 12 19 19 22 14 19 19—180	21 21 19—61
Roberts	17 13 22 21 23 17 23 17 18 24—200	21 19 24—64
Drube	17 20 17 11 23 21 20 25 19 23—196	23 18 17—58
Weinheimer	20 16 20 23 17 17 19 20 20 21—193	20 16 13—49
Nestler	21 17 13 25 20 20 22 16 24 20—198	20 17 13—50
Wellinger	23 13 23 20 17 20 23 20 25 20—204	17 23 20—60
Hasenzahl	23 16 21 19 22 20 21 17 20 21—204	21 22 21—64

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shot to be announced here send in notice like the following:

Fixtures.

Jan. 26-27.—Orange Lake, Newburgh, N. Y.—Tournament at Pine Point. Open to all. First day, targets; second day, live birds.
Feb. 15-19.—Hot Springs, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. \$1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.
Feb. 22.—Atchison, Kan.—Tournament of the Atchison Gun Club. Live birds and targets.
Feb. 22.—Buffalo, N. Y.—Invitation target shoot of the Bison Gun Club.
Feb. 22.—Sistersville, W. Va.—Tournament of the Sistersville Rod and Gun Club.
Feb. 22.—Pawling, N. Y.—Tournament of the Pawling Gun Club.
March 15-18.—Utica, N. Y.—Tournament of the Oneida County Sportsmen's Association. Live birds and targets. Open to all. Henry L. Gates, Pres.
March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, \$25, birds extra; \$1,500 guaranteed to the three high guns; \$600, \$500 and \$400; all surplus added.

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.
 April 5-8.—Baltimore, Md.—Annual spring tournament of the Baltimore Shooting Association. Geo. L. Harrison, Sec'y-Treas.
 April 13-15.—Atchison, Kan.—Manufacturers' fourth annual tournament. Added money later. Jack Parker, Manager; Lou Erhardt, Sec'y.
 April 27-28.—Peru, Ind.—Tournament of the Peru Gun Club. J. L. Head, Sec'y.
 May 17-20.—Tournament of the New Jersey State Sportsmen's Association. T. H. Keller, Sec'y.
 May 18-19.—Crawfordsville, Ind.—Tournament of the Crawfordsville Gun Club. C. E. Lacy, Sec'y.
 May 30.—Canajoharie, N. Y.—Decoration Day shoot of the Canajoharie Gun Club. Targets. Charles Weeks, Sec'y.
 June 14-15.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League of Indiana, on the grounds of the Limited Gun Club.
 June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluebirds thrown free of charge. Professionals and manufacturers' agents barred from programme events.
 June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.
 Jan. 26-27.—Elizabeth, N. J.—Tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Immediately after the conclusion of the Elliott-Gilbert match on Saturday last, Brewer approached Gilbert with the idea of arranging a match with him. Gilbert very quietly and very nicely told him that if he wanted to shoot a match with him (Gilbert), all that he had to do was to post a forfeit and challenge for one of the trophies now held by him. Brewer at once said that he didn't want to shoot for any cup, but that he wanted to shoot for a good, big sum in cash. Gilbert's reply was that he was not shooting any matches for money; that he never bet a cent on any of his matches, and that Brewer knew it. This fact is, indeed, very well known. Then Lou Erhardt stepped in and made the following proposition: He promised to post \$250 as a forfeit to bind a side bet of \$1,000 a side that Brewer could not defeat Gilbert in a 100-bird match—that is to say, if Brewer will challenge for either the Du Pont or the Star trophy, Brewer's backers would be accommodated to the extent of a side bet of \$1,000 that their man (Brewer) could not win the trophy. As a sure way to stop all talk, the best plan would be for Mr. Erhardt, or some other backer of Gilbert, to post a forfeit of \$250 to bind such a side bet, making the bet conditional that Brewer challenged Gilbert for one of the trophies. It would not be necessary to leave the forfeit up longer than a couple of weeks, as in that time it could easily be ascertained whether Brewer's backers wanted the match or not. As a matter of course, the match would be shot in Chicago. Our idea in suggesting the above method is to do away with all possible talk on the part of Brewer and his backers in the following line: "If we challenge Gilbert for the cup, we put up \$100 against the cup, and will have to go to Chicago for the match. We also run the chance of not getting a single side bet to help pay expenses if we win." If, on the other hand, Mr. Erhardt or somebody else posts the forfeit, conditionally as above, all chance of such talk is done away with. We might also remark that Chicago is not so much nearer to Spirit Lake, Ia., than it is to New York; and that on John Watson's grounds every man gets a fair shake and good birds to shoot at. Put up or do the other thing. (This applies to everybody, and the shoes fit a whole lot of people).

To "An Old Shooter."—"This slurring remark can be the result only of ignorance regarding the history of this championship emblem, or, perhaps, of indifference to the facts. The Cast-Iron medal is the only trap-shooters' emblem of the American live-bird championship before the public. It was projected by an assemblage of the best trap shots in America, was manufactured for them, has been shot for by them, etc. * * * We reply that, if you are really "an old shooter," will you please look over your back numbers of FOREST AND STREAM (all "old shooters," as well as young ones, read FOREST AND STREAM), and turn to the issue of Oct. 2, 1897, not quite four months ago. In that issue you will find an article headed "Authorized by Grimm;" and in that article you will find what we take to be the full, true and particular account of the birth of the Cast-Iron medal, and its subsequent history up to that time. In another issue, some six weeks later, viz., Nov. 13, you will find a letter signed B. Waters, entitled "On Championships, Historical or Otherwise." You will there find another short resume of the career of the Stove-Lid, as Mr. Hough has styled it. If either we or our friend Mr. Waters are wrong in any particular regarding the history of this trophy, it would be kindness, indeed, to make us acquainted with our error. Awaiting your early reply, we remain, etc. * * * [N. B.—We can supply the above numbers at the usual rate!]

The Boston, Mass., Gun Club, with grounds at Wellington, near the grounds of the Boston Shooting Association, started last week a new series of prize shoots, the series lasting until April 20, shoots taking place every Wednesday, except Feb. 23, until the above date. The conditions governing the "individual shoot" are: Best six scores out of the fourteen shoots to count for prizes; each shoot to be at 21 targets, viz., 10 known, 5 unknown and 3 pairs. For the team match the conditions read: "Each team to consist of two shooters, and each contest of 10 known and 10 unknown; 40 targets to constitute a team score. Any number of teams can enter. In case of absence or sickness, one man can be substituted who is not a member of any other team, but not more than two changes of original team can be used during the entire fourteen shoots, the five best scores to be taken for the prize score. Teams selected before the first shoot. Proxy shooters not allowed when original members of team are present. Team match shot at the handicap distances. In case of ties, preference will be given to persons attending the greatest number of shoots. Final ties decided by shooting one complete score.

C. S. Guthrie, a member of the Herron Hill Gun Club, of Pittsburgh, Pa., and also of the Carteret Club, shot a match on Tuesday last, Jan. 11, with Capt. A. W. Money, of the American E. C. & Schultz Powder Co. The conditions were both men at 30yds., 100 birds per man, Carteret boundary. This boundary is 30yds. and is a wire fence about 18in. high, but the back boundary is an open one and is only about 28yds. from the traps. This makes quite a small space in which to kill fast birds. The scores were 88 to 86 in favor of Guthrie, Capt. Money having to shoot an uphill race from the very start, as he lost his fourth, fifth and seventh birds in quick succession. They were tied two or three times after that, and were still tied at the end of the seventy-eighth round. Then Capt. Money again lost three birds very quickly, his seventy-ninth, eighty-first and eighty-fourth getting away from him. Neither man shot in his best form, but still the birds were very good, although there was no wind to help them.

Most flattering reports come from Hot Springs, Ark., where John J. Sumpter, Jr., is going to hold his big five days' shoot, Feb. 15-19. The first four days are to be devoted to targets, the last day to pigeons. The promoter of this tournament, the Arkansas Traveler—in fact, Sumpter himself—will add \$1,100 in cash to the purses. The \$1,100 will be spread around through the programme in such a manner that it will draw a whole host of shooters to this popular resort. To insure the satisfactory running of this tournament, Mr. Sumpter has secured the services of Jack Parker, the popular tournament manager, and the representative of the Peters Cartridge Co. and King's Smokeless Powder Co. With the "Two Johns," Parker and Sumpter, in double harness, there ought to be nothing lacking to make the tournament run smoothly from start to finish.

The match between Elliott and Gilbert for the Du Pont trophy came off on schedule time, 12:30 P. M., Jan. 15, at Dexter Park, L. I. The match was rather a disappointment, Elliott falling off in his shooting very much in the last 34 birds of the match. At the end of the sixty-sixth round the two men were tied with 63 killed out of the 66. It had been a neck-and-neck race all the way, and it looked likely to finish in a close and exciting manner. Then came a break, and Elliott lost 6 out of his last 34 birds, being ultimately defeated with ease by the score of 96 to 91. Gilbert shot a magnificent race throughout, and finished strongly, often calling forth loud applause by the skillful way in which he handled his hard birds. He bore his newly won honors with a grace that was really refreshing, and he was just the same Fred after the race that he was before he fired a shot on the Dexter Park grounds.

The result of the deliberations of the Interstate Association regarding plans for its target tournaments in 1898, are given elsewhere and will be found full of meat. The barring of paid men and manufacturers' agents from the tournaments of the association will be received with mixed feelings; but we are satisfied that the association is working for the best, and that its action will meet with very general approval. Its recommendations to clubs giving tournaments under its auspices, to vary the monotony of events at unknown angles or at known traps and angles, by introducing a few expert rules events, or some events under the Novelty system, will also, we hope, bear good fruit. We earnestly commend these suggestions of the Interstate Association to the consideration of such clubs as may be chosen by the association for its circuit in 1898.

Irby Bennett, of the W. R. A. Co., made his appearance in this city on Monday morning, Jan. 17, after a long holiday spent in his old stamping ground, Memphis, Tenn. He came to attend a meeting of the tournament committee of the Interstate Association, and also the general meeting of that association called for the above date. Had it not been for these two important meetings, Irby might have been down South yet; and we wouldn't have blamed him a bit, for Memphis isn't half a bad place at any time of the year; just now it's all right. They've no snow there, and they don't have to shovel half a ton of coal a day into the furnace to keep the water pipes from freezing; neither do they have to push the snow off the sidewalks. All of which, etc.

A recent issue of the Albany Evening Journal has the following item in regard to the incorporation of a club that purposes to establish a game preserve in Georgia: "The Sapelo, of New York city, filed a certificate of incorporation with the Secretary of State to-day. The club proposes to establish game preserves in the county of McIntosh, Georgia. One of the directors is Congressman James J. Belden, of Syracuse. The other directors are: Howard S. Robbins, Frederick E. Haight, George Clinton Batcheller and George C. Miller, of New York city; Morris P. Ferris, of Yonkers; James A. Walter, of Darien, Ga.; J. Harper Poor, of Chicago, Ill.; William Armstrong Halsey, of Newark, N. J.; John B. Lord and William H. Nichols, of Brooklyn."

The Bergen County Gun Club, of Hackensack, N. J., announces that it will hold a shoot on Saturday, Feb. 12, for a silver cup donated by the president of the club, Mr. George P. Griffiths. The conditions of the cup race will be as follows: Open to all, no handicap, 50 targets, unknown angles; entrance \$1.50—that is, \$1. for the targets, and 50 cents to go to form a fund for the second, third and fourth high guns, the high man of all taking the cup. The purse thus formed will be divided 50, 30 and 20 per cent. In connection with the cup shoot there will be a programme of other merchandise and sweepstake events provided. In fact, there will be a good all-day shoot at Hackensack on Feb. 12, and it will be managed by E. G. Horton.

Capt. B. A. Bartlett did not make a long stay in this city, returning to his home in Jamestown, N. Y., immediately after the Elliott-Gilbert match. By the way, Capt. Bartlett is quite a second-sight man, fortune-teller and what not; or else he's a good guesser. He can predict the result of a prize-fight accurately, and has given the results of all the big matches at live birds, shot recently, actually naming the correct scores in the second Heikes-Grimm match. Kolla has now written to Bartlett asking for a hint as to the outcome of the Budd-Heikes match for the "stove-lid."

Dr. H. E. Colvin, a prominent member of the Lake Side Rod and Gun Club, of Burlington, Vt., was a spectator at the match for the Du Pont trophy on Saturday last. He had come all the way from Burlington, so he said, to see "some one who can shoot better than I can. I've got to leave home if I want to see such a person!" And he laughed as he said it. How badly Dr. Colvin wanted to see this match may be guessed from the fact that, without an umbrella to shield him, he trusted his silk hat to the Long Island rain, rather than miss the shoot.

The Trap-Shooters' League of Indiana is making preparations for its campaign in 1898. The annual tournament of the league will be held on the grounds of the Limited Gun Club, at Indianapolis, June 14-15. The league has also granted permission to the Peru, Ind., Gun Club to hold a tournament April 27-28, and to the Crawfordsville, Ind., Gun Club to hold a tournament on May 18-19. On looking over the above dates, it will be found that the dates for the annual league shoot, June 14-15, clash somewhat with those arranged for the Cleveland Target Co.'s shoot, June 15-17.

Several friends of E. A. Jackson, of Hackensack, N. J., who was for some time last year secretary of the Bergen County Gun Club, of that place, tendered him a farewell dinner on Saturday night last, Jan. 15. The attendance at the dinner was a proof of the popularity of Mr. Jackson, some seventy-five persons taking part in it. The occasion of the dinner was Mr. Jackson's departure in the near future for the Klondike gold fields, and many hearty good wishes were offered him for his future success in the pursuit of virgin gold in its native haunts.

Secretary P. H. Willey, of the newly organized Danville, N. Y., Gun Club, writes us, under date Jan. 13, as follows: "The Danville Gun Club was organized last evening in the office of Mr. F. Hoffman, by a few congenial spirits who wish to perfect themselves in the art of wing-shooting. The officers elected were: President, J. Bryant; Vice-President, H. Miller; Secretary-Treasurer, P. H. Willey; Capt., E. Frazier. It was decided to hold weekly practice shoots, the first to be held on Jan. 14."

Col. A. G. Courtney, of the Remington Arms Co., is to be found just now somewhere in the vicinity of that company's exhibit in Madison Square Garden. Courtney has not found the winter so far at all uncomfortable; in fact, he says that he's kept so busy taking orders for his company's guns that he's not had time to feel the cold at all up to date. He also stated that the warmth of his greeting in Providence, R. I., about ten days ago, was enough to take the chill off a Dakota blizzard.

Airy Lou Hardt, or Lou Erhardt, who hails from Atchison, Kan., was in Philadelphia on business the latter part of last week. He ran over from that city on Saturday last to witness the race for the Du Pont trophy at Dexter Park. The opinion the boys have of Airy Lou is best shown by the fact that he had to go outside the club house and stand in the rain and pull the traps for just two hours and thirteen minutes! He says that his tournament, April 13-15, will be as good as, if not better than, ever.

The Rockaway Point Rod and Gun Club, otherwise known as "The Cuckoos," held its annual meeting Jan. 12, and elected the following list of officers for 1898: President, L. H. Schortemeier; Vice-President, Gay Sterr; Secretary, John H. W. Fleming; Treasurer, Edward F. Bourke; House Committee, William Wagner, Frank Coleman and J. H. W. Fleming. The members will celebrate their tenth anniversary on Feb. 19 next at the club house, Rockaway Park, L. I.

It will not do to forget that the benefit shoot tendered to Neaf Appar by his Newburgh friends is booming along, nor will it do to forget that it will be held at Orange Lake, Newburgh, N. Y., Jan. 26-27. Ship your shells for both targets and live birds to Neaf Appar, Newburgh, N. Y., and you will find them at Pine Point when you want them, if you ship them soon enough. The list of merchandise prizes for the target shoot on Jan. 26 is growing rapidly, and it begins to look as if there would be plunder for all.

Chief among the events scheduled for John S. Dright's live-bird shoot at Dexter Park, Thursday, Feb. 3, are a 10-bird and a 15-bird handicap. The first is an allowance handicap, the latter an ordinary allowance handicap. We have not the time nor the space now to give the programme a full review; but we may add that, as the shoot is an invitation one, all those who are invited will receive a programme in good time, and will be able to see what Mr. Wright has provided for them.

John L. Winston advises us that he has severed his connection with the Austin Powder Co., of Cleveland, O. It will seem rather strange, at coming tournaments, not to find one's self tripping over shells arranged in cabalistic forms and shapes that forcibly draw attention to the excellence of "Load 147!" In his brief note Mr. Winston does not say what his future course in life is to be, but it is hardly likely that he will quit shooting until his breath leaves his body.

An officer of the Humane Society was present at the match between Gilbert and Elliott on Saturday. Prior to the match he spoke to Elliott in regard to a possible arrest in case he was not a member of an organized gun club. On Elliott's assuring that he was such a member, the match proceeded, and we understand from Mr. Lippack, proprietor of the grounds at Elkwood Park, that the society's agent expressed himself as fully satisfied with the way in which the match was conducted.

W. F. Parker, of Parker Bros., and L. J. Gaines, of the same company, were in town on Monday for the double purpose of attending the meeting of the Interstate Association and viewing the Sportsmen's Exposition. As it is not the football season just now, Mr. Parker's wealth of hair drew down many favorable comments. Mr. Gaines, we are told, has not been in New York for so many years that he had to stick close to the other representative of Parker Bros. to prevent getting lost.

The Pa. Ring, N. Y., Gun Club will hold an all-day shoot on Washington's Birthday, Feb. 22.

The coming tournament of the Baltimore Shooting Association, April 5-8, will be given as usual on the grounds of the association, on the Pimlico road. The tournament will be under the sole management of James B. Malone, the club's manager. Two sets of traps will be used, as in the past, bluebird targets being thrown in all the target events. The programmes are being prepared, and it will not be long before they will be in the hands of the shooters.

The Cleveland Gun Club held a shoot on New Year's Day, with turkeys and ducks as the prizes. A local daily, in speaking of the affair, says: "Most of the members straggled home at night with a big load of winnings. This was notably the case with Mr. Upson, who wended his way homeward with two turkeys and six ducks."

Mr. Ed O. Bower, secretary of the Sistersville, W. Va., Rod and Gun Club, writes as follows: "Because of the very disagreeable weather here on New Year's Day, which interfered very materially with the success of our tournament, we have decided to hold another all-day sweepstake shoot on Feb. 22, and programmes for our Washington's Birthday shoot will be out in a short time."

Mr. H. P. Collins, the representative of the Du Pont Powder Co. in Baltimore, Md., was the referee appointed by the company for the Elliott-Gilbert match on Saturday last. Mr. Collins stood out in the rain, twirled the indicator, watched the result of each shot, and gave his decisions promptly and in a clear voice. As a referee he was a decided success.

Ben O. Bush, of Kalamazoo, Mich., was another who had come a long way from home to take in the Sportsmen's Association's Exposition and the Elliott-Gilbert match. Mr. Bush says that they've had a good season's trap-shooting out in Michigan, more targets having been thrown and more powder burned at the traps in 1897 than in any previous year.

Elmer Shaner has come to town, and will go back happy in the knowledge that he now knows what he has got to do in the tournament line this year. Although he is, as he says, "over a month behind time now," he'll soon pick that up again, and never know that it took any extra hustling to get ready for the target season of 1898.

Elliott protested against shooting the match with Gilbert on Saturday last, Jan. 15, on the plea of "bad weather." We did not think at first that he had made the protest seriously, but we now learn that he did lodge one with Mr. Collins, the referee, and we suppose the Du Pont Powder Co. will have to act upon it.

Paul North, of course, is here, and is talking magautrap and bluebirds to beat the band. He is chipper, however, over the action of the Interstate Association in barring paid men and manufacturers' agents from taking part in the sweepstakes at any tournaments held under its auspices.

Eddie Bingham and Fred Gilbert left for Chicago on Monday afternoon, but promised to be back again in two months to take part in the Great American Handicap. "And there'll be others with us, too," said Eddie. That's good news, and we feel that it is fitting to add: "The more, the merrier."

The Canajoharie Gun Club, of Canajoharie, N. Y., will hold a tournament at targets on May 30, Decoration Day. This Decoration Day shoot has become an annual affair at Canajoharie, and Secretary Charles Weeks writes us that the club will do in 1898 what it did in 1897.

The Elizabeth, N. J., Gun Club will hold a two days' tournament at target and live birds, Jan. 26-27. The first day there will be target sweeps under the management of the club. On the second day there will be live-bird shooting, this part of the tournament being under the management of Eddie Earl.

The forfeits put up by B. A. Bartlett and W. H. Wolstencroft for the match set to come off on Saturday last, Jan. 15, at Holmesburg, Pa., were drawn down by mutual consent, and the match postponed to some future time.

The Bison Gun Club, of Buffalo, N. Y., will hold an invitation all-day shoot at targets on Washington's Birthday, Feb. 22. Secretary Mack, of that club, is now busy with the programme for that shoot.

A. H. King, Bessemer and Wood, all members of the Herroil Hill Gun Club, of Pittsburgh, Pa., tied on 22 each out of 25 live birds, in the second shoot for the club trophy on Jan. 12. On the shoot-off A. H. King won with five straight.

The New York Commercial Advertiser was away ahead of all the other New York dailies in the way in which it handled the Sportsmen's Exposition in its daily reports.

John J. Hollowell will be one of the Northern contingent who will journey to Hot Springs, Ark., to take part in John J. Sumpter's target and live-bird shoot, Feb. 15-19.

Thanks to our Western cotemporary, we now know what "usual form" is not. Being naturally a little modest, we had not looked upon it in that light before.

JAN. 18.

EDWARD BANKS.

The Interstate Association.

Plans for 1898.

The Interstate Association held a meeting of considerable importance on Monday last, Jan. 17, in Madison Square Garden, the meeting being called for that place owing to the Sportsmen's Association bringing all the members of the association together, thus two birds were killed with one stone.

There was a full attendance of members when President Dressel called the meeting to order. Among the subscribers represented were: U. M. C. Co., J. A. H. Dressel; W. R. A. Co., Irby Bennett; Hazard Powder Co., John L. Lequin, secretary of the association; Du Pont Powder Co., E. S. Lenthilhon; American E. C. & Schultz Powder Co., Capt. A. W. Money; Laffin & Rand Powder Co., A. W. Higgins; Tatham & Bros., Charles Tatham; Cleveland Target Co., Paul North; Parker Bros., W. F. Parker. Elmer E. Shaner, manager of the association, was also present, as also were Ed Taylor, of Laffin & Rand; L. J. Gaines, of Parker Bros., and John J. Hollowell, of the U. M. C. Co.

The meeting was called for the purpose of receiving the report of the tournament committee, embodying the views of that committee as to what the association should do in regard to target tournaments during the coming season. There was considerable discussion over the report handed in, but the association finally decided, as recommended, to hold eight or ten target tournaments during the season of 1898, much upon the same lines adopted by it in 1897. There was, however, one important change, a change that we most heartily favor, and which we think will do much to make the tournaments of the association a thorough success, and accomplish the aim of the association, viz., the popularizing of the sport of trap-shooting.

Tournaments for Amateurs Only.

This change is the barring of paid men, manufacturers' agents, or anybody connected with a firm that manufactures powder, guns, shells, ammunition, targets or traps, from taking part in the sweepstakes. All such shooters as are comprised in the foregoing list will be welcome at all times to take part in the tournament, entering any or all events "for birds only." By this means any amateur can come to a shoot, put up his money and shoot against his own kind, but will also have the privilege of shooting at precisely the same kind of targets that his brother expert shoots at, and can thus measure his skill with that of the more expert.

It was also decided to leave the matter of division of purses to the choice of the club holding the tournament, and to urge clubs to embrace in their programmes some variations from unknown angles and known traps and angles, by introducing a sweep or two at expert rules or under the Novelty rule. The latter rule is that where there are five traps as usual, but an additional three traps are also put out in the field, 35yds. beyond the other five traps throwing incomers, everybody will shoot at eight unknown traps, but novices will be placed at 14yds., semi-experts at 16yds., and experts at 18yds. This style of shooting is always very popular with both spectators and shooters, and it bids fair to be one of the features in the coming tournaments of the Interstate Association during the season of 1898. Expert rules are also interesting to watch, and we certainly hope that some of the clubs which propose holding tournaments during 1898 will adopt the suggestions of the Interstate Association in respect to varying the styles of shooting.

A Cordial Invitation to Western Shooters.

At this meeting it was also agreed to issue a cordial written invitation to all the Western shooters who took part in last year's Grand American Handicap, inviting them to come to the Grand American Handicap of 1898 at Elkwood Park, March 22-24, and to bring a friend along with them, promising them at the same time a hearty welcome and a good shoot. It was the sense of the meeting that much of the success of the Grand American Handicap of 1897 was due to the thirty-three shooters who came from beyond the western bank of the Ohio River, and it was felt that their services in this respect should be recognized.

It should be stated that the restrictions placed upon paid men and manufacturers' agents, etc., do not extend to the Grand American Handicap, being intended only for the association's target tournaments.

WESTERN TRAPS.

Hot Springs Midwinter.

CHICAGO, Jan. 12.—Mr. John J. Sumpter, manager of the Hot Springs, Ark., midwinter tournament, writes me very confidently of the success of his shoot, Feb. 15-19. "I am receiving letters from all over the country asking for information," he says, "and you may tell the boys I will stake my reputation on this tournament, and will guarantee that we will have no such weather as was encountered in San Antonio last winter. We never have any real cold weather here, and one or two days are our longest bad spells. For the live-bird handicap I will be able to get enough birds here and at nearby points, so they are bound to be good, not having to be shipped in choked-up coops. Programmes will be out Saturday. Our first event will have 125 entries, sure."

Heikes Wins Again.

At Dayton, O., Jan. 5, Rolla Heikes defeated C. A. Young, of Springfield, O., with a score of 90-84, 100 live birds. During the day some 500 live birds were shot.

Such is Fame.

The Dayton, O., Journal offers its readers the following bit of authentic history while commenting on the victory of its popular Dayton citizen: "To fully appreciate Rolla Heikes's great victory over Grimm, Saturday, it should be remembered that Grimm won the World's Fair championship and big stake with a score of 98 birds, entrance fee \$125, and Bogardus and a dozen others in it. Capt. Bogardus said at that time that Grimm was the hardest man to beat that he had ever shot against."

The New Reporter Vindicated.

I must reconstruct my opinion of the new reporter who covered the tournament, two weeks ago, engineered by the Denver Rifle Club, and participated in by the shooters from Pueblo and other Colorado cities. It seems that members of the local club sought to evade the hostility of the Humane Society by handing out press reports which spoke of the live birds as "targets." In spite of this shrewd, though rather confusing subterfuge, the members of the Humane Society have secured evidence and will prosecute a number of those who took part in the New Year's shoot. This accounts for the "shattering" of the targets by the second barrel in the course of the "rifle" contest. The members of the gun club will fight the case, claiming that at the last session of the Legislature the State law was amended in such a way as to permit the shooting of live birds by a regularly incorporated gun club. The Humane Society claims that this clause is unconstitutional and technically irregular.

Affairs at Kansas City.

Every other man in Kansas City is a pigeon shooter, and the latest thing in gun clubs there is the Veterans' Twelve-Gauge Gun Club, whose early organization is on the list of probabilities. There will be a charter membership of fifteen old-timers, who will continue to be the governing council of the club. The membership outside of this fifteen will be esteemed honorary membership, and will be allowed to shoot, but not to vote. There will be no monthly dues, but monthly shoots will be held, at 25 live birds per man.

The monthly medal shoot of the Stock Yards Gun Club, of Kansas City, was held Jan. 8, handicap shooting. James Frey won the medal with a score of 12 and a favorable handicap, although Stockwell and Kelley were high guns. Score:

G W Stockwell.....111911*2121211-14	E Fletcher.....111101022111011 12
R P Barse.....110111201*21202-11	J W Olander.....200100012100220-7

In Town.

Lou Erhardt, of Atchison, Kan., was in town this week, and has left for New York to see the Gilbert-Elliott race and to attend the Sportsmen's Exposition.

Pine Bluff Gun Club.

CHICAGO, Ill., Jan. 12.—Pine Bluff Gun Club, of Arkansas, held a little live-bird shoot last week on the grounds near the water works, the weather not being very favorable. At 25 birds the scores were: Lloyd 24, Speers 22, Ely 22, Williams 17, Coles 16. At 10 birds, Lloyd and Ely tied on 6, Speers 5, Coles 4. The Clements-Sumpter match for the State medal will be shot on the 19th of this month.

Black River Falls.

On Jan. 5 the Black River Falls Gun Club, of Wisconsin, was organized with the following officers: Dr. J. W. Boisil, President; F. B. Dell, Vice-President; J. G. Forbes, Secretary-Treasurer. All members joining before Jan. 15 will be considered charter members. It is expected that the young club will stir up things a bit in that section of the State.

Milan, Ill.

The Rock Island Gun Club, of Milan, Ill., closed a two days' sweepstake tournament last week. Entry ran as high as 35, among the visitors being George Summerville, of Coal Valley; Will Cropper, of Black Hawk; Messrs. Kelly and Paterson, of Edgington; Brown, Schneider and Day, of Prophetstown, and Albert Miller, of New Boston. High guns for the shoot were: J. O. Paddock, first; A. Henry, second; Lewis, of Davenport, third. The attendance from various river towns was so good that the local men contemplate giving other shoots and pushing their own club contests.

Coal City Shoot.

Coal City Gun Club, of Illinois, gave a little live-bird shoot New Year's Day. Scores: Seven live birds: Sharp 6, Henry Williamson 5, John Shelly 5, D. H. Wilson 5, William Anderson 4, Robert Whorrie 4, John Robinson 3, Charles Barsdorff 1.

Peoria Shoot.

A few of the Peoria cracks got together New Year's Day, with the following scores:

Twenty targets: Charles Doubet 18, C. H. Edwards 9, G. Patton 20, William Sneden 2, Charles Kingsbury 3, Thomas Patton 19, William Kingsbury 12, Owen King 8, Mike Cusack 13, W. P. King 5, H. Edwards 15, Charles Colter 4, F. Stagans 3, J. Draper 12.

Seven live birds: Charles Doubet 3, G. Patton 3, Charles Kingsbury 7, Mike Cusack 5, H. Daly 3.

Sedgwick Shoot.

The Gun Club of Sedgwick, Kan., on Jan. 5 held a little tournament and pulled off a team shoot, in which Sedgwick, Newton and Putnam competed. Visitors from Newton to Sedgwick were Frank Hannum, George Dougan and son, Floyd Hoyt, Charles Swope, Goodwyn Brown, John Greeley, John Hickens, Will Thompson, Amos Graybill and James Fenter, all of whom were so well pleased that they wish to visit Sedgwick again, even if they do get beaten. Newton Gun Club will in all probability hold a shoot Washington's Birthday, and will have the Sedgwick boys as guests, as well as others from Hutchinson, Emporia, Wichita, Cottonwood Falls and other neighboring points. Kansas is a good shooting State, and has a number of cracking good shots. Following were the scores in the town team shoot at Sedgwick, at eight targets per man, for a silver trophy:

Sedgwick—Wiley 8, Elliott 8, Gretcher 7, Giffin 6, Bruce 6, Glover 5, Burgess 4, Kemper 4; total, 48.
Newton—Swope 6, Hoyt 6, Dougan 6, Hickens 5, Hannum 5, Fenter 4, Thompson 2, Greeley 1; total, 35.
Putnam—Lowman 7, Kinzer 7, Moore 6, Brown 6, Milne 4, Brumington 4, Schermerhorn 0; total, 34.

Alpena Election.

The Chase Benjamin Gun Club, of Alpena, Mich., at its annual meeting, elected the following officers for the ensuing year: President, D. D. Hanover; Vice-President, A. T. Kinney; Treasurer, Dr. Blake; Secretary, Will Blackburn.

Live Birds at Wheaton Golf Grounds.

Jan. 14.—There will be a live-bird shoot to-morrow at the grounds of the Chicago Golf Club, at Wheaton, some thirty miles west of the city. The links of the golf club at this pleasant suburb are among the best known in the West, and the country club at Wheaton is the scene of many interesting amateur contests of different sorts. A tidy shooting box has been erected and a full set of King's automatic traps put in place. It is expected that a good, stiff live-bird team will be made up from the membership of the golf players. Among those interested in the shooting are Messrs. Joseph Leiter, J. A. Grier, Watson F. Blair, A. M. Wilson, E. S. Worthington, B. M. Wilson, C. B. Macdonald, E. S. Leiter, Mark Cummings, Fred Keep, William Borden, Arthur Caton, G. A. Schwartz, John A. Logan, Jr.

The talk about holding the Grand American Handicap for 1899 in Chicago has temporarily brought into prominence the grounds of the golf club at Wheaton, which are suggested as being suitable for the purposes of the great tournament. It would not seem in the least likely that the grounds could be secured for this purpose, as the golf club is purely private and amateur in its purposes. Much the same objection, though perhaps not so strenuously

urged, would obtain in the question of the Washington Park Club, whose large and beautiful grounds are located well within the city limits. Watson's Park would hardly offer sufficient accommodations. But Chicago never had anything so big yet that she couldn't swing it.

Chandlerville Shoot.

The Gun Club of Chandlerville, Ill., held a little live-bird shoot last Thursday afternoon. Score, seven live birds: W. W. Dick 6, Harve Hurd 6, L. Spielman 6, Joe Bair 4, J. Feilden 2, J. Metzmaker 5, C. Morgan 3, Ance Baker 5, K. McNeill 2, D. McNeil 3.

Waukegan Club Shoot.

Bad weather made bad attendance at the club shoot of Waukegan, Ill., Gun Club, Jan. 11. Score:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Freezer.....	8	7	8	7	8	8	Barton.....	6	10	10	8	10	10
Bangs.....	4	5	4	5	7	7	J Graves.....	5	9	9	8	7	
Kennedy.....	7	6	8	10	7	9							

Nos. 1 to 3 were at unknown angles; Nos. 4 to 6 were at unknown angles.

Keokuk Annual.

At the annual shoot of the Keokuk, Ia., Gun Club, the following scores were made:

No. 1, 10 targets: Leizy 4, Woodbury 10, Hess 6, Brown 5, Raber 8, Greaves 3, Leindecker 5, Borne 6, Meister 5.

No. 2: Leizy 2, Brown 6, Woodbury 7, Hess 9, Meister 8, Raber 7, Leindecker 5, Greaves 5, Borne 8, Griffey 7.

No. 3, at 10 birds: Brown 8, Woodbury 7, Hess 9, Meister 5, Leizy 3, Greaves 2, Griffey 9, Leindecker 2, Borne 9, Winnard 8.

In the medal shoot, at 20 targets: Brown 16, Woodbury 17, Hess 17, Meister 7, Roos 12, Leindecker 11, Winnard 11, Griffey 12, Borne 16, Raber 10, Leizy 10, Greaves 8. In shoot-off Woodbury broke 5 and Hess 4. This is the third time Woodbury has won the medal, and it is now his own personal property.

Belleville will Join.

At the election of officers of the Independent Gun Club, of Belleville, Ill., the following were chosen: Richard White, President; Gust. Thebus, Vice-President; Jul. Heinemann, Treasurer; Fred Rodenmeyer, Secretary; John Rodenmeyer, John A. Loos, Philip Stroh, Julius Heinemann, Richard White and Fred Rodenmeyer, Executive Board; Bunk Baldwin, First Field Captain; Otto Heinemann, Second Field Captain; John B. Sauerwein, Custodian. The club has decided to join the State Association.

Wisconsin Gun Club.

Wisconsin Gun Club, of Milwaukee, met Jan. 6, with the following scores:

Twenty-five targets, unknown angles: Himmelstein 19, Fisher 19, Farber 21, A. Klabunde 20, Klapinski 16, L. Paul 19, Horlick 12, Fiebrantz 16.

South Side Gun Club.

The prosperous South Side Gun Club, of Milwaukee, held its eighteenth annual meeting Jan. 4, and elected the following officers: President, William C. Holtz; Secretary, F. J. Holtz; Treasurer, C. W. Milbreth; Director for three years, Thos. N. Draught. A special meeting of the club will be held Jan. 25, at which time disposition will be made of about \$2,000 in season prizes for the ensuing year.

Piqua Shoot.

Piqua, O., has no gun club, but is anxious to organize one. A number of the local sportsmen held a live-bird shoot New Year's Day, making the following scores:

Total birds.	Killed.	Total birds.	Killed.		
W C Wooten.....	20	14	W H Grapes.....	10	7
G W Lorimer.....	21	13	H Hallock.....	10	7
J H Lorimer.....	20	10	J Brookhart.....	20	10
J Schomaker.....	18	6	C Grosch.....	20	8
G Kearns.....	12	2	G Haverman.....	10	5
R Hartley.....	10	3	Dr Funderburg.....	20	11
J Purcell.....	15	10	W Peters.....	8	5
E S Lorimer.....	10	4			

Oxford Gun Club.

Oxford Gun Club, of Kansas, held a live-bird shoot Jan. 5, and the entertainment being somewhat novel for that locality, attracted considerable attention. Scores:

Dave Miller 10, Cooley 12, Norris 6, D. B. Miller 6, Collins 9, E. Miller 8, Maggard 8, Bussard 7, Reed 6, Kelsey 7, Alley 5.

Sumner-Leeman at Galena.

At Galena, Kan., on Jan. 6, C. M. Sumner defeated H. D. Leeman with a score of 45 to 41 out of 50 targets, for the Wollgast medal, representing the target championship of southeast Kansas and southwest Missouri.

1206 Boyce Building, Chicago.

Waukegan, Ill.

The Waukegan Gun Club held its regular New Year's Day contests on the club grounds at Waukegan, Ill., Jan. 1, 1898, and while the attendance was not large, a general satisfaction prevailed among those present.

The weather was quite cold and snow covered the ground, though notwithstanding these elements they were kept warm in their work at the traps.

The best average of the day was won by C. Hoffman, with G. Thayer second, and H. A. Bangs only one point behind for third average.

Following are the scores, which were all 10-target events, known angles:

	Per cent		Per cent
Thayer... 10 7 8 .. 9 9 ..	56	Bangs.... 8 6 .. 10 ..	10 85
Kennedy. 8 7 7 6 8 5 7 63		Barton... .. 9 9 ..	8 6 80
Shults... 6 2 .. 3 ..	36	Smith... .. 3 5 5 5 45	
Effenger. 6 2 .. 4 5 ..	42	Stadfeldt. 1 ..	5 7 6 62
Frazier... 6 5 8 10 8 8 77		Graves... .. 7 ..	8 .. 75
Hofmann. 7 .. 9 9 9 10 ..	88		

Audubon Gun Club's December Shoot.

Through some mistake the scores made by the members of the Audubon Gun Club, of Chicago, at its December shoot, were not sent out correctly to the papers. In order that all errors may be rectified, the following accurate report of the scores made on that occasion are given below:

Club event:
Gillespie, 2.....100022122111122-12-2-14
Felton, 2.....022121120222212-13-2-15
Bissell, 2.....1202222222222-14-2-15
Frothingham, 0.....12122202222122-14-0-14
Rice, 3.....22200211212102-12-3-15
Amberg, 2.....01121212222222-12-2-15
Morris, 4.....210221221220002-11-4-15
Hollester, 2.....2111101211111-14-2-15

Morris and Hollester being tied for the November shoot, they shot off that tie, as well as the tie in the above shoot, in the following shoot-off:

Morris, 4.....212210200012221-11-4-15
Hollester, 2.....111212220121111-14-2-15
Felton, 2.....012221212221020-12-2-14
Bissell, 2.....200220
Rice, 3.....0221100
Amberg, 2.....012010

Second tie:
Morris, 4.....121101021201220-11-4-15
Hollester, 2.....2111101211111-14-2-15

Third tie:
Morris, 4.....002222200202121-9-4-13
Hollester, 2.....1112112011111-14-2-15

Thus Hollester wins both the November and December shoots.

CHICAGO, Jan. 10.—The Nottor Gun Club held its weekly shoot on the club grounds, corner Archer and Kedzie avenues, Chicago, on the 9th inst., and it was attended by a fair number, considering the day, which was misty in atmosphere and wet under foot.

The club announces that it will give a grand prize masquerade and ball, on Saturday evening, Feb. 12, at Farking's Hall, 3012 Archer ave., and extends invitation to all members of Cook county clubs.

The next regular shoot of the club will be held on the 23d of this month.

Following are the scores. The race is 25 targets for Du Pont prize:

Wm Wharrie.....	111010011110111101011110-18
G Nottor, Jr.....	1111010111111111111111011-21
A Pugh.....	1111110101111101001111-20
M J Auer.....	110101101111111111110111-20

L Williams.....	01110001010101000110000-11
G Nottor, Sr.....	11101010011100011101111-18
F Nottor.....	1010111100011111111111-20
C Vorkeller.....	100000101000111001100-12
W Skillin.....	0111101101110000011101-16

Jan. 8.—There was a good attendance of shooters at Watson's Park to-day. Among the number were Fred Gilbert, of Spirit Lake, Ia., and C. M. Grimm, of Clear Lake, Ia. The day was fairly warm, with a soft sunlight, while the breeze was from the right quarter.

The ladies, De Maris and Neta, are availing themselves of every opportunity to become proficient with the shotgun, and are to be seen at the park with their guns and shells nearly every week. Neta seems to do better work at live-bird shooting than her husband, who taught her how to shoot. The records for to-day are:

Shot at.	Scored.	Shot at.	Scored.		
F H Carson.....	41	34	Neta.....	20	11
H Brunt.....	41	29	C M Grimm.....	15	14
F S Rice.....	37	21	Dr Shaw.....	15	12
F Gilbert.....	35	34	Comley.....	10	10
Abbott.....	32	21	Goodrich.....	10	7
Hollester.....	30	21	Fish.....	10	7

Eureka Gun Club.

The Eureka Gun Club, of Chicago, held its regular monthly live-bird contest for medals at Watson's Park, Burnside Crossing, Ill., Saturday, Jan. 15. The day opened with a continuous fall of light rain, with snow, and it was generally expected that the attendance would be light on this account, but all were agreeably disappointed and surprised to find the number of participants equal in average with those on days of shoots formerly held, when the conditions were more favorable.

The ground was covered with snow, the sky overcast with slight quartering wind; consequently light-colored birds were at times difficult to find in sighting over the gun barrels, but while the birds of to-day were more mixed and were not as hard as in the previous shoot, some good kills were made. Among those who participated as our guests were Jessie Pumphrey, of Columbus, O., and Lou Harrison, of Minneapolis, Minn.; Dr. Shaw and De Maris, of this city.

The following are detailed scores of the classified medal contest. 10 live birds, 30yds. rise:

Hoyt.....	2220111111-9	I. H. Goodrich.....	2222220022-8
E S Rice.....	22212220-8	C Antoine.....	2122201221-9
F P Lord.....	12121222-10	J Glover.....	1222212122-10
Ed Steck.....	202122221-9	Neta.....	12020220-6

* Indicates back score shot. † Indicates visitor.

Watson's Park.

John Watson announces that he will open his park at Burnside Crossing, Ill., on Jan. 22, 1898, to sweepstake and practice shooting, and any person attending may shoot in sweeps or for the price of birds.

He has been and will continue trapping birds in all practice and club shoots, at 15 cents per bird.

Stony Island Gun Club.

Jan. 15.—The Stony Island Gun Club, with grounds at Ninety-fifth street and Stony Island avenue, held its medal shoot to-day. The conditions were 25 targets, handicap allowance of misses as breaks. J. Porter won the medal with 19 breaks and 4 allowance, a total of 23

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CONGRESS AND THE GAME.

SENATOR TELLER last week introduced his game measure to regulate the transportation of game. It is in effect the bill which was commented upon in our issue of Oct. 23, when we pointed out that as then worded it appeared to be based upon a mistaken premise that the individual States were powerless, because lacking constitutional authority, to enact and enforce non-export game laws. Doubtless Senator Teller has given careful consideration to this phase of the question, and has concluded that his bill comes within the jurisdiction of Congress. We are led to infer as much from the altered text. If it shall be demonstrated that Congress may thus give into the control of the Interstate Commerce Commission the regulation of traffic in game between the States, Senator Teller's measure will have a far-reaching influence in supplementing the non-export laws now on the statute books. Its enforcement will do more for game preservation than almost any other practicable expedient conceivable, for it will mean carrying out the principle of stopping the sale of game; and it will cut off from the New York, Boston and other markets their illicit supplies of deer, grouse and quail which are now transported in such tremendous volume, in violation of the laws of the States where the game is killed. We trust that Congress may take early action in the matter. The existence of such a law would give heart to the workers in the cause the country over. The full text of the measure follows:

S. 3257. In the Senate of the United States, Jan. 18, 1898, Mr. Teller introduced the following bill, which was read twice and referred to the Committee on Interstate Commerce: A Bill to regulate the shipment of wild game from one State to another:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be unlawful for any railroad company, express company or other common carrier, or its officers, agents or servants, to receive for shipment or transportation, or for any person or corporation to ship or offer to any common carrier for shipment, from any place within any of the States or Territories of the United States or District of Columbia, to any place without any of the States or Territories of the United States or District of Columbia, or to any foreign country, for sale, for market, or for storage, any moose, elk, deer, buffalo or bison, caribou, antelope, mountain sheep or mountain goats, or any parts thereof, or any wild turkey, prairie chicken or pinnated grouse, sage hen, Mongolian or ring-neck pheasant, grouse, pheasant or partridge, quail, wild goose, duck, brant, swan, woodcock, snipe, rail, plover or other water-fowl; provided, that nothing herein contained shall prohibit the shipment of any wild game, animals or birds, or parts of the same, that may be expressly authorized or permitted by the laws of the State in and from which the shipment is made, if the same is conspicuously labeled "wild game," on which label shall be stated the kind and quantity of said wild game, animals or parts of the same, and the date and place of shipment, and the name or names of both the consignor and the consignee, a copy of which label shall be kept on file by the common carrier at the place from which said wild game, animals or birds, or parts of same, are shipped.

Sec. 2. That any person or corporation guilty of violating the provision of this section shall, upon conviction, be punished as provided in section 10 of the act to regulate interstate commerce; and the Interstate Commerce Commission is hereby given jurisdiction in the matter of the transportation of game as in other matters affecting traffic between the States.

FADS AND FIELD SPORTS.

TO THOSE creatures of spare money, idle moments, originality and energy called fads, some wise and useful, others silly and worthless, much credit is due for useful improvement in the wholesome diversions and recreations of social life, and in the improvement of the mechanics and arts, though there are people who consider all fads as being of idle purpose, frivolous things on which energy is frittered away, or on which both time and money are idly expended if the fads be expensive.

Nevertheless the restless genius of the faddist has done much for the progress of the world in general and for the sporting world in particular. He is often a pioneer in social or mechanical progress. He investigates and experiments and practices the fad which appeals to his peculiar bent of mind, though as in all other interests of life there will be a large part whimsical, or freakish, or useless, so far as public benefit is concerned.

Things novel and peculiar are generally considered as being fads, though they may possess genuine merit, and having it the public may be slow to give it recognition and approval; on the other hand, the public may go to an extreme in its enthusiasm and use of what at first was considered a fad, for it is a plodding world, one so from necessity and habit, moving in conventional channels and acting in set forms, so that it has but little time

for entertaining novelties which are not tried and proved useful; if the novelty is so proved, public approbation may go to excess.

The public, once it adopts a fad, makes a general use and application of it regardless of its special value in a limited field, and this is none the less true of the sporting world, in which fads flourish notably well. The use of full-choke guns, for instance, a few years since for all kinds of shooting, whether of open or covert, became general, and indeed has not yet entirely passed away, though the special fitness of the choke-bore and cylinder-bore guns in their special fields of usefulness are now better understood and recognized.

The swift and wide-ranging dog, of stylish dash, whose speed was at the highest whether working in open or covert, was a popular public fad for many years, and fashion decreed that such dogs, if setters, must be black, white and tan, and it happened that many well-bred setter puppies were killed for the one reason that they were not of that color. The back-wash of that silly fad still lingers. There are a few men who still believe or affect to believe that great pace is the proper thing for every kind of field shooting, regardless of conditions and intelligent adaptation of means to ends, and that black, white and tan constitute the only true and useful color.

To enumerate all the fads of the sporting world would be to make a minute criticism on the transformation stages of progress, yet out of all the fads something of permanent value has been contributed by each. However much a thing of true merit may be misapplied for a time, there is always a tendency to a recovery of sensible application and a resulting and lasting benefit from the thorough investigation and experience.

SNAP SHOTS.

THE German expression "What's loose?" has point now as to the business management of New York's fish and game interests. The Legislature has spent the sum of \$41,858.48 on the first annual report of the Fisheries, Game and Forestry Commission, issued last year as the most expensive single volume ever published by the State, and probably by any State. And while the fortunate recipients of this \$42,000 work of art have been admiring its colored pictures, the Commission has been suspending from duty some of its most efficient game protectors, because there is no money in the treasury to pay them. Suits have been abandoned, perfectly good cases have been thrown up, law violators have been granted immunity, and breaking of the game laws goes on unchecked, because the money which the Legislature should have devoted to protective purposes has been squandered in needless expenditures. If the reports which are to follow are to be kept up to the expansive and expensive character of the last one, there will come a time when it will cost so much to report what has been done that there will be nothing left with which to do anything to be reported.

The deferring of action by the President as to the appointment of the individual who the other day sat himself down in the chair of the Commissioner, to see how the promised place would suit him, prompts indulgence of a hope that Mr. McKinley may have reconsidered his intention of delivering the United States Fish Commission over to an unworthy because ignorant and legally disqualified political appointee. This is to say that we trust that the President may yet resolve in this matter to take the only course which is open to him with honor and name for the place a person fitted by knowledge, acquirements and training to fill it. In such a momentous concern as this the Chief Executive should comply with the letter and the spirit of the statute. The law expressly says that the Commissioner shall be "a person of scientific and practical acquaintance with the fish and fisheries." It has been given out by Senator Elkins that his man has been for several months studying up on fishculture, and that he is bright and will soon learn; and therefore is qualified as the law directs. To have kept silence would have been a more decent course. Senator Elkins knows that studying up on fishculture in no way qualifies within the meaning of the law; he knows that the President knows this; and he knows that the President knows that the public knows it. To talk as he does about "reading up" is an insult to the President and an affront to the people. It is an insult to the President because its effect is to make the President a party

with him to the contemptuous derision and flouting of the law. Mr. McKinley may have made an injudicious promise of the Fish Commissionership to the West Virginia Senator, as Herod promised to the daughter of Herodias the head of John the Baptist on a charger, and like Herod, although regretting his oath, he may consider himself bound to fulfill it. He may feel himself under obligations, for personal reasons, to deliver over the Commission as spoils, but it is inconceivable that he should share the impudent flippancy exhibited by Mr. Elkins, and willingly be made to pose with him in any such biting of the thumb at the public.

When we have at Washington in the highest departments of the Government such examples of flagrant disregard of law and the people's rights in connection with fishing interests, we should not expect a high code of morals to govern mere private citizens who are prompted by greed to defy the game laws. There is really little distinction in morals between the Fish Commission grabbing by a United States Senator and the Jackson's Hole elk grabbing by a New York speculator in live game. The only remedy in either case is the arousing of a public sentiment which shall protest so vigorously that the grabbers may be frightened into dropping their plunder, and those in authority may be frightened into doing their plain duty. In letters just received from Jackson's Hole correspondents tell us that prompted by the protests the FOREST AND STREAM has made against the unlawful capture and shipping of elk from the valley, petitions have been circulated, public sentiment expressed, and such agitation made as promises to put an end to the illicit traffic. It appears that Manager Glidden of the Moose Head Ranch, in addition to having secured from the authorities special permission to violate the laws of the State, succeeded in some way in having himself appointed a deputy game warden—a delightful modern instance of the fox made gooseherd. This was too much for the Jackson people, who united in a petition to the Governor, praying that the Glidden special permits to violate the anti-elk-shipping law might be revoked and his commission as deputy game warden rescinded. It was pointed out that he was not a resident of the State, and that a person who was engaged in the capture of live game for export might be assumed under the ordinary processes of the human composition to administer his office in a way more useful to him and his game enterprises than to the people of Wyoming. Protest and petition have done their work. It was currently reported at the Sportsmen's Exposition last week that papers were served upon Mr. Glidden in the Madison Square Garden, canceling both his warden commission and his special permit to violate the Wyoming game law. Whether the papers were served is immaterial, since a sentiment has been aroused in Jackson's Hole which is not likely to permit further illegal export of game.

When one comes to think of it, what a travesty it is that the Governor of Wyoming should be among the signers of a call for a national sportsmen's association, with headquarters in far-away New York. Here is the executive of a Western State, by whose consent or in contempt of whose authority a live game speculator succeeds in open, advertised and boastfully heralded violation of the laws; here is an executive who cannot or does not protect the game in his own State, assuming to shoulder with others the easier task of protecting the game of the entire continent.

We print elsewhere Secretary Arthur F. Rice's report of the formation of a League of American Sportsmen. The programme calls for a national organization, with State divisions, game wardens, secretary-treasurers and deputy wardens in every county of every State, who are to be awarded \$10 for every conviction secured, the funds for this purpose to come presumably from the membership fee of a dollar, exacted of everybody except ministers and teachers. Estimates have been published that the organization will have \$100,000 in the treasury the first year. The scheme is a beautiful one on paper. There is perennial glamour about this visionary plan of a national sportsmen's association. But no practical accomplishment has ever been achieved by any of the movements of this kind, further than to promote personal interests of individuals connected with them. There is no reason to believe that in this respect the new organization will differ from the others.

The Sportsman Tourist.

An Idyl of the Marsh.

FAR as the vision extends the widespread marsh stretches outward, Level, without any break, and dotted thickly with tule.

Sometimes, so quiet and calm, a peaceful scene it is truly:
Cattle are grazing about, all eating succulent rushes;
Wildfowl now cleaving the air on swiftly vibrating pinions,
Now, with their sturdy wings set, they quickly drop to the water
Shining below them in ponds, where lush the smart-weed is grow-
ing.

Naught to be heard save the call a flock of geese in the distance
Give, as they wheel through the air, in slowly narrowing circles.

Then, when the wild tempest howls, and strident Boreas blusters,
Scurrying clouds overhead, and sending cattle to shelter,
Over the noise of the storm the flute-like call of the widgeon
Causes a thrill of delight, and warms the heart of the gunner
Who, in his blind by the pond, is snug and warily hidden,
Chafing his hands to keep warm (the sun has newly but risen).

Out on the water close by, as though but quietly feeding,
Floats there the flock of decoys, all painted, hollow, unheeding;
Though they bring death to their kind, who, trust the fine old drake
leading,

Swing in too close to the blind. Alas! for drake and his fellow.
Sharp cracks the nitro; and then, with paddles franticly fanning,
There, on their backs, lie the drakes, with green heads limp on the
water.

Happy the fowler is then, and softly smooths out the feathers;
Watching, alert all the while, lest, haply, others are passing.

Lone there he is with his dog, a brave brown spaniel so faithful,
Stanch, and a true little friend, who loves the voice of his master.

Note now the hoot of the owl; the distant whistle of widgeon;
Raucous the voice of the crane; the trump of swan passing over.
Hoarse is the voice of the fowl; their gabble loud and unceasing;
Eerie the voice of the marsh, yet dear to every fowler.

CULPEPPER.

LOS ANGELES, Cal.

How the Doctor Shot his Deer.

"ISN'T that a beauty!" exclaimed the Doctor, as he pulled the expensive new repeater from its case and laid it across his knee. "I bought this for the express purpose of killing a deer this trip. I've been coming up to this country every fall for three years, and while you fellows invariably get your mutton, the only real good shot I've had, the darned old rifle you loaned me to shoot with wouldn't work. Just give me a glimpse of a deer, and if it's a fair show, Paul, the gun's yours if I don't get my meat."

Paul Tebo, the half-blood Chippewa Indian to whom this was principally addressed, had been cook and guide for our regular fall outing party for several years, and his eyes sparkled as he handled the costly firearm. "You see, you get chance this time sure! Deer plenty this fall; you want more give me gun if you get deer than if you don't," he replied, as he laced up his cruiser boots preparatory to starting out on the day's hunt. As Paul had said, the deer were plenty, but the Doctor's luck was against him, as usual, for the deer seldom took the run-way he was stationed on, and although he caught occasional glimpses of their white flags flitting over the clearings or through the woods, they disappeared before he could get a shot. He heard his companions' rifles speak many times, often followed by an exultant shout, but not once did that new rifle come into use. The last day of our stay was at hand. Seven deer had been killed by the party, and the Doctor swore a good, round oath that he would never, never come to Wisconsin on a hunting trip again.

"You want deer bad, I get you one sure," said Paul. "How in thunder can I when we break camp at day-break!" roared the man of pills. "Here you've put me on the best runways and given me every possible chance. I tell you I'm hoodooed. A deer won't come within a thousand rods of me, no use talking; I'll shoot porcupines after this, even if I know a deer is coming toward me."

"Never mind; come with me after supper, and I show you," said Paul, as he placed a partridge stew on the table. Accordingly, about 7 o'clock, with our heavy coats, as it grew dark early this time of the year and the nights were cold, the Doctor, Tebo and myself set off through the woods back of the camp. We were rather mystified, as Tebo carried no headlight and was very noncommittal—a habit of his when his mind was set on a fixed purpose.

Across a deep ravine, through an old chopping and over a small hill, we followed the trail with only the dim outlines of Tebo to guide us along—the Doctor, with his 220lbs. avoirdupois, stumbling heavily every few rods; as he would catch his feet in the tangled underbrush, grunting and occasionally muttering his regrets at having started on such an unheard of expedition. At last, panting with the brisk pace set by the guide, we arrived at a small clearing of about one acre. Here our suspense as to the modus operandi of getting the Doctor a deer was ended. Strong cleats nailed for a ladder on a large pine were to be seen, and enabled us with mighty hauling and boosting to get the Doctor to a small platform built on three projecting branches about 20ft. from the ground. The Doctor rubbed his barked shins and carefully tested the platform before daring to squat down between Tebo and myself, and rest his broad back against the main trunk of the tree.

A short distance in the clearing from our station an old log, bored with many holes, was soon revealed to us by the moon, which now was rising in silent splendor over the black foliage, and lit up the near surroundings with its mellow light.

The black earth around the log was disturbed, showing the deer lick was well patronized, and that the salt from the log having been exhausted, the deer had torn up the dirt with their sharp feet to get at that which had been washed by the rains into the ground. Our silent vigil

began. An occasional whisper passed between us, but that was all.

Afar off a whippoorwill unceasingly called its mate. An hour passed—it seemed like five—my limbs were stiff—when, hark! the snap of a twig is heard, an animal makes its presence known. The Doctor reaches for the rifle, Tebo whispers something to him, and pulling back the trigger before he cocks the piece, so it will give forth no warning sound, hands it to the Doctor. Again the snap of a twig is heard, and this time near at hand. Although familiar with most kinds of hunting, this waiting in suspense so long after dark in the stillness of the forest has such an effect upon me that every pulsation of my heart, it seems, must alarm the approaching, unsuspecting deer. A low, guttural word is heard from Tebo, as what in the moonlight appears a bear, but in reality is a large porcupine, ambles across the clearing. The Doctor gives vent to a heavy sigh as he lowers the hammer of his rifle, and we settle ourselves for another long period of waiting.

I count the whippoorwill's repetition, to pass away the time. The last of my fingers is ready to register the hundredth tally making a thousand, when, again—hark! Was it a twig broken, or only my imagination? Tebo shifts the rifle to a handy position, and I knew it was animal life. The Doctor's chance must come soon, as the tall pines on the west of the clearing are commencing to throw their shadows toward the center, and soon the lick will be in darkness. Patience has its reward, and amply was I repaid for keeping such a cramped position for hours, by the sight that soon met my eyes. Something was moving in the undergrowth to the east, for it swayed a trifle as into the clearing and bright moonlight stepped a magnificent buck. Nature's bravest liar, the moon, may have been responsible for part of the deception, for I would have sworn it was an elk. Broad, spreading antlers, head erect and ears pushed forward he hesitated a moment and gave a whistle that was startling in the deathlike stillness. Had he scented us? Evidently not, or his craving for salt overcame any misgivings he may have had, for he worked his way toward the lick, halting every few steps and looking back for—yes, more. A sleek doe and half-grown fawn were timidly following. A family complete! The doe, with her dainty steps, and a caress of her offspring, showing her heart to be as tender as her haunch. Magnificent scenery and works of art sink into insignificance as I recall so vividly to my mind the scene as it appeared to me then. With wide-open eyes and mouth I had gazed, hardly daring to breathe, and utterly forgetful of my companions. The movement of Tebo, as he again noiselessly cocked the rifle and handed it to the Doctor, recalled me to my surroundings. I realized that mine was a passive part, and a quick feeling of gratitude filled me, that I was not expected to send a messenger of death into that noble family now ranged before the lick, side by side. Every smallest detail was apparent to me. The utter absence of fear in the deer, the gleam of triumph or anticipation in Tebo's face, the tremor of the Doctor's hand as he raised to his shoulder the new rifle that was now to fulfill its mission! His muscles were contracted and his arm now steady, when, slowly drawing the rifle back over his shoulder until the hammer was close to his eye, with a superhuman effort he cast it from him toward the deer and shouted at the top of his voice, "Bang!"

The rifle belongs to the Chippewa.

AUGUSTUS D. CURTIS.

Just About a Boy.—III.

"SAY, want to go 'n' git some wile honey?" said the boy one day in the fall, as he rode up to the barn door. "Know where they's a dandy tree juss full of honey. Found it up river yesterday when I was tinkerin' round there with the boat. Lots of squirrels up there too, 'n' we can have a reg'lar picnic if we start early. I'll go home and hitch up, 'n' you get ready, will yeh?"

"Yes, I guess I can fix it," I answered. "You get your things together and be back in an hour, and I will be ready."

"All right," he said, and was away like the wind on his black pony, a little beast that seemed to enjoy the boy's company as well as I did, by the way.

In an hour he drove up to the gate, and a drive of eight miles brought us to the creek a half mile west of the river and opposite the point we wished to reach on the main road.

Here we stopped, and began to get ready for our walk. I was busy putting together what we wanted, and did not notice the boy for a few minutes, during which time he had unhitched the pony and dragged the pony up by the fence, out of the way of passing teams. Then the pony was stripped and a halter with a picket line attached put on him and the other end anchored to the fence, so he could feed without reaching the road.

Then I saw a queer proceeding. The boy took the buggy cushion, whip, harness and everything movable out of the buggy and piled them in a heap. Next he took his big belt knife and went to a thick patch of sumac bushes that grew about waist high on the other side of the road. Carefully he cut away these bushes in spots, cutting the stems close to the ground and piling the bushes carefully at one side. When he had several little clearings made in the thicket, he brought the harness and other things over and deposited them, a few in each place that he had cleared.

I stood silently watching him, and he turned and saw me.

"Got to hide this truck," he remarked. "If I didn't, somebody 'd steal it while we wuz gone; so I juss fix it so they never know it's here."

While he said this he was dropping the bushes back where they had stood before, each one upright as it had grown, and looking as though it had never been disturbed. Where they showed an inclination to lop over, he stuck one or two into the ground and let them support the others.

"Come on," he said, when he had finished. "Less get some squirrels." I glanced back at the little thicket now growing as it had been before, apparently, and I could

not but admire the young mind that had figured out so easily that no one would ever think of looking under a growing thicket for plunder.

His protection and reliance were in nature, and he knew nature's features so well that he counterfeited naturalness, and knew the human animals who might pass that way would never know the difference, that his cut-off bushes would not wilt before we got back, and that he would find his property just as safe as though under lock and key.

We climbed the fence and wandered among a growth of oak and "pig nut" trees until a squirrel scurried up a big oak, and then something else happened.

I had always circled a tree when two were hunting squirrels in company, but the boy said: "Hol' on, I'll show you how I get 'em when I'm alone."

He picked up a piece of a broken limb and walked to within 30 or 40ft. of the tree, then cocked his shotgun and held it in his left hand. With the other he hurled the stick as far as he could on the opposite side of the tree, and before it struck the ground he had his gun at his shoulder waiting for the squirrel.

When the limb struck the dead leaves it made a racket on the ground, and the squirrel swung around the trunk on our side. Instantly there was a flash, and down he came, dead as a mackerel.

"Yeh see, the squirrel gets scared at the noise 'n' pops around the tree, watchin' back, 'n' never stops to think about th' man 'at he saw comin' when he run up there," said the boy as he gathered up his kill and put up its head through a loop of string on his belt. "They ain't got a lick o' sense, anyhow," he continued. "Now you see that bunch o' leaves over 'n' that little oak with the grapevine in? Well, that's a summer's nest, 'n' most likely we'll find a squirrel there. He ain't got sense enough to run when he hears the gun. Less go 'n' get him."

We went to the tree indicated, and the boy said: "Now you get ready 'n' I'll get him up."

I stood back, and the boy walked to the vine, jerked it sharply two or three times, and, sure enough, out popped a squirrel, which fell to my gun.

We wandered through the woods until late in the afternoon, killing several squirrels and some quail, but I saw no sign of bees or a bee tree, so I finally asked him where his bees were.

"O, 'cros't the river. We won't bother 'em till dark, 'cause we don't want to kill 'em, and they'd sting us plenty in daylight," he answered. "I'll show you how I work the trick when it gets dark, so less go back to the wagon 'n' get the things 'n' a bite to eat. Won't take long to get the honey when the time comes, 'n' we got to take the axe 'n' pails when we go, 'n' we'll leave our game at the wagon."

When darkness came we got the honey—but that is another story for another day.

EL COMANCHO.

Newfoundland.

Man hath no power in all this glorious work:
The hand that built the firmament hath heaved
And smoothed these verdant swells; and sown their slopes
With herbage, planted them with island groves,
And hedged them round with forests. Fitting floor
For the magnificent temple of the sky—
With flowers whose glory and whose multitude
Rivals the constellations!

—W. C. Bryant.

SOME of the great dailies of the American continent have lately got into the habit of referring to our island as the "sportsman's paradise." This is a very appropriate title, as nowhere is there greater sport to be had for either rod or rifle, and for many years to come it will be the favorite resort of those sportsmen who are fast learning of our advantages in this respect.

Here we have a large island (the tenth largest on the globe), about 42,000 square miles in extent, and from the nature of its soil and climate affording food and cover for numberless herds of caribou and other large game, not to talk of the countless flocks of birds, both indigenous and migratory, including ptarmigan or wood partridge, plover, curlew, snipe, wild geese, black duck, and an endless variety of sea birds.

If it be considered that it is only very recently that the interior of the island has been opened up, and that our small population has lived along the waterline since the settlement of the country—over 300 years ago—and that up to very lately there was not a single village five miles from the salt water, the reason that our game has gone on increasing and multiplying will be very apparent. The great bulk of our people by the very nature of their occupation were debarred from taking any part in the pleasures of the chase, and further the man who had killed a hundred or two quintals of codfish and caught many of them by hand, or who had "trode the bloody pans" and fought dog-hoods and old harp seals, with an occasional polar bear, lost his relish for the smaller and milder game that the sportsmen effect. Hence it is that up to very recently generations of caribou, reindeer and other game lived within a few miles of man's habitation, fulfilled the laws of their existence and passed away without ever having seen a human being.

But all this has of late been changed. The last few years we have seen in St. Johns—the chief town of the island—choice venison selling for a few cents per pound. It has been so plentiful at times during late years that it could not be disposed of at any price, till it was unfit for human food and was then thrown over the wharves. A celebrated case happened a year or two ago when a man up the west coast of the island was prosecuted by the authorities for selling venison to the French for bait for the carrying on of the codfishery. Fortunately this indiscriminate slaughter took place near the sea coast and not in the interior of the island, and it only took place at the season when the herds were on their annual migrations north or south, so that it is safe to assume that while the immense deer parks in the interior have as yet remained undisturbed, on the whole the great bulk of the caribou and reindeer have come to no harm. Now that the railway runs through the interior and opens up miles of country till now inaccessible, the Legislature has enacted the necessary

legislation prohibiting the wholesale slaughter of our game.

For years this has been a "close preserve" for a few English naval officers and their friends, and while they enjoyed first-class sport the country reaped very little benefit, and in one notable instance the country, its climate, resources and even the very game that afforded such sport year after year were all basely libelled in the leading English newspapers by one who had received nothing but the warmest hospitality from our people. Just now the eyes of the outside world are being opened to our magnificent resources, and during the next few years we will certainly have increasing numbers of tourists visiting our shores.

The great trouble heretofore has been the expense of visiting the island, added to which was the uncertainty of the means of transit and the dreaded sea voyage, with its accompaniments of danger from fog and ice. These difficulties are completely obviated, or at least minimized, by the splendid facilities now at hand. With a tri-weekly connection with the neighboring continent—the palace steamship Bruce covering the distance in about five hours—and with railway accommodations of the latest and most approved style, including Pullman palace, dining and sleeping cars, and all this at very reasonable rates, a great influx of the wealthy and leisure classes, both of America and Great Britain, will certainly take place during the next few years.

The climate in summer when tempered by the balmy sea breezes is bracing and health-giving, and when compared with the torrid heat of countries in the same latitude in America and Europe, the wonder is that thousands of health and pleasure-seekers have not sought it long ago. The scenery is such as the poet sings of in our opening quotation, and nowhere will you find a nobler or a lovelier scene than this.

Vast deer parks there are in the interior as yet untrod-den by the foot of man. The rivers and lakes teem with the gamiest salmon and large mud and salt-water trout, and visitors invariably testify that the people are kind and hospitable. The rate of living is comparatively low. And "when the wind sweeps the broad forest in its summer prime, as when some master hand exulting sweeps the keys of some great organ," and "the trees give forth the music of the woodland depths, a hymn of gladness and of thanks," then may Newfoundland be not inaptly styled the "sportsman's paradise." W. J. CARROLL.

Evening on the James.

LIGHT air, barely sufficient to give steerage way, wafts the yacht over the waters.

Wing-and-wing, she glides smoothly onward, the main sheet just skimming the surface, shattering the clear-cut reflection of boom and sail into crinkling fragments as it trails.

At intervals comes a puff of renewed energy, to which the canvas responds, swinging the boom ponderously forward, to bring up suddenly with heavy jar and rattle of tackle, as it snaps the trailing ropes from the water.

For an instant I catch the glisten of bright drops flung from the now tense and rigid sheet. Anon it is sagging, the boom swings slowly back, till presently a soft purling tells me it is trailing again.

We are slipping quietly along to our anchorage, within a stone's throw of the ruins of the old church at Jamestown.

No one speaks, the scene is too lovely for word-disturbance.

Cap leaves the wheel to join me at the rail, where together we watch the sunset.

The western sky is aflame with color, the farther shore, with its heavy fringe of cypress, standing out inky black below.

Abreast of us the island is bathed in a flood of mellow orange that touches and glows here and there upon the huge trunks of the forest trees. Somewhere among the tangled vines that hang above the quiet graves near the ruins a cardinal lingers to flute a vesper hymn.

His clear notes, crisp and true, ring on the still air, and lend such exquisite charm to the evening stillness that when they cease our breathing seems to have insensibly deepened.

"Forward there?" Cap's voice startles me with its sudden inquiry.

"Ready, sir!" comes the response.

A pause as the echoes die—

"Let go!" and the anchor plunges to rest.

WILMOT TOWNSEND.

Natural History.

Gift to Yale University.

At a meeting of the corporation of Yale University, held Jan. 13, Prof. O. C. Marsh formally presented to the University the valuable scientific collections belonging to him, and now and for a long time in the Peabody Museum. The collections thus presented—six in number—are described by Prof. Marsh in his letter to the corporation as follows:

"These various collections, now deposited in the Peabody Museum in New Haven, include six of special importance, which may be briefly described as follows:

"(1) The Collection of Vertebrate Fossils.—This is the most important and valuable of all, as it is very extensive, contains a very large number of type specimens, many of them unique, and is widely known from the descriptions already published. In extinct mammals, birds and reptiles of North America this series stands pre-eminent.

"This collection was pronounced by Huxley, who examined it with care in 1876, to be surpassed by no other in the world. Darwin, in 1878, expressed a strong desire to visit America for the sole purpose of seeing this collection. Since then it has been more than doubled in size and value, and still holds first rank. The bulk of this collection has been secured in my Western explorations, which have extended over a period of nearly

thirty years, during which I have crossed the Rocky Mountains twenty-seven times.

"(2) The Collection of Fossil Footprints.—These specimens are mainly from the Connecticut Valley, and thus have a special local interest. They also form one of the most extensive and complete collections of the kind in this country, if not the most valuable of all.

"(3) The Collection of Invertebrate Fossils.—This includes a large number of interesting specimens from many formations and localities, both in this country and in Europe. Some of these fossils I collected myself, but the greater number were secured by purchase. Among the series of specimens especially valuable may be mentioned several thousand from the famous Mazon Creek locality in Illinois; a very extensive collection of crinoids from Crawfordsville in Indiana; the largest collection of nearly entire trilobites yet discovered, and one of the rarest series of Silurian sponges known, including important type specimens.

"(4) The Collection of Recent Osteology.—This is believed to be the most complete collection in this country for purposes of study. I have made special efforts for many years to secure the skeletons of rare existing vertebrates from every part of the world, particularly of mammals, birds and reptiles. The collection is especially rich in anthropoid apes, the gorillas being represented by no less than thirteen individuals, and the other genera by rare characteristic specimens.

"(5) The Collection of American Archeology and Ethnology.—This collection is the best in the country in several branches of the science, being particularly rich in Central American antiquities, several thousand specimens in number and many of them unique. Some of these I obtained myself in Central America, and among the others is the famous de Zeltner collection, rich in gold ornaments, which I secured by purchase. The specimens from Mexico are also of great interest, and the series is a representative one. It includes the well-known Skilton collection.

"(6) The Collection of Minerals.—This is a limited collection, but contains many valuable specimens, among them probably the most interesting series known of Nova Scotian zeolites. These were mainly collected by myself before I graduated at Yale during six expeditions to Nova Scotia.

"The three principal collections in the above series, numbered 1, 4 and 5, have practically no other representatives at Yale, and hence their importance to this institution.

"Besides the six main collections named, I have several others of less value, which include fossil plants, casts of fossils, geological specimens, and recent zoological material. There also are deposited in the Peabody Museum, and are covered by the present deed of gift."

It has long been known that it was Prof. Marsh's intention ultimately to present these invaluable collections to the University, and this has now been done, subject only to certain conditions, of which the most important are these:

"(1) The scientific collections I now give to Yale University shall be kept in the Peabody Museum building or in additions thereto equally safe from fire.

"(2) During my life these collections shall remain as now under my supervision and control, available for my own investigation and description, or for the work of others designated by me.

"(3) At my decease, and forever after, these collections shall be under the charge of the Trustees of the Peabody Museum and their successors, and in the special custody of curators recommended by them and appointed by the corporation of Yale University.

"(4) The type specimens and others of special importance in these collections shall not be removed from the museum building. Less valuable specimens, however, especially duplicates, may be so removed by vote of the trustees of the museum."

There is probably nowhere in the world any collection of vertebrate fossils which is so rich as that which Prof. Marsh has brought together in thirty years of work and at a cost of a sum of money that is to be reckoned not by thousands, but by hundreds of thousands of dollars. Among the forms best known may be mentioned the series of fossils illustrating the genealogy of the horse, as made out by Prof. Marsh and accepted by Prof. Huxley, who used it as the basis of his New York lectures; (2) the birds with teeth, nearly 200 individuals, described in Prof. Marsh's monograph "Odontornithes"; (3) the gigantic dinocerata, several hundred in number; eocene mammals described in his monograph on this group; (4) the brontotheriidae, huge miocene mammals, some two hundred in number; (5) pterodactyles, over 600 in number; (6) the mosasaurs or cretaceous sea serpents, represented by more than 1,500 individuals; (7) a large number of dinosaurian reptiles, some of gigantic size. Besides these are various other groups of mammals, birds and reptiles, most of them including unique specimens.

It is well known that to Prof. Marsh Yale University owes its Peabody Museum, the gift of George Peabody, Marsh's uncle, as well as thirty years of enthusiastic unpaid service as Professor of Paleontology, and it is natural that a man who has done so much for the University should now do still more. It was Prof. Marsh who thirty years ago had the genius to discover, to grasp the full meaning of and to thoroughly exploit the rich fossil-bearing fields of the trans-Missouri region, and the vertebrate fossils now given to Yale University have come in large measure from these fields.

New Southwestern Mammals.

IN Vol. XX. of the "Proceedings of the United States National Museum" Dr. Edgar A. Mearns, of the U. S. Army, publishes two papers giving preliminary descriptions of the new mammals collected during the recent survey of the boundaries between United States and Mexico. The advance sheets of the first of these papers were issued Jan. 12, 1897, and of the second Feb. 11, 1897. In the first paper are described two new subspecies of *Lynx rufus* under the names respectively *eremicus* and *californicus*. The former of these inhabits the eastern and western desert tracts on the Mexican line, the latter

the Pacific coast tract of California and lower California. Two subspecies of gray fox are also described, a new species of skunk (*Spilogale ambigua*) and a new subspecies (*Mephitis occidentalis holzneri*) conclude the first paper.

The second opens with a description of a new species of skunk (*Mephitis milleri*) from Arizona. *Dorcaphus crooki* is a new species of blacktail deer, which, from the description, one would imagine to be nearly related to *D. columbianus*. Dr. Mearns regards the animal as showing a compromise between the characteristics of the whitetail and the mule deer. A new subspecies of mule deer (*D. h. eremicus*) is described from the most arid portion of Sonora, Mexico. It is remarkable for its size and for the heavy and divergent beams of its antlers. A new subspecies of peccary (*D. a. sonoriensis*) is described from Sonora, Mexico.

Menagerie Notes.

IT is learned with great regret by all interested in menageries that the Zoological Garden Co., of Cincinnati, has failed and gone into the hands of a receiver. These gardens have been well known for a good many years, and were long managed with remarkable success by our correspondent Mr. Frank Thompson, eminent as a collector of wild animals, and as a field naturalist. Under Mr. Thompson's administration the gardens, viewed from the naturalist's standpoint, were strikingly successful, but since he left them things have been going from bad to worse, until the present climax has been reached.

Mr. Thompson's interesting contributions to FOREST AND STREAM on the capture of wild animals in Africa and the adventures which he met with while engaged in this pursuit are no doubt still remembered by many of our readers. His sketches were always graphic and full of interest.

The last week or ten days have been notable in two menageries in and near New York for the birth of wild animals. In the collection in Central Park two tiny grizzly bears were born about the 15th of this month, but unfortunately neither survived. It was different with four lion cubs born in Mr. Starin's menagerie in Glen Island, which at last accounts were said to be doing well.

Game Bag and Gun.

Megantic Club Banquet.

THE Megantic Fish and Game Club and their guests filled the dining hall of the Copley Square Hotel last Saturday evening to repletion. The occasion was the annual banquet of the club, which the sportsmen of Boston, and in fact many other localities, have been looking forward to with anticipation for a long time. The company marched into the banquet hall at 7:30 P. M., and very soon after were engaged in an attack on the appetizing solids and dainties before them. Daggett's orchestra played all the popular songs, and the company were not slow in joining an excellent quartette in the choruses. Myron W. Whitney, the well-known basso, sang the "Three Fishers," which was received with thundering encore. The decorations were very pretty and suggestive. Back of President Arthur W. Robinson were draped two beautiful flags, with a magnificent elk head, and a giant eagle did guard duty. Around the hall suspended from the walls were thirty or forty pairs of caribou antlers. At the lower end of the room a great moose head stared at the company and listened to the proceedings with apparent interest.

The invited guests of the club were: Col. H. A. Thomas, postmaster of the city of Boston; Hon. John L. Bates, speaker of the Massachusetts House; Col. Benj. S. Lovell, Mr. Horace G. Rockwell, Mr. Godfrey Morse, Mr. E. Noyes Whitcomb, president of the Englewood Fish and Game Club; Rev. E. C. Butler, of Quincy, and Mr. E. W. Gleason, of New York city.

At 9:30 o'clock the dinner was over, chairs were pushed back, cigars lighted, and the company prepared to do homage to the feast of oratory which was to follow. President Robinson complimented the club on its prosperity during the past years, stating that the result of good management and economy had reduced the club indebtedness to the amount of \$1,700; the full limit of 300 members had been reached a long time ago. He also mentioned the success which has attended the hatching of fish at Big Island Pond, saying that 85,000 trout and 50,000 salmon had been liberated during 1897. Over 200 members and guests had visited the preserve last year. After reading letters of regret from the Governor and Lieutenant-Governor of Massachusetts, he introduced Postmaster Thomas, who put the company in good humor by several amusing stories. The postmaster took advantage of the opportunity to speak of the proposed reduction of the force of letter-carriers, and spoke in condemnation of such a course. He congratulated the club on its success, and regretted that he was not a sportsman himself.

Speaker Bates followed with an eloquent speech, referring to the great area of the club's preserve, its game and fish, and excellent membership. He also spoke of the game and fish laws of Massachusetts, the introduction of the Mongolian pheasants, and touched on many subjects which seemed to interest the assembled sportsmen greatly.

After a "sleight of hand" performance by one of the actors of Keith's Theater, President Robinson introduced the Hon. Godfrey Morse, who was followed by Col. Benj. S. Lovell, Mr. Martine, of Plainfield, N. J., and the Rev. E. C. Butler. The last speaker of the evening was E. W. Gleason, of New York city. This gentleman was a favorite at last year's dinner, when he made a very eloquent speech. His remarks were therefore awaited with interest, and proved that the silver tongue was still equal to an occasion of the kind, for his descriptions of experiences in the woods, what he had learned there, and the benefits of a life of that kind were realistic in the extreme.

Mr. Gleason's speech ended the evening's ceremonies in fitting style, and shortly after the club members and their guests adjourned not to meet again around the banquet board until another annual dinner and its accompanying features were ready to be enjoyed.

MEGANTIC.

Maine and Non-Residents.

Editor Forest and Stream:

In your issue of Jan. 15 is the report of the annual meeting of the Maine Sportsmen's Association, and as I was born in good old Oxford county, State of Maine, and spent many years of my life there, and for the past thirty-one years I have never failed to visit my native State, I have kept in touch with its changes, its prosperities and its adversities, and certainly there is not a member of the Maine Sportsmen's Association who is more interested in the action, the arguments and the final outcome of its recommendations than I am. I have no selfish nor pecuniary motives which actuate me, and as I am already on the "down-hill of life," I cannot expect long to be benefited or injured by whatever legislation these law-makers see fit to make; but I must offer a protest to some of the remarks and to some of the propositions put forth by some members of the Association. They are unbecoming Maine sportsmen.

First.—The secretary, Mr. Farrington, suggests a tax on a non-resident hunter. If he only hunts in Blanchard, his native town, he pays nothing, but if he goes up to Monson and shoots a partridge he must go and find a game warden somewhere (perhaps down to Bangor) and give him \$1. Then perchance if it is open season and he runs on to a deer and by a lucky shot kills it he must go and find the warden again and pay another tax of \$2.

Second.—Hon. A. M. Spear has got a scheme by which he is going to soak us poor non-resident sportsmen and cover us not with "immortal glory," but with licenses, and is not content until he insults the carcass of the poor dead deer by covering them also. Neither Mr. Farrington nor Mr. Spear say whether it will cost \$1.25 for every \$1 they collect by these licenses, but that will come near it.

When I read Senator Engel's speech I wanted to shake him by the hand, for there is a man who has got Maine's game interest at heart.

There must in all contracts be at least two parties involved. Here is the State of Maine on one side and the non-resident sportsmen on the other. Which party is the most interested the State of Maine or the sportsmen? Which can get along without the other best?

The State of Maine has a Klondike within her forests and streams, which exacts not \$1 of its capital in its working.

The sum of \$8,000,000, Senator Engel tells you, there was turned into the State broadcast, and every town, village, yea household, was benefited by it, and yet Mr. Spear thinks "York and Cumberland counties should not be taxed for the game appropriation, as they receive no benefit."

I have a neighbor who has spent nearly six months of every year for the past eighteen years in his camps on the shore of Richardson Lake, and who has spent thousands of dollars in the State of Maine while fishing and gunning, and whose camps and outfits cost him \$3,000. He says "when he is obliged to go and ask for a license, be the fee ever so small, he will go to his Maine camps but once more, and then to sell or burn them."

I have sent to Maine during the thirty-one years I have lived here in Massachusetts perhaps fifty men, and some have taken their wives with them. They go for the scenery and its fish and game, more especially perhaps fish and game; but when there is a license to be obtained, with the bother and necessary red tape attached, the scenery loses its charm, and they naturally say, "Good-by, old Maine; there are other places on this earth, perhaps not quite as good as Maine, but we'll risk it anyway."

Mr. Carlton advocates that every non-resident should "be obliged to hire a licensed guide." Then Mr. Carlton would oblige me if I wished to take my rifle and go up in the woods and sit down on my favorite log and watch for a possible shot, to have guide A, who when out fishing with me, and I suggested that a certain cove and inlet would be a good place in warm weather, volunteered the information that "that was the place where he got his deer for the house in the summer," and I must have him, for he was the only licensed guide, although there were from twelve to twenty hunters there, and he would rather go with me because I always sit down.

I think Mr. Carlton right when he says that the "guides hold the game question in the palms of their hands." They are all human, Mr. Carlton, and don't tempt them.

I spent nearly three weeks of September and October of 1897 at my favorite "place of rest," with my wife, and it cost me 120 good, hard-earned dollars, and I had a licensed guide only when I wanted one. I caught less than ten trout, I shot three partridges, and I fired two shots at an enormous buck (but didn't start a hair), yet I came home perfectly satisfied, and shall go again next year (provided I can do so without paying a license, I care not how small or how large it may be), then I am done; and I am authorized by my friends who went with me—and they cannot be counted on the fingers of both hands—to say that they too want no more of Maine's great gifts to her sportsmen on such terms.

Don't kill the fat goose which is laying you golden eggs, and insult the poor old bird by exacting of her a license fee for the privilege of laying those eggs, but look at this matter from a business standpoint.

If you have got to have money to protect your fish and game (and you surely have), which is the best way to raise it, by imposing a tax which will amount to less than 10 mills per capita on your residents, or exact a license fee from non-residents and drive your guests away?

If you have not got game and fish enough, cut down the limit, play your game according to your means, but don't imagine you can bluff the sportsmen; they will raise you every time and take the pot.

MILL.

Arkansas and the South.

LITTLE ROCK, Ark., Jan. 19.—Owing to this being an off year with us from a duck shooter's standpoint, several parties have recently gone from here to the Texas coast. Mr. E. B. Jett, Assistant Secretary of the State, was one of a party, with J. C. Jones, of Arkansas; J. N. Cummings, of Texas, and another Mr. Cummings, and Mr. Cox, of Chicago. The party went by the Pittsburg & Gulf road to Beaumont, Tex., and from there to Winne, on the Interstate and Gulf, to Anahuac, on Galveston Bay, a distance of eighteen miles. As they were driving over the country they saw thousands of snow geese feeding on the prairie—in such large numbers as to make it appear that snow had fallen there recently. They also found some chickens en route, and bagged five along the road. On Galveston Bay they found the shooting superb. In six days they bagged about 1,500 ducks, principally bluebills, with a fair sprinkling of red-heads and canvasbacks. The shooting here is all over decoys from blinds, the easiest and pleasantest mode of duck shooting. There were also plenty of snipe on the marshes in the vicinity of Beaumont, and on the day that this party passed through there several local hunters bagged five dozen in a few hours almost within the corporate limits of the city.

The glowing accounts Mr. Jett brought back of the fine shooting he had in this section was instrumental in sending another and much larger party, comprising Mayor J. A. Woodson, L. W. Cherry, John M. Pemberton, J. W. Irwin, Nal. Williams, George M. Heard, J. W. Blackwood, James Keatts, Dr. J. H. Lenow, Dr. G. M. D. Cantrell, Col. Ben. W. Johnson, June Ingram (the champion tarpon catcher) and Nick Trulock. They were joined by Messrs. Ward, Clark and Taylor, of Hope. They left here Jan. 9, going over the St. Louis, Iron Mountain & Southern Railroad to Texarkana, and from there to Beaumont, and then over to High Island. Here it was found, much to the disappointment of Mr. Irwin, that the party was too large to be properly taken care of, there not being enough guides and horses to go around. The shooting is done at the fresh water ponds back from the coast, and the only mode of travel practical there at this season of the year is on horseback. This was particularly hard on the heavy weights, as there were several who could not get astride of a horse. Mayor Woodson tried wading in the marsh, but after several attempts he had to quit in disgust, as his 250lbs. avoirdupois proved too great a handicap for him. In describing the adhesive quality of the mud he said that it would bog a saddle blanket anywhere. They found plenty of game, but got only ordinary shooting. The truth of the matter being that they did not remain long enough to get the lay of the country, only hunting four days. Mr. Irwin was informed by the guide that there had been no mallards in that section since November, but that he had noticed from the window of the car many bunches of these ducks five or six miles back from the coast. So he decided to go back and endeavor to locate their feeding grounds. As he anticipated, he found all the ponds back there full of mallards. Here he, Pemberton and Keatts had some very good sport, but he afterward ascertained that he had not gone quite far enough, as a mile further back is what is known as a tank in Texas, and here the ducks flocked in countless numbers. The shooting here was also over decoys, each of the party being provided with collapsible decoys and waders, the latter very essential for this kind of shooting, as the ponds being shallow good stands can be secured by the means of these among the rushes and grass. Mr. Irwin also noticed many Canada geese back here, while close to the coast only the snow goose or white-fronted brant was to be seen, these being there in countless thousands. The ducks found near the coast are principally bluebills, teal, widgeons and pintails.

Snipe were plentiful and were to be found only a short distance from the hotel. On the day the party started for home there was an extraordinary flight of these birds. The party did not slaughter any large quantities of game, but all returned delighted with their trip. The weather was favorable for shooting throughout their stay, though exceedingly mild, making it possible to hunt only in the lightest of garments.

Arkansas.

No kinds of shooting have been up to the usual high standard this season. Deer are not reported plentiful in any section, and venison never maintained so high a price, and has been scarce in the market at that. Of the many parties that went out from here after deer only a few met with any kind of success. Turkeys are more numerous and in some localities they are reported plentiful.

The duck shooting was a disappointment to all of us, as from the favorable reports sent out from the Dakotas and Minnesota we were expecting a large flight of mallards. But the long and protracted droughts obviated this, as there were few of our marshes and lakes that contained any water. Many places where in former years I have had good shooting were dry as late as November. Only at one time did I find the shooting fair, and that was the first part of December. My companion on this trip was John Sumpter, of Hot Springs. We arrived at the lake in the afternoon, and in a few hours bagged fifteen mallards, but that night it turned very cold, so that the lake froze and the ducks departed for the South. Had we been twenty-four hours earlier we would probably have got the limit.

From all other parts of the State the reports have been universally the same. Even on the famous sunk lands in the northeastern part of the State the shooting was poor compared with that of former seasons. This seems in a great measure to apply to the South in general. With the exception of the coast shooting I have heard of but one other point where the duck shooting was reported good. In the vicinity of Alexandria, La., the shooting should have been fine for quite a while.

Quail that usually afford us so much sport during December, January and February are really scarce this season. Fair bags have been the exceptions, while good ones are unusual; only one or two really good ones have

come to my knowledge. The drought may have had something to do with this, as very few small birds were seen at the opening of the season. It is possible that the extreme hot dry spell may have prevented the hatching of the last brood, or that the young perished from lack of water.

In Louisiana the quail crop should be a large one, and this is the only section where I have had really good shooting. I have heard of one party who boasted of bagging 103 birds in three hours' shooting in the northern part of this State.

John Sumpter, who went to Oklahoma after quail, reports the birds numerous there and the shooting very easy, as they hunted on the prairie, the birds being found in the draws, and when flushed would fly to the open prairie, where long straight kills could easily be made. In one day he and two others bagged 124 birds without any special effort. Sixty-eight of these John says fell to his gun, his companion not making any effort, as they wanted him to get all the shooting he desired. He stated that in the vicinity of Shawnee it is possible to put up forty bevies a day.

PAUL R. LITZKE.

The League of American Sportsmen.

Editor Forest and Stream:

FOREST AND STREAM has so long and so consistently preached the gospel of game protection that its readers are, I think, deeply interested in anything bearing upon this good work. I therefore deem it my pleasant task to briefly describe the plans of the League of American Sportsmen, an organization which took definite form at a convention held on the 18th inst., at Hardman Hall, Fifth avenue and Nineteenth street, New York, pursuant to a call issued by nearly 100 men, many of whom are known to the readers of FOREST AND STREAM, and all of whom are thoroughly committed to the principle of game protection. Perhaps I cannot better express the objects of the League than to quote verbatim the prospectus which accompanied the call.

The League of American Sportsmen is organized for the purpose of protecting the game and game fishes; the song, insectivorous and other innocent birds, not classed as game birds.

Its prime object is to enforce game laws, where such exist, and to secure and enforce such laws where not now in existence.

It aims to promote good fellowship among sportsmen; to foster in the minds of the people a love of nature and of nature's works; to encourage the propagation of game and game fishes, and the restocking of game fields and public waters. To these ends it will act in unison with State, county and municipal authorities who aim at similar ends.

The League of American Sportsmen will not compete with any other organization that has similar objects in view. On the contrary, it desires to enlist the sympathies of, and to co-operate with, all such.

The League of American Sportsmen is opposed to excessive slaughter of game and fish, under the name of sport. We are opposed to the killing of any innocent bird or animal, which is not game, in the name of sport or in wantonness.

We are opposed to the sale of game and game fishes at all times and under all circumstances.

We believe in reasonable bags. We believe the killing of game and the taking of fish should be limited by law, not only as to seasons, but that the bag for any one man, for a day and for a season, should be defined by law.

We believe in a gun-license law, with severe penalties for violations thereof.

We, as individual members of this League, pledge ourselves to work for the education of the public, and especially of our boys, on the lines indicated above; to co-operate with our officers, and with State or municipal officers, in the enforcement of game laws, whenever an opportunity offers.

The convention was a most enthusiastic one, and the hearty support given to the proposed plan by the 140 men present argued well for its success. Fifteen States were represented, and among those present were the chief game wardens of Utah, Ohio and Pennsylvania. Letters were read from prominent men in various States of the Union promising their hearty coöperation and volunteering to establish State divisions. Permanent officers were chosen as follows: President, G. O. Shields, New York; First Vice-President, Dr. C. Hart Merriam, Washington, D. C.; Second Vice-President, Ernest Seton Thompson, New York; Third Vice-President, Hon. W. A. Richards, Governor of Wyoming; Fourth Vice-President, Prof. W. T. Hornaday, New York; Fifth Vice-President, A. A. Anderson, New York; Secretary, Arthur F. Rice, Passaic, N. J.; Treasurer, F. S. Hyatt, Clinton Bank, New York.

The League of American Sportsmen, like the League of American Wheelmen, is to be a national organization, with State divisions, chief wardens, secretary-treasurers, and deputy wardens in every county of every State. The membership fee is \$1 per annum, excepting for ministers and teachers, who may become honorary members. Membership is open to males over fifteen years of age, and women may be made associate members.

The committee on constitution and by-laws made its report, and after some discussion of details the same were adopted. It is of course impossible to go minutely into the substance of the constitution and by-laws, which are now in the hands of the printer, but in addition to what has already been stated it may be said that the deputy wardens are to be appointed by the chief warden of each State division and to hold office during his pleasure. They are to seek violators of the game laws and aid the regular authorities in prosecuting offenders, receiving as a reward \$10 for each conviction they are instrumental in securing. It is confidently believed the State authorities will ultimately delegate legal powers to the L. A. S. wardens, and that their efficiency will thus be greatly augmented, as has been the case with the officers of the Society for the Prevention of Cruelty to Animals. Twenty-five members may constitute a State organization, with chief and assistant wardens as officers, and in several States the membership is already sufficient for the organization of divisions.

The League of American Sportsmen has not been organized without a due appreciation of the difficulties that must be met and overcome. It will arouse the hostility of game dealers, cold storage men and market-hunters. It will stir up enmity, criticism and ridicule among those who think their sport is to be interfered with or who have in times past been interested in similar movements that have failed. Time, money and strenuous effort will be required to accomplish the ends desired, and possibly some of them may never be entirely realized; but as the League of American Sportsmen makes war on no one

save the real sportsman's worst enemies it is hoped and believed that these are the only enemies, open or hidden, that the League will have. As the aims of the League are all on the lines of game protection and true sport, it seems to me that every sportsman will feel inclined to lend his aid and support to an organization that will strive mightily to check the extermination of game birds, animals and fishes in the woods and fields and waters of our land; that will fight the market-hunter and the game hog with all the forces it can bring to its aid; that will assist in sustaining good laws and in substituting others for those that are not good, and that in every reasonable way will endeavor to create a wide and general sentiment in favor of broad and humane sportsmanship. If these principles are worth fighting for, then I can see no reason why the great army of men who love the song of the robin and the thrush, who delight to see the leaping trout or salmon, who feel their blood stir at the rise of the quail or grouse, and who hope for many years to come to find the deer and moose in the forest, should not extend the hand of good fellowship to the League of American Sportsmen. ARTHUR F. RICE.

The Plumed Knight of the Forest.

FOR MY LITTLE HUNTRESS FRIEND, ALICE.*

FOR a Christmas present I send you the caudal appendage of the Plumed Knight of the Virginia forest—the ruffed grouse—with us, the pheasant. He is a proud and lordly fellow, indeed.

Let's go to see him in his winter home. Well, the earth has been covered for a long while with a deep snow, but the sun has been shining warm all day, and he is out hunting his 4 o'clock dinner. He has been making his home during the storm in yon dense laurel thicket at the foot of the mountain, just across the creek. It hasn't been cold enough to freeze over the channel of the creek, but it is trickling along its icy banks, and the laurel boughs have icicles frozen on them and are bent, dipping into the water, tipping, tipping, glistening in the current as it flows. High over this knight's somber tenting ground stands thick the hemlock, its branches drooping with the weight of snow; a bunch of feathery white now falls, and the boughs spring to their wonted places. A red bird sits on the lithe, green limbs, amid the snow, swinging and shaking it off for fun.

On this side of the brook there stands a thick clump of grapevines, matted with green briars; high up, here and there, hang sparse bunches of wild grapes, sweetened by the frost; a great, round holly bush is standing near by, full of red berries creeping out through the fleecy snow, among the green leaves which mantle the graceful little tree.

The sun has been shining full on a fallen tree, stretched on the ground near by, and has left bare the moss, grown just a little green under the snow. Long winter ferns are clinging round about the mossy trunk.

Something like an old "frog stool" on the log suddenly gets alive. It dresses at once in gaudy habiliments. By magic its graceful neck now takes on a gorgeous ruff, sleek and glossy; his helmet crest is high; proudly his tail spreads; see how lordly he steps, his head twisting from side to side to look at us with both eyes, and as he steps his tail dips, expands and lessens. Suddenly he folds back his ruff, closes his tail, ducks his head, and as quick as a flash he thunders through the hemlock boughs, scattering a storm of snow as he bolts a hole through them, to his home in the jungle. This is the "plumed knight" of the mountain and mossy dell, a weird, wild, phantom bird.

Though he flew, still he is a brave, game little forester, fearing no mortal enemy of his ilk; but he has heard the rattle of shot. This time he was mistaken, Alice; we just went to see him dine, as we did the pretty birds on Indian River.

But, Alice, even boys are sometimes cruel enough to shoot this haughty little lord of the woods. See yon thick-timbered ridge? About the top of that he often makes his autumn home.

It is October, and Jack Frost has been painting landscape scenes. With one stroke of his brush he has made the beech leaves beautifully golden; the shapely gum, burning scarlet; the oak, green and golden. He has left untouched, as an ornate frame, the glistening green of the laurel and the serpentine arms of the arbutus creeping about the cliffs. The silken, oily leaves of the hickory cover the ground, save the few that linger to play with the breezes; then, growing weary, float twisting to rest forever upon the earth. The shades of the evening are stealing darkly eastward over the ravines; the very stillness is appalling.

This plumed commander of the flock has wandered away from his comrades in search of nuts and red dogwood berries; he is lost and lonely, and he wishes to marshal his clan. A bare old chestnut log lies yonder. With what strutting pride he mounts this rustic platform and begins his drum-beat.

There is a boy hunter who has been lazily basking in the sunshine, lounging on the moss and leaves, dreaming and musing in the glorious autumn silence, building just such air castles as only a boy can build. Beside him lies harmlessly the single-barrel shotgun, which he has been even too lazy to load. He now hears the drum-beat of the little commander. Pulling his cap closely about his head, the boy hunter is alert, and like a shadow disappears in the forest. Now he waits to again hear the beat, and he steals to near the little drummer. He, too, is on the watch; his ruff is on, his wings are ready; he croaks a little and darts along the log; again he stops. Mortally shot, he pitches from the log into a heap of tight leaves hard by, and fighting death as bravely as he lived, he dies in the circle which he has made bare by the beating of his wings.

This, dear Alice, is the deed of the innocent boy who a moment ago was dreaming like an angel.

But, little girl, men are only grown-up boys, especially those who linger much about the fields and forests. They, too, must play in turn the poet and the savage.

* The above was written to the little daughter of a Florida hunting chum of mine, she herself having often bravely ridden with us deer hunting. I thought maybe some other little hunters might wish to read it.

It is now late in November. The pictures of Jack Frost have been defaced by the driving rain and sleet, and the giants of the forest have stripped their tawdry garments to fight the winter storms. How defiant is the stalwart oak and poplar! How ghostly white are the bleached cliffs!

There is a calm day, damp and the fog swings about the ravines. Yonder, above the first brushy foothills of the mountain, there is some level ground, cushioned with the parlor carpet of the forest (leaves and ferns and moss), through which is peeping the red "mountain tea" berry. The plumed knight of the forest has assembled his neighbors to dine there to-day, and the uninvited guest must array himself in the dress suit of the hunter to meet them. Brown corduroy trousers; canvas leggings, buckled from the close-fitting gaiter to the knee; new, neat-fitting canvas hunting coat, allowing to be seen but little of the plaid blouse shirt waist beneath; soft, light hat; the double-barreled shotgun his only ornament; his sole companion is a pointer, clean-muscled, as sinewy and as eager as a racehorse. With a high and cautious head, this unerring dog leads his master among the unsuspecting revelers of the berry patch; thundering, the plumed knight leads the way toward the jungle, but smokeless and vicious cracks the ornament of this intruder, and the brave leader falls, helplessly beating the earth; shrouds himself in his own gaudy plumes, and dies. Alice, dear, I plead guilty to all this, both as man and boy.

SAMUEL CECIL GRAHAM.

CHICAGO AND THE WEST.

CHICAGO, Ill., Jan. 22.—The bill introduced in the U. S. Senate on Jan. 18 by Senator Teller, regulating interstate traffic in wild game, is the second measure of the kind emanating from the West, the other having received mention in these columns some months ago, when it was placed in the hands of Congressman White, of Chicago. The Teller bill originally included in its purposes only three Western States, but seems now to have been enlarged and extended. It proposes practically the same course as that earlier mentioned, to make it unlawful for any common carrier to ship game from one State to another contrary to the laws of the State from which shipped, all such traffic being put in the control of the Interstate Commerce Commission. This would make the law-breaking game handlers fight the strong U. S. laws instead of the weak State laws, which thus far have never been found successful in checking illegal game shipping to any serious extent. What will be the success of the bill in Congress remains to be seen.

Another old and much mooted question comes up again in Colorado in the current court records in the case of hotel-keeper F. W. Bailey, of Denver, earlier mentioned. Mr. Bailey is about to test the constitutionality of the law which forbids hotels to sell game in the close season. Mr. Bailey gracefully admits that the State may establish a close season for the killing of its own game, but claims that it has no jurisdiction over game brought in from outside the State. Let me hasten to say to Mr. Bailey that he is quite right in his independent and manly position that any law which doesn't suit him must be unconstitutional. Yet it is too bad for him that several other supreme courts have already passed on this very question, and have had the audacity to declare that a law with a loop-hole wider than itself would not be very much of a law.

In the matter of additional rabbits I note that the farmers of Calloway county, Mo., got out their guns one day last week and killed 1,637 cottontail rabbits for charity. The Alton road carried the rabbits free to the St. Louis Provident Association; the local organized charities and transfer companies also gave their services free. The worthy poor may have rabbits at St. Louis for the asking. The rabbit has proved to be a great game bird this winter. Thus I observe that Sumner county, Kan., has repealed its 3 cents bounty on jack rabbit scalps, after paying for 187,000 scalps. It was suspected that some of these came from other counties. Such are the possibilities of the jack rabbit industry that even the judges on the bench forsake judicial honors for the commerce of the gun. At least Judge Hedge, of Hoxie, Kan., has resigned his office. He said he could make more hunting rabbits. But then his salary was only \$25 a year, and he couldn't live on that.

How they are beginning to shake things up in game law circles. Last week I noted the big seizure made in St. Paul of game boxed f. o. b. for Chicago. Now the American Express Co. is made defendant in a suit brought at Shell Lake, Wis., for carrying game to St. Paul last November, where said game was seized by Warden Fullerton. It looks as though a poor express company couldn't get a place to lay its head. With the individual violator it sometimes fares likewise. Witness the case of Allen Ferris, of Christian county, Ill., who was last week fined \$3,000 on 500 counts in a case of illegal quail.

They are in trouble over their game law out in Nebraska, one construction having it that a common carrier may not handle game even within the confines of that State, and another holding that the penalties applies only to game received for shipment to points outside of the State. The attorney-general holds the latter opinion.

The decision of the Nebraska attorney-general brings to mind the comment made in these columns last week on the concessions made by the Illinois State Fish Commission to the market fishers of this city and of the Illinois River. Members of that board are friends of mine, and FOREST AND STREAM could certainly never be accused of hostility to the Illinois Commission. What I would like to ask is therefore put in a friendly way, and it is this: Why was not the ruling on the construction of the Illinois fish law handed down by our State's attorney and not by the Fish Commission? And if a State's attorney were asked whether a 1 3/4 in. mesh were a 2 in. mesh, what could he say? If he were asked if a short-sized fish illegally sold would be illegal on Tuesday and not illegal on Monday, what could he say? And if the State's attorney could only give one answer, how can the Fish Commission give a different one? I wish some one would explain this to me, but I will admit it

might be difficult for me to see it. There is only one uniform game law, and that is a law which sits on rich and poor alike, and which has no loop-hole wider than itself. Let me suggest that the construction of this law be carried to its proper branch, and that the deputy wardens be turned loose to look for cases, and plenty of them. So shall it rain upon the just and the unjust.

Speaking of uniform game laws, the matter of the convention of wardens here, Feb. 7, still progresses. Michigan will send to this convention four commissioners: Senator John L. Beston, of Columbiaville; Representative F. B. Chamberlain, of Ironton; State Warden Chase S. Osborne and Commissioner Horace L. Davis, of Grand Rapids.

Among doings of Western sportsmen's organizations this week may be chronicled the proposal of the Huntington, Ind., sportsmen to stock adjacent farm lands with the Mongolian pheasant. I observe that the stockholders of the Pekin and Spring Lake Hunting and Fishing Club are going to lose their club grounds to the bondholders of the project. The club was in debt \$10,000, but held some 6,000 acres of land, which is worth perhaps \$30,000 to \$45,000—a very ample security. I have shot over that country. It was once a notable sporting region, and has many attractions still.

The game bird, the fish and the dog are all objects of the care of the strong protective association at Grand Rapids, Mich. This week it held a banquet at which many prominent State officials attended. A bench show and an occasional trip of investigation into illegal fishing and shooting are among other good deeds of this useful body.

At the annual election of the Duck Island Gun Club held at Peoria, Jan. 18, the following officers were elected: President, W. H. Shaw; Vice-President, J. B. Mosby; Secretary, D. W. Voorhees; Treasurer, W. C. Bush; Directors chosen were: John B. Mosby, Cincinnati; W. L. Shepherd, Chicago; W. C. Bush, Peoria; D. W. Voorhees, Peoria, and W. H. Shaw, Canton.

At this meeting the Duck Island Gun Club took action on one point alone which would stamp them sportsmen. It resolved to prohibit the sale of game killed on the Duck Island Club marshes. No club which allows the sale of game by any of its members or any of its servants can be called abreast with modern sportsmanship. The affairs of this representative shooting body are in fine condition. The grounds are among the best in the State for duck shooting. The stage of water on the marsh is regulated by a ditch which leads from the main river above Copperas Creek Dam. The marshes along the Illinois River were once among the famous wildfowl countries of the West, but long ago it became apparent that the only way of retaining any of this shooting was by means of establishing preserves. The Duck Island Club has its cake, with peaches and cream on the side, and it does not mean to eat it all at once.

The weather in this part of the world continues exceptionally mild. It is snowing hard to-day, but we have had no winter to speak of in Chicago thus far, and if the present open weather continues we shall hear of the spring shooters beginning their pleasant occupation inside of thirty days. It is the provincial fashion of a great many Northern men, some of them very good business men, to imagine that the sporting season closes when winter shuts down in the North. In reality there is no stoppage of the sporting year in the United States. Just now they are having the finest sort of duck shooting on the marshes of the San Francisco gun clubs out in California. Points near Mt. Eden and Alviso, the grounds of the Empire Club, the Ferris marshes and the Suisun sloughs are all spoken of as offering good sport. In southern California the season for snipe and ducks is in full swing. In Texas the snipe and duck shooting is at its best, and the same may be said of Louisiana. In both the latter States, and in Mississippi, Arkansas, Missouri, Tennessee, and indeed the whole group of Southern States the quail season is at its height. Yet sometimes a dealer in sporting goods says to me that he thinks he will not advertise after the "close of the season." Does such a dealer think that the shooters of all these warmer regions do not need outfitting as well as those of the North? Or does he suppose that all these shooters do not include FOREST AND STREAM as a part of their outfit? A fish line sold at \$1 is sold as well in the winter as in the summer if the dealer gets his \$1, and the man who wants it will buy it then just as quickly as though he lived north of the Ohio River. It pays to advertise in FOREST AND STREAM, and to advertise there all the time.

Club Organizations.

The Evansville, Ind., Hunting and Fishing Club has been organized with capital stock of \$5,000 and the following officers: President, Henry Stockfleth; Vice-President, Charles Melzer; Secretary and Treasurer, Alfred Greene.

The Reelfoot Outing Club, of Louisville, Ky., was organized Jan. 10, with a capital stock of \$10,000. The incorporators are Messrs. Llewellyn Smith, M. E. Taylor, Charles T. Ballard and W. E. Chess. The club will buy land around Reelfoot Lake, in Tennessee, and maintain hunting and fishing headquarters.

Elk and Oxen.

Mr. J. B. Mathers, of Glenboro, Manitoba, recently purchased a magnificent elk's head from a farmer, who killed it near the Riding Mountains. The farmer heard his oxen bellowing in the night, and going out, found that they were attacked by this big elk, which he promptly shot. The elk was apparently feeling proud over the fact that oxen did not have horns as long as his own. As usual, pride went before a fall.

Chippewa Wolf Drive.

The Chippewa tribe of Wisconsin held its annual wolf drive New Year's Day, and the drive is said to have cleaned up eighty-nine wolves and four lynxes.

English Partridges.

Henry Moore, of Corinth, Miss., has brought with him from England a number of English partridges, which he has turned down on his farm near Corinth. He

succeeded in bringing over thirty-five of the birds alive. Should they receive proper protection, they might increase, and should flourish in the mild climate of Mississippi.

Tolleston Damages.

On Jan. 11 the Circuit Court at Valparaiso, Ind., awarded Theodore Prowl \$5,000 damages in his suit against the Tolleston Gun Club for injuries received at the hands of the club wardens. Prowl claims to have been injured in the imbroglio last spring, where a number of farmers attacked four of the keepers of the club. The club will appeal this case. E. HOUGH.
1206 BOYCE BUILDING, Chicago.

"Trail and Camp-Fire."

THE third volume of the Book of the Boone and Crockett Club has just been issued; the two earlier ones, "American Big-Game Hunting" and "Hunting in Many Lands," having been published in 1893 and 1895 respectively, the purpose of the club, we are told, being to issue one such volume every two years.

"Trail and Camp-Fire" we are inclined to regard the best of the three volumes. It is quite as entertaining as any of its predecessors, covers as wide a range of subjects, and at the same time it has in it more material of permanent value than either of the other two. We are quite in agreement with the remarks in the editors' preface, when they say: "The two earlier volumes of the club's publications, though devoted chiefly to accounts of hunting adventure, contain also considerable matter bearing on the natural history of North American game and forest preservation. In the present volume an effort is made to devote more space to the natural history side of our large animals, for the publications of the club should contain material of permanent value. Of course, any book, whether on hunting or science, should be interesting, but it should be something else too. Hunting stories should be more than merely pleasant reading. The purposes of the club are serious, and its published papers should be of a lasting character."

* * * The big-game hunter is a man who travels about with his eyes open, and the more familiar he is with the habits of game, the greater will be his success. The best hunters owe their success less to their skill with the rifle than to the knowledge which they have acquired of the game that they pursue, and the closer a man's habits of observation, the more speedily will he become a hunter."

This handsome volume of more than 350 pages is made up of a dozen contributions by different members of the Boone and Crockett Club, to which are added a list of books written by members, the constitution of the Boone and Crockett Club, together with a list of the officers and members.

At the annual meeting of the club held in January, 1897, Mr. A. P. Low, of the Canadian Geological Survey, talked in most interesting fashion, taking for his subject the Peninsula of Labrador, which he treated from the point of view most likely to interest sportsmen. An abstract of this paper, treating of the history, topography, human inhabitants, game and fish of Labrador, occupies the first thirty-five pages of the book, and these are full of interest, for there is no one who can speak so authoritatively on this country as Mr. Low. He it was who first crossed it from one coast to the other, and his explorations of it have continued up to the present day.

The interesting and amusing character sketch of a

conducted on a scale so entirely different from anything that we know about that we can only accept the statements of travelers without trying to understand them. The illustrations of African big game found in this chapter are especially good.

The piece in this book which is most attractive is the sketch of Canadian winter hunting, by Mr. C. Grant La Farge, called "Sintamaskin." This sketch possesses far more literary quality than any other found in the book. The reader sees what is being written about, not because the writer laboriously strives to make him see it, but because the writer is so saturated with deep feeling for the scenes that he is describing that, unconsciously and without effort, he brings their salient points before

death its president, Gen. Benjamin H. Bristow. An admirable portrait of Gen. Bristow forms the frontispiece of the present volume, and a brief tribute to the worth of this accomplished lawyer, soldier and statesman appears just before the first article in the volume.

Elsinore.

ELSINORE, Cal., Jan. 12.—Nestling amid mountains is pretty Elsinore Lake, thirty miles from Riverside, the orange garden of southern California. Pleasantly situated on the north bank is Elsinore, a city of 300 souls, containing a good hotel and bathhouse, numerous hot sulphur springs, and a straggly main street. The re-

THE FIRST RHINOCEROS.
From "Trail and Camp-Fire."

his reader's eyes. A paper by Mr. Grinnell, on "Wolves and Wolf Nature," gives much recondite information about Western wolves large and small, and Mr. Theodore Roosevelt, in a paper entitled "On the Little Missouri," tells in a capably spirited way about the hunting there in modern days.

From the naturalist's standpoint, the composite chapter entitled "Bear Traits" is one of the most interesting in the book. It has to do very little with killing bears, but gives the observations of four members on two species of bears. The sections by Dr. Merriam, Mr. Roosevelt and Mr. Stimson are extremely interesting.

The Hon. W. Carey Sanger's article on "The Adirondack Deer Law," and Mr. Madison Grant's on "The Ori-

mainder of the assets of the town consists of memories of the "boom." In fact, all southern California now dates, not from the war, but from the boom. The town is scattered in an astonishing fashion, for land in "boom" days was too valuable to build upon, and the Elsinore limits could easily contain a population of 50,000 people. The hunter, while following the lively quail in the foothills, two or three miles from town, stumbles frequently over town lot stakes, firmly imbedded in the adobe soil.

But in these degenerate days the chief excuse for the existence of the little city is the curative powers of the hot springs, the waters of which are efficacious in cases of gout and rheumatism and all diseases of the skin.

The lake, which is three miles wide and five in length, swarms with wild fowl, and despite the efforts of the small boy and him of larger growth, who pepper away incessantly from the shores, and of two or three market hunters and a few murderous night shooters, the birds refuse to be driven out. Spoonbills are the most numerous of the ducks, although there is a fair sprinkling of canvasbacks, sprigs, redheads, butterballs and black-jacks, with now and then a few mallard or teal. Wild geese and brant are plentiful, and the empty spaces are filled in with mudhens, loons and divers innumerable. The market hunters crouch in small, flat-bottomed boats and use a pair of very short paddles, which they work like a pair of flippers, the hands being under water. By this means it is easy to sneak near enough to a flock for a pot shot, and they manage to bag two or three dozen ducks and an occasional goose in a day's work.

The night shooters, with their jacklights, do much more execution, and although against the law, no effort is made to bring the offenders to book.

Although "blinds" are common enough, decoys and calls seem to be little used, the shooters generally being out for meat, not sport, and preferring to take pot shots at the unwary fowl feeding in too close to shore.

I am of the opinion that fair bags could be made from good blinds by the use of goose and duck decoys and calls.

Quail are found in good numbers in the adjacent foothills and cañons, but cannot well be hunted with dogs on account of the cactus. The most ambitious dog is apt to lose his ardor after one or two encounters with this savage plant. One hunter came back to the hotel a day or two since with his knee well studded with the tiny spines, and though he has worked industriously with tweezers, some of the spears still remain under the skin to torment him. The valley quail at this season are of a bluish drab color conforming closely to the color of the bushes. Their flight is something startling in its swiftness, and I have seldom seen a countenance more eloquent of disgust than that of an Eastern shooter on his return from his first morning's hunt, with two birds out of fifteen acknowledged chances.

After a couple of trials, however, he began to catch on, and is now having good success. The birds are marvelous runners, and the Eastern man finds chasing them up the steep sides of cañons and over precipitous hills, waist high with grease wood or sage brush, a very different matter from following a well-trained dog over a level, open field at home. However, if one does not get as much game out here, he at least gets the exhilaration of deep lungs full of superb mountain air and magnificent vistas of snow-clad ranges on every hand, and in view of this and the robustious appetite thus acquired, he may console himself with the reflection that "Not all of hunting is in game."

L. J. M.

THE BIG ELEPHANT.
From Wm. Lord Smith's "African Hunting Trip," in "Trail and Camp-Fire."

Western mountain man, from the pen of Mr. Lewis S. Thompson, was recently printed in FOREST AND STREAM. East Africa is a region so far away that for most American sportsmen it has an exceeding interest. For this reason Dr. William Lord Smith's narrative of his hunting trip into the interior from Aden will be eagerly read. It is hard for an American to comprehend these great expeditions, where the men are often numbered by the hundreds and camels by fifties. African hunting is

gin of the New York Zoological Society," are chiefly historical, and of special interest to members of the club as showing the work which it has done.

Mr. Pierce's tale of "A Newfoundland Caribou Hunt" is told with spirit, but there seems to have been more than enough killing by the members of this party.

The Boone and Crockett Club is doing a good work in striving to raise the standard of sportsmanship in America. It does not claim perfection for all its members, yet it is striving always to improve matters, and its books ought to be in the hands of all hunters of large game.

It will be remembered that in 1896 the club lost by

A Night Watch in the Adirondacks.

(N. B.—Not in violation of the game law.)

WE were in camp in the depths of the forest, and several small ponds were easily accessible. They were good places to watch for afternoon and morning shots. We had some. So did the deer. Among the party of hunters was one who had been West, and claimed to have killed much and various big game there. This trip was but incidental, yet he was anxious to kill a deer. He had some opportunities, one as follows: In the arrangements for one night and morning watching, it was his turn to stay in camp alone for a while, as the others were going to remote ponds—some to stay over night and watch in the morning, others to watch as long as they could see that night, and then return to camp by lantern light. Crossing the trail, those last would travel over several big runways. Some of them intersected in a ravine. Near the junction grew a large beech tree. It was suggested to the to-be-lonesome man that he take a position in that beech tree and watch for a passing deer. Just the thing, and a shotgun would do the business! Accordingly, while en route to the pond, the party helped him into the tree and enjoined his absolute silence until he saw a deer—or the returning camp lantern. He promised faithfully to observe all instructions. He had ample time to think over and digest them. The limbs supporting him grew tired. Limbs of beech or of flesh—it makes no difference—both were used in supporting him, and both were tired. He climbed higher. The limbs changed, but did not rest much. Darkness came, but no deer. At noonday that ravine was dark—at midnight it was black. Had a buck stopped under that very tree,

frosty morning, or strung for a half mile along some stake-and-rider fence. Indeed, I had hopes that game would be so abundant in the coming years that shooters of meager abilities, such as Mr. Farmer and myself, might expect to bag an occasional bird. To have these hopes dashed to earth by the strong right arm I had been leaning on for support and comfort was a sad blow. My grief was of course assuaged in a great measure on being assured that Mr. Loveday is an exceptionally fine field shot, and did the work up in a neat, sportsmanlike manner. It would have been almost too much to bear, to know it had been done after the manner of the ordinary butcher.

Mr. Harbaugh, veteran sportsman of this county, and father of the Genesee Sportsmen's Club, tells me that he was out with Mr. Loveday's party on the first of the two days put in on the Allerton farm, and that five of them bagged just eleven chickens, and he don't think those staying for the second day did any better. He thinks there must be some mistake, and that perhaps a misplaced cipher has done the mischief, and that Mr. Loveday will rise and explain as soon as he can stop laughing. Will Mr. Farmer investigate this matter, and report later?

E. P. JAKES.

Nantucket Rabbits.

NEW BEDFORD, Mass., Jan. 14.—A party of old sportsmen took a sail the other day to Nantucket on a rabbit shooting expedition. The party was composed of Messrs. Fred Tripp, N. E. McCully and C. T. Brownell, the veteran Gordon setter breeder of New Bedford. Arriving at Nantucket, we were taken for a seven-mile

IN CAMP AFTER THE LEOPARD HUNT.
From "Trail and Camp-Fire."

the man could not have killed it, unless by accident. Will those fellows ever return? They are in no hurry—of course, he is having a good time—and besides, they must not interfere with his shot by returning too soon. He has promised to await their coming—he cannot well do otherwise, for he cannot get down in the dark nor travel if he could. About five or six hours he waited. Did he have fun? We did the next day, for he had learned how it is sometimes done in the Adirondacks. JUVENAL.

Henry County Prairie Chickens.

Editor Forest and Stream:

Your correspondent, Mr. George T. Farmer, seems to have got things a little mixed in his communication in your issue of Jan. 15. He says those martyred seventy prairie chickens of which I wrote some time ago were not killed by one, but by four men. Now, in rebuttal, I will quote the game warden's own statement in regard to those chickens:

"Mr. Loveday, in his talk with me, said that in Bureau, Wayne, Henry, Clay and Kankakee counties, the chickens were abundant this year. In two days' shoot in Henry county he bagged seventy birds himself, a bag greater than I have heard of to one gun in any part of the West this fall."—E. Hough, in "Chicago and the West," FOREST AND STREAM, Oct. 16, 1897.

Brother Farmer will see from this that he is not only barking at a knot, but that even the knot is on another tree. If the warden, in company with others, killed seventy other chickens, then those other chickens must have come in from adjacent counties, as I am very sure of the original seventy. In fact, I challenge Mr. Farmer to prove there were more than seventy chickens in Henry county on Sept. 1, 1897, and if he succeeds, I will agree to plead guilty of neglect, and resign my position as statistician. But my letter concerning those Henry county chickens was not intended to call attention to my work as chicken counter. Neither did it have any reference to the time when the game warden, in company with others, shot seventy or any other number of chickens in two days, but were some reflections that came to me on reading the account of the time when the warden got seventy chickens in two days to his own gun. This tale, coupled with the disappearance of my wards, brought a train of reflections that were somewhat tinged with sadness. I had watched the increase of the chickens in this county with much joy, and when it was announced that at last we had an efficient warden I began to have visions of an old-time chicken crop, such as when we used to see them clustered in the trees of a

drive by Mr. Sidney B. Folger, a hunter of high standing, to his home at Siasconset Village, where we were cared for by his kind wife, who knows just how to cater for a hungry hunting party. We put in twenty-eight hours rabbit hunting, and with Mr. Folger and Mr. Al Pitman as backers captured seventy-two cottontails and two jack rabbits.

Who says there is no game in Massachusetts?

C. T. B.

Fraudulent Scalps.

J. T. Mackintosh was arrested at Council Bluffs, Ia., last week for importing wolf scalps from Wyoming and collecting bounty on same in various parts of the State of Iowa, where bounties are offered of a size making the operation a profitable one. The defendant was taken to Winterset, Madison county, where he has been producing a good many wolf scalps in a practically wolfless country. Mackintosh was in camp on the Coon River, and fifty-eight wolf scalps were found about his camp when search was made, to say nothing of a box of scalps which was found at the express office addressed to him from a point in Wyoming. Mackintosh is one of a party of men who are alleged to have regularly worked the western counties of Iowa with their fraudulent scalp game, and have escaped detection until lately, when their luck seemed altogether too good to be true.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

North Carolina Ducks, Geese and Brant.

NEW BERNE, N. C., Jan. 11.—Advices from Bogue Sound state that the waters down there are swarming with "thousands and tens of thousands of ducks, geese and brant." The weather was never more favorable for both the sportsman and the fowl. It is just cold enough to keep the birds moving, and warm enough to be comfortable for the gunners. There will be legitimate shooting on the Sound until March 1. Besides ducks there are deer and quail to one's content.

J. J. W.

Florida Quail.

BROOKSVILLE, Hernando County, Fla., Jan. 16.—Col. H. T. Holliday, of Virginia, and the Rev. Dr. Watkins, of South Carolina, have been spending two weeks hunting in Hernando county, bagging about twenty-five birds a day. Hunting season in Florida is from October to March 15.

J. W. L.

Mongolian Pheasants.

THE Massachusetts Commission makes report as follows of the work of breeding and distributing Mongolian pheasants during 1897:

The rearing and distribution of these birds during the past year has been fairly successful, the only drawback being the unprecedented wet and cold weather during the early part of the breeding season, which proved fatal not only to the early broods of pheasants, but all ground birds appear to have suffered from it.

As the Mongolian pheasants have come to stay, whatever information may tend to facilitate their introduction is important. We have therefore spared neither time nor expense to find the simplest and most effective way of breeding them.

As has been heretofore stated, great numbers of English or ordinary ring-neck pheasants are annually bred in Europe. According to the best publications on this subject, and confirmed by breeders with whom we have personally conferred, the young of this variety are fed on hard-boiled eggs or custard mixed more or less with chopped vegetables. A well-known English breeder states that he raises from 40 to 60 per cent. Not only in our own experience, but in that of all others of whom we know who have attempted to raise the Mongolian pheasant, this food has proved a failure, and it was not until the introduction of maggots as food that they were successfully bred in confinement. So pronounced is this, that it is only necessary to know what a breeder is feeding his chicks to know what variety he has.

Not only is the feeding of larvae necessary, but it is much cheaper than the eggs and custard. Six sheep's plucks a day, costing from 3 to 5 cents each (according to locality), will provide food for 300 chicks until old enough to feed on scalded grain.

Larvae for Food.

It is necessary, throughout the breeding season, to provide a good stock of breeding flies, for they lay their eggs and die. If their increase is not provided for the whole neighborhood will become exhausted of them. The varieties we most encourage are the blue-bottle fly and the flesh fly, the latter being the most desirable. In the beginning we had only the blue-bottle; now more than one-third are the flesh fly. As the larvae of the latter are much larger, it is easy to separate them with suitable screens, allow them to change into the pupa state and hatch as many as may be required. Six plucks will give from six to eight quarts of maggots. Placed in pans in a refrigerator, at from 40 to 45 degrees, development is arrested and they may be kept for weeks. We usually have from one to two bushels on hand, to provide against stormy or cold weather when flies are not out.

In our early experiments we found the stench from decaying meat almost unbearable, and we were liable to be complained of as a nuisance. We tried deodorizing, with no effect. Either the plant must be abandoned or moved to some other locality (neither of which could be done, and carry out the contemplated work), or some other method of raising larvae must be devised. We were therefore compelled to a scientific study of the nature and habits of the fly. It was soon discovered that flies do not lay their eggs on tainted meat. They are clean feeders from choice, and thrive better on fresh meat. Giving the flies fresh meat, and feeding the maggots on thinly sliced fresh meat twice a day, giving them no more than they will eat up clean, the disagreeable odor can be almost entirely overcome. Without entering further into detail of this laboratory, which has attracted the attention of several scientists, we append the statement of Mr. Kirkland, of the State Board of Agriculture, as showing the possible results of such an establishment. Mr. Kirkland writes:

"In fulfillment of my promise to furnish you some notes on the common blow-flies, I send you the following:

"The species which furnish the greater part of the insect food of your birds are the blue-bottle fly (*Lucilia caesar*), the flesh fly (*Sarcophaga carnaria*), and in small numbers the blue-tail fly (*Calliphora vomitoria*). All of these species commonly breed in animal matter. The females hibernate in sheltered places, and emerge with the warm weather of early spring to deposit their eggs.

The flesh fly is responsible for the largest maggots. According to Packard, the females of this species, after being fertilized, retain the eggs until they have hatched. They deposit large numbers of living larvae on exposed meat and animal refuse. Prof. Lugger states that single females of this species may give birth to 20,000 of these larvae. Pieces of meat which I exposed Aug. 1 were soon infested by the larvae of this fly. The maggots were fully grown Aug. 6 and pupated Aug. 7 and 8; the flies emerged Aug. 24 and 25, thus showing that about twenty-four days are required at this time of the year for the transformations of a brood. This period of time will be found to vary, I believe, according to the prevailing temperature, hot weather hastening, and cold weather retarding, the development of the insects. If we should allow an average of twenty-one days for each brood, seven broods would be possible in the five months of May, June, July, August and September. Owing to the variation in the length of the larval stage, where food is continually supplied, as at your establishment, there are no well marked broods, but a continual succession of maggots and flies.

"The blue-bottle fly in point of numbers is the most common species at your place. Unlike the flesh fly, this insect deposits eggs instead of larvae, and, as you pointed out to me, exposed meat is soon covered with masses of the eggs of this insect. In a short time the eggs hatch and give rise to maggots, somewhat smaller than those of the preceding species. Single females confined July 31 laid respectively 74,143,223 eggs, but under normal conditions the numbers doubtless would have been larger. These eggs yielded imagoes Aug. 14 and 15, making the period required for the transformation of this species about fourteen days. This would allow ten broods during the months previously mentioned. As

As a matter of interest, I have computed the unrestricted increase of a single fertilized female during ten generations, allowing but 100 eggs per female and considering half of these to yield males—conditions purely arbitrary and hardly possible in nature, but giving somewhat surprising results. The first generation would have 100 larvae, developing to fifty males and fifty females; the second generation would have 5,000 larvae, and so on to the tenth generation, which would be represented by 195,312,500,000,000,000 mature flies. Should we consider, for the purpose of illustration, that nine of these flies would require one square inch standing room, the tenth generation would make a belt of flies over 200 miles in width around the entire globe. While the conditions that would afford such an unrestricted increase are entirely inconceivable, yet the figures show the possibilities of the reproductive powers of this insect. What wonder is it then that these blow flies speedily destroy the carcasses of our largest animals? The third species mentioned (*Calliphora vomitoria*) was not very abundant, and I was unable to make any notes on its development. The life history of this insect, however, is known to be similar to that of the blue-bottle fly.

"I might add that the excellent arrangements which you have devised for the rearing of dipterous maggots with which to feed your birds are of more than ordinary interest, and seem in every way adapted to obtain the desired results."

Incubators.

In our last report attention was called to the probable results from the use of incubators. Everyone who has ever had any considerable number of hens under his care must realize the vexation and disappointment which constantly comes from their waywardness; and, what is even worse, treat them as you may, they are never entirely free from vermin. These pests get on the young pheasants and destroy many of them before they are old enough to keep themselves clean by dusting. So annoying were all these things that we determined to get rid of them if possible, and notwithstanding the assertion of pheasant breeders that it was impossible to raise these birds with incubator and brooder we bought of Mr. Rankin a small incubator, capable of carrying about 200 eggs, a plain, farmer-like machine, but too bulky and heavy for pheasant eggs. We subsequently built two smaller incubators, which we liked much better for the work. From the last one we obtained a hatch of 95 per cent., and, notwithstanding our inexperience, the entire hatch was from 10 to 15 per cent. higher than from the average hens.

It is easy enough to hatch pheasant eggs in any good machine that will hatch hens' eggs, with this exception: the shell of the pheasant egg is much closer grain and not so porous as hens' eggs, and the moisture necessary to the latter proves fatal to the former. Acting on the rule to put pans of water in the egg chamber, we lost many pheasant eggs in the first hatch. The chicks were so crowded in the shells that they could not get out.

Brooders.

There is no difficulty in hatching the eggs in any good incubator, but the rearing of the young pheasants, either in the brooder or under a hen, is not so easy. We made many and some interesting experiments in raising them in brooders, using mostly the Foster brooder. In the hands of so skillful a man as Mr. Foster this can be used successfully with a limited number of birds, but for extensive breeding of pheasants the heat should be evenly distributed throughout the chamber of the brooder and be self-regulating, as, if there is not sufficient heat, or if any part is warmer than another, they will crowd together and smother.

Outdoor brooders are not desirable for this work, as the sudden changes of weather render it impossible to maintain an even temperature; and it is inconvenient and almost impossible to give the chicks proper care in stormy weather, while the high winds that often occur are liable to disarrange things and in some cases set fire to the brooder.

The result of the exhaustive investigations made during the past season have led to the construction of a brooder house, partly covered with glass for the protection of very young birds in cold and wet weather, and equipped with brooders that are self-regulating and even in temperature. There is no guess-work about it; the temperature, once established, can be sustained with very little care. Our experience warrants the conclusion that with proper incubators and brooders nine-tenths of the cost and labor in rearing pheasants may be saved.

Experiments in this direction, but varying in methods, were made by Mr. Ames, of North Easton, and by Mr. Foster, of Ashby (for the Fitchburg Rifle and Gun Club). Mr. Ames hatched all the eggs in an incubator, to avoid vermin. All the chicks were reared in brooders. Both gentlemen acted in consultation with this board, and both were anxious to obtain as many birds as possible from their limited stock of breeders, and neither felt disposed to run the risk of extended experiments in what is now proved to be a new and important departure in rearing pheasants.

NORTH EASTON, Mass., Oct. 16.—In answer to your letter, let me say that I have had this year a little better success in raising pheasants than I did last. I have now about 100 young birds, all of which were raised with the incubator and brooder. I have kept an accurate account of all the eggs my hens have laid, the percentage of their fertility, proportion of birds raised, etc., which I should be glad to show you at any time. From a comparison of this account with the one which I kept two years ago, I have proved, to my own satisfaction, that by the employment of the incubator, and brooder I have been able to raise more birds, with less labor, than I could have done by setting the eggs under hens. My first hatch, of sixty-seven, all died within the first week. The cause of this mortality was, I found when too late, that the temperature of the brooder had been kept too high. The cause of most of my subsequent losses was cold and wet weather.

I shall keep all my young birds until spring, and then turn some of them loose, reserving enough for future experiments. Unfortunately, a large proportion of my birds are cocks. Two or three wild broods have been seen about here, which goes to show that the birds I turned loose two years ago have been able to withstand our winters. I think that pheasants, in their wild state, must lay earlier in the season than they do when in captivity; for one was brought in by a cat which was at least two weeks older than any young birds I had. HOBART AMES.

ASHBY, Mass., Sept. 22.—Replying to your request, would say that the Fitchburg Rifle and Gun Club continued their efforts to rear Mongolian pheasants, and I have again had the care of them.

Of the birds raised last year, only one was trapped for breeding. During the season five pairs have been received from your yards. They were bred in trios, and the two extra cocks were liberated in spring, that they might breed with the hens that are known to have lived over from last year's breeding. Of the six hens at the start, three died about June 1. The first egg was laid April 12; the last, Aug. 4; total number of eggs, 217. Of this number the two hens in yard No. 1 laid 110. All the eggs were set under hens, and 154 chicks were hatched; 66 of these are now alive and doing well. The rearing has been done entirely with the brooder mentioned in your report last year. The successful bill of fare has been a liberal supply of tender lettuce, clean maggots and custard, carefully fed. All have been kept yarded, and the hens (about 30) will be kept and bred from next year. H. R. FOSTER.

The distribution of Mongolian pheasants to parties who were willing to take care of their breeding and turn out the young birds in their respective localities has not proved as successful as was anticipated. Although careful directions as to care and breeding were given, a majority either lost their old birds or failed to raise young ones. So far as stocking the State is concerned, it would in most cases have been better to have set them at liberty.

Two years ago we sent a trio of birds to Pittsfield, which were placed with a man to breed them. When we visited him in the fall we found his coops too high, and, having neglected to clip the wings, one of the females had flown up against the wire and was killed. At Mr. Stevenson's request we sent him another bird, but for the two years he has failed to raise any. The same experience is reported by others. To our inquiries Mr. Stevenson sends the following letter. The statement that the hens laid but nineteen eggs seems to us a mistake; it is far more likely that they were eaten by the birds.

PITTSFIELD, Mass., Nov. 6.—I find about a dozen birds have been seen this season in Dalton, near where the birds were first put out, and one hen with a large brood of young just over the line in Pittsfield. Evidently the pheasants will live here if let alone. They seem to stay around and near cultivated lands, rather than go back on the hills.

You will be interested to know that Mr. Zenas Crane has, within a short time turned out near his residence in Dalton two dozen pheasants. They were purchased of Mr. Woodward in New York, and are said to be Mongolians.

I am sorry to say we have again had no success in raising chicks from the two you sent us. The hens laid but nineteen eggs, and from these only five chicks were hatched, which lived but a few days. With your permission, we will let the three out next spring, and shall hope they will improve on our experiment.

The woodcock and partridge do not seem to have been as plentiful as usual this year, but trout have done well for us, so that fishing has been better than the past few seasons. J. M. STEVENSON.

Nine pairs have been liberated in Winchester, besides a number of surplus cocks, some of which, having no mates, have wandered away. In the last two years a number of broods have been reported in the vicinity within a mile or so of where they were let out, and there is not a week that we do not hear of one or more being seen. We regret to say that several have been killed by gunners. During the early part of November four persons were arrested and each fined \$20 and costs of court for killing pheasants. Other cases are known, and investigation may lead to evidence to convict.

Through the kindness of Mr. S. Forehand, of Worcester, the Mongolian pheasants were placed in the hands of the Commissioners for the purpose of stocking the State; and the fact that we were the first to establish a successful method of artificially breeding them has led to an extensive correspondence throughout the United States, not excepting Oregon, from whence our birds were obtained. Not being permitted to send them out of the State, we have sometimes referred parties to the State game warden of Oregon, who, as will be seen by the appended letter, seems to appreciate the flooding of his office with correspondence:

PORTLAND, Ore., Nov. 3.—The Mongolian pheasant continues to thrive and increase in this State, where they were first introduced as a game bird on the American Continent. This increase is the more remarkable because of the failure of the Legislature to provide adequate laws and funds for their protection. They have become the favorite market bird in this city, over 10,000 having been sold here last year during the one month that market sales are permitted by law—Oct. 15 to Nov. 15.

There is a great demand for these birds, for stocking purposes, from nearly every State in the Union, scores of letters being received at this office every week, making inquiries as to their habits, and how they can be obtained. The demand has now become greater than the supply, as only birds bred and raised in confinement can be legally shipped out of the State, and then only upon affidavit of the shipper that the birds are such as to entitle them to shipment.

I have no doubt that the effort made by your Commission and other enterprising citizens, to stock your State with this, the greatest game bird on earth, will prove successful. All that is necessary is wise protective laws, strictly enforced, prohibiting their killing for five or six years, to thoroughly establish them.

Your climate is colder than ours, and the environment in your State not as favorable for their rapid increase; but they are a hardy, prolific bird, and I feel confident that they will gain a foothold if given a fair chance. HOLLISTER D. MCGUIRE, State Fish and Game Protector, Oregon.

Believing that the introduction of these birds is of great importance to both farmer and sportsman, we have given considerable space to recording, in part, what has been done in the care and breeding of them.

For assistance in this work the State is under obligations to Mr. Hobart Ames, of North Easton; Dr. White, of Sandwich; the Fitchburg Rifle and Gun Club, the Milford-Gun Club, Senator Woodfall and many others, who have freely given time and money for the public good.

News from the Yukon.

A note just received from Mr. J. B. Burnham, written at Fort Selkirk, Nov. 6, reports further progress toward Dawson City checked by the ice; and it was Mr. Burnham's intention to winter on Selwyn Creek, thirty miles below Fort Selkirk, and to hunt. Indians were, at the time of writing, coming into Fort Selkirk with caribou and moose meat.

Sea and River Fishing.

Fishing Up and Down the Potomac.

The First Lock.

THE Chesapeake and Ohio Canal comes into Georgetown about 36ft. above the Potomac at this point. This level runs west nearly parallel with the river on the Maryland side for five miles to the First Lock, one of the nearby popular fishing resorts for Washington anglers.

The Lock may be reached by electric car now, necessitating only a short walk down the steep bluff; or one may walk up the towpath, or take a little launch which plies on the canal in the summer months. We have nearly always driven up, keeping close to the canal on the land side, with a first-rate macadamized roadway as far as historic Chain Bridge, and then taking to a woods road with a single track for a mile and a half further to the Lock-house.

This is as far as a road is visible, the Potomac Heights rising so sheer from the back of the house that one may almost step out of the second-story window.

It is a delightful drive before sun-up on a July morning, when the dew is on the grass and the air is full of mist, if you are not subject to rheumatic troubles.

Half-way up the woods road we reach one of the few genuine springs on this side the river to Great Falls. This one has a short run across the road to the canal, and its crooked bed is hidden under a mass of delicious water cress, which we value nearly as highly, and gather with nearly as much care and satisfaction as we do the bass.

Other springs there are in plenty up this side of the river, trickling their inviting but deceptive streams from the foot of the Palisades, but they are mostly a disappointment.

The Conduit, which supplies Washington with water from the dam at the Great Falls of the Potomac, runs for fifteen miles along the top of the ridge, and it is supposed to be little leaks from this which furnish these pseudo springs, of which there are scores along the bluff.

At any rate, when the river water is warm, so are they, and when it is long muddy they, too, become discolored. However, their water is somewhat cooled and partially filtered by its passage through the crevices of the rock, so they are always to be preferred for drinking purposes, though with not much advantage to boast of.

Just before reaching the end of our ride, we cross a turbulent little brook, the waste overflow from the Delacaria, or Receiving Reservoir. This noisy stream in its course has a good many first-rate pools, which are sometimes filled with bass, but they don't stay long. A few old-time fishermen, who have known it for nearly a score of years, keep tab on it, and if an imprisoned bass happens anywhere along its line, all sorts of inducements are offered him to change his quarters.

Last fall a neighbor who has fished it many seasons, and occasionally had great sport after a spate, as the English call a freshet, spent an afternoon here. He had been fishing all the morning in the river for bass, without a rise, and was driven to "try something else." With bob and worm he took a basket of the gamy, long-eared sunfish with which the pools seemed to be filled, and was nearly as proud of his catch as if they had been better fish. "Better" here means only larger, for there are no better in any other sense.

Arriving at the house, we turn the horse over to the boys—sons of the Lock-keeper—put on our wading costumes in the unused lower story, and cross the canal over the gate of the Lock, always trying first for a bass in the tail of the flume or waste race, which carries the surplus water from the upper level around the Lock.

As is well known, the canal has lots of good bass in it, and many a stray one is picked up at the discharges of these flumes in the lower level, where the bass come to feed on the boat refuse which comes from above, or on the smaller fish which gather here for the same purpose.

On the writer's first visit to this place, his first cast in the mouth of the waste was rewarded with a fine bass so hungry it seemed to meet the fly almost half-way, and he has never been able to pass the place since without trying for another that does not come. Maybe next time. A story is told of a man who, on his way to work, accompanied by a favorite terrier, jumped a hare, which the terrier would have caught, only the hare went through a hole in a nearby wall. For five years the man and his pet passed this place twice a day, and never once that the terrier did not investigate the hole in the wall, evidently with the expectation of finding that or another rabbit. So strong are association and memory and hope in all of us.

The procession of canal-boats that all day "like a wounded snake drags its slow length along," at intervals sends a lazy tub into the Lock to be lifted up or dropped down, loaded with coal from Cumberland, or grain or hay, and usually going back light. Life on a house-boat has always an attraction for the fisherman, and with the curiosity natural to all of us we linger while one is passing, looking for something odd about the boat, its cargo or its people, and not always disappointed. Sometimes in the season we get a melon or two, for our noon rest, of some captain enterprising enough to have risked part of his capital in garden truck. Occasionally a boat happens along having a baby with a strap around its waist, with a couple of yards of rope fastened to a staple in the roof of the cabin that gives the young one a certain freedom of movement, and fresh air, without the risk of tumbling into the raging canal. After seeing several hundreds of these boats whose general style of architecture tends to monotony, one becomes so nearly indifferent that the announcement that another is approaching will hardly meet with a response, if the fishers are already on their way to the water. But "here's a kid on this one" has never been known to fail of securing an audience.

It is half a mile to the principal channel of the river from the towpath, across a stony flat with great shallow pools in which freshets usually leave some fish imprisoned. Two years ago there were hundreds of fine

bass here, which gave us sport the whole summer long. Last year there was not a single good bass in any of them, but instead three or four schools of carp of 8 or 10 lbs., usually shy enough to keep well out of our way; but one morning when we were there at daylight we had an interesting hour following them about, fifteen or twenty in a school, and not disturbed when we were stooping over them, wishing for a spear or a gun.

A feeder comes into the canal at the Lock from the level of the river above the dam, and many bass are taken at the feeder lock, some fifty rods away. Just above this feeder lock a retaining wall for the feeder serves as a waste discharge called a tumbling dam, and at its foot is a little pool 3 or 4 ft. wide. Walking over this wall one day, the writer saw several bass, frightened by his shadow, scurrying under the rocks. Returning a couple of hours later, and approaching quietly, a fly, dropped down 10 ft. below, was seized at once by the largest fish in the pool, and after a sharp struggle at some disadvantage, with light tackle directly over the fish, it floated quietly long enough to allow him to clamber down and net it. By giving the scared fish a rest after each effort, five were thus taken. Last year a friend found one good one in this same pool, and secured it in the same way. These could only have reached this place by washing over in a flood.

There are several shallow channels, some quite rapid, between this and the main bed of the river, and these are full of bass, but hard to get. They can only be reached by wading, but the angler is hard to please if he cannot find here some attractive water which he will be ambitious to fish. Shallow ripples and deep pools; overhanging willows and big rocks; grassy mats and foaming eddies; hoping with every cast for a 5 lb. bass, but they do not often run here over half that weight.

There may be nothing in it, but we have always thought that it was too close to the head of the Little Falls to be comfortable for the big bass.

Our experience has been that they much prefer the foot of strong water to its head, and the first rush of the Falls begins just opposite the Lock.

But we find enough always to make the day here a happy one, for, with the author of "Random Casts," we feel that "It is not the number of fish he captures that makes the angler contented, for the true angler can enjoy the mere casting of the fly, if he has only an occasional fish to reward his efforts."

HENRY TALBOTT.

The Hudson River as a Salmon Stream.

BY A. NELSON CHENEY.

(Read at National Fisheries Congress, Tampa, Fla.)

FROM time to time, during the past twenty-five years, to my personal knowledge, and probably for a longer period, there have appeared in various publications articles describing the Hudson River as an original salmon stream. Some of them have merely made the broad statement that the river once contained *Salmo salar*, and others in more explicit language described the great quantities of the fish that once inhabited the stream, and deplored the fact that they had become extinct in the river. Almost without exception, the sole foundation for the statement that the Hudson was once a natural salmon river rests upon an extract from the log of Henry Hudson, of the Halfmoon, who records that in 1609 he saw a "great store of salmons in the river" which now bears his name.

Within the past fifteen years a gentleman wrote to a newspaper published in a city on the bank of the Hudson, declaring that his grandfather caught large numbers of salmon in the Hudson, and for this reason it was a proper water to be restocked with the king of fresh-water fishes. That old, old story which originated in England or Scotland one or two hundred years ago, that apprentices and servants provided, when indentured to their masters, that they should not be required to eat salmon oftener than twice a week, has been transplanted to the banks of the Connecticut, and has even been applied to the Hudson and its alleged salmon. Nevertheless, I maintain, and will show in this paper, as I believe, conclusively, that the Hudson was not originally a salmon stream, and that no salmon were ever found in it, except possibly an astray from the Connecticut, until it was planted by the United States Fish Commission and the Fisheries Commission of the State of New York. As to Hudson's declaration—or, to be exact, the declaration of Robert Juet, the master's mate of the Halfmoon, for he it was who wrote the journal—under date of Sept. 3, 1609, he writes: "So wee weighed and went in and rode in five fathoms, oze ground, and saw many Salmons, and Mulletts and Rays very great. The hight is 40 degrees 30 minutes." Under date of the 15th: "Wee ran up into the river, twentie leagues, passing by high mountains. Wee had a very good depth as thirteene fathoms, and great store of salmons in the river." A boat was sent out, and with a net "ten great mullets of a foot and a half long apiece, and a ray as great as four men could hale into the ship" were taken. Not a single salmon was captured at any time while the ship was in the river. The Halfmoon entered the mouth of the river Sept. 3, and anchored inside Sandy Hook, and the next day, the fourth, was when the fishing was done. The ship ascended to the present site of the city of Hudson, and a boat's crew was sent up the stream to about where Waterford now stands, or a little north of the present city of Albany. The ship and its master returned and set sail for Europe on Sept. 23, so that, all told, Hudson was in the river twenty days in the month of September. Had there been salmon in the river, he must have seen them between Sandy Hook and Waterford, and they would not have been in that portion of the river at that time, as their spawning habits would have taken them fifty miles further up the river than Waterford, to Baker's Falls, where shad ran until stopped by the building of the Troy dam in 1825. In some of the Canadian rivers there is a late run of salmon, the fish running as late as October, but this was not true of the Connecticut or other New England salmon streams, nor has it proven true of the Hudson since it was stocked by artificial means.

Hudson being an Englishman, and possibly more or less familiar with salmon in the rivers of his own country, and Juet being born at Limehouse, on the river Thames, where salmon were then common, it is perhaps fair to assume that, seeing schools of large fish of some sort, one or the other associated them with the fish of his home waters and called them salmon in the log.

In a description of New Netherland, printed in Amsterdam, Holland, in 1671, occurs this paragraph: "The streams and lakes, rich with fishes, furnish sturgeon, salmon, carp, bass, pike, roach, bleak, all sorts of eel, sunfish which resemble the bullhead in taste, and codfish which are caught near waterfalls." It will be observed that European common names are applied to the fishes, and doubtless the writer was familiar with the fishes of the old country, and applied their names to the fishes in the new country that to him resembled those of the old. To this day codfish are not caught near waterfalls, and it is more than doubtful if salmon existed in the lakes and streams any more than bleak and roach. New Netherland is bounded "on the south by Virginia, north-east by New England, north washed by the river Canada, and on the coast by the ocean." Besides codfish at the waterfalls and salmon in the streams and lakes, the writer found that "New Netherland hath, moreover, a wonderful little bird scarcely an inch long, quite brilliant in plumage, and sucking flowers like the bee; it is so delicate that a dash of water instantly kills it. When dried it is preserved as a curiosity." The hummingbird is a little larger now, and more hardy, but the description is perhaps as near of the bird as of codfish being taken at waterfalls and salmon in lakes within the boundaries as given of New Netherland.

In 1680 Jasper Danker and Peter Sluyter, members of the Society of Labadists in Holland, visited this country, and they record of the Mohawk, a tributary of the Hudson: "There are no fish in it, except trout, sunfish and other kinds peculiar to rivers, because the cahoos stop the ascent of others."

They dined in state with "Madam Rentslaer at Albany, and had to eat exceedingly good pike, perch and other fish," but no salmon.

New York had salmon streams on the north flowing into the St. Lawrence, Lake Champlain and Lake Ontario, for I have found laws for their protection enacted in 1801 and later, and mentioning the Oswego, Grass, Racket, St. Regis rivers and Fish and Wood creeks, as well as other streams. A law enacted in 1801 provided that no dams should be erected on streams flowing in Lakes Ontario, Erie or Champlain, to prevent salmon from following their usual course up said streams, and when dams were erected, they must be provided with what are now called fishways, to enable fish to pass over the obstruction. There is every indication that the law-makers of the last of the last century and the first of this understood fully the value of the fish in the waters of the State as food, and threw every possible safeguard around them, but there is no record of a law protecting salmon in the Hudson until 1771, when it was enacted:

"Whereas, It is thought that the fish called salmon, which are very plenty in some of the rivers and lakes in this and the neighboring colonies, were brought into Hudson's River, they would, by spawning there, soon become numerous, to the great advantage of the Public:

"And whereas, A Number of Persons in the county of Albany propose to make the experiment, and defray the expense attending the same; in order that the good design may be more effectually carried into execution, it is conceived necessary that a law should be passed for prohibiting the taking and destroying the Fish for a term of years."

This act was signed by John, Earl of Dunmore, and in less than a month after, viz., April 2, 1771, the Common Council of Albany passed the following resolution:

"Resolved by this Board, That a letter be sent to William Penturp for to come down & agree with the corporation, if he can undertake to bring live Salmons into Hudson's River."

There is no record, however, that anything was actually done, under this resolution, to stock the Hudson with salmon. Samuel L. Mitchell, Professor of Natural History in the University of New York, wrote in the "Transactions of the Literary and Philosophical Society of New York," in 1815: "There is no steady migration of salmon to this river. Though pains have been taken to cherish the breed, salmon has never frequented the Hudson in any other manner than as a stray." In 1857 Robert L. Pell, of Pelham, Ulster county, petitioned the Legislature to construct fishways in the Hudson, and offered to stock the river with salmon without expense to the State. There is no evidence that the State accepted the proposal of Mr. Pell to stock the river with salmon at private expense, and certainly the fishways were not built.

I believe it unnecessary to quote further from old records and laws to prove that the Hudson River was not originally a natural salmon stream. The evidence is chiefly of a negative character, but I am of the opinion that it is conclusive.

What has been done to make the Hudson a salmon stream has been done within the past twenty-five years, and I will rehearse the operations of the National and State Fish Commissions to this end as briefly as possible.

Beginning with 1873, and continuing for three years after, the Fish Commission of New York planted in the tributaries of the Hudson a quantity of fry of the Pacific salmon, hatched from eggs furnished by the United States Fish Commission. Several hundred thousand fry were planted, but so far as known, after going to sea as smolts, not a single fish returned to the river, and this is true also of other plantings of this species of salmon in other Atlantic coast rivers.

In 1801 the late Col. Marshall McDonald, then United States Commissioner of Fisheries, requested me to make an examination of some tributaries of the upper Hudson, with a view to making a plant of yearling quinnat salmon. He was thoroughly convinced that the attempt to stock the Atlantic rivers with the fry of this fish was an abject failure, but at the Wytheville station of the Commission, in Virginia, rainbow trout from California had been established in the hatchery stream by planting fingerling fish after plantings of fry of this species of fish had failed, and he desired to try a like experiment with the salmon

also from the Pacific Coast. I selected several streams in Vermont, tributary to the Battenkill River, which in turn flows into the Hudson. The streams were free from everything injurious to young salmon, and there were no natural or artificial obstructions in them. Later I went to Vermont with one of the United States Fish Commission cars, and planted several thousand yearling California salmon in the streams selected for the purpose. Not one of them has ever been heard of since they went down to the sea.

The experiment of stocking the Hudson with Atlantic salmon (*salar*) was begun in 1882, at which time 225,000 fry were planted in small streams tributary to the head of the river about 260 miles above Sandy Hook. Nothing was heard from this plant until 1886, or four years after, when adult fish returned to the river, fish weighing from 9 to 16 lbs., and ascended to Troy, where they were stopped by the State dam. Every year since, with one exception, plants of salmon fry or yearlings have been made in the river, and every year adult fish have been captured in the lower river by the net fishermen.

One thing has been proven to my satisfaction, beyond peradventure, by these experiments. The young of the *Salmo salar*, when planted in the Hudson, do not go to the sea until they are two years old, and they return from the sea when they are four years old.

If I should make this statement before a European audience, I would be accused of rank heresy, and possibly here in Tampa delegates to the National Fisheries Congress will desire to know what proof I have of this assertion. I planted salmon fry in a trout stream tributary to the Hudson which had never contained salmon, and it was two years before they arrived at the smelt stage and took their departure for the sea in silvery livery. Selecting another stream, I made a like plant, and it was two years before the pair put on the smolt dress, and turning their tails to the sea, drifted down with the current. During the past fourteen years I have planted *salar* fry in various streams, and always when in a new stream where they could be watched, that no mistake would be made, they have remained for two years before going to sea. Since the first plant of *salar* fry, a total of 3,486,000 have been planted in the Hudson River, this number including 12,000 yearlings. All the eggs were furnished by the United States Fish Commission, and came from the Penobscot River in Maine. For a number of years after the initial plant the United States paid all the expenses of hatching and distributing the young fish, but later the Government furnished the eggs, and the Fisheries, Game and Forest Commission of New York hatched and planted the fish at the expense of the State.

It is of record that in one year over 300 adult salmon, fish from 10 to 38 lbs. each, were taken in nets in the lower Hudson, every fish taken contrary to law. It is true that some salmon taken in nets are released by the fishermen, but the high price offered for Hudson River salmon in the New York markets sorely tempts a fisherman to kill such salmon as may be taken in his net, instead of releasing them uninjured, as the law directs. Fishways have been erected in the Hudson by the State at Troy, Mechanicsville and Thomson's Mills, but other fishways must be built before the river is open to the fish from the sea to the pure water of the upper river, where the salmon would naturally go to find spawning grounds.

The Cohoes Falls, on the Mohawk, is to-day as much of a bar to the upward migration of salmon as when Jasper Dunker made the entry in his journal in 1680, which I have quoted.

Baker's Falls, on the main river, has been supposed to be one of the causes why salmon never frequented the river at the times they ran into the Connecticut. These falls stopped the shad, and it has been said that they would stop salmon. Possibly they would, but I visited the falls with the late Commissioner McDonald, and we were both of the opinion that it was possible for salmon to surmount them on the proper stage of water. Why the Hudson was not originally a salmon stream when the Connecticut, a neighboring river, was, I shall not attempt to explain. It may have been that Cohoes, and other falls on the main river and its tributaries, operated as a bar to keep them from proper spawning grounds, but one thing has been demonstrated most fully: The Hudson River of to-day, with its sewage from towns, and poisons from mills and factories, does not deter salmon from entering from the sea, once the fry are planted in its headwaters, and with fishways in all the obstructions, natural and artificial, it could be made a self-sustaining salmon river, if the millers would obey the law, while the State Fisheries Commission aided nature in keeping up the supply of young fish by artificially hatching the eggs. Col. McDonald told me on more than one occasion that if the Hudson was open to the salmon, and proper efforts were made to keep up the supply of young fish, and netting regulations were enforced, the river would from its salmon add \$100,000 a year of profit to the State financially, while largely augmenting the food supply.

San Francisco Fly-Casting Club.

SAN FRANCISCO, Jan. 13.—*Editor Forest and Stream:* The San Francisco Fly-Casting Club is making preparations for an open-to-the-world tournament, to be held in San Francisco on Sept. 9 and 10, 1898, in which fly-casting and lure-casting events will be programmed.

Our club has taken this matter up in earnest, and will make the tournament a most attractive one, both in number, character and value of the medals and prizes, and as an interesting event to the angling fraternity.

It is hoped that competitors from the East and abroad will enter the contests, and with this object in view we should be much pleased if you would notice in your columns the fact and date of the tournament, and assure a most hearty welcome to all who can arrange to be with us.

HORACE SMYTH, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Fly-Casting Tournaments.

DURING the last week the interest in the fly-casting seemed to increase, and on several occasions the tiers of benches were crowded by ladies as well as gentlemen, and all were enthusiastic when a particularly long cast was made or a record broken. It was a reunion of anglers who seldom meet, and many old friendships were renewed. The number of old friends we met—men whom we had not seen for years—would require a column to record, and the hearty hand-shakings with new as well as with old friends was felt for days afterward. All distance records are given in feet and inches.

Monday, Jan. 17, at 3 P. M.

Class F.—Ladies' fly-casting contest. For distance only. Unrestricted. Open to all. No fees will be required in this contest. Judges, Fred Engle, Fred Mather. Referee, T. B. Stewart.

Miss Cora Leonard73.0 Miss Helen Stoddard62.0

Both ladies made graceful as well as long casts. Miss Leonard showed the style of those famous casters H. W. Hawes and R. C. Leonard in hardly allowing her line to touch the water before retrieving it, thereby lessening the strain in lifting the line, but at the same time risking a chance that the leader might straighten out. Miss Stoddard was handicapped by a blistered hand and a sore biceps from practice the day before, but her casting was much admired, and she promises to become an expert.

Monday, Jan. 17, at 8 P. M.

Class G.—Obstacle fly-casting contest. For delicacy and accuracy. Open to all. There will be placed on the left side of the bank a bush overhanging the water 3ft. and above the surface 3ft., distant from the casting platform 30ft., and on the right side of the tank a similar bush, under like conditions, distant from the platform 40ft. The contestant will be allowed five casts at each bush. The contestant who places the fly most delicately and nearest the side of the tank, under either of the bushes, shall take first award. The score is given in inches and tenths, but the record of the ten casts is omitted. Judges, T. B. Stewart, H. R. Harris. Referee, Lody Smith.

E R Hewitt228 22.8 F N Peet346 34.6
G Poe242 24.2 D Brandeth372 37.2
C M Roof244 24.4 P C Hewitt411 41.1
B W Goodsell297 29.7 D T Kennedy501 55.6
Geo Landman310 31.0

This was a cumbersome way of reckoning, and it took some time to figure it up. Mr. Kennedy withdrew after the ninth cast, hence his score was divided by 9. There was great skill required in this cast, and the winner, Mr. E. R. Hewitt, showed that he could dodge his fly under a bush as well as cast it far in other contests. There was no applause because none but the judges knew what the caster was doing, and even they have no record to compare it with until they figure it out. In this and in all other contests we give the names in the order of their record and not in the order in which they may have cast.

Tuesday, Jan. 18, at 3 P. M.

Class H.—Fly-casting contest. Distance only. Open only to those who have never cast more than 75ft. in any similar contest. Judges, Fred Engle, Fred Mather. Referee, T. B. Stewart.

D Brandeth81.0 W K Park68.0
W N Goddard79.6 L Taylor61.0

This brought in some new men, and while such a contest does not interest the public like a struggle between the champions, it encourages beginners.

Tuesday, Jan. 18, at 8 P. M.

Class I.—Switch or Pritchard style contest. Distance only. Open to all. Rods and length of leader unrestricted. An obstacle, 12ft. high, will be placed 15ft. back of the contestants. Judges B. W. Goodsell, E. S. Osgood. Referee, S. P. Kellogg.

H W Hawes99.0 P C Hewitt91.6
R C Leonard95.6

This was a fine contest in that most useful of all styles of getting out a fly. As Harry Pritchard was the one who introduced it in our tournaments the committee honored him by calling it after him. The "obstacle" was a painted canvas screen representing trees and was 20ft. high instead of 12. The record of Mr. Peter Cooper Hewitt was gratifying to those who hope to see the "amateurs" come up with the two who are looked up to as experts or "professionals" because they are rod-makers and who contested with him.

Wednesday, Jan. 19, at 3 P. M.

Class J.—The Press fly-casting contest. Distance only. Open only to members of the press. Rods and length of leader unrestricted. No entrance fees will be required in this contest. Judges, T. B. Stewart, H. W. Martin. Referee, R. B. Lawrence.

C H Mowry73.0 E C Stokes59.0
W K Park68.0 Fred Mather55.0
H R Harris60.6

This class is really intended to encourage young and struggling journalists, but several of them declined to enter against Mowry, who has a record. A well-known angling writer entered to cast against Mr. Mather. He withdrew and so did Mr. Mather after a few casts, using only a small portion of his time in order not to make a record, giving as a reason that he only wanted to beat Mr. W. C. H. and no other.

Wednesday, Jan. 19, at 8 P. M.

Class K.—Single-handed bait-casting contest. For distance and accuracy. Open to all. Five casts shall be made with $\frac{1}{2}$ oz. rubber frog, to be furnished by the committee. Free running reel to be used. No limit as to rod or line, but the line must not be leaded or weighted. For accuracy five casts shall be made at a buoy placed 60ft. from the casting point. The casts to be made with the $\frac{1}{2}$ oz. rubber frog, and for each foot or fraction of a foot that the frog falls from the buoy a demerit of one shall be made; the sum total of such demerits, divided by five, shall be considered the demerit per cent.; the demerit per cent. deducted from 100 shall be the accuracy per cent. The average distance cast, added to the percentage of accuracy, shall constitute the score.

This was the most complicated bit of mathematics that the committee evolved. It is possible that they understood it, but it is a positive fact that few others did. We merely give the list of winners, which were: R. C. Leonard, C. G. Levison, J. H. Bellows, F. N. Peet and B. W. Goodsell. It was a most unsatisfactory class and should never be repeated in the same way, *i. e.*, adding the percentage of accuracy to the average distance cast.

Thursday, Jan. 20, at 3 P. M.

Class M.—Fly-casting contest. Distance only to count. Rods and length of leader unrestricted. Open only to those who have never cast over 96ft. in any similar contest. Judges, T. B. Stewart, E. S. Osgood. Referee, Fred Mather.

R C Leonard110.6 I W Bellows92.6
H W Hawes100.6 G W Goodsell92.0
P C Hewitt98.0 Geo Landman86.0
T B Mills97.6

This was an exciting contest, because of the privilege of every man to enter who had never cast over 96ft. As we go to press we cannot search the records, but we

think that some of the contestants have records of over 96ft., unless the rule of "Rod and leader unrestricted" should be construed to show that there had been no "similar contest." Here again Mr. Hewitt crowded the champions. The contest was remarkable in the fact that Mr. Goodsell cast his five minutes without asking for time for repairs, and that Leonard's record last year in a similar contest was 101.6. A sliver on the side of the tank cut the leader of Hawes's and made him call for time.

Thursday, Jan. 20, at 8 P. M.

Class N.—Fly-casting contest. Distance only to count. Rods and length of leader unrestricted. Open only to those who have never cast over 96ft. in any similar contest. Judges, C. M. Roof, S. P. Kellogg. Referee, F. D. Devine.

B W Goodsell92.6 E R Hewitt85.0
Geo Landman92.0 I W Bellows82.6
F N Peet90.6 D Brandeth80.0

In this contest Mr. Brandeth cast 94ft., which would have made him the winner, but he had several inches of the butt of his rod inside his cuff, and there was a protest against that style of casting. There was a nice question involved, but the judges left it to the referee, and he decided against Mr. Brandeth. The fact that these contests are entirely in the interest of fly-casting as an art, and therefore diametrically opposed to mug-hunting, makes it obligatory on the protestant to show that the judges have been unfair, and this is difficult, because they volunteer to do the work *con amore*.

Friday, Jan. 21, at 3 P. M.

Class O.—Light rod fly-casting contest. Distance only. Open to all. The rod must not exceed 4oz. in weight, with an allowance to be made of $\frac{1}{4}$ oz. for solid reel seat. Length of leader unrestricted. Judges, Fred Engle, T. B. Stewart. Referee, Fred Mather.

R C Leonard90.6 I M Bellows81.0
P C Hewitt92.0 B W Goodsell76.0
H W Hawes88.6

Here Mr. Hewitt again crowded the champions, and received the plaudits of his friends. The records of all the contestants are remarkable when the weight of the rod is considered, and a few years ago such a record would have been thought to be impossible.

Friday, Jan. 21, at 8 P. M.

Class P.—Fly-casting contest. For accuracy only. Distance 60ft. Open to all. Rod and length of leader unrestricted. After the contestant has signified his readiness he shall make five consecutive casts at the buoy. The distance in feet and inches at which the fly drops from the mark at each cast shall be noted, and the sum of these distances added together and divided by five shall constitute the score. The contestant having the lowest average shall be declared the winner. Judges, S. P. Kellogg, H. R. Harris. Referee, M. H. Smith.

C M Roof18.0 3.7 1-5 B W Goodsell12.6 2.6
F N Peet17.6 3.5 D Brandeth10.8 2.1 3-5
P C Hewitt14.0 2.9 1-2 Geo Landman5.6 1.3 1-5
G Poe13.6 2.8 2-5 J H BellowsWithdrawn.
H E Robbins13.0 2.7 1-5

Mr. Landman was remarkably accurate at the 60ft. mark; his five casts measured as follows: 6, 14, 14, 14, 18in. from the buoy.

Saturday, Jan. 22, at 3 P. M.

Class Q.—Light rod fly-casting contest. For distance only. Open to all. Rods must not exceed 5oz. in weight, with an allowance to be made of $\frac{1}{4}$ oz. for solid reel seat. Length of leader unrestricted. Judges, G. Poe, W. C. Harris.

R C Leonard101.6 H W Hawes93.6
P C Hewitt95.0 B W Goodsell87.0

It will be noted that this contest was like that of the day before, except that the rods might be an ounce heavier, and the contestants were the same. Each man exceeded his record of yesterday by many feet. Goodsell by 11, Leonard by 9, and Hewitt and Hawes by 5 each.

Saturday, Jan. 22, at 8 P. M.

Class R.—Expert fly-casting contest. Open to all. Distance only. Rods and length of leader unrestricted. Judges, T. B. Stewart, R. B. Lawrence. Referee, J. L. Livingston.

R C Leonard120.0 P C Hewitt95.6
H W Hawes104.9 I W Bellows89.0
B W Goodsell98.0 Geo Landman84.6

Leonard cast last, and the cheers which came from the lower end of the pool told that all records with a single-handed fly-rod had been broken. Then came a call for a tape-line, to measure the distance he had cast beyond the tank, which was 110ft. from the stand. Then the Garden rang with cheers when 120ft. was announced. Reuben had not cast his allotted five minutes, but he stepped from the stand saying, "That will do for to-day." This beats his former record of 106, and also that of Mansfield of 111.3, made in Chicago. Twenty years ago a man who could cast 60ft. was thought to be a wonderful caster. Mr. Leonard's great cast closed the tournament, which had been interesting throughout.

FRED MATHER.

[Next week Mr. Fred Mather will make some personal comments on the incidents and accidents observed during the contests.]

Senator Quay's Snappers.

ST. AUGUSTINE, Fla., Jan. 18.—*Editor Forest and Stream:* I find by a scrap in the Tatler that Senator Quay and his party caught 800 red snappers from 10 to 40lbs. each in one day at Juniper Inlet. Now all agree that the Senator is an able politician, but this case proves that outside of politics he's as thoughtless as a boy. He's too sensible not to know that there is no sport in hauling in fish by the hundred. No one will object to his catching tarpon, but the snapper is too valuable a fish to waste.

When a Waltonite goes on a record-breaking excursion and boasts of so many hundred trout to his individual hook we may appropriately dub him a "trout hog," but when a respectable United States Senator runs his snapper score into the hundreds we hesitate to call him a snapper animal of any kind, though I would like to ask him how long he thinks such sport will last if this record business is kept up. He may say it will make no perceptible diminution in their numbers, but St. Augustine can tell another story. The waters around here are so persistently fished with hook and net that no one but a very patient angler cares to waste his time in trying to catch a fish of any kind. This record-breaking business I find is kept up at the different hotels along the coast and published as one of the chief attractions, but when they find the attraction oozing away they'll come to the conclusion that they've acted about as wisely as the man who killed that famous Klondike goose.

DIDYMUS.

ANGLING NOTES.

Lobsters Spawn Annually.

PROF. E. E. PRINCE, Commissioner of Fisheries of the Dominion of Canada, has sent me a copy of his paper on the "Natural History of the Lobster," in which he takes the ground that the lobster spawns annually, and possibly twice in one year. The belief has heretofore prevailed that the lobster was a biennial spawner, but the observations of Prof. Prince refute that belief. He says: "A very erroneous opinion was in circulation some years ago that the female lobster spawns once in two years. * * * Prof. Garman, and more recently Prof. Herrick, have favored the idea, and Dr. Fullerton has also adopted it in his recent Scottish paper on 'Lobster Development,' though the evidence when analyzed, instead of establishing biennial spawning, all points the other way. * * *

"We have, indeed, available the fullest scientific proof that a decapod, closely allied to the lobster, spawns not once in two years, but twice in one year. Thus the shrimp (*Crangon vulgaris*) spawns in April and May, as well as in early November. A valid inference would be that the lobster spawns not less frequently than once a year. * * * My own observations, for which Canada offers opportunities incomparably greater than those of any other country, lead me to the view that lobsters as a rule spawn annually, and that a female lobster which has hatched her brood early in the season does in many cases produce a second crop of eggs later in the fall, which are carried all winter. The details of my examination of a large number of specimens supporting this view cannot be given here, but will be published in due course elsewhere."

The entire paper from which I have quoted is one of great interest, but I cannot quote at greater length from it in a note, not even what is said of the author's embryological studies of the lobster, which go to support his view that they spawn annually, particularly as he promises fuller details later. Investigators doubtless make errors in their investigations of natural history subjects through lack of proper material or opportunity, or for other reasons over which they have no control, but they seek only the truth, and are quite ready to acknowledge any possible error when it is shown to be an error by one who has had greater opportunities for investigating any particular subject.

Prof. Herrick's paper on the "Habits and Development of the American Lobster" is most exhaustive, and I have assumed it to be the surest guide to the life history of the lobster, as probably it is, and in it he says that he has demonstrated on the ground of anatomy that the lobster did not and could not breed annually, as commonly supposed. Although such authorities disagree on this point, there is no reason to believe that they will not ultimately agree, when all the evidence is produced.

An Explanation.

A friend, writing me in regard to my photograph, reproduced in this paper of the Christmas issue, says:

"The photograph of you is good, for I have seen you in a similar situation, with one exception, on a number of occasions—although your clothes look better than usual. But where under the sun did you get that arm-chair that you are sitting in? It looks like a property of a photographic studio. The balance of the picture is real enough, even to the inevitable cigar between your fingers; but you will have to explain that chair."

My friend is not the only one who has wondered about that chair, for I wondered about it myself when I first saw it. The photograph was taken on the shore of Big Crooked Lake, Township 43, Herkimer county, a portion of what is known as the "Webb purchase," as it belongs to a tract of nearly 100,000 acres purchased of Dr. W. Seward Webb by the Fisheries, Game and Forest Commission to add to the State's holdings in the Adirondack Park. The lake is one of the Red Horse Chain of lakes, and the one most remote from Beaver River and railroad communication. I took the capital photographer, Mr. Severance, up there with me to get some photographs for the annual report of the Commission, and with three guides and two boats we made rather a hurried trip through the chain of lakes and over the connecting trails. It was our intention to camp on Clear Lake, but when we got to that lake we found the camp in possession of Dr. Spruce M. Nash, of New York, and Prof. Richards, of Yale University, and we pushed on over the trail and across Summit Lake to Big Crooked. We found the camp practically as shown in the photograph, and it was nearly dark when we reached it, and it was raining. It was against the law to peel the trees, and, very naturally, I did not propose to break the law, even to make a dry place to sleep; and we fixed up the roof of the lean-to with such bark as we could find at the sides and on the ground. It was the first trip that Mr. Severance had made into any wilderness, and he was not as happy as he might have been. At the outset I told the guides that, while I was in a hurry, I was a heavy man and would go first over the trails, and I would not expect them to go faster than I did. Mr. Severance landed at the camp with two badly blistered heels, and the guides swearing that they had no idea that a heavy man with short legs could get over a trail like a jack rabbit, and would not stop long enough to eat decently.

That chair was in the camp when we reached it, and I learned by inquiry that it was made by one of Dr. Webb's game wardens who spent a winter on the shore of the lake, and had nothing else to do but watch for poachers, keep warm and make chairs. I am prepared to testify that he made good, strong, comfortable chairs, and I heard that he preserved the fish, too, for the lakes afforded good fishing when they were guarded by a private owner, but as soon as they came into possession of the State the fishing was not as good. There was no time to try the fishing, and I had no fishing tackle with me, but I heard from the campers and guides that the fishing had fallen off in a most mysterious manner after the tract became a part of the State Park. With the small number of game protectors that the State has at command, it is quite impossible to guard all the lakes against netters. Dr. Webb preserved the fish because he had guardians living on the tract, and on his preserve alone he had

as many special protectors and game keepers as the State has to protect the fish and game in the entire State.

In spite of the shower and the broken roof to the lean-to, we passed a very comfortable night in the camp represented in the photograph. I say "we" when really I should except Mr. Severance. Some time in the night a young northern hare came into the camp, entering from the side where I was sleeping, and as soon as it jumped on to me it gave a frightened jump on to Severance, whereupon Severance arose, hastily started up the fire, and sat in that chair until morning. Had he told me what had alarmed him, I would have explained what it was, but he kept his own counsel until we got out of the woods, and at the time I was too sleepy to more than realize that a hare had jumped on to me and that Severance had left the camp for the fire.

Late Spawning Trout.

Some time after the men had ceased taking trout spawn at the Sunapee Lake, N. H., hatchery last fall—or, to be exact, on Dec. 19—it was discovered that trout were running up the inlet brooks. The hatchery is on a brook called Pike Brook, which is closed to fishing, and the breeding fish—trout and ouananiche—are netted at its mouth as the fish leave the lake and attempt to ascend the stream to spawn. When the egg-taking season is over, the nets are removed from the mouth of the brook. The trout observed in the brook above the hatchery on Dec. 19 were all large fish weighing, it was estimated, from 3 to 4 lbs. or over each. Last year I was there during the egg-taking season, and after the ouananiche had been taken and placed in the breeding pens, a number of big salmon were found in the stream above and below the hatchery. The men were there on the ground, and the salmon were netted and the spawn taken and placed in the hatchery troughs.

Land-locked Salmon in Ontario.

During a recent railway journey I had a chat in the smoking car with Mr. F. W. Myers, of the Custom House at Rouse's Point, and he told me that last season he went over the railroad from Ottawa and Parry Sound with Paul Smith. The railroad runs for 250 or 300 miles through an unbroken wilderness, the whole region abounding in lakes and streams that were filled with fish of all kinds. In speaking of the different kinds of fish, Mr. Myers mentioned land-locked salmon as inhabiting some of the lakes. Questioned to know if he was absolutely sure that the fish were land-locked salmon, Mr. Myers said that he caught none himself, but he was informed by the engineers who surveyed the road, and who were familiar with the Lake St. John ouananiche, that the fish were land-locked salmon and not lake trout or other species of trout. In this State the lake trout has been called salmon without prefix or suffix on other occasions and places than bills of fare at summer hotels, and perhaps I am over-suspicious about the identity of the fish in Ontario. Chambers, in his book on the ouananiche, does not include Ontario within the boundaries of the geographical distribution of the ouananiche. Creighton quotes Hallock as saying that the ouananiche is found in the Stony Lakes of Peterborough county, Ontario, some 150 miles or so south of the region where Mr. Myers and Paul Smith heard that land-locked salmon were found. If any reader of FOREST AND STREAM has actually caught land-locked salmon in any of the lakes referred to, will he not make it known in this paper?

Monsters.

A few weeks ago I wrote a note about monsters of the salmon family, concerning which Dr. Seligman, of St. Thomas Hospital, London, is preparing an exhaustive paper, or series of papers. Dr. Seligman writes me that he has had to abandon his work on the monsters for a time, as he has arranged to go as botanist and zoölogist with Prof. Haddon's expedition to Torres Straits and Borneo, to be gone sixteen months. He promises to resume his work on his return, and he has sent me some observations on a trout caught by Mr. Frederic M. Halford, with a supplementary dorsal fin.

A. N. CHENEY.

Rainbow Trout for New Jersey.

THE December report of State Fish and Game Protector Chas. A. Shriner, of New Jersey, records the distribution of 32,000 brook trout fry from 2 to 5½ in. in length. Sixteen hundred rainbow trout, received through the courtesy of the Flat Brook Club, of Sussex county, were divided between the Pequest at Andover in Sussex county on application of Frank Straly, and the Musconetcong, near Hackettstown in Warren county. The report continues:

"The rainbow trout is a new fish for the waters of New Jersey. Although several lots have been sent to this State by the United States Fish Commissioner in years past, no successful results have attended the transplanting of the fish, due in most cases to the fact that they were placed in water not suited to them. Although slightly inferior, both for the angler and the table, to the native wild trout, they are admirably adapted to streams the temperature of which at times rises too high to support the life of the indigenous trout. Rainbow trout have been known to thrive in water frequently reaching a temperature as high as 72 degrees, and there are instances recorded where they did not succumb to a temperature of 85 kept up for several days. A number of streams in New Jersey have been rendered unsuitable for our own trout by reason of the cutting down of forests along the banks; in such there is every reason to expect that the rainbow trout will do well. In appearance they very much resemble the indigenous trout, but are of stouter build; they increase in weight far more rapidly and grow to a considerably larger size. Although their introduction into good trout streams is not generally advocated by fishculturists, nevertheless there are a number of streams in New Jersey deserted by the indigenous trout where the California variety may be expected to do well. Unfortunately for the more extended trial of their introduction into this State, the arrangements made by the Commission for the purchase of a

considerable number of these trout fell through, to the chagrin of a number of citizens who were ready to extend a welcome to the Western immigrant.

"The netting of indigenous fresh-water fish out of the Delaware and Raritan Canal has not been very successful so far, owing to the fact that the water was not drawn off at the time anticipated. The result of the netting so far has been ninety-six black bass, thirty-two pickerel, sixty yellow perch and sixty white perch. These fish were nearly all adults, some of considerable size; the entire lot was divided between the Fitzhugh Stream at Husted station and the Tumbling Dam Pond, near Bridgeton; both these waters are located in Cumberland county.

"A consignment of 200 black bass received from the United States Fish Commissioner for Lake Hopatcong were placed in the sheet of water indicated.

"For the purpose of supplying more food for the fish in Culver's Pond, 20,000 bait-fish were placed in that pond."

Indulging his Privilege.

BIRMINGHAM, Ala.—*Editor Forest and Stream:* May I indulge in the privilege allowed sick persons and do a little grumbling. I think it will do me good even if I bore the readers.

Government Economy.

Last spring and summer the association of which I am a member had correspondence through our representative Hon. O. H. Underwood with the Secretary of the Navy in regard to putting fishways in the lock dams of the Warrior River at Tuscaloosa. After considerable correspondence he informed us that we should have a petition signed by not less than twenty-five reputable citizens asking for the fishways to be put in. This was soon done, and after a good many more yards of red tape had been bound around the subject we were informed that the engineer in charge of the locks had sent in his estimate of the cost of fishways at \$8,000, and considering this expense the Government did not see fit to put in the work. I suppose the estimate was made for ways constructed of granite and cement, the same as the locks, but this I do know, the ways can be built of heart pine for an eighth of that estimate and would serve the purpose and last for years. I don't know what it cost the Government to stock this stream with shad; not much less, I should judge, than the estimate given for the ways. I cannot see any good judgment or economy in not putting the ways in at that figure. The shad is doomed in this stream unless it is done. The locks too destroy the other fish, as all are shut off from their spawning grounds. To what extent this will affect the streams above dependent on this one so far as the supply of bass is concerned I am not competent to say. I would like to ask some of the authorities if the bass is enough migratory in his habits for this to seriously affect their welfare in these streams.

The Texas Flea.

I don't know that this is the proper title to address this pestiferous and murderous insect. I know he has added another howl to swell the chorus, and I would like some information from some one who is acquainted with him. I never heard of him until two years back, and never formed his acquaintance until this winter, when I was further south at my old home in search of health. I did not find health, but I found this pest to add to the ills I had to bear. In appearance this flea (or whatever he is) looks in size like the fleas found on cats, with the body some longer. He seems to be of a very sluggish nature, as you can pick him up easily, and I have laid them on a piece of paper where they would be for some time; then he would seem to think of something in the next county that he wanted to see about and depart so rapidly the eye could not follow him. They do not confine themselves to animals; in fact, I believe the fowls suffer the most from them. Their favorite part to attack on both fowl and beast is around the eyes, where they congregate until they are in great lumps; then they bury their heads in the flesh and remain like a tick or red bug. Nothing seems to remove them effectually but scraping them off with a knife.

Fisheries Congress.

If there has been a representative for this State appointed I do not know it. I understand the Governor said he would appoint any one who wished to go. I hate to think that our Governor has not the interest at heart of the subject in general or the State in particular and have appointed a competent person to represent us, but such seems to be the case.

Jumping Carp.

I notice in the last issue of FOREST AND STREAM what Mr. Hough has to say on this subject, and until a few days ago I thought like him, that the carp never aired himself. We have about six miles from this city an artificial pond covering thirty or forty acres. It was built ten or twelve years back, and shortly after some one put some carp in. May he never do the like again. On Jan. 1, my brother and I went out to get some bass for our Sunday breakfast. It was a very warm day, even for this latitude, and the bass bit well, and in a short while we had four nice ones; and as we were drifting around lazily with the wind a large fish broke water with a splash close behind the boat. We both thought it a big bass and turned to cast back. As we did so another fish left the water, and we saw that it was a carp that would weigh 30 lbs. at least. They were soon jumping in all parts of the pond. The fish were of different sizes and seemed to be having a lively time generally, as they were stirring the mud up from the bottom. They kept this up all the afternoon, and not another bass did we get. How little did those who introduced the carp into this country dream of the harm they were doing by handling something they knew nothing about.

A Gun Story.

I will tell you a short story from life. I knew a young

man who had the means and capacity of enjoying himself in everything this world can give. His chief pleasure was sports of field and stream; he was a thorough sportsman, and his implements were dear to him as to every true sportsman from memories that cling to them. The pride of his heart was a costly gun—one of the highest productions of the makers, and could have been treasured for a work of art if no other. Alas! when this young man died, a friend, one of the judges of the State, who was considered a sportsman, assisted the young widow to settle up her affairs and was of great help to her in her troubles. Thinking nothing she could do would be more acceptable as an acknowledgment of her gratitude than to present him her husband's gun, she did so. The other day this man drove up to where I was standing; he was on his way to shoot quail. I looked for the gun. At last I found it—the idol of his friend's heart. There it lay in the bottom of the buggy covered with mud and sand, battered and rusty, of no value to its present owner more than that it would shoot and kill a bird. A \$15 gun would have filled the bill for him. "Why is it that a \$600 work of art, requiring days of work of brain and hand to produce, should have for its guardian and keeper a \$15 soul?"

ALABAMA.

Game and Fish Protective Association of the District of Columbia.

WASHINGTON, D. C., Jan. 19.—The Association will hold its annual meeting Feb. 9, at the armory of the Washington Light Infantry. Its roster will soon contain 500 names. The bill H. R. 6161 for the protection of fish in the District, prepared by the National Fish Commission, approved by the District Commissioners, and by the Association, has passed the House and will pass the Senate at an early day. The annual meeting promises to be interesting, the committee having arranged a programme of papers, addresses, etc.

FIFTY-FIFTH CONGRESS, SECOND SESSION. H. R. 6161.
A BILL

For the protection of fish in the District of Columbia, for the maintenance of a permanent spawning ground in the Potomac River in said District, and for other purposes.

1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that from and after the date of the passage of this act no person shall fish with fyke net, pound net, stake net, weir, float net, gill net, haul seine, dip net, or any other contrivance, stationary or floating, in the waters of the Potomac River and its tributaries within the District of Columbia. Provided, that nothing in this act shall be construed to prevent the use of barrel nets or pots for the catching or killing of eels, or prevent the United States Commissioner of Fish and Fisheries, or his agents, from taking from said waters in any manner desired fish of any kind for scientific purposes or for purposes of propagation, and that none of the provisions of this act shall apply to persons employed in catching young catfish, smelt, chub, bull minnows, and crayfish for use as bait in fishing with hook and line; provided further, that any person engaged in taking such catfish, smelt, chub, bull minnows and crayfish shall first have procured a written permit from the said Commissioner of Fish and Fisheries to take such bait for hook-and-line fishing.

Sec. 2. That no person shall catch or kill in the waters of the Potomac River or its tributaries within the District of Columbia any black bass (otherwise known as green bass and chub), crappie (otherwise known as calico bass and strawberry bass), or striped bass (otherwise known as rockfish) between April 15 and June 1 of each year; nor have in possession nor expose for sale any of said species between the dates aforesaid, nor catch or kill any of said species of fish at any other time during the year except by angling, which shall not include the taking of fish by what are known as out lines or trot lines.

Sec. 3. That it shall be unlawful for any person to have in possession or expose for sale in the District of Columbia after June 10 in any year any fresh fish of the shad or herring species.

Sec. 4. That it shall be unlawful for any person to expose for sale in the District of Columbia at any time during the year any striped bass or rockfish or black bass having a length of less than 9 in.

Sec. 5. That it shall be unlawful for any person to catch or kill in the waters of the Potomac River or its tributaries within the District of Columbia any fish by means of explosives, drugs or poisons.

Sec. 6. That no person shall allow any tar, oil, ammoniacal liquor, or other waste products of any gas works or works engaged in using such products, or any waste product whatever of any mechanical, chemical, manufacturing or refining establishment, to flow into or be deposited in Rock Creek or the Potomac River or any of its tributaries within the District of Columbia, or into any pine or conduit leading to the same.

Sec. 7. That any person who shall violate any of the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction therefor before the police court or any other court of the District of Columbia shall be fined for each and every offense not less than \$10 nor more than \$100, and in default of payment of fine shall be imprisoned in the workhouse for a period not exceeding six months; and any officer or other person securing such conviction before the police court of the District of Columbia shall be entitled to and receive one-half of any fine or fines imposed upon and paid by the party or parties adjudged guilty.

Sec. 8. That all nets, boats or other contrivances, the property of any person convicted under the provisions of this act, shall be returned to the property clerk of the Metropolitan Police Department, to be delivered to the owner upon the order of the judge of the police or other court, and if not called for within six months by the claimant the same shall be treated as other abandoned property coming into the hands of the police.

Sec. 9. That all acts or parts of acts not in harmony with the provisions of this act be and the same are hereby repealed.

The International Fishery Congress.

A REPRESENTATIVE gathering of fish commissioners and others interested in fish and fisheries gathered at Tampa, Fla., on Wednesday of last week, in attendance upon the first annual convention of the International Fishery Congress. More than one hundred names were registered from various parts of the United States, while an international character was given to the affair by the presence of accredited representatives of Germany, Spain and China, the last being Second Secretary Chow Tsz-Chi of the Chinese Legation.

The visitors were welcomed in a glowing speech by Governor W. D. Bloxham, to which happy response was made by Mr. A. N. Cheney.

Thursday a permanent organization was formed, with Mr. A. N. Cheney, of Glens Falls, N. Y., as President; Thos. H. Watts, of Alabama; Eugene G. Blackford, of New York; Geo. F. Peabody, of Wisconsin; P. J. Berkman, of Georgia, and D. P. Corwin, of Pennsylvania, Vice-Presidents, and Dr. Hugh M. Smith, of the United States Fish Commission, as Secretary.

Thursday and Friday were devoted to the reading of papers; and on Saturday excursions were made to the Mullet Key fishing grounds and the Manatee River on board the United States steamer Fish Hawk.

The Kennel.

Fixtures.

BENCH SHOWS.

Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.
Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.
March 9.—St. Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.
March 15.—Northwestern Kennel Club's dog show, St. Paul, Minn. C. E. N. Howard, Sec'y, St. Paul, Minn.

FIELD TRIALS.

Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

The U. S. Field Trials.

(Concluded from page 78.)

Thursday.

THE weather was clear and cool. As the day advanced the sun and wind did much toward drying out the ground. In the afternoon the mud was much less troublesome. Wire fences cramped the competition a great deal, and there was much working at cross purposes. There was some old-fashioned hustling betimes. The work of the dogs as a whole was not up to expectations, though there was a part of the work which was really high class.

Saragossa Belle and Sam T. began at 8:30. A bevy was seen to flush near where one dog was working, quite a distance away. In woods on the scattered birds Sam pointed and moved on; some birds were flushed near the place. Sam made three good points on singles, and Belle made two. She refused to back. Sent on, Sam pointed in woods, and in roading to locate he showed reluctance. Up at 9:00. Both ranged fast and wide. The heat as a whole was not notable for any special excellence.

Elgin's Dash and Dave Earl began at 9:11. Dave flushed a bird of a bevy wilfully and showed lawlessness. On a marked bevy in thicket Dash made a good point and Dave backed. Earl, going down wind, flushed a bevy in weeds. The birds were marked down in the open where there was sufficient cover for them to hide in and where there should have been good point work, but the handlers got into a scrambling mood and flushed the birds. Beating about, each dog secured a single-bird point. Up at 9:40. The heat was rather ragged and hurried, and fell far short of equaling the opportunities. Dash ranged with ordinary judgment and was over-attentive in nosing out likely corners. Dave Earl had much the better range and speed.

Ann of Abbottsford and Landseer began at 10:01. Landseer was to have run with Roland, but the latter being withdrawn on account of illness, and Rodfield's Boy also not running, Ann and Landseer were braced together. After ranging about ten minutes Landseer was lost. A diligent search failing to find him the next heat was begun. It had been in progress some minutes when Landseer appeared. After that heat was ended this heat was resumed. They were cast off at 11:05. They pointed near each other independently. Landseer first, then began roading; Landseer pointed the bevy, and Ann backed indifferently. In ranging Landseer was out of bounds much of the time, and strained the resources of his trainer to handle him. Ann had a useful range, but the class of her range was rather ordinary. Up at 11:45.

Harwick and Tony Gale were cast off at 10:27. Tony pointed a bevy and made another point on the scattered birds. Harwick in a thicket pointed, moved on to locate better, and flushed the single; he again pointed and drew on, and the bird was flushed afterward. Tony pointed stanchly in a plum thicket; nothing found. The ranging of the dogs was much interrupted by stretches of wire fences obstructing them. There was nothing notable in the quality of their bird work. Both ranged fast and wide enough.

Sister Sue and Pin Money were cast off at 11:57. They soon started in a straightaway run out of sight and staved out of bounds quite a while. Sue was inclined to follow her leader. They neglected working to the gun for some minutes. When they were got in hand they settled down to better work. Pin Money pointed a bevy nicely and was commendably stanch. Sue at this juncture came in and commenced working for her handler. The birds took a long flight. Pin pointed them in weeds, but she drew on to locate better and Sue made game and began roading on the same birds, which flushed before they were again pointed. They were again followed. Pin pointed them well and Sue backed; then Sue got a good point on a single and the heat ended. Pin Money showed much the better abilities, though she impaired her work by wild running part of the time and she was not properly obedient. Up at 12:20.

Tory Luna and Hurstbourne Zip began at 1:24, after lunch. Zip pointed in woods, moved on to locate; Tory roaded and pointed the bevy. Tory next pointed two remaining birds. Zip made one good point on a single and a point to which nothing was found. Both were speedy and had good range, Zip going the wider at times, though he was very irregular in his casts and sometimes went too wide. Up at 1:54.

Young Rip Rap and Belle of Hard Bargain were cast off at 2:03. Rip ranged lawlessly out of bounds most of the time. Belle was fast and kept within more reasonable limits, but she was disobedient and difficult to hold properly to the course. Up at 2:37. She was a merry, industrious worker nevertheless.

Second Round.

Ten were kept in. Of these Sister Sue was rather fortunate in having the preference over Ned B., a dog which in my opinion outclassed her in every respect. The heats in this series were one hour long.

Cincinnatus Pride and Count Gloster began at 3:18. Pride pointed on larks and was backed. Next he located a single bird skillfully, then pointed it. Pride next pointed some scattered birds in woods. Sent on. Count dropped to a point in a cottonfield; Pride backed; nothing found. Count made two of three false points in suc-

cession. Next he made a good point on three birds. Sent on. Pride made game and roaded in a masterful manner to a point on a bevy in woods. It was an excellent piece of work under difficult conditions, the ground being bare. It was accurate, quick and skillful work. Sent on. Pride took up the trail of a single bird and followed it very accurately quite a distance on the bare ground. He pointed occasionally. As he had it nearly located Count cut in ahead and took the point, but the real credit was Pride's. Count then roaded about and pointed, but failed to locate. In the open on the scattered birds Pride made two points and two flushes. He had much the better of the heat.

Albert Lang and Harwick were cast off at 4:23. Albert made two points and Harwick one; nothing found. Albert pointed a bevy well on dry leaves. He next pointed a single and was backed. Harwick pointed a bevy which flushed wild. Both dogs feathered and roaded about for some minutes in an open field, but failed to find. The birds had probably flown to roost. Sent on. Harwick pointed a bevy by a hedge; Albert backed. Both dogs ranged well considering the unfavorable ground, and were fast and diligent. Both showed good bird work.

Friday.

Rain fell heavily during the night, and the muddy conditions again prevailed. A dark, overcast sky promised a stormy day. After waiting a while, there being a remote prospect that no rain would fall, a start was made. Birds were not found in such numbers as in previous days. There were but few spectators present, nearly everyone having left for their homes. There were a few light falls of rain during the forenoon.

Sam T. and Tony Gale were cast off at 10:21. Sam pointed a bevy in heavy weeds in bottom. Sent on. Tony pointed a bevy in open sedge, and Sam, coming about 30yds. ahead, pointed the same bevy independently. On the scattered birds Tony got three good points, the birds lying very close. Sam coming in pointed on one of Tony's singles. Next Sam made game, drawing about and pointing now and then, but failed to locate. Sent on. Sam pointed in weeds; nothing found. Tony made three points on singles, two of the points being made while the dogs were separated. Sam again roaded about, pointing at times; Tony backed; nothing found. Tony was lost for a few minutes and was found pointing a bevy. Sam backed. The birds were marked down in heavy weeds and both pointed on them; the birds flushed in twos and threes, the dogs still pointing and drawing slowly as the birds flushed. Sam next made a point on two outlying birds. Tony had much the better of the heat. The conditions were very favorable for good scent. Both dogs were fast and ranged well. Sam showed timidity on scent and avoided following it to a conclusion several times.

Sister Sue and Tony Luna were cast off at 11:33. Sue pointed some birds and Luna backed; Sue flushed. On the scattered birds Sue made three points on singles, one of which was flushed by Luna; the latter pointed a single. Sent on. Sue roaded to a point on a bevy, roaded on to locate better and Luna cut in and took the point. Sue made two good points on singles. Luna next pointed a bevy and Sue made a point to which there was nothing found. Sue had much the better of this heat.

Hurstbourne Zip and Pin Money started at 1:20, after lunch. Zip's work was of an inferior grade. They backed each other soon after starting. Zip got two uncertain points and one good one on birds. He backed well. Pin made one point on a lark and three on running birds.

Third Round.

Cincinnatus Pride and Tony Gale were cast off at 2:52, and ran about ten minutes. Pride found and pointed a bevy nicely; as Tony ran in toward him from the front, the bevy flushed. The heat then ended.

Harwick and Sister Sue ran nine minutes, beginning at 3:06. They were worked on scattered birds. Harwick dropped to a point on them in leaves in woods; a good piece of work. Sue was headstrong, and could not be controlled sufficiently to work on the scattered birds. Sent on after the scattered birds in woods. Harwick again pointed them well. Sue made one point to which nothing was found, and one point on a rabbit. Harwick had the better of the heat in every respect.

The Absolute.

Chisholm and Sport McA. were cast off at 3:21. It would be difficult to imagine a more total collapse of a competition than that which soon took place. Sport bolted after a few minutes and was not seen again during the heat, which ended in about a half hour's time. His tracks were found where he had crossed the highway into large fields on the opposite side of it. In the meantime Chisholm had been working alone, had flushed a bevy and a single bird, and was running in poor form. It was a heat in which all competition had vanished. A long search failed to find Sport after the heat was ended.

Saturday.

There was a heavy downpour of rain during the night. Great, dark clouds sailed across the sky at the time of starting, but the rain had ceased. The three judges, two reporters and a small boy constituted the party following the one handler and two dogs. The latter were cast off at 8:57, and the unfinished heat was resumed. It may be mentioned in passing that Sport was found on point the evening before, after a good deal of searching. A heavy rain set in as the heat began, and lasted till the dogs were ordered up. Soon after they were cast off Sport bolted and was lost for nearly an hour. Riders searched about for him. He found himself at last and came to the party from a point of woods some distance away. In the meantime Chisholm had been out in the wagon. Cast off again, Sport was kept in bounds only by the most constant whistling and shouting, and while it kept him in uncertain check in a way, it entirely deterred Chisholm from making any serviceable effort at all. The latter showed repugnance toward the water, the rain and the wet grass, and tried to com-

promise by leaping over the tops of the sedge now and then. On two running birds which one of the judges had seen running in the grass, and which the dogs had been previously worked upon without finding, Chisholm secured a loose kind of point. Sport, after the birds were flushed, pointed a few yards ahead, probably on foot-scent. The heat then ended, lasting something over an hour. The misbehavior of sport would have disqualified him in any event, and while Chisholm ran a very weak heat, he won, with something to spare. This heat proves that Sport needs a great deal of good discipline and work to make him a worker to the gun. As for Chisholm, the cold rain and wet ground effectually put a damper on his performance.

B. WATERS.

The Continental Field Trial Club's Trials.

THE trials of the C. F. T. C. were run at New Albany, Miss., beginning on Monday, Jan. 17. The entries in the stake were light, a loss being suffered from following the U. S. trials in the next week after they were run, as all clubs suffer under similar circumstances.

The grounds were favorable for good work, and the birds were in sufficient numbers to decide a competition, though not so plentiful, nor were they distributed so uniformly as could be desired throughout the grounds. For these reasons a longer time was required in running the heats than otherwise would be necessary.

The judges were: Messrs. W. S. Bell, of Pittsburgh, and E. H. Osthaus, of Toledo. They officiated very well in every respect, and they arrived at accurate decisions. Mr. N. Wallace, the third judge engaged, sent his excuses at the last moment, thus disappointing the club. The decisions were approved by all who were not chronic kickers in whole or in part. No judges could be more painstaking, patient, attentive and considerate than were the two under consideration.

The visitors were: Mr. Hobart Ames and wife, Boston; Dr. B. C. Russell and wife, Keene, N. H.; W. H. Joiner, Memphis, Tenn.; Mr. W. G. Graham, Grand Junction, Tenn.; Capt. J. R. Horton, Holly Springs, Miss., and others.

The Derby.

This stake was for all setters and pointers whelped on or after Jan. 1, 1896. There were four prizes, namely, first, \$250; second, \$200; third, \$150; fourth, \$100.

There were eight starters, as follows:

H. B. Ledbetter's b., w. and t. setter bitch Sport's Belle (Marie's Sport—West Wind), Geo. Gray, handler, with Dr. J. R. Daniels's l. and w. pointer dog Sam's Bow (Plain Sam—Dolly Dee II.), Geo. Richards, handler.

J. J. Odom's b., w. and t. setter dog Sport McA. (Tony Boy—Blue), D. E. Rose, handler, with W. G. Graham's b. and w. setter dog Dick Bland (Sam Gross—Madie R.), J. H. Johnson, handler.

Dr. M. F. Rogers's b., w. and t. setter bitch Pearl R. (Sam Gross—Donna Inez), D. E. Rose, handler, with Geo. E. Gray's (agt.) l. and w. Sport's Girl (Spot Cash—Mamie B.), agent, handler.

Wm. Elliott's l. and w. pointer dog Doctor Tassie (Hal Pointer—Kent's Star), Geo. Richards, handler, with Geo. E. Gray's (agt.) l. and w. pointer dog Young Jingo (Jingo—Pearl's Dot), agent, handler.

There was a dearth of birds in some of the heats. None of the competition was secured without the most diligent searching.

The winners were: Sport's Girl first, Young Jingo second, Pearl R. third, Dick Bland fourth.

Sport's Girl ranged well and at good speed, and she exercised good judgment. Her point work was commendably accurate both on bevs and on singles. She showed some puppyish traits occasionally, more in her manner than in the work itself. She remained out at her work and conducted it without coaching.

Young Jingo ran a very close race for first, but he was not entirely independent in his ranging, and he made some bad errors at the finish, which set him back undoubtedly. Still no dog in the stake equaled him in finished training, honest work to the gun and bird sense. Taking his point work into consideration, apart from the errors, his bevy work was excellent, and he could be handled with ease in working for singles; and in this and the prompt obedience he gave to whistle he was not approached by any dog in the stake.

Pearl R. was not reliable at all times either on point or back, and she was handled with much difficulty and a deal of noise. She received a great deal of coaching also. While she was fast and diligent, her range was not conducted with the best of judgment.

Dick Bland's competition was weak in its ranging features. His point work was fairly good. Toward the close of the competition he was running with less spirit than in the earlier part.

Monday.

The morning was raw and cloudy, but gradually the temperature became higher, the clouds passed away and the afternoon was quite pleasant. Birds were not in abundance. There were twelve or thirteen bevs found, which gave a fair test of the dogs by hard searching, through heats longer than the average, hence the tests were quite thorough. There was industrious work displayed throughout the stake, and the class of the work was above the average, taking into consideration the limited opportunities.

First Round.

Sport's Belle and Sam's Bow were cast off at 10:11. Belle pointed a rabbit and Bow backed. Again cast off for a search of bevs. Bow pointed, moved on, making game, but failed to locate. The birds were afterward flushed by the riders. Next Bow in the open pointed a bevy and made two points on the scattered birds. Sent on. Belle pointed a bevy in woods, and on the birds marked down in the open, Belle flushed a single, and next she made a point near where some birds had flushed. Bow was the better in range and speed. Down 1 hour and 2 minutes.

Sport McA. and Dick Bland ran 1 hour and 12 min-

utes, beginning at 11:22. Soon after starting Sport bolted. The judges held Dick in check for a while, allowing a reasonable time to find Sport and get him in hand. Failing this, Dick was ordered on, working alone. As a matter of courtesy, one of the judges assisted in the search. Dick flushed a single across wind. Next he pointed some scattered birds quite well. Sent on again, and the riders flushed a bevy, and Dick was headed for the scattered birds when Sport came in. He was watched by some of the horse men till his handler came in from a distance, where he was searching, and the competition was again resumed. Dick made a good point on a single at the edge of woods. Sport roaded and pointed alternately about 100 yds.; Dick swinging in ahead on the same trail pointed; both drew on and failed to locate. Sent on. Sport pointed in scrubs, and Dick about 30 yds. ahead flushed or pointed. He held his point, and the rest of the bevy flushed wild. In woods, working on the scattered birds, Dick made two points. Dick was badly handicapped running against Sport. The latter was constantly disposed to bolt, and it required a deal of loud ordering and whistling to keep him under any control. He could not be kept to the course. He was flagrantly disobedient when working to the gun, and most of the time he was self-hunting.

Pearl R. and Sport's Girl started at 2:16. Pearl made game and flushed a single excusably. Sent on. Pearl pointed a bevy in heavy cover. Sent on. Girl pointed a bevy in the open; Pearl backed prettily for a moment, then broke her back, and was stanch on back only to order. On the scattered birds Pearl made two good points; Girl made one. Their range averaged about middling. Girl was puppyish at times, but she showed a great deal of merit. Pearl ran prettily, but in her work she received a deal of coaching from her handler. Up at 3:36.

Doctor Tassie and Young Jingo began at 3:43 and ran 1 hour and 31 minutes. The former injured his tail near its end on a barbed wire, and his sides were red with blood from lashing his sides with it as he ran. He also injured a toe-nail severely, in consequence running with a shortened stride and range throughout the heat. He ran pluckily nevertheless, and made a very creditable showing. A bevy was marked down in heavy weeds in shallow water. Doc pointed two of the birds and Jingo backed nicely. Jingo made two points on the scattered birds. Worked on and a bird or two flushed near him. It was a very unfavorable place, and flushes were excusable. Sent on. Jingo made a good point on a bevy, and in woods on the scattered birds he made three points; Doc made one. Up at 5:14. Jingo had the better of the heat in every respect, though Doc kept diligently at work and made a good showing. Had it not been for his injuries he undoubtedly would have displayed a higher class of competition.

Tuesday.

The weather was cloudy, frosty, damp and raw. The clouds showed signs of breaking away in the forenoon, and the sun made a feeble attempt at shining, but the favorable weather signs lasted but a few minutes. Birds were hard to find, and this prolonged the heats much longer than otherwise would have been necessary.

Second Round.

Dick Bland and Sport's Belle started at 8:27. The dogs worked diligently over three-quarters of an hour before finding. Dick pointed a bevy and Belle backed, and on the scattered birds Dick secured a point in sedge. Belle flushed a single on bare ground. Up at 9:22, and Dick had the better of the heat.

Sport's Girl and Sam's Bow were started at 9:59. Girl pointed two birds, moved on and flushed the birds. In woods Sam made a point on singles. Next he roaded to a flush on a single after having pointed it. Girl made two good points on scattered birds. Up at 10:53. The pointer ranged well, but his bird work was weak. Girl far surpassed him in locating and pointing, and she ranged well besides.

Pearl R. and Young Jingo were cast off at 11:00. Each made a point on a bevy, Jingo's being marked by quick following of the scent to the birds and accurate pointing; Jingo backed Pearl's point. Sent on, and both pointed a bevy independently at about the same instant. Jingo pointed a single and Pearl backed. Next she pointed a single. Jingo pointed some scattered birds; Pearl broke her back and flushed the birds. Up at 11:50. The pointer ranged with the most judgment, and his work on birds was much better. He worked more on his own judgment than did Pearl, the latter having a great deal of coaching.

Third Round.

Pearl R. and Dick Bland were started at 1:58. Dick pointed some scattered birds, and at the same time Pearl pointed a bevy; next she pointed a single, and sent on again she found and pointed a bevy. Up at 2:24. Dick backed well and was industrious.

Young Jingo and Sport's Girl began at 2:29. Girl pointed a bevy and Jingo backed nicely. Sent on. In some bottom land he flushed it again. Girl pointed on the footscent. The last errors of Jingo undoubtedly lowered his standing seriously.

This ended the stake.

The All-Age Stake.

There were thirteen starters, all of which had competed in previous trials.

This stake was for all setters and pointers which had not won first in any recognized trial in America. The prizes were \$200, \$150, \$100, and \$50, first, second, third and fourth respectively.

The winners were: First, Cincinnatus Pride; second, Albert Lang; third, Young Rip Rap; fourth, Elgin's Dash.

The stake as a whole was weakly contested. Pride was the only dog which showed class work. He maintained his good reputation as an excellent performer, and the description of his qualities as put forth in recent reports in FOREST AND STREAM is equally applicable to his competition in this trial.

Of the others it may be said that they made a weak competition, and won not so much on their own high merit as the demerits of their competitors.

Edw. Burdett's b., w. and t. setter bitch Ann of Abbottsford (Gladstone's Boy—Bohemian Girl), George Richards, handler, with A. N. Schoenfield's b., w. and t. setter dog Noble Leo (King Leo—Minnie T.), N. B. Nesbitt, handler.

F. W. Dunham's lem. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E. Rose, handler, with Edw. A. Burdett's b., w. and t. setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), George Richards, handler.

Charlottesville Field Trial Kennels' lem. and w. setter bitch Belle of Hard Bargain (Count Gladstone—Daisy Croft), C. E. Buckle, handler, with Elared Kennels' b., w. and t. setter dog Tony Gale (Antonio—Nellie G.), D. E. Rose, handler.

N. T. De Pauw's l. and w. pointer bitch Sister Sue (Jingo—Rooney Croxteth), N. B. Nesbitt, handler, with S. P. Jones's b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler.

Bar Harbor Kennels' b. and w. pointer dog Young Rip Rap (Rip Rap—Pearl's Dot), George Gray, handler, with Theo. Goodman's b., w. and t. setter dog Albert Lang (Count Gladstone IV.—Dan's Lady), J. H. Johnson, handler.

H. R. Edward's b., w. and t. setter dog Harwick (Top-sy's Rod—Opal), George Gray, handler, a bye.

First Round.

Ann of Abbottsford and Noble Leo began at 3:22. Leo made a point to which nothing was found. Next he made a good find and point on a bevy in sedge. Working on the scattered birds Ann roaded a single and flushed it willfully in open sedge. She steadied down, and in a few moments afterward pointed a single nicely. Leo made four points in quick succession on singles. Ann pointed one and Leo flushed one. Up at 4:30. The heat was not marked by any good ranging or special superiority aside from the points on scattered birds.

Cincinnatus Pride and Elgin's Dash were started at 4:34 and were ordered up at 5:06 without finding, although a few moments after being ordered up a point was claimed for Pride. He had the better of the ranging.

Thursday.

Wednesday was a day of heavy rain and high winds. No attempt was made to start the competition. Thursday was cloudy and cool. There was a while toward midday when the sun broke through the clouds in places, raising hopes of a clearing up of the weather; it lasted but a short time. The sky again became heavily overcast. Still the day as a whole was favorable for bird work if the birds had been moving. They, however, seemed to be huddled most of the time. Some of the heats were short of birds, as in previous days. Owing to the dark sky and muddy ground a late start was made.

Belle of Hard Bargain and Tony Gale were cast off at 10:35. Tony pointed. Soon Tony pointed a bevy in the open sedge at the edge of woods, and was backed. Working on the scattered birds, Tony made a point to which nothing was found and two good ones on singles. Again searching for beves, Tony pointed and Belle took a circle around him from behind, keeping about 50 yds. away from him, cut in ahead and pointed. Again no birds were found. Both dogs moved on, roading, Tony being much assisted by Belle in keeping to the trail. She pointed the bevy some 200 yds. from where Tony first pointed. He showed a very low order of ability in following this trail. Again searching for beves, Tony found and pointed one in open sedge, Belle backing him to order. Both were steady to shot. Up at 11:11. Tony had the better of the heat in every way, save in the matter of roading and locating the running bevy.

Sister Sue and Hurstbourne Zip began at 11:16. A bevy was flushed by the horses. The dogs had passed close by it. Sue took a cast and pointed a bevy. The dogs were separated some minutes at this juncture. Zip made game and pointed twice and nothing was found other than small birds. Sue flushed part of a bevy which both dogs passed near. Zip flushed a single awkwardly. Up at 12:36. The heat was a poor one. Sue ranged very irregularly, came in to her handler unnecessarily, and worked her ground without any judgment.

Young Rip Rap and Albert Lang ran one minute over an hour, commencing at 2:23. Albert pointed a bevy in woods, locating it poorly. Next he pointed a single. Searching for beves again, he found and pointed a bevy; Rip coming in and going down wind flushed some outlying birds of it. Rip pointed a single and Albert backed. The latter during the heat made three points to which nothing was found. Up at 3:24. Rip was out of sight too much. Neither showed good judgment in ranging, and they ran together betimes for company in searching for beves.

Ned B. and Dave Earl started at 3:30. Dave pointed a bevy nicely in open ground; Ned stole the point in the most brazen manner, running directly to Dave and stopping close in front of him. Dave stood stanchly. It may be said by way of explanation that Mr. Gray handled Ned, Mr. Richards, his regular handler being ill. Moved on, roading, Dave pointed a bevy and Ned refused to back. He backed once well when Dave pointed on footscent. The pointer showed speed, fair range and displayed good point work. Neither worked with proper independence. Up at 4:23.

Harwick, the bye dog, ran from 4:30 to 5:16 without finding. He made a point to which nothing was found and his range was lacking in judgment.

Friday.

The weather was delightfully pleasant. A balmy atmosphere, a clear sky and bright sun favored good work in the competition and a pleasant day for those in attendance. The ground had dried out so well in the high places that the footing was good, and the low places were passable. The work was partially good and the rest indifferent or bad. The final heats were not contested so closely as was anticipated from the work done in the previous ones. There were not so many birds found as were desirable. In the afternoon the grounds were exceedingly difficult to work. There was too much wet

bottom land, thickets and bare cottonfields for consecutive good competition.

Second Round.

Elgin's Dash and Noble Leo were cast off at 9:39. The heat was a poor one. Dash pointed a bevy at the edge of woods; Leo flushed an outlying single and refused to back, and on the scattered birds he made a flush and a point. Next Leo pointed a single and Dash stole the point. Up at 10:10. Leo ranged close and his work was ordinary. Dash ranged without much judgment, though he was diligently at work and covered a reasonable scope of ground. He paid too much attention to nooks and corners at times in nosing them out, and carried a low nose when on scent.

Cincinnatus Pride and Rip Rap started at 10:22. Pride going down wind flushed two outlying birds of a bevy then pointed it. Rip pointed a single which was in a tree. Pride made two good finds and points on beves. Rip Rap also found and pointed a bevy accurately. Both ranged fast and wide, and showed good judgment. Their point work was commendably good. Up at 11:05.

Tony Gale and Albert Lang started at 11:11. Lang pointed two beves and Tony made a spectacular back about 50 yds. behind, and to the point on the first bevy. Tony made four firm false points at different times during the heat. Lang showed very superior ability in locating his second bevy. He made one point on a single. He far excelled his competitor in finding and pointing. Up at 11:55.

Sister Sue and Dave Earl began at 1:59 and ran one hour. The heat was marked by a very low grade of work. Sue flushed two beves and Dave false-pointed repeatedly. They were both out of the running then beyond question.

Young Rip Rap and Elgin's Dash started at 3:10. Both were fast and diligent. Some uncertain work was done on singles, though the last point of each on singles was true and good. Rip found and pointed a bevy, and Dash flushed a single and pointed one. Up at 4:11. Rip was the superior in every respect.

Cincinnatus Pride and Albert Lang started at 4:15. Lang pointed; nothing found. Pride was lost, and when found was back on the course in weeds pointing a bevy. A run with heavy cover had cut off the view from him and the party had passed by him. He showed good range, speed and judgment, although the grounds were unfavorable for the best display of those qualities. Lang worked diligently, but found nothing. Up at 4:56. This concluded the trials.

B. WATERS.

The Rights of Dog Owners.

NOTWITHSTANDING all the disadvantages which the owners of valuable dogs encounter in establishing property rights in them, a marked legal advance is made occasionally toward the desired recognition. On Jan. 6 the Appellate Division of the Supreme Court of the State of New York decided that the act of the Legislature passed in 1896, authorizing the Mohawk and Hudson River Humane Society to tax dogs in Albany and vicinity, and to kill any and all dogs which did not bear the dog tax tag, was illegal. Justice Landon, who delivered the Court's decision, conceded the power of the Legislature to establish license laws applying to the ownership and harboring of dogs, but he questioned the soundness of the law which imposed a penalty of confiscation on such dogs as were not licensed. He supported the point of law so often raised in similar cases; that is to say, that an owner cannot be deprived of his property without due process of law. He further held that the defendant, being a corporation, was not eligible to hold public office, the one reason alone that it could not take the oath of office rendering it ineligible, and that therefore the plaintiff had ground for action in the illegality of the act vesting the execution of certain police powers of the State in a private corporation, and thus in a way giving an ineligible party a public office.

Of course, the last point turns more on the unconstitutionality of the act in question than on the rights of ownership, but it is pleasing to know that a dog owner as such is gaining consideration from any legal point of view, in this respect differing from that wherein the dog was considered wholly as being *ferae naturae*, and entitled to no serious legal consideration whatever.

The New York Show.

The following additional special prizes are offered for competition at our coming show, namely: F. G. Goodridge offers \$10 for best American-bred Irish setter bitch and \$10 for best Irish setter puppy.

The Bull Terrier Club offers a challenge cup, value \$100, for the best exhibit of four bull terriers entered and owned by a member. The cup to be competed for annually at the Westminster Kennel Club shows, and to be won three times by the same exhibitor before becoming his absolute property.

Mrs. J. R. M. Grosvenor offers \$10 each for the best heavy weight, medium weight and light weight poodle exhibited by a member of the Poodle Club.

A class will be made for Airedale terriers, as a number of entries have been guaranteed. Class 233, Italian greyhounds, should read: "Free for all dogs and bitches."

We take this opportunity of notifying exhibitors that in all cases the date of birth of the exhibit must be given on the entry form.

JAS. MORTIMER, Supt.

Alabama Field Trials.

BIRMINGHAM, Ala., Jan. 20.—The Alabama Field Trials Club will hold their second annual trials on the club's reserve, at Madison, Madison county, Ala., beginning Feb. 7. The regular stakes will consist of a derby, open to dogs born on or after Jan. 1, 1896, and an all-age stake for dogs of any age.

The derby entries closed with twenty nominations, full list to be printed in your next issue. Entries to the champion and puppy stakes are coming in freely, although entries do not close until night before the running. All railroads in Mississippi, Tennessee, Georgia and Alabama, except the M. & O. and K. C. M. & B., will sell tickets to Madison on Feb. 5, 6 and 7, good for return to Feb. 17, at one and one-third fare for round trip, on the certificate plan.

H. K. MILNER, Sec'y.

Champion Stakes.

NEW ALBANY, Miss., Jan. 24.—Special to Forest and Stream: Eight starters in the Champion Stakes—Cincinnatus Pride, Pin Money, Ann of Abbottsford, Marie's Sport, Tony Gale, Tippoo, Young Rip Rap, Von Gull. If weather is good, stake will be finished Wednesday. Judges are Messrs. Bradley and Osthaus.

B. WATERS.

Brunswick Fur Club.

THE annual meeting of the Brunswick Fur Club was held at Barre, Mass., on Jan. 17, 1898, Vice-President Dennison in the chair.

The reports of the secretary and treasurer were read and accepted. O. W. Bennett, R. S. Cook and Porter Cleveland were elected to honorary membership and J. H. Van Dorn to active membership.

The election of officers for 1898 resulted in the choice of O. F. Joslin, President; L. C. Dennison, A. B. F. Kinney, C. L. Wellington, Vice-Presidents; A. B. McGregor, M. F. H. Bradford S. Turpin, Secretary; W. A. Bragdon, Treasurer; A. F. Joslin, Dr. A. C. Heffenger, L. E. Conant, L. H. Parsons, George E. Carr, Executive Committee; J. H. Van Dorn, Delegate to the A. K. C.

It was voted to give a special prize of \$10 at the New York and Boston shows for the best American foxhound. It was voted to hold the field trials during the week of Oct. 17, and it was announced that Dr. Heffenger would give a hunting medal, Mr. Parsons a Derby medal and Mr. Joslin a speed and driving medal, as special prizes at the trials.

The following committees were appointed: On Field Trial Grounds, R. D. Perry, S. Decatur and Solomon Bennett; On Field Trial Judges, W. A. Bragdon, A. B. F. Kinney, H. A. Stetson; On Membership, H. J. Given, George E. Carr, Adjourned. BRADFORD S. TURPIN, Sec'y.

POINTS AND FLUSHES.

The famous pointer bitch Maid of Kent, owned by the Charlottesville Field Trial Kennels, died recently from an attack of brain trouble, the symptoms being those of violent insanity. The attack came on suddenly when Mr. Buckle was returning with her from field work. Death soon followed. Fortunately as anything could be where there was so much loss, two puppies were saved from her last litter by Tippoo. She was about eight or nine years old. In her field trial days she was one of the best pointers that ever entered a competition or a day's work to the gun. She gave Antonio a close contest for first in the four-hour stake at Lexington, N. C., some years ago, and there were several witnesses who thought her work the better. All in all, she contributed much toward gaining the esteem of the public for the modern pointer, and was a living testimonial of the skill of the breeders.

Secretary James L. Little, of the N. E. Kennel Club, writes: "Will you please, through the columns of your paper, suggest to dogmen that we should like photos of some of their best dogs for publication in Boston dailies, at the same time calling attention to the fact that name of owner, name of dog, registered number, if any, and winnings should accompany same. Mr. H. W. Lacy, of Boston, has been decided upon as the judge for black and tan terriers at our coming show."

The following extract from a letter from Mr. Thomas Johnson gives information of the serious loss which he has suffered in his kennel interests, and for which he has our sympathies: "You will be sorry to hear that poor old Pitti Sing was suffocated with two others yesterday. My kennelman put a number of dogs together the evening previous in their kennel boxes, and the night being extremely cold he placed sacks over the apertures to keep the dogs warm. The consequence was they were stifled and three were found dead. One was my best young black setter. The other was a very promising young pointer, the result of a cross from Alberta Joe and a blood sister of Mr. Dexter's celebrated India. Mr. Dexter was with me, anxious to cross Alberta Joe on old Rip Rap stock, so kindly presented me with Indiana, above mentioned. I was also looking forward with much interest to rearing another litter the coming summer from old Sing. This seems rather visionary when you remember that her daughter won the Irish Field Trials eleven years ago, and second in the National trials the same year. Old Sing's achievements are now almost ancient history, yet the day before her death she was more sprightly than lots of dogs three years old, but *nil desperandum*."

Mr. Vero Shaw, in his pleasant reminiscences of his recent visit to America, published in the Stock-Keeper (Eng.), has this to say concerning the benching of dogs in America, his criticism being evoked by observing the manner of benching at the Brooklyn show: "I can offer no opinion upon the open black cockers and some other classes, as, owing to an abominable custom which prevails in America, all the dogs of each owner can be benched together, and in the case of these dogs they were so completely jumbled up when I went round to take final notes, that I could make nothing of them. Surely, if only for the sake of the public, who pay dollars at the doors, and who naturally desire to be able to distinguish the dogs, this selfish system, which is unworthy of good sportsmen like the Americans, should be abolished. I am told it is the usual custom; if so, it is a blot upon the management of dog shows in such an enlightened country."

Yachting.

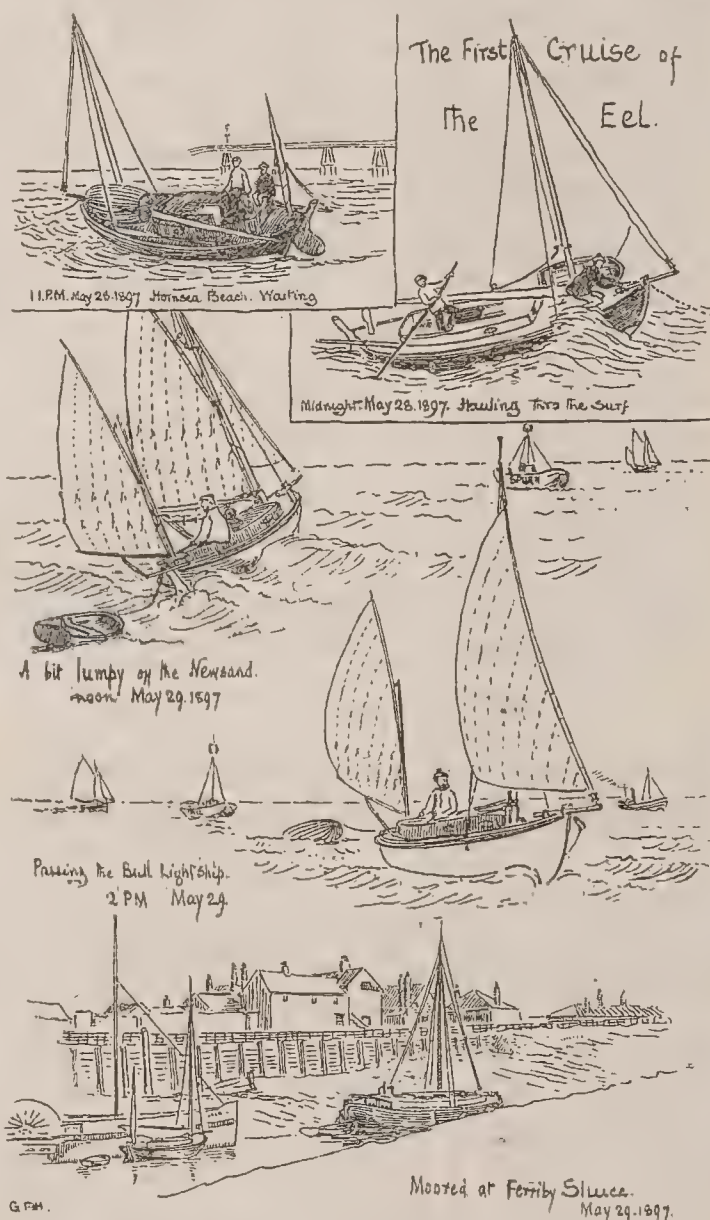

The Canoe-Yacht Eel.

THE little ship here illustrated, the canoe-yacht Eel, is one of the later and largest of the peculiar type of cruising craft developed by that unique organization, the Humber Yawl Club, of Hull, Eng. The club, which has a membership of seventy-five and a fleet of fifty boats, mainly canoe-yawls and canoe-yachts of from 13 to 23 ft., has its headquarters on the Humber, with the stormy North Sea but twenty miles away to the eastward; and on the west a network of small rivers—the Trent, Ouse, Derwent, Foss, Aire, Hull and Witham, with their many connecting canals. The cruising for which the club is noted is done both on the North Sea and the inland rivers, so that the larger boats of the fleet, in spite of very light draft, are necessarily very stanch and sturdy craft. A day's trip by steamer from Hull to Rotterdam or other of the Dutch or German ports opens up hundreds of miles of canoeable waters, the Dutch and German rivers and canals; and not a season passes without a squadron cruise of the H. Y. C. on these waters. The members of the club hail from Hull, Scarborough, Grimsby and other North Sea ports. The club has a station on Hornsea Mere, a lake barely a mile in diameter, and situated at Hornsea, almost on the sea, though not directly connected with it. Many of the yachts are built and raced here, being transferred by cart to the beach and launched in the sea, or in the other direction to the Humber. Eel was designed by her owner, Mr. George F. Holmes, mate of the club, in 1896, and built for him by J. A. Akester, at Hornsea. Mr. Holmes has

designed many canoe-yawls and canoe-yachts, some of which he has built himself; and he has cruised for years both on inland and open waters. For the former use, his canoe-yawls Cassy and Ethel, with others illustrated in the past in the FOREST AND STREAM, have proved very successful, and from them he has developed the larger type of canoe-yacht called for by longer cruises on open waters.

Eel was launched on Hornsea Mere just before Easter of 1897, and after some preliminary sailing there she was carted to the beach and re-launched on the night of May 28, after waiting for a favorable slant of weather following a hard blow. We reproduce from the H. Y. C. book of 1897 some sketches of her launching and first cruise. Between that date and her laying up, on Oct. 30, she was used regularly for "week-end" cruises and on holidays, and for a vacation cruise on German waters, as well as for some races with others of her class. She covered during the season some 500 miles on the Humber, Trent, Ouse and other rivers, and about the same distance on the Elbe and Baltic. What was of more importance to her skipper than the mere distance sailed was the opportunity to fill four sketch-books during the season. Single-handed or with a congenial companion, the Eel was started on Saturday afternoons for some quiet spot, up or down, according to the tide. Sunday was spent in idle sailing and sketching, and the night or early morning tide brought her skipper back to business. The following description was written for the FOREST AND STREAM by Mr. Albert Strange, of Scarborough, another canoe-yawler and single-hander, owner of the two canoe-yachts Cherub I. and II. Mr. Strange made the German cruise with Mr. Holmes.

A great number of small boat sailors in England still prefer to use craft in which they can—however small the ship may be—enjoy the pleasurable adventures of cruising. Many too prefer to do their cruising in small boats of the canoe type, as being on the whole more suitable to the waters of the larger estuaries, where strong tides, shallow harbors, and large shoal patches abound. And as their wanderings are not confined to the waters of their own island, but are extended to the nearer rivers and seas of Northern Europe—Belgium, Holland, Denmark, etc.—their craft being transported on a steamer's deck for the over-sea passage, the question of convenience of handling by crane or steam winch

operates strongly toward keeping the boats of a reasonable size, and extremely moderate displacement for their dimensions.

Eel is the latest outcome of a series of experiments carried on by various members of the Humber Yawl Club during many years. The first yawls of this club were very small shallow craft, with small sails, small centerplate, and 100lbs. or more of ballast. By and by these little ships grew larger, developing iron outside keels, larger and heavier centerplates, and larger sails, but still depending for shelter and sleeping accommodations upon the tent, which was of course only used when at anchor or in port.

Whether the men became less hardy, or whether the weather of these islands has grown colder or wetter, is not for the writer to say, but at any rate cruising in company with small cutters and other cabinied craft developed in some of the members of the H. Y. C. a taste for comfort and for an atmosphere of refinement that could only be satisfied by some sort of a cabin and a petroleum stove, and Viking, 18 ft. x 5, was the forerunner of the type craft which, with Cherub, 20 ft. x 5 ft. 10 in., as an intermediate size, has culminated in Eel.

English yachtsmen have always had a lingering regard for comparatively easy beam, although the fishermen and coast boatmen have never departed from the 3-beam standard of beauty; and I confess that when I first saw Eel under the builder's shed she looked strangely wide for a pleasure craft, even for a canoe-yawl; and I told her owner that he had perhaps bitten off a bigger lump of boat than he would be able to swallow, at any rate single-handed. My subsequent experiences in racing and cruising in Eel lead me to modify this opinion. She can be just about managed single-handed by a smart man under most circumstances short of extremes, but she is a sight nicer with two; and the fortunate "deckie" who sails with her genial owner is rarely liable to be called away from the galley to help in the navigation, while the spacious cabin always there, at all times a snug, warm home at night, makes the hardships sometimes felt in cruising, even in these latitudes, very easy indeed.

The displacement, of about 40 cwt., is no bar to her being carried on deck by most coasting steamers; her length, of 21 ft. (and all boat at that), is not difficult to stow or sling aboard, even on a very small vessel. Although the beam is large, this in itself is no hindrance, and as I dare say my cousins across the pond will not consider it at all out of the way after their own catboats. It doesn't seem to stop her in sailing, and is a very necessary factor in enabling her to carry her rather large sails (for this side) as well as she does.

The designed draft of water of 2 ft. renders her quite independent of the centerplate, although the addition of so valuable an assistance in getting to windward is very appreciable. The sharp rise of floor, however, gives very great weatherliness, and should any accident prevent the plate from being lowered the boat handles with perfect surety under all circumstances. This in itself is a great element of safety, as nothing is much more helpless than the shallow type of centerboarder when the board mutinies, breaks, or is lost.

I had the pleasure of an extended cruise this summer in Eel. She was taken on a steamer from Hull to Hamburg, and at that port put overboard. We voyaged up the Elbe far beyond the influence of the tidal current and then down past Hamburg some 50 miles to the mouth of the river. Here we went through the new North Sea canal to Kiel, and from thence cruised for some time in the open Baltic, meeting all conditions of weather. The boat behaved splendidly under all circumstances. We found that

no local craft, even of much greater rig, could hold their own with us, excepting of course racing yachts. The fishing craft of twice her size were as a rule hopelessly beaten, and I don't remember any time that we were beaten in windward work by any craft smaller than a 50-ton schooner, and it took her some time to dispose of us, so slippery a customer is Eel in a bout to windward.

It is in the hope that such a handy and compact little ship will interest the cruising readers of the FOREST AND STREAM that her owner has drawn the lines, and I have written this short description of the boat and her capabilities. There may be perhaps an opening in America for some such type of really useful little cruiser. Anyway, we have both derived so much profit and pleasure from the accounts of craft on your side, and from the numberless plans and lines which enrich your pages, that we offer these in grateful recognition of favors past and to come.

The rig, it will be observed, includes that very useful contrivance the roller jib; which does not seem to have caught on in America to the extent its merits deserve. Indeed it is not too much to say that it is the one thing above all others that makes the boat so easy to handle, as any amount of headsail can be given her, from the full amount to the complete stowage of the sail, without leaving the well. The jib itself is well cut, and stands as long as any sail in the boat. Moreover, it drives better than any other sail, and was made by Perry, of Birkenhead, who seems specially good at making this particular sail. The principle on which it works is very simple; a pull on the jib sheet unrolls the sail, which is seized to a hollow wooden roller which revolves on a wire stay, passing through its axis, and at the same time rolls up the roller line on the flanged ferrule at the tack. When the sail is fully sheeted the ferrule is filled by the roller line. To take sail off, slack jib sheet and pull on the roller line. This pull rotates the roller and winds up the sail. It never seems to get out of order, and in sails say up to 100 ft., or 120 ft., could not well be bettered. For larger sizes its use is not so desirable.

The construction of Eel is strong, but quite light enough for cruising purposes. The keel is of mahogany, 2 in. thick and about 16 in. wide amidships. There are five grown oak frames 1 1/2 in. square. Between each of these frames are three bent timbers of American elm 1 1/2 in. x 3/4 in.; these are joggled into the keel. The planking is of larch, 3/4 in. thick, fifteen planks a side, carvel built. The gunwale is outside and extra large for strength when being hoisted or lying alongside piers; it is 3 in. x 1 1/2 in., with a protecting band of galvanized iron all around 3/4 in. thick.

The deck is double, pine and redwood forming the under skin. Under the fore deck the pine is 1/4 in. thick, laid diagonally; aft it is 1/2 in. Over all is 3/8 in. teak; between the two a thick coat of paint on calico, giving a light but very tight deck. The sectional drawings show very clearly the general arrangements and the somewhat unusual form of centerplate, which is easily raised by the Spanish Burton shown in the deck plan.

The Seawanhaka Knockabouts.

THE Seawanhaka fleet is now so far advanced at Stearns's yard, Marblehead, that the boats will probably be finished, excepting the rigging, by some time next month. The work of duplicating so often by a definite system has proved very satisfactory, there having been few delays; and the boats of the series have followed each other quickly and smoothly. Two more orders have been taken recently, making up the original number of twenty-four, for Messrs. J. R. Maxwell, Jr., and George Milne. In addition to the nine boats of the same design building under a sub-contract at Gloucester for the Westchester Country Club, and the six at Harlan & Hollingsworth's, Wilmington, for the Corinthian Y. C., of Philadelphia, Mr. Stearns has just signed contracts for eight of similar model for the Cohasset Y. C., to be 33 ft. over all, 8 ft. 6 in. beam, and 3 ft. 6 in. draft, with centerboards as in the S. C. Y. C. boats. It is probable that more will be ordered for the same class. The 21-footer Verona, designed and built by Mr. Stearns last year, has recently been sold to Charles Osborne, of the S. C. Y. C.; she is practically the original of the new one-design class, but is a keel boat and rather elaborately fitted up. Mr. Stearns has also orders for designs for several yachts of 21 to 30 ft. l.w.l.

Canoeing.

American Canoe Association, 1897-98.

The Atlantic Division Smoker.

THE Atlantic Division of the American Canoe Association entertained the Central, Eastern and Northern Divisions at an informal smoker on Saturday evening, Jan. 15. The attendance of about 125 members and friends was a source of gratification, and the committee of arrangements, composed of Rear-Com. Pinkney, Mr. John C. Mowbray and Mr. Paul B. Rossire, furnished a right royal programme for the occasion. Chief "Big Foot" Seavey stalked around with a 8 ft. churchwarden clasped in his prehensile hands, and assisted some of the newer and smaller members to connect their large-sized pipes with the gas. Dunnie, our commodore-elect—in the words of the good Mr. Bennett—was in his usually amiable mood, and spoke briefly of the 1898 meet, the plans and work of the various committees, and his words were listened to with the greatest of interest.

It was a pleasure to watch the reception of the men, as they came in, by those already there. The greetings were most hearty, and every one was in the best of spirits. Capt. Forbush, Dad Thorne, Willy Williams and Mr. Skissenhoefer (it is easier done than said) came all the way from Buffalo to attend the smoker. Last year they were represented at camp for the first time, having about ten men present; this year they expect an attendance of twenty-five from their club. Dad Thorne has been appointed chairman of the 1898 camp site committee, and Willy is on the regatta committee, with the Right-Hon. Hogan, J. K., H. R.; Tassit Southgate, of Worcester, Mass.; Messrs. Lawrence and Packer, from Trenton, and others from the Red Dragon C. C., of Philadelphia. Men from Sing Sing, Newark, Yonkers, Brooklyn and other suburbs of New York talked canoe, sang, ate, drank, watched a light-fingered gentleman hatch eggs from the ether, laughed at the antics of a trio of colored "coonists," and contributed in every way to a most enjoyable evening. The committee is certainly to be congratulated on the result of its efforts. Over here Com. Dunnell and ex-Vice-Com. Quick had their noses together over some argument, and as I passed the former was saying: "We had to do it, farmer, for how can a \$700 meet be run on \$400?" Presumably they were discussing the \$5 per clubita act recently promulgated by the commodore for prizes. Over in that corner the genial commodore of the Brooklyn C. C., Judge Dater, and a bevy of admirers were discussing theories, pipes, etc., and our Bob, ex-Com. Dorland, Lin Palmer, ex-Rear-Com. Billy Barlow and some of the smaller fry were laughing and joking, while the rest of those present were lost in merry-contemplation of the Only Ho, "the like of ye which is not yette." Jack Mowbray, the brothers Douglass, "Mrs." Peebles, One-Legged Pinney, Com. Paul B. Rossire, Sec'y-Treas. Schuyler and Tommy Hale were among the lights which glittered so profusely in the "vast amphitheater," and all, from beginning to end, without exception, were most enthusiastic, verbally and otherwise, in manifesting the pleasure this initial meet of 1898 had given them,

Rifle Range and Gallery.

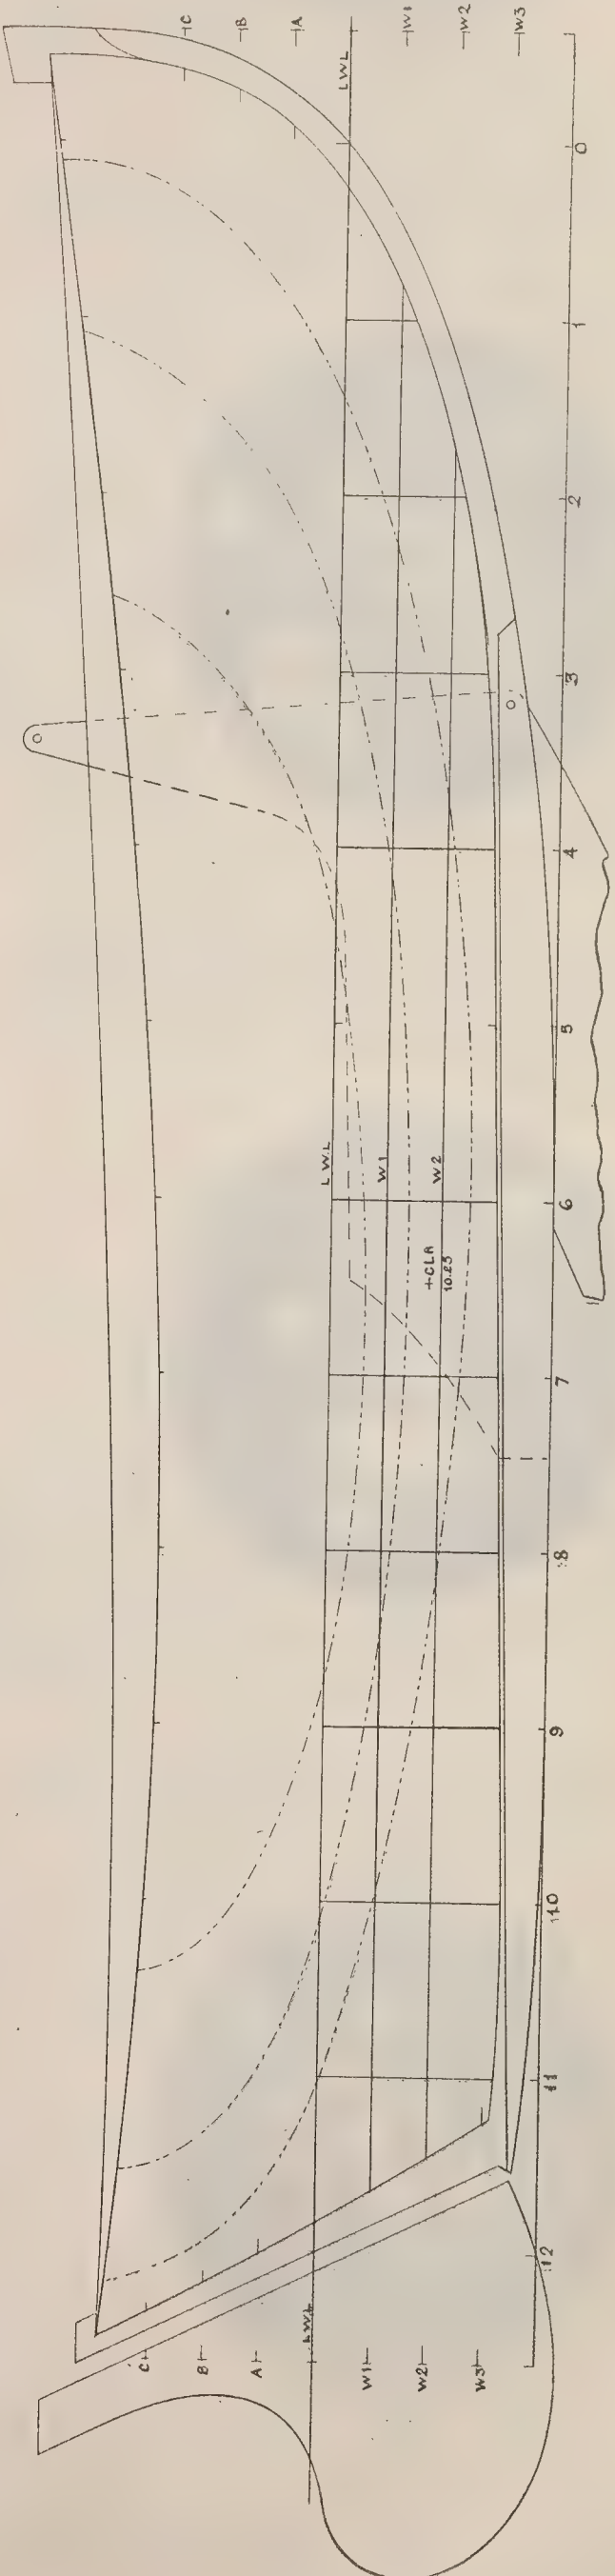

The Sportsmen's Association Tournament.

AFTER nine days of shooting, the rifle tournament in Madison Square Garden, held under the auspices of the Sportsmen's Association, was brought to a close on Saturday night, Jan. 22. The post of honor as champion, captured last year by M. Dorrier with a score of 2,421, was taken this year by Harry M. Spencer, of Dunmore, Pa., with a total of 2,424, three points higher than Dorrier's winning score of 1897. Mr. Spencer also figured conspicuously in the other contests.

The tournament was under practically the same management as last year. The cashier's and official scorer's office was very ably run by George W. Plaisted, assisted by W. von Wussow, the latter gentleman furnishing excellent matter every day for the benefit of the daily press. Mr. Plaisted's intimate knowledge with the rifle shooters of this country stood him in good stead when it came to taking entries for the various contests.

The tournament committee had for its chairman H. D. Müller, who worked hard to make the tournament the success that it was. Messrs. Zettler Bros. had charge of the ranges, and furnished all kinds of .22 short rifle and .22 long rifle cartridges, having also a stock of rifles on hand for those who did not bring their own guns with them. Gus Zimmerman aided materially in the running of the tournament, counting targets and checking them off prior to their being handed into the cashier's office for the recording of the same.

As usual, the chief interest centered in the individual match, the

Designed by George F. Holmes, Esq., Humber Yawl Club, 1896.

100-shot contest that decides the Sportsmen's Association championship for 1898. In this contest R. J. Young early gave the boys a taste of what they had to beat to take the post of honor from him. On Friday evening he commenced his string of 100 shots, shooting three scores of 10 shots each. He started with 244, then he made a 235 and a 233. At this point he quit for the

first target was 247. Then he had a 241, 240, 240 and another 241 for his first five strings; this gave him an average of 241 4-5; not enough to win unless he could improve in his last five strings. Then came 243, 244, 243 and 241 in quick succession. This left him with a 241 to make to tie and 242 to beat Young's total. Not feeling in the best of form, Spencer did not shoot his last score until the following day, when he totaled another 244 and landed 3 points ahead of Young. Here were two scores of 2,424 and 2,421 for the others to go on against; and the task proved too severe, Spencer and Young being respectively first and second at the end of the tournament.

M. Dorrier was third with 2,413, his second string and fifth target putting him behind the leaders. Much interest centered in the work of L. P. Ittel, the crack from the Pittsburg, Pa., Rifle Club. Mr. Ittel has come to the front very rapidly, and has made his mark indeed, landing a tie for fourth place with Fred C. Ross, one of the best shots around here, or, for the matter of that, anywhere else. Mr. Ittel arrived in the city on Monday morning, and, rather unwisely, did not give himself a night's rest before commencing his string of 100 shots. The result is shown in his third and fourth targets, after which he quit for the day. The next day he shot a great gait, but failed to raise anything but a 236 in his last target. Curiously enough, Fred Ross made the same finish in his string of 100 shots, 236 being the best he could do in his last 10 shots.

Louis Flach, of Brooklyn, was the sixth in order of merit, and he was also the only other contestant out of the 43 entries to total 2,400 or better. Next to him came Dr. A. A. Stillman, another rising shot, from Syracuse, N. Y., his total of 2,396 this year comparing very favorably with his 2,337 last year. His last 10

day, feeling that he was not in trim to finish his string. He came back on Saturday night and quickly showed the wisdom of his move on the previous night. His seven last scores averaged

No. 2. 240.

243 3-7 as against 239 for three scores on Friday night. His total when figured up showed 2,421, the same total that Dorrier won with in 1897.

No. 3. 241.

The total of 2,421 at this style of shooting was a big one to go up against, and its being made so early in the game had something to do with keeping the total number of entries in this

No. 4. 241.

match down to 43, or 3 less than in 1897, when Dorrier's total was not made until the last night of the match, up to which time 2,383 was the highest recorded. Harry Spencer showed that he was going to put up a big score when he got to work. His

No. 5. 240.

shots netted him 247, a total that was never beaten in this contest for any string of 10 consecutive shots.

E. S. Pillard, of New Britain, Conn., is another rifleman who will be found near the top in future contests of this kind. He rolled up a total of 2,390, finishing his 100 shots with a string of 10 that netted him 244, his highest score in the 10 targets. L.

No. 6. 243.

Buss, of New York, was ninth on the list; his last five targets averaged 242 but his first five had put him out of the race for first place, and his full total was only 2,387, 4 points more than Ross's score last year that won him second place. Dr. W. G. Hudson, of New York city, came within 1 of tying Buss's total, while W. Rosenbaum and L. P. Hansen scored respectively 2,385 and 2,384. Thus in this year's contest twelve men beat the second highest total made last year, while two, Spencer and Young, beat the highest score.

The highest individual score for any string of 10 shots was 247, five men sharing the honors in this respect—Spencer, Young, Ross, Stillman and Rosenbaum; Ittel scored a 246.

Below is a list of the rifles and ammunition of 12 out of the first 13 shooters, Dr. Hudson's gun and ammunition being unknown to us, as we were unable to see him personally and find out what he was using:

Name.	Club.	Rifle.	Ammunition.

Continuous Match.
Messrs. Spencer, Dorrier and L. Buss tied for the first three places in the Continuous Match with 149 each out of a possible 150. There was no 148 made, but Messrs. H. D. Muller, J. G. Dillin, L. P. Ittel and R. J. Young tied on 147 for the next four positions. The thirty-two prize winners in the competition, together with their scores, are given below:
Continuous Match.—Entries unlimited; best two tickets to count; possible 150:

Bull's-eye Target.
Repeating his performance of last year, Mike Dorrier again went to the front on the bull's-eye target on the last night of the tournament. Up to within a few hours of the close of the shoot, 10 degrees was high. Then came C. S. Dietrich with 8½, closely followed by Dorrier's 8 degrees, which took the prize for the best bull. Below are the winners in order of merit, the figures after the shooter's name representing the number of degrees:
M. Dorrier 8, C. H. Dietrich 8½, P. Kossek 10, H. M. Spencer 10, Dr. A. A. Stillman 10½, H. D. Muller 11½, E. S. Pillard 12, J. Facklamm 12½, Dr. W. A. May 12½, C. W. Horney, Jr., 13, G. D. Wiegmann 13, F. C. Ross 14, J. F. Smith 14, S. Buzzini 14½, R. Busse 15, H. Mahlenbrock 15.

The Target of Honor.
On the Target of Honor there were two highest possibles—75—one credited to Louis Flach, of the Zettler Rifle Club, and the other to E. S. Pillard, of the New Britain, Conn., Rifle Club. Next to them came M. Dorrier with a 74, while there were three 73s, viz., Dr. A. A. Stillman, C. E. Gensch and O. King.
The list of prizes for this competition were as follows: Gold medal by August Ludwig; .22cal. schutzen rifle by the Winchester Repeating Arms Co.; fruit dish by William Armbruster; pair of statuettes by Zettler Bros.; order for 5,000 Peters Carttridges for .22cal. rifles; set of rifle sights by Lyman A. Mills; shooting blouse and jacket by Harry Thurman; loading machine by F. Fabarius; three prizes of Troisdroit powder by F. Groos, agent for this powder in the United States; a case of imported Niersteiner by Lemcke & Doscher, and \$120 in cash prizes.
The winners and their scores were as below:

EDWARD BANKS.

Shell Mound.
SAN FRANCISCO, Cal., Jan. 10.—*Editor Forest and Stream:* The Columbia Pistol and Rifle Club held an annual meeting on Jan. 7 for election of officers and adoption of shooting programme for 1898. Twenty-six members were present, and a spirited meeting was held. The officers chosen were: Dr. L. O. Rodgers, President (fourth year); F. H. Bushnell, Vice-President; F. O. Young, Secretary-Treasurer (fourth year); C. M. Daiss, First, and A. H. Cady, Second Shooting Master; Trustees, J. E. Gorman, E. Jacobsen and D. W. McLaughlin. The shooting programme will be completed at an adjourned meeting to be held next Friday evening. Among the veteran riflemen present were A. Strecker, Howard Carr, Capt. J. E. Klein and Ed Hovey. Medals and cash prizes to the value of about \$500 will be put up by the club for 1898. Yesterday the initial shoot of the year was held; also first shoot of the Germania Club. Scores were:
Columbia Club, Columbia target:
Open rifle shoot at 200yds. for the Bushnell medal: The score was: F. O. Young, 52, 55, 59; J. E. Gorman, 57; F. E. Mason, 61, 57; Dr. Rodgers, 66, 71; A. B. Dorrell, 68; D. W. McLaughlin, 67; A. Strecker, 75, 75; A. Gehret, 80; E. Jacobsen, 74. In the championship class the score was: Dr. Rodgers, 57; F. E. Mason, 59; D. W. McLaughlin, 61; F. O. Young, 62; W. Strecker, 72; E. Jacobsen, 94. First class—A. B. Dorrell, 74; J. E. Gorman, 77; A. Gehret, 86; G. A. Schultz, 96. Second class—A. H. Cady, 115; A. Hinterman, 135. Third class—E. Woenne, 110; Mrs. M. J. White, 125; C. F. Waltham, 136; W. F. Unfried, 150. In the pistol shoot, 50yds., the following scores were made: Champion class—J. E. Gorman, 41; Dr. Rodgers, 45; C. M. Daiss, 74; M. J. White, 49; A. B. Dorrell, 50; F. O. Young, 64; E. Hovey, 67. First class—D. W. McLaughlin, 54; F. E. Mason, 60; E. P. Jacobson, 76. Second class—Mrs. M. J. White, 64; A. Hinterman, 74. Third class—A. H. Cady, 77; B. P. Jonas, 125; W. F. Unfried, 126; A. Doria, 225. Ten-shot scores

for Blanding medal—C. M. Daiss, 37, 40; J. E. Gorman, 41, 42; A. B. Dorrell, 49; F. O. Young, 56.
Germania Club, ¾in. ring target, 20 shots only allowed:
First prize of the first champion class to John Utschig, 433, and second to Dr. L. Rodgers, 432. In the second champion class the first prize went to L. Bendel, 412, and the second to H. Heilberg, 398. In the first class, first prize went to F. Rust, 391, and second to J. E. Klein, 373. In the second class the first prize was earned by E. H. Goetze, 398, and the second by John Tiedemann, 380. In the third class D. Salfeld won first with 328, and J. F. Daly second with 315. The prize for the best first shot went to R. B. Schuster, 24, and for best last shot to Dr. Rodgers, 25. The first shoot of this year's series for the \$75 diamond medal and cash prizes was also shot, with the following score—only one entry of 10 shots allowed: F. P. Schuster, 210; J. Utschig, 215; L. Bendel, 213; D. B. Faktor, 212; Dr. Rodgers, 221; A. Strecker, 208; D. McLaughlin, 221; E. Goetz, 155; F. E. Mason, 215.
ROELL.

Rifle and Revolver Competitions at Boston.

The New England Sportsmen's Association will hold a series of rifle and revolver competitions during the two weeks that its show will be open in the Mechanics' Building, Boston, March 14-26. These competitions will be held under the direction of separate committees, one for each branch. The revolver competitions will be under the direction of the following committee: F. B. Crowninshield, chairman; John B. Paine, Louis Bell, E. E. Patridge and Butler Ames. The rifle committee is: F. B. Crowninshield, chairman; C. W. Hinman, John T. Humphrey, Charles H. Eastman and J. E. Kelly.
For revolver and pistols there are three championships competitions—the "Any" revolver championship, "Military" revolver championship and the pistol championship. In each one of these competitions there will be three prizes, silver cups of the actual value of \$50, \$25 and \$10. For rifles (any .22cal. rifles) there is a 50-shot championship competition, 100 measured feet, 25-ring target; any sights except telescopes; off-hand; any .22cal. rim fire ammunition allowed. Prizes, three silver cups of the actual value of \$50, \$25 and \$10.
In addition to the above four competitions there are re-entry matches for the "Any" revolver, "Military" revolver, Pistol and "German Ring" re-entry for rifles; there will also be a "Standard American" re-entry for rifles, with a Standard American target reduced to 100ft., 7-ring black.

The prizes in each of the re-entry matches, with the exception of the "Standard American," consist of twelve cash prizes, dividing \$140, as follows: \$30, \$25, \$20, \$15, \$12, \$10, \$8, \$6, \$5, \$4, \$3, twelve prizes, dividing \$100 as follows: \$20, \$15, \$11, \$10, \$9, \$8, twelve prizes, dividing \$100, as follows: \$20, \$15, \$11, \$10, \$9, \$8, \$7, \$6, \$5, \$4, \$3 and \$2. A total of \$600 in cash and twelve cups of the aggregate actual value of \$340 will thus be distributed in prizes at this tournament.

The programme is a neat one, in book form, and can doubtless be obtained from F. B. Crowninshield, Pierce Building, Copley square, Boston, Mass., on application for the same. It contains the details of all the matches and a full set of rules to govern the contests.

Rifle Notes.

L. P. Ittel, of the Pittsburg Rifle Club, and M. Dorrier, of the Zettler Rifle Club, shot a friendly race on Saturday last, Jan. 22, on a 200yds. range in the vicinity of this city. Mr. Dorrier was not in the best of trim for such a match, as he left the Sportsmen's Exposition in Madison Square Garden quite late on Friday night, and then spent the best part of the night loading shells for himself and Ittel to shoot the next day. Whatever shape Dorrier was in, there can be no two ways about it. Ittel was in wonderful trim and shot a great race. His average was quite high, and Mr. Harry Spencer, who witnessed the match, came back to Madison Square Garden full of Ittel's shooting, and gave it as his opinion that the Pittsburg rifleman was going to be bad medicine at future schutzenfesten.

Tom Keller is not unknown among riflemen, it seems. Among shotgun cranks Tom has a big following, but we were somewhat surprised to see how well everybody at the rifle ranges in the basement of the Garden knew Tee Kay. And, say, perhaps Tom wasn't feeling good over the showing made at this tournament by Peters's long rifle and Peters's short, semi-smokeless!

Harry Spencer shoots a Winchester barrel, octagon, with a 16in. twist. The action is a Ballard, the stock being a Zettler stock. It weighs about 11½lbs.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Feb. 10-11.—Indianapolis, Ind.—Tournament of the Limited Gun Club. First day, sparrows; second day, handicap race at targets; handicaps 100 to 110; \$10 entrance, targets extra.

Feb. 15-19.—Hot Springs, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. \$1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 22.—Atchison, Kan.—Tournament of the Atchison Gun Club. Live birds and targets.

Feb. 22.—Buffalo, N. Y.—Invitation target shoot of the Bison Gun Club.

Feb. 22.—Sistersville, W. Va.—Tournament of the Sistersville Rod and Gun Club.

Feb. 22.—Pawling, N. Y.—Tournament of the Pawling Gun Club.

Feb. 22-23.—Buffalo, N. Y.—Second annual midwinter tournament at Audubon Park, under the management of E. W. Garbe. Targets. \$500 added.

March 15-18.—Utica, N. Y.—Tournament of the Oneida County Sportsmen's Association. Live birds and targets. Open to all. Henry L. Gates, Pres.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, \$25, birds extra; \$1,500 guaranteed to the three high guns; \$600, \$500 and \$400; all surplus added.

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

April 5-8.—Baltimore, Md.—Annual spring tournament of the Baltimore Shooting Association. Geo. L. Harrison, Sec'y-Treas.

April 13-15.—Atchison, Kan.—Manufacturers' fourth annual tournament. Added money later. Jack Parker, Manager; Lou Erhardt, Sec'y.

April 19-22.—Des Moines, Ia.—Charley Budd's shoot. First three days, targets; \$350 added. Fourth day, live birds; 25 birds, \$25, handicap, \$50 added.

April 27-28.—Peru, Ind.—Second annual amateur tournament. Jack Parker, manager. Address all communications to J. L. Head, Peru, Ind.

May 17-20.———.—Tournament of the New Jersey State Sportsmen's Association. T. H. Keller, Sec'y.

May 18-19.—Crawfordsville, Ind.—Tournament of the Crawfordsville Gun Club. C. E. Lacy, Sec'y.

May 30.—Canajoharie, N. Y.—Decoration Day shoot of the Canajoharie Gun Club. Targets. Charles Weeks, Sec'y.

June 7-9.—Sioux City, Ia.—Fourth annual amateur tournament of the 500 Gun Club. Three sets of traps. W. F. Duncan, Treas.

June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.

June 14-15.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League of Indiana, on the grounds of the Limited Gun Club.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Blue-locks thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

Jan. 26-27.—Elizabeth, N. J.—Tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

DRIVERS AND TWISTERS.

Under the head of Western Trap will be found a note from our Chicago correspondent, Mr. Hough, relative to the coming sparrow and target tournament at Indianapolis, Feb. 10-11. Another correspondent, Gaucha, elsewhere has also something to say in regard to the Limited Gun Club and its tournaments. Hence there is nothing left for us to do but to give the bare schedule of events arranged for the above two days. On Feb. 10 there will be five events at 20 sparrows each, \$6 entrance in each event, birds included. Ten per cent. of the net purses will be deducted to form a fund for average money to be divided 30, 25, 20, 15 and 10 to the five high guns that shoot through the sparrow programme. All events class shooting; 28yds. everybody; four moneys; arbitrary boundary. On Feb. 11 the programme calls for a 100-target race, handicaps from 100 to 110, \$10 entrance, targets extra; optional sweeps of \$2.50 on each string of 25 targets. In the optional sweeps it will be class shooting, five moneys. The purse in the main event will be divided "high guns." If 20 or less entries, eight moneys—25, 20, 15, 10, 9, 8, 7, 6; if 30 or less entries, ten moneys, 20, 17, 14, 10, 9, 8, 7, 6, 5, 4; if 40, more or less, entries, fourteen moneys, 15, 13, 10, 9, 8, 7, 6½, 6, 5½, 5, 4½, 4, 3½, 3. An important note is the following: "No allowance shooter can beat a scratch man who breaks 94 or better. If scratch man does not break 94, allowance shooters will tie at 94. The entries on this day will close for the handicap when the first squad have shot their first string, and for the optional sweep on the firing of the first gun."

Regarding the talked-of match between Brewer and Gilbert, we received a letter the other day from a well-known shooter in Philadelphia, prominent in amateur circles, who, *inter alia*, had this to say as to Brewer's backing: "In regard to Brewer's match against Gilbert or Elliott, I feel that a match can be arranged for a considerable sum, if either of these gentlemen will shoot in the vicinity of Philadelphia or New York. The matter was in discussion in my office one day this week, and several gentlemen expressed their willingness to put up Brewer's stake if the match was to take place where they could see it. It is out of the question to arrange a match for Chicago. Rather than have the match fall through on account of a disagreement as to the grounds, they would be willing to allow either Gilbert or Elliott a reasonable sum for expenses if either of them will shoot in the East." Knowing the writer of the above as well as we do, we can say that his words have the weight of authority. But, as we pointed out last week, we understand that Gilbert is under contract to shoot no matches for money—only for trophies—and that as long as this contract is in force it is hopeless to expect to see him come to Philadelphia or New York to shoot, unless the cup is brought here by some one else. So far as Elliott is concerned, we have heard of no propositions for a match between him and Brewer. A match between either of the parties mentioned would be well worth seeing, and, as it will be noted, the Philadelphians are willing to pay to see one if it can be arranged.

Regarding the article in our issue of Jan. 22, entitled "The Referee's Discretion," a prominent trap-shooter of Philadelphia, Pa., writes us, under date Jan. 21, as follows: "I read your article in the current number of your journal in reference to the rule regulating misfire. The question is a very difficult one to determine, and must, in my opinion, be left to the discretion of the referee. As a member of the rules committee of the Riverton Gun Club, I proposed the following rule, which has not yet been adopted by the club officials, but has received the tacit consent of the members: 'Rule 11, Sec. A—A misfire is no shot unless occasioned by the neglect of the shooter.' 'Sec. C—Should the gun fail to discharge for any reason other than the neglect of the shooter, the referee should declare a no-bird.' I have been trying for the last year or so to get some uniform action by the clubs in reference to this important particular, and as soon as this rule is adopted by the Riverton Gun Club officially efforts will be made to get the other gun clubs to adopt a similar rule."

Mr. John A. Wilson, of Franklin, Pa., secretary of the Pennsylvania State Sportsmen's Association, writes us as follows under date of Jan. 22: "The roster of the Pennsylvania State Sportsmen's Association will be ready for distribution about Feb. 1, and there will be sufficient copies to go all around. In doing this work the committee has received little assistance from the clubs forming the association, though ordered to do the work by these same clubs. The book will be a handsome one, 6½x4½in., printed on heavy paper and covered with a flexible leather cover, which will allow of its being used as a book of reference without wearing out easily. The cost of this publication has not been small, and we do not think it wise to take the money from the association to pay for the book, so the committee has decided to furnish the book to those clubs which are not behind in association dues at the rate of 5 cents per copy, for members of the association only. I will be glad to furnish a copy to the secretary of any State association who will send me his address."

Within the next few days the Interstate Association will close contracts for tournaments with a few clubs. The chances are that there will be interstate tournaments at the following places during the coming season: Meadville, Pa.; Portsmouth, Va., and Waterville, Me. Other tournaments will be arranged for in a short time. There will not be an interstate shoot at Sherbrooke, Can., as we had hoped there would be. The Interstate Association, although thinking very favorably of Sherbrooke's claims for such a shoot, feels that the time has hardly come for it to go into Canada while so much ground in the United States remains uncovered. Clubs desiring tournaments should lose no time in writing to the manager of the Association, Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa., making application for the same. It should be borne in mind that the Association will not go west of the Pennsylvania western border this year.

Elsewhere we give a letter written to FOREST AND STREAM by Mr. Elmer E. Shaner, manager of the Interstate Association, in which he corrects the error made by very many of the daily papers in regard to the Grand American Handicap. As stated in our report of the Association's meeting of Jan. 17, published in our issue of Jan. 22, and as shown by the terms of Mr. Shaner's letter, the Grand American Handicap was specially excepted from the conditions that apply to all the target tournaments held under the auspices of the Association during the year of 1898. Paid representatives, manufacturers' agents and any one connected with firms that manufacture guns, shells, powders, targets or traps will be barred from competing for the purses at any of the target tournaments of the Association, but will be eligible, as in the past, to enter and to shoot in the Grand American Handicap.

E. D. Fulford, of Utica, N. Y., and F. D. Kelsey, of Buffalo, N. Y., were the two men who most particularly gave the Canadians object lessons in smashing targets at the Hamilton tournament, Jan. 18-20. According to the newspaper scores, Fulford broke 153 out of 160 shot at in the three days; his score included a 20 straight at reversed order and a 23 out of 25 at 15 singles and 5 pairs. Kelsey shot at 15 targets less than Fulford did, and like Fulford he lost 7 of them, breaking 138 out of 145. Fulford's average was 95.6, Kelsey's 95.1. The 15 targets Kelsey did not shoot at were unknown angles. He broke 18 out of 20 at reversed order, and tied Fulford's score of 23 at the mixed 25. Bartlett broke 18 out of 20 at reversed order, and ran 25 straight in the mixed shooting. His total was 147 out of 160, an average of almost 92 per cent.

In the live-bird shooting at Hamilton, Jack Fanning was, of course, right on top, although there were others, notably Fulford and Bartlett, who chased him hard. Fanning and Fulford were placed on the 32yds. mark, Bartlett at 30yds. During the three days Fanning shot at 51 birds and lost just 1. Fulford also shot at 51 birds and scored 49 of them. Bartlett's total was the same as Fulford's.

On Jan. 23 ten members of the Hudson Gun Club, of Jersey City, paid a visit to the Cuckoos at Rockaway Park, L. I. A return visit will be arranged in the near future. There is also some talk among the members of the Hudson Gun Club of paying a visit to the Kearny, N. J., Gun Club on Washington's Birthday, but details have not been fully decided upon as yet.

The dates for the Elizabeth, N. J., shoot have been changed. Originally the intention was to have a two days' shoot, Jan. 26-27. The shoot will now be a one-day affair, and will be held on Feb. 3. The programme will be as follows: No. 1, 5 birds, \$5; No. 2, 7 birds, \$5; No. 3, 10 birds, \$5; No. 4, 25 birds, \$10, birds extra. Only live birds will be shot at, price 20 cents each.

With John S. Wright's invitation live-bird shoot on Feb. 3, and with two other shoots for the same date in this vicinity, at Elizabeth and Singac, N. J., pigeon shooters around here will have plenty to choose from on that date.

Arthur Bunn, of Singac, N. J., announces a 25-bird race, \$10, birds extra, for Feb. 3, at 12 sharp. Other events to suit shooters. All events class shooting.

Here is an incident of the Sportsmen's Exposition: On Friday, Jan. 21, a party who had been inspecting the Winchester Co.'s exhibit, and talking shoot with Elliott and Van Dyke, strolled over to the U. M. C. space and corralled Hallowell. With his usual courtesy, John J. U. M. C. Hallowell explained everything very fully, particularly the working of the Driggs 1-pounder. Just before leaving the visitor said: "The Winchester people employ quite a large number of men to shoot around at tournaments, don't they? How many does your firm employ?" Hallowell replied: "None at all." "None at all?" said the stranger: "Why, you and your father are shooting all the time, aren't you?" It is now quite in order to congratulate U. M. C. Thomas on the fine physique of his son!

Charley Budd, of Des Moines, Ia., writes us under date, Jan. 18, as follows: "You will see by the above heading—'Charley Budd's Shoot, April 19-22'—that I am going to hold a little tournament. Please claim the dates for me. The three first days will be devoted to targets, and I will add \$300 to the purses, and will also give \$50 for best averages. On the fourth day there will be a 25-bird race, \$25 entrance, with \$50 added; handicaps 27 to 32yds. I am going to Hot Springs to have a good time with John Sumpter, and from there to Dayton, O., to settle my little difficulty with Rolla. Will see you at the Grand American." All of which goes to show that Chippie Budd is going to have his hands full, shooting and making arrangements for his tournament, between now and April 19, the day on which his four days' shoot commences.

The other evening, while walking on Broadway, near the Broadway Central Hotel, Ed Rike thought he was going to have an experience with some of New York's thugs. As he turned out of a by-street on to the main thoroughfare, within a block of his hotel, he noticed two men putting up their coat collars and pulling their hats down over their eyes, all the while edging over toward him. Instinctively he shifted his umbrella into his left hand as the men got up to him and jostled him. He raised his hand to hit the one on his right, discovering just in time that it was Elmer Shaner and another who were holding him up. Elmer little realizes, says Ed, how near he was to getting laid out by a solid right-hander on the top of his comparatively unprotected cranium.

John Shaaber and Ed Yeager, both prominent members of the Independent Gun Club, of Reading, under whose auspices the Pennsylvania State shoot will be held, March 29—April 1, were in the city on Tuesday last, Jan. 18, visiting the Sportsmen's Exposition. While in the city they met Elmer E. Shaner, who will have the management of the State shoot, as in past years, and had a talk with him regarding the programme for that shoot. Mr. Yeager, who is corresponding secretary for the State Association, informed us that the programmes would be ready about the first week of February; he also promises that the Independents will give one of the best State shoots ever held in Pennsylvania.

Crossing Fulton Ferry on Friday afternoon last, Jan. 21, we were rather surprised to meet Dan Loomis, from Burlington, Vt., agent for the Lake George & Lake Champlain Transportation Co. in that city. Mr. Loomis reported all well with the Lake Side Rod and Gun Club, of Burlington, and personally gave us a few particulars about the weather in Vermont at this time of the year. We have a distinct recollection of a Vermont blizzard we ran up against, in company with Hen Spear, about two years ago last November.

Mr. Ed O. Bower, secretary-treasurer of the West Virginia State Sportsmen's Association, writes us from Sistersville, W. Va., under date of Jan. 15, as follows: "The second annual trap-shooting tournament of the West Virginia State Sportsmen's Association will be held at Parkersburg, June 8-10, under the auspices of the Mountain State Gun Club. Programmes (ready for mailing May 10) will contain the amount of added money and valuable prizes, and will be mailed upon application."

Mr. G. M. Walden, president of the Missouri State Fish and Game Protective Association, was one of those present at the Elliott-Gilbert match on Jan. 15 at Dexter Park, L. I. Mr. Walden enjoyed, early in December, the honor of captaining the Kansas City winning team in the Chicago-Kansas City team race. After the team race it will be remembered that he suffered individual defeat at the hands of the Chicago captain, Col. C. E. Felton, in a live-bird race.

W. N. White, of the Portsmouth, Va., Gun Club, was in the city last week, and went home happy in the knowledge that the Interstate Association would hold a tournament on his club's grounds some time during the spring or early summer. Mr. White says that his club will extend a hearty invitation to all to attend the shoot, and promises a first-class time. Of course, at this tournament the Interstate's rule barring paid men, manufacturers' agents and such from taking part in the purses will be strictly enforced.

Mrs. M. F. Lindsley, "Vanda," is in the East once more, and purposes making a stay in the vicinity of New York for a period of a month or two, at any rate until after the Grand American Handicap. While in New York Mrs. Lindsley's headquarters will, of course, be at 88 Chambers street, the home in this city of the King Powder Co. and Peters Cartridge Co. Mrs. Lindsley informs us that Milt is flourishing, and that Jerry, the bear, is also in the most robust health.

Ben H. Norton, of the Hazard Powder Co., was one of those who had charge of the Hazard Powder Co.'s exhibit during the Sportsmen's Exposition. Mr. Norton will probably be seen at the Boston show during its first week, but he will be on hand when the time comes for him to open the cashier's office at Elkwood Park, March 22-24, the three days of the Grand American Handicap meeting.

The Sportsmen's Exposition of 1898 has come and gone. With it came a whole host of friends of FOREST AND STREAM, who have also gone away and left us feeling quite lonesome. This annual gathering of sportsmen is always a pleasure to look forward to, and affords an interchange of ideas that prevents our getting rusty.

Mr. C. B. Bristol, one of New Haven's most prominent trapshooters, was in the city last week, and took in the Sportsmen's Exposition. We were unfortunate enough never to be able to make connection with Mr. Bristol's right hand this time, and expect to receive a peremptory summons to come to a shoot at New Haven, Conn., and make up for deficiencies.

Messrs. Daly & Chanfrau, managers of Elkwood Park, will arrange full programmes of live-bird events for the Monday, Friday and Saturday of the Grand American Handicap week, Feb. 21 and Feb. 25-26. This will enable any shooter who wishes to do so to put in a full week shooting over the best laid out and most comfortable grounds in this country.

Charlie Mowry, of the Sporting Goods Gazette, Syracuse, N. Y., paid a flying visit to the city last week, spending most of his time in Madison Square Garden, looking up the trade and inspecting the exhibits at the Sportsmen's Exposition. *En passant*, we might say that Mr. Mowry came out on top, as usual, in the fly-casting contest open to members of the press only.

In our report of the Gilbert-Elliott match for the Du Pont trophy, which appeared in our issue of Jan. 22, we omitted to mention that Gilbert's load of Du Pont Smokeless was loaded in a Winchester Leader shell. Gilbert always shoots Winchester factory-loaded ammunition.

Manager Garbe, of Audubon Park, Buffalo, N. Y., announces a target tournament for Feb. 22-23. Elsewhere will be found a brief review of the programme prepared for the occasion. "Manufacturers' experts and paid professionals will be eligible to first and second moneys only."

Will K. Park, of Philadelphia, is a fly-fisherman as well as a journalist and shootist. As the result of his work with rod and line in the fly-casting tournament at the Sportsmen's Exposition, Will can now wear a bronze medal. He says he beat one man, anyway.

The Cleveland Target Co. has written a letter to FOREST AND STREAM regarding the stand it took at its tournament in 1897 in the case of Mr. Chauncey Powers, of Decatur, Ill. The letter, which explains itself, appears elsewhere in our trap columns.

In another column we give the letter written to the Western shooters by Mr. Lequin, secretary-treasurer of the Interstate Association, inviting them to attend the Grand American Handicap of 1898.

T. S. Dando, of Philadelphia, Pa., was the first entry enrolled on the list of Grand American Handicap shooters. Last year Mr. Dando was the last entry, wiring his post entry from Philadelphia on the morning of the shoot.

The West End Gun Club, of Davenport, Ia., announces that it will hold a merchandise shoot Feb. 18-20, and that it is sparing no effort to make it a success in every respect.

Jack Parker will manage the fourth annual amateur tournament at Peru, Ind., April 27-28.

EDWARD BANKS.

ON LONG ISLAND.

Unknown Gun Club.

Jan. 13.—The Unknown Gun Club, of Brooklyn, N. Y., held its monthly live-bird shoot at Dexter Park, L. I., this afternoon. There was a good attendance of shooters, twelve taking part in the club event at seven birds per man. E. A. Vroom, W. E. Skidmore and T. B. Potter were the three men who made straight scores. Scores were:

E. A. Vroom, 29212211-7 John Akhurst, 250212210-5

W. E. Skidmore, 261212221-7 W. A. Sands, 26222202*-5

T. B. Potter, 251111211-7 J. B. Voorhies, 291010120-4

Dr. Schwartz, 28111112-6 Dr. Moore, 252020021-4

C. C. Beveridge, 28121211*-6 Ed Hauff, 25*102022-4

Henry von Staden, 23.121*112-6 Gabriel Selig, 230000120-2

Emerald Gun Club.

Jan. 15.—The Emerald Gun Club held its regular monthly live-bird shoot this afternoon at Dexter Park. There was a good attendance, 26 shooters taking part in the club event. Remsen, O'Connell, Vroom and Hillers made straight scores, six others making 9 each. Below are the scores:

Class A, 28yds., 7 points:

J. S. Remsen.....2222222222-10 Daniel O'Connell.....2222222222-10

Class A, 28yds., 6½ points:

E. A. Vroom.....121211112-10 Wm. Sands.....2101200210-6

Dr. G. V. Hudson.....2001121022-7 Thomas Short.....2001020110-5

F. W. Place.....1021022102-7 J. H. Moore.....2220110020-6

Wm. Amend.....0220221022-7

Class A, 28yds., 6 points:

Geo. B. Hillers.....2222222222-10 B. Amend.....1101102200-6

H. P. Fessenden.....2222222222-9 John Woelfel.....2020202110-6

S. M. Van Allen.....2111211201-9 M. C. Brown.....1010010200-4

Wm. Joerger.....1010202101-6

Class B, 25yds., 6 points:

C. W. Billings.....11211201112-9 Emil Weiss.....2210121211-9

R. Regan.....2112211220-9 Chas. Stuetzle.....1220220220-7

Class B, 25yds., 5 points:

Dr. Richter.....2211122210-9 Dr. J. Ruyl.....0022201200-5

T. F. Cody.....2020222222-7 Dr. Macfarland.....2011020200-5

Geo. K. Briet.....1102200020-5 H. J. Mollenhauer.....1010102200-5

The last shoot for the yearly prizes will be held on the third Tuesday in February, the 15th, the annual distribution of prizes and election of officers taking place in March.

John Wright's Invitation Shoot.

In getting up an invitation shoot at Dexter Park for Thursday, Feb. 3, Mr. John S. Wright, manager of the Brooklyn Gun Club, has catered to the popular taste. The idea was not to get up a shoot for shooters, nor for the sake of making money for the club, nor for anybody else to get rich at the expense of the poorer shots. What Mr. Wright and his friends wanted was a good day's sport among themselves. Accordingly invitations have been mailed to those whom it is desired to have at the shoot. It may be that some have been overlooked, but a short conference with Mr. Wright at 318 Broadway, Messrs. von Lengerke & Detmold's store, will probably correct the error. The invitation reads as follows:

"The Brooklyn Gun Club takes pleasure in inviting you to participate in an all-day live-bird tournament, to be held at Dexter Park, L. I., on Thursday, Feb. 3. The entire affair being an invitation shoot, our friends can count on the exclusiveness of the company." The invitation is signed by J. S. S. Remsen, president of the club; Theo. Baron, secretary, and J. S. Wright, manager.

The schedule of events is as follows:

No. 1.—Wright's introductory. Miss-and-out. \$2 entrance. Re-entry permitted up to end of first round.

No. 2.—Welcome. Five birds. \$5 entrance, birds included. Twelve entries and under, three moneys; over twelve, four moneys. 28yds. rise for all.

No. 3.—Fair for all. Seven birds. \$5 entrance, birds extra. Handicap rise from 26 to 32yds. Moneys as in No. 2.

No. 4.—Brooklyn Club Handicap. Ten birds. Entrance \$7.50, including cost of birds. Handicaps from 26 to 32yds. 28yd. men, 1 miss as a no-bird; 27yd. men, 1 miss as a kill; 26yd. men, 1 miss as a no-bird and 1 miss as a kill. Moneys as in No. 2.

No. 5.—Union Course Handicap. Fifteen birds. \$10 entrance, birds included. Handicaps, 26 to 32yds. Twelve entries and under, three moneys; over twelve, four moneys.

No. 6.—Miss-and-out. \$2 entrance. Re-entry permitted up to close of first round.

If time permits, extra events will be arranged to suit guests. Lunch and hotel accommodations at the grounds. Shooting to commence at 9:30 A. M. sharp. Birds furnished at 25 cents each. Take Union "L" Road, East New York branch, to Cypress Hills. Jamaica avenue trolley direct to grounds.

New Utrecht Gun Club.

Jan. 22.—Seven members of the New Utrecht Gun Club took part to-day in the target shoot at Dyker Meadow. In the club shoot, Platt Adams won in Class A with 19 out of 25; Toplitz in Class B had no competitor. In the prize shoot, M. Van Brunt won with 20 out of 26. Scores in these two events were:

P. Adams, A.....11101111111111111111-19

W. H. Thompson, A.....0111101101101101111100-18

The Hamilton Tournament.

BELOW is a brief resume of the chief events shot during the three days of the Hamilton, Can., tournament, Jan. 18-20:

No. 1, introductory, 10 live birds, \$10 entrance, birds extra, \$100 guaranteed, 31 entries: E. D. Fulford, 32, C. S. Burkhardt, 30, C. Ross, 27, S. Corbett, 28, J. S. Fanning, 32, and Jack Parker, 30-10; Brady, 28, E. Smith, 29, B. A. Bartlett, 30, H. Reynolds, 31, H. D. Bates, 30, C. Scane, 29, E. N. McCarney, 28, C. Crew and H. D. McConochie—9; Fick, 29, Hibbard, 28, Decoy, 29, Daniels, 29, Bennett, 30, D. James, 28, L. Norris, 29, D. E. Dunham, 28, T. Crooks and Lyons—8; Wingate, 30, Boyd, 27, C. Wilmot, 30-7; F. D. Kelsey, 30, James Crumb and A. Price—6.

No. 2, Grand Canadian Handicap; 20 birds, \$15, birds included, \$600 guaranteed; 14 moneys to the high guns; \$125 to the high gun: the other 13 in proportion; 50 entries. Fanning, 32, L. W. Bennett, 30, Bartlett, 30, Kelsey, 30, Wayer, 31, Van Vlack, 29, and Norris, 29-20; Wilmot, 30, Burkhardt, 30, A. Peart, 29, King, 29, Fulford, 32, Brady, 28, Reynolds, 31, Forsyth, 30, Bice, 28, Parker, 30, and White, 28-19; Reardon, 31, Graham, 29, Bates, 30, Fletcher, 29, W. Stroud, 28, McCarney, 28, Daniels, 29, Wilson, 29, Brooks, 29, Dunham, 28, Gay, 30, and Scane, 29-18; Briggs, 29, Lyons, 29, I. Crooks, 29, and McConochie, 29-17; R. H. Hebbard, 28, Corbett, 29, Ross, 27, Price, 30, Crew, 30, and G. Stroud, Jr., 27-16; Fick, 29, Smith, 29, and Boyd, 28-15; Grant, 28, and F. Bennett, 28-14; Green, 30, and A. J. Bennett, 28-13; Thomas Crooks, 29, Wingate, 30, and Hooper, 30, retired.

No. 3, same as No. 1; \$100 guaranteed; handicaps same as above; 24 entries: Hibard and Gay, 10; Burkhardt, Fanning, McCarney, Corbett, Wallace, Peart, Bice, Miller, McCann, Fulford, Brady, L. W. Bennett, Bartlett, Crew, Wayer, Wilmot, Brooks and Norris, 9; Kennedy, Bates and George, 8; White, 6; Thomas Crooks, 5.

The prizes were divided as follows: J. T. Fanning, of Batavia, N. Y.; Leo Bennett, B. A. Bartlett and L. Norris, of Buffalo; C. Kelsey, of East Aurora, N. Y.; J. Wayer, of Hesper, and D. L. Van Vlack, of Toronto, all with possibles, took \$63.55 each. A. J. Gay, of Bowmansville; J. Parker, of Detroit; H. Reynolds

and C. T. Wilmot, of Port Hope; E. D. Fulford, of Utica, N. Y.; W. H. Brady, of Detroit; A. Peart, of Burlington; C. S. Burkhardt, of Buffalo, and Messrs. King, Rice and Forsyth, with scores of 19, took \$11.90 each, the remaining prize money.

Following were the scores of the miss-and-out:

Fanning 11, Parker 11, Graham 11, Fletcher 11, Reynolds 11, Fulford 11, Brooks 11, Wingate 11, Bellamy 5, Bartlett 5, Bennett 3, Gay 2, J. Crooks 2, Watson 2, Dunham 1.

Fanning, Parker, Graham, Fletcher, Reynolds, Fulford, Brooks and Wingate divided the money.

Below are the scores in the team race for the championship of Canada and five gold medals; five men to a team, 25 targets per man:

Orangeville.—Williamson 24, Scane 22, Burrell 23, Dick, 24, Brooks 23; total 116.

Mallard Club, Hamilton.—Brigger 20, Oliver 23, H. Lee 21, J. Stuart 23, G. Harrison 23; total 110.

Hamilton Club, No. 1 Team.—Wilson 23, Fletcher 22, Wingate 24, Galloway 21, Crooks 23; total 113.

Hamilton Club, No. 2 Team.—Dynes 21, Clifford 21, Langhorn 15, Graham 17, Reardon 18; total 82.

Toronto Club.—Thomas 21, Decoy 16, Green 19, Crew 22, Bellamy 16; total 94.

Handicap at White Plains, N. Y.

WHITE PLAINS, N. Y., Jan. 22.—The handicap live-bird shoot held to-day at the Sunnyside Kennels, under the management of E. F. Ward, was well attended, considering the low and threatening clouds and the small snow squalls, which undoubtedly kept many away who would otherwise have been on hand. Over twenty had agreed to enter the handicap, but twelve was the actual number of shooters. Among them were Mr. Hyland and his daughter, Miss M. E. Hyland, of Tarrytown, N. Y.; James Thompson and son, of Yonkers; Messrs. Blumbaum and Kelly, of Mt. Vernon; Ed Bartram, of New York; Messrs. Sutton and Sanborn, of Pleasantville, and the Ward brothers, of Elmsford, N. Y. A good number of the home talent turned out also to witness the shoot.

The grounds of the Sunnyside Kennels are of the best, and there is a snug little shooting booth, replete with every convenience. The proprietor, Mr. Moreman, had everything in apple-pie order—including the lunch, which he served at a very moderate price. The club is situated on a table-land. Some 200yds. northeast of the traps there is a swale, thus giving the shooter a good skyline. In fact, these grounds are hard to beat. Mr. Lou Platt acted as referee; E. G. Horton as official scorer. Miss Hyland had more than her share of ill-luck, as she hit every bird she shot at, with the exception of one, but her light load let them get away, although she frequently hit them with both barrels. James Thompson killed his birds well and in quick time, shooting like the veteran that he is. By far the most brilliant kill of the day was made by B. Ward on his 15th bird, a perfect cyclone from No. 3 trap. The birds were strictly first-class, having been taken from the loft on the morning of the shoot. There were only two duffers among them, and it would be hard to find a stronger and quicker lot of birds. The handicapping was done by Messrs. Ward and Thompson. Scores:

Boston Gun Club.

Boston, Jan. 12.—Miserable weather conditions prevailed at Wellington, Mass., and vicinity to-day; nevertheless close on a dozen shooters visited the Boston Gun Club and successfully inaugurated the new prize series, Jan. 12 to April 30, inclusive. The fog and rain greatly increased the difficulty of shooting, which was unnecessary, seeing that the majority were all out of practice anyway. Eastman, of Phillips-Andover, seemed the only one in his element during the prize match, placing a good 18 that will doubtless be included in his prize total at the end of the series. To-day was the first of fourteen shoots composing the winter series. Following out the line of previous successful programmes, a prize score is shot each afternoon, and the six best selected for prize total. The list of prizes is headed by a B. G. C. gold charm, followed by articles useful to the sportsman. The intention of selecting the six scores is to afford the most faithful attendant the better show of improving his total. A team match is similarly scheduled this series which will doubtless become fully as interesting as the individual contest, and while the scores in to-day's event were not up to standard, it was decided a novel and attractive feature.

Scores as follows:

Events: 1 2 3 4 5 6 7 8 9 10 11 12

WESTERN TRAPS.

Chicago Has No Shooter.

CHICAGO, Ill., Jan. 22.—It is a notorious fact that Chicago is about the poorest shooting town in the world, except when once in a while she wakes from her deep slumber and does some brief, heroic act, such as getting skinned by Kansas City. The humiliation of Chicago's slackness in trap matters has, however, not for some time been borne in on us so forcibly as it has lately in the case of our inability to select a champion to meet Dr. Williamson, of Milwaukee. It is only just to the latter to say that he has not been trailing his coat at all, and has not taken the position that he could beat everybody in the world. In point of fact, the challenge to the Chicago shooters did not emanate from him, but from a friend or his, and the hard-shooting doctor does not classify himself as a world beater. It is too bad that a race cannot be arranged on this pleasant amateur basis, but the fact remains that such is not apt to be the case. A number of our shooters think that George Kleinman could beat Dr. Williamson at Burnside grounds, especially if he had one or two days of practice beforehand. But no one seems to care enough about the matter to take it in hand, see to the practice and secure the backing, and all that sort of thing which goes with the getting up of this kind of a race. It is not likely that Dr. Williamson would on a hard day here score so many birds to the hundred as he would in Milwaukee, but our folks seem to think that he would score so many that no local man would have sufficient cinch. Jack Winston would like to come up from Washington, Ind., to shoot the Milwaukeean, but Jack doesn't qualify as a Chicago resident, and we have no right to enlist outside talent.

Chicago Surplus.

A personal letter from Col. C. E. Felton, late member of the committee which won general approbation by selecting the Chicago team, states that he does not favor the purchase of an amateur medal with the surplus funds left over from the intercity shoot. Col. Felton does not want to be reminded perpetually of the fact that he was a functionary at the occasion which created the surplus. He suggests that a better way to use this money would be to send back the contributions of those who aided financially, but who returned their tickets. Failing of this, he thinks it would be well to get up one grand handicap shoot for the surplus as a purse, same to be divided into a number of small prizes. All this, however, he advances as late contribution to the many ideas suggested for the distribution of this fund, and aside from its actual disposition in the form of an amateur trophy.

Indianapolis Sparrow Shoot.

The Limited Gun Club, of Indianapolis, in its tasty programme takes up further the matter of a sparrow tournament for the entertainment of gentlemen who can conveniently pass through Indianapolis on their way to the midwinter tournament held by John J. Sumpter at Hot Springs, Ark. The management announce the dates of Feb. 10 and 11. There will be plenty of sparrows and plenty of targets, the latter shot under target handicap, 100 targets, unknown angles, \$10. A percentage of the net purses will be reserved for the five high guns. The club secretary, Mr. H. T. Hearsey, requests all who can attend to kindly advise him of that fact, and the club adds the following words of invitation and explanation:

"In asking our friends to visit us so soon after our very successful live-bird tournament, we do so with a deep sense of appreciation and hearty good will to those gentlemen who, by their presence and their guns, contributed so much to the success of our first attempt; and we also feel grateful to those friends who gave us the support of their wise counsel and good wishes, although unable to attend.

"The rate to Hot Springs and return for fifteen or more is \$27.20. We hope to have several times fifteen. The special parlor car to St. Louis is 50 cents. Special sleeper St. Louis to Hot Springs, \$3. Same returning. Fifteen-day limit. Owing to the influence of Mr. John J. Sumpter and ourselves, we trust the rate will improve. We can leave here at noon and reach Hot Springs the next noon. Our car will leave Saturday or Sunday; the majority will decide after they reach here.

"Now, if those gentlemen who desire to go to the Springs, but can't spare the time to shoot with us, will just mail their drafts to the management, we will secure tickets, parlor and sleeper, for them with pleasure—just to show we have no hard feelings. * * *

"The management will accept the forfeit and post the conditions for any and all private matches for either day, or any part of either day, that may be suggested. These contentions to be decided by the scores in the regular programme. Here is where you get a run for your money. The complimentary dinners will be on tap at the old stand."

Audubon Club Election.

The Audubon Gun Club, the patriarch of the shooting organizations of Chicago, showed its up-to-date and vigorous condition in its annual meeting, Jan. 20. There is only one vacancy in its membership. The following officers were elected for the ensuing year: President, J. H. Amberg; Vice-President, C. E. Felton; Second Vice-President, L. M. Hamline; Secretary and Treasurer, W. L. Shepard; Board of Directors, Frank Place, Fred H. Lord, W. P. Mussey, F. R. Bissell and E. S. Rice.

The Audubon Club will send two teams to the State shoot at Peoria next June. Liberal appropriation was made for season prizes, and the individual handicaps will be at once arranged.

Other Elections.

Pekin Gun Club, of Illinois, at their annual meeting elected the following Directors: Herbert Becker, J. M. James, John Reuling, Edward Joerger and Lawrence Hagny.

At Savannah, Ill., last week, a gun club was organized with twenty members and the following officers: D. S. Berry, President; C. E. Miller, Vice-President; W. G. Law, Secretary; B. B. Hyler, Treasurer; Executive Committee, O. A. Manning, F. H. Jenks, R. A. Cassell. The president appointed the following committee on by-laws: B. B. Hyler, A. P. Woodruff, M. W. Dupuis.

The Mississippi Valley Gun Club, of Prairie du Chien, Wis., at its annual meeting last week elected the following officers: Hon. Judge M. B. Hendricks, of Waukon, was chosen President; Vice-President, S. Northcott; Secretary and Treasurer, C. E. Buck; Directors, F. H. Hunting, C. E. Bayliss, E. E. Wright.

The sportsmen of West Duluth, Minn., met last Saturday and organized a gun club, which as yet has no name, although shooting has been begun at the traps, which are located on the ice in the bay. The following officers were chosen: John Isaacson, President; F. R. Holmberg, Vice-President; Charles Kauppi, Treasurer; Charles Johnson, Secretary.

The Fulton Gun Club, of Fulton, Mo., was organized last week with the following officers: Noble B. McKee, President; James A. Leavell, Treasurer, and T. Ed Carter, Secretary.

At the annual meeting of O. K. Gun Club, of Kansas City, last week the old officials were continued in office. Ed Hickman and Will Herman tied for the new club trophy, 14 out of 15.

The Kansas City Gun Club, at its annual meeting last week, decided to shoot henceforth at 25 birds in each medal shoot. The following officers were elected: J. B. Porter, President; A. H. Glassner, Vice-President; Secretary-Treasurer Fogg was re-elected.

St. Louis-Kansas City.

Mr. G. M. Walden, of Kansas City, made a visit to St. Louis last week. Mr. Bert Taylor, of St. Louis, said to him that if Capt. Walden would bring his men to St. Louis, the mooted St. Louis-Kansas City team race would be shot. The latter said he could hardly bring his men to visit St. Louis for the race, but that if the St. Louis men would come to Kansas City, the race would no doubt be shot there. This latter proposition will be accepted by Mr. Taylor, and it is alleged that he will get together ten men and go up to Kansas City some time in February.

Scattering Shoots.

Painesville Gun Club, of Ohio, shot with the following results in its last weekly shoot, 25 targets: Cain 19, Wasson 18, Hodges 16, Gill 13, Taylor 12, Donaldson 9, Carnegie 8, Hardway 7, Adams 7, Hoose 7, Morgan 6, Fitzgerald 6, Gage 3, Blackmon 1, Hays 24, Savage 11, Pratt 8, Stevenson 7, McLeod 4.

Away out in Pullman, Wash., I hear of Prof. J. A. Balmer, with whom I used to hunt quail in Vincennes, Ind. It seems that there was recently a little town competition between Pullman and Moscow, Wash., and that Moscow carried off most of the honors. The shoots at live birds were miss-and-out, and I am pleased to see that in many of these events Prof. Balmer's name is in the high-gun ranks. In his team shoot Moscow won with 4 birds to the good.

They shot a few live birds last week at North LaGrange, Wis., with the following results: Ten live birds: Hughes 10, Baker and King 9, Lewis, Malcolm, Browall and Eelbeck 8. C. H. Nott was chosen President for the coming year, and E. W. Taylor Secretary.

At St. Louis last week J. S. Morrison defeated F. B. Goodrich at 100 live birds, 75 to 70.

Members of the Bevier, Mo., Gun Club held a team shoot last

week. It was small, but as interesting pro rata and per capita as though it were bigger. The following are the results of the mixed competition, live birds and targets:

Live birds:
Rivers (captain) 5, Williams 7, Chadwell 4; total 16.
Simpson (captain) 7, Rafter 6, Morgan 2; total 15.
Bluerocks:
Simpson (captain) 11, Rafter 10, Morgan 9; total 30.
Rivers (captain) 8, Williams 12, Chadwell 5; total 25.
E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Audubon Gun Club.

Jan. 19.—The Audubon Gun Club, of Chicago, held its January shoot to-day at Watson's Park. At the close of the day Amberg, Hollester and Bissell were tied for the club medals, the further shoot-off of the tie being postponed until the February shoot.

Scores:
C S Wilcox, 25 221122121022211-14-2-15
Chas Morris, 30 11210121210010-11-4-15

Hollester, 30 21222012221212-14-2-15
F R Bissell, 29 11001211221122-13-2-15

Ties on 15:
Morris, 30 1100121000
Amberg, 30 121222122211212-15-2-15
Hollester, 30 22221011221121-14-2-15
Bissell, 29 20122212022222-13-2-15

In practice the same day the following scores were made, the figures in parentheses after a shooter's name being the number of birds he shot at:
Gilbert (27) 25, Barto (35) 28, Wilcox (25) 19, Barri (25) 10, Simmonetti (16) 8, Andrews (15) 8, Rice (10) 6, Frothingham (10) 6.

Practice at Watson's Park.

Jan. 21.—Practice scores to-day: McGuire (50) 46, O'Donnell (50) 44, and Franklin (50) 42.

Jan. 22.—Practice: Claret (20) 14, Wright (20) 19, Mrs. Dr. Shaw (10) 6, Houston (15) 13, Steckel (10) 8, Wiley (10) 8, Hollester (21) 14, R. B. Carson (15), 10, O'Donnell (21) 17, Gilbert (10) 10, Dr. Shaw (10) 10, Fehrman (10) 6, Dr. Carson (15) 10, Neta (15) 8, Dr. Miller (20) 15, Hess (15) 12, Pumphrey (15) 13, Paterson (10) 9, Wm. Snow (9) 75.

Same day: Sweep at 5 birds: Goodrich, Hollester, Hess, Claret, Gilbert and Barto 5, Fehrman, Sprigg, Miller and Shaw 4, Wiley and Steckel 3, Houston 2, Rice 1.

The Garfield's Shoot on Jan. 29.

The Garfield Gun Club will hold its monthly live-bird contest at Watson's Park, Ill., Jan. 29. Visitors are invited to be present.

Owing to an erroneous statement in a Chicago sporting paper, which stated that Garfield Club's shoot would be held to-day (Jan. 22), several members of that club were present at Watson's Park to-day. The day was a most disagreeable one, on account of the driving snowstorm that prevailed during the day. Some of those who attended to-day will positively be unable to attend again next week, and it is hoped that the Garfield Gun Club will grant them the privilege of shooting an extra score at the February shoot, in view of the fact of the mistake above referred to.

A. C. PATERSON.

IN NEW JERSEY.

Some Sweeps at Yardville.

Jan. 11.—There were 13 entries to-day in a 15-bird race shot on Charlie Zwirlein's grounds at Yardville, N. J. The entry fee was \$10. The birds were a very good lot, and as a result not a single straight smore was made. F. Warner won first money alone on 14 out of 15, losing his second bird and then killing the last 13 straight. There were four ties on 13 for second money, and curiously enough, as there was no 12 or 11, four men tied for third money on 10 each. A single 9 took fourth money. Scores:

F Warner 10121212122222-14
T Harrison 22201222220222-13
J Bracelin 10102121212112-13

W Ellis 01021121212112-13
C Francis 111200121001022-10

Jan. 13.—A sweep was shot to-day on Zwirlein's grounds at Yardville, the conditions being 10 birds per man, 21yds. rise, 50yds. boundary, one barrel only. Scores:

C Britton 110101111-8
C Applegate 101010101-7
H Stewart 011110101-7
G Stewart 101110101-7

YARDVILLE.

Boiling Springs Gun Club.

Jan. 19.—The semi-monthly series of prize shoots held by the Boiling Springs Gun Club was continued to-day. These shoots are held on the first and third Wednesdays of every month. A gold watch is put up for competition every two months, the party winning it the greatest number of times out of the four shoots to become the owner of the watch. Should there be a tie on wins, such tie will be shot off. As it happens, it does not look as if there was likely to be any tie in this series, as Capt. Money has secured first place on both shoots held to date. With his allowance of seven extra targets to shoot at, he has scored 49 and 50, his highest possible being made in to-day's contest. At the first shoot, held Jan. 5, Wright and Beveridge were close up with 48 each. To-day Wright had another chance of tying Capt. Money, but he lost two out of his allowance of seven extras, and scored 49, one less than a highest possible. Among those present to-day were Elmer E. Shaner, manager of the Interstate Association. Mr. Shaner was persuaded to show his skill with the gun, and pounded out 10 straight and 9 out of 10.

Below are the scores of the prize race in detail, the handicaps being shown in the figures after each shooter's name; where no handicap is given, we have received no notice as to what was allowed that shooter. It will be noticed that Money and Wright were the only ones to shoot their allowances, no one else being able to make a highest possible:

Capt Money, 7, 111111101111111001101111111011111111111-45
Chris Wright, 7, 111111101111101011111011011011111111111-44

Somerville Gun Club.

Jan. 19.—The Somerville Gun Club held a live-bird shoot to-day on its grounds at Somerville, N. J. Three individual matches were shot, each at 25 birds per man, Hildebrand shooting in each one, and being the loser. Two sweeps were also shot, one a five-bird race with 15 entries, the other a seven-bird race, \$5, with 14 entries. Brewer and Woodruff divided first money in the five-bird race, being the only ones to scores all their birds. In the seven-bird race Woodruff, Brewer and Hovey divided first money on 6. The

birds were acknowledged by all who saw them to be as good a lot as ever left the trap. Scores:

Match.—W. Terry, of Plainfield, N. J., and L. Hildebrand, of Lebanon, N. J.; 25 birds, \$25 a side, loser to pay for birds, A. S. A. rules. Frank Timmons, of Morristown, N. J., referee:
W. Terry, Plainfield, N. J. 22222222002037222200001-17
L. Hildebrand, Lebanon, N. J. 2221202722200200000020-12

When the 22d bird had been shot Hildebrand offered to shoot Terry 25 more birds for another \$25, score to go right on, which resulted as follows:

W. Terry 0110222200202221022000222-17
L. Hildebrand 2110202101001120100000000-11
Sweeps were shot as below. No. 1 was 5 birds, \$3, three moneys; No. 2 was at seven birds, \$5, three moneys:

No. 1. No. 2.
Case 21110-4 0220002-3

G. W. SQUIER.

Jeannette Gun Club.

Jan. 21.—The Jeannette Gun Club held its regular monthly live-bird shoot to-day at Guttenburg racetrack. The attendance was decidedly good, twenty members taking part in the club race at 10 live birds per man. In Class A, Job Lott, 30, and H. Otten, 28, tied on 9 each, Lott losing his 10th bird. On the shoot-off, Lott won in the third round. This gives the Class A medal to Lott for his own personal property, he having now won it the requisite number of times to become the owner. In Class B, for 25yds. men, H. Rohlfis and F. H. Eilen tied on 7 each; on the shoot-off Rohlfis won in the fifth round. The birds were a really good lot, and were aided by the brisk west wind that swept across the race-track. Scores:

Tie.

Trap Around Pittsburg.

Greenfield Gun Club.

PITTSBURG, Pa., Jan. 14.—Old Hoss and Pills shot a team race to-day against Born and Jake Motz on the grounds of the Greenfield Gun Club. The conditions were 100 targets per man, unknown angles. Old Hoss and Pills won easily, each scoring 88 out of their 100, the team total being 176 against 156 for their opponents. Scores were:

Old Hoss 111111111111111010011011101111111111111111111-44

Hazelwood Gun Club.

Jan. 14.—John Crossland scored 48 out of the 50 live birds he shot at to-day on the grounds of the Hazelwood Gun Club. There were two 25-bird races scheduled, and Crossland, with totals of 25 and 23 respectively, carried off first honors in both events. Scores were:

First event, 25 pigeons:
Barlow 202220222221112120212022-21
Wilson 0200221112122112102220201-19
Munson 21112202222211120222110111-22
Crossland 21122222222111122221222-25
Second event, 25 pigeons:
F Barlow 021121221202210222221022-21
N Wilson 1220021220221112100121212-20

Crossland 1112122200222122212212111-23

Washington Park Gun Club, of Kansas City.

KANSAS CITY, Mo., Jan. 12.—The January shoot of the Washington Park Gun Club was held to-day, and the contest for the medal was a hot one. Dave Elliott, Theodore Fernkas and Nelson Jarrett tied for first place on 13 each out of 15. On the shoot-off Dave Elliott was the winner. Scores:

D Elliott 12122011122211-14
N Jarrett 22222212222021-14
T Fernkas 12202122211221-14
J N Nute 1111111102101-13
C Barker 1021201112111-11
A F Rickmers 22102220221101-12
Wright 01202112121202-12
The annual meeting of the club was held to-day. The following list of officers for 1898 was elected: President, Nelson Jarrett; Vice-President, W. A. Laidlaw; Secretary and Treasurer, Walter Burns. The club is in a healthy financial condition, and the following new members were admitted: W. L. Moore, T. C. Bottom, J. D. Dickinson, C. W. Barker, C. P. Fairman, S. W. Bullock, J. N. Nute, W. S. Allen, of Raymore, Mo., and Paul Francke, of St. Joseph.

The club has decided to offer as a trophy a silver cup instead of the usual medal, and has adopted the Riley handicap to govern its monthly shoots. Any member winning the trophy three times in succession will become the permanent owner of the prize.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR; 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, FEBRUARY 3, 1898.

VOL. L.—No. 6.
No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the FOREST AND STREAM. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

NUISANCES IN YELLOWSTONE PARK.

A DISTINCTLY retrograde step has been taken during the past season in the management of the Yellowstone National Park, and this has been done not by the superintendent nor any official directly connected with the Park, but by the Department of the Interior, which appears to have disregarded the reports of the superintendent and to have cared more for the pleadings of paid attorneys of private persons eager to make money out of the Park than for the convenience and comfort of the general public. The matter in question was probably never brought directly to the attention of the Secretary of the Interior, or, if it came before him, it is not to be supposed that he is sufficiently informed as to the conditions prevailing in the Park to be able to determine as to what is or is not desirable. However this may be, it is certain that action was taken in direct opposition to the recommendations of the superintendent of the Park, whose knowledge, judgment and experience may be assumed to be better than that of an official in distant Washington.

Here are the facts. Several years ago one Wylie, known in parts of Montana as "Professor" Wylie, because he is a superintendent of schools, started a cheap transportation route through the Park. His charges were much less than those of the ordinary transportation company. He did not stop at the hotels, but carried with him tents, in which his customers slept at night, cooking out of doors. This was very well, and afforded many persons who might not have felt able to make the trip with the more expensive transportation companies an opportunity to see the Park. After this had gone on for a year or two, Wylie made application for a license to establish permanent camps. This having been granted him, he erected a number of flimsy board outbuildings and later other very temporary shacks, log cabins, or huts, in which his passengers might sleep. The superintendent of the Park declined to allow this, and Wylie appealed to the Interior Department. The superintendent very justly objected that to establish such permanent camps, and above all to allow buildings to be erected by a man who had not secured a lease of ground from the Interior Department, would be altogether unjust and wrong. Moreover, it would practically be impossible to police such permanent camps properly, and the litter which would inevitably collect around them would be an eyesore and an offense to all travelers through the Park, whether riding in private conveyances, or on the wagons of the transportation company, or on horse, or bicycle, or shank's mare.

When Wylie made his appeal to the department he promptly secured the services of an attorney in Washington—Mr. Lamar, of Washington, nephew of the late Secretary Lamar—to represent him before the department. Mr. Lamar is from Mississippi, as is also Mr. Sims, the clerk in the Interior Department who had charge of National Park matters. Smarter still, Wylie came on to New York and hired a lawyer here—James A. Blanchard, a politician—to go to Washington and to argue his case before the department. On the *ex parte* statements of these attorneys the written objections of the superintendent were overruled, and Wylie received permission to establish along the roads in the National Park a series of permanent edifices, which can be compared to nothing so well as to the buildings of the old-fashioned shanty town that once existed on the rocks in New York city in the neighborhood of the Central Park. Such small settlements, surrounded by all the debris of camps ancient and modern, would be

nothing less than a disgrace to the National Park. It is difficult to understand how any official having due regard for the proper care of this wonderland, and the slightest consideration for the convenience of that portion of the public who visit it, could consent to such defacement of the Park.

It may safely be stated that if Col. Young's opinion should be sought in this matter by the Secretary of the Interior, he would be found bitterly opposed to the nuisances which Wylie intends to establish, and of which the Department of the Interior approves.

This winter a number of new transportation-hotel companies, encouraged by Wylie's success, have applied for privileges such as have been granted to him. If these are to be given them; if they are to be allowed permanent occupancy of a piece of ground, whether for camps, shanties or hotels, they should at least be obliged to take out leases and pay for the privileges of holding this ground to the exclusion of other visitors to the Park.

It will be remembered that Secretary John W. Noble took away transportation rights from the hotel company on the ground that a single corporation should not carry on both kinds of business. Now, Wylie is given protection and authority to do both without the payment of rental and without incurring any expense for permanent structures.

The whole matter is one which should be further looked into by the Interior Department. We trust that before the opening of another season in the National Park such permission as has been given to Wylie will be revoked, and that he will be obliged to get along as other people do—either to sleep in tents or to lease ground and erect buildings which will not be offensive either to the eye or the nose of the traveling public.

SNAP SHOTS.

The National Fishery Congress at Tampa, Fla., adjourned on Tuesday of last week, having resolved itself into an International Fishery Association, embracing the whole earth, with officers as follows: President, Dr. Alexander Agassiz, United States; First Vice-President, Mons. Perrier, France; Second Vice-President, A. Nelson Cheney, New York; Secretary and Treasurer, Dr. Hugh N. Smith, Washington, D. C.; Executive Committee (a few countries have not yet had delegates named for them), W. S. Fish, Commissioner ex-officio; A. A. Adey, Assistant Secretary of State; W. E. Meehan, Pennsylvania; Clarence B. Mitchell, Massachusetts; L. T. Carlton, Maine; Dr. W. R. Capehart, North Carolina; F. C. Zacharie, Louisiana; Dr. Theo. Gill, Washington, D. C.; Eugene Blackford, New York; Prof. Jacob Rigard, Michigan; Prof. S. A. Forbes, Illinois; Prof. D. S. Jordan, California; M. J. Kinny, Oregon; Gov. W. D. Bloxham, Florida; Chow Tsz Chi, China; Capt. E. B. del Arbol, Spain; Adolf Neilson, Newfoundland; R. B. Marston, England; Sir Spencer Walpole, England; S. Jaffe, Germany; Raveret Wattell, France; Alex. Heinz, Finland; B. Oopzoon, Holland; K. Ito, Japan; Anton Dohrn, Italy; Karl Zogt, Switzerland; M. Saville Kent, Australia.

The congress was a most happily successful affair in such respects as it was possible for it to be. The convention gave a welcome opportunity for the fish commissioners of arboreal climes to visit the charming West Coast country of Florida, to pluck the midwinter rose, sail on sunny waters, and listen to the mocking-bird singing o'er the lea. Needless to say that the excursion was a delightful one, and that the delegates enjoyed themselves to the full, even after it had dawned upon them that the congress was likely to be in effect more of a boom for Tampa Bay hotel interests than for fishculture and fish protection. Probably most of the visitors would be quite willing to go again; but now that the national congress has been expanded into an international association we beg leave to suggest to First Vice-President Perrier, of France, that the next meeting should be held in Paris.

The actual product of the conference was a series of valuable papers on fishculture and allied interests. One of these, by Mr. Cheney, on the Hudson River salmon, we printed last week. Next week we shall give Mr. Livingston Stone's reminiscences of the early days of fishculture in America, and other papers will follow.

In our fishing columns is printed a note from the Martinsburg, W. Va., Democrat, reporting a recent night fracas between George M. Bowers and his brother John, in which Brother John came off second best, Brother George inflicting upon him a wound "extending from ear to ear." Mr. Bowers is, the Democrat adds, "the same gentleman" who is a candidate for United States Fish Commissioner. We have been at some pains to verify the truth of the item, which sheds new light on the character of the candidate. Mr. Bowers may not know a red herring from a catfish, but his performance in a night brawl demonstrates that he has executive ability of a high order; and the subordinates in a fish commission with the Martinsburg disciplinarian at the head of it might safely be counted upon to toe the mark lest their own heads should be cut from ear to ear.

The fisticuffs incident is illuminative to the public, which has had scant information of Mr. Bowers, except that he was an ignorant and unfitted candidate for an important Government position. But Senator Elkins cannot be wanting in full and ample knowledge of the man's character. He must know Bowers from A to Z; and what a disgraceful thing it is that he should attempt, through the good offices of President McKinley, to foist such a man upon the country. It is inconceivable that the Senate should consent to such a degradation of the Commission.

At a meeting of the executive committee of the Pennsylvania Fish Protective Association the other day, a memorial was adopted of which the text reads as follows:

To the President of the United States:

The public press has recently announced a contemplated change in the office of the United States Commissioner of Fish and Fisheries. The Pennsylvania Fish Protective Association, fully recognizing the usefulness and high state of efficiency to which the work of this department of the Government has been brought, would respectfully ask that in making any appointment due regard should be had to a compliance with the provisions of the statute providing for the proper qualification of such Commissioner. We are, very respectfully,

E. HAGERT, President.
M. G. SELLERS, Secretary.

Copies were forwarded to the President and to Congress, and the memorial has been given large circulation in the press. The example set by the Philadelphia society should be followed by every other association in the country especially interested in this matter. Those Senators who may be depended upon to oppose the nomination of Mr. Bowers should know that there is a widely prevailing sentiment throughout the country indorsing their stand.

The House of Representatives last week considered the new game bill for the District of Columbia, the most important feature of which is a clause forbidding the sale of game in close season, whether the game was killed within the District or elsewhere. The bill passed the House and has gone to the Senate.

The debate on the measure was interesting and illuminative chiefly because it showed that those who spoke in opposition knew little or nothing of the principles involved. At this stage of the world's history it is ridiculous for Congressmen to talk in the vein of Mr. Ray, of New York, or Mr. Fleming, of Georgia. These gentlemen not only betrayed gross ignorance of the legislation of their own States, but of the well-recognized principles of game protection, principles embodied in the existing laws of every State whose Legislature has not been controlled by game dealers' lobbies, and enunciated by numerous decisions of lower courts and by the Supreme Court of the United States. We congratulate the District of Columbia Fish and Game Protective Association upon the progress of the measure. If the Senate shall give its indorsement, the National Capital will be relieved of the odium which now attaches to it as a market for game unlawfully shipped from the several States. We referred last week to Senator Teller's bill to restrict the interstate transportation of game in violation of State prohibitions. The adoption of this new law for the District would be directly in line with the purpose sought to be attained by Mr. Teller.

The Sportsman Tourist.

Just About a Boy.—IV.

THE sun had painted the western sky in crimson and gold, against which the gnarled cottonwoods and oaks appeared in silhouette, and the elms wove a delicate tracery of drooping limbs. The frosted leaves had nearly all fallen to the ground, leaving only the more hardy or sheltered ones still on the trees to wait the chill touch that would wither and send them fluttering down in zigzag flight as the morning sun rose.

The waiting silence of a fall evening had settled over the land while we were eating our lunch, and as the light faded the boy glanced comprehensively up and around as he said: "Well, I reckon we better hustle if we want to get that honey. I'll juss hide the guns, 'cause we won't need 'em to-night. Hain't no painters nor bears nor things in these woods, so all we need is the axe 'n' pails 'n' lantern 'n' ropes. I'll get things in shape while you fix the basket, nen we'll go."

When he had "fixed things" we shouldered the axe and other plunder and struck out through the woods for the bee tree. Reaching the river, the boy sat down and began unlacing his shoes, remarking, "Got to cross the river here."

I did not fancy a plunge in the icy current of the stream so late in the season, and made some few remarks about a boat and coming up during the next few days.

"Pshaw!" said the boy, "'tain't more'n knee deep all the way over. They's a sandbar here 'at runs kind o' anglin' down stream an' it won't take yeh more'n to yer knees anywhere. I been across here lots o' times an' I know. Your feet 'll get a little cold, but you'll feel better after yeh get out 'n yeh did 'fore yeh went in. C'm on, less git over."

I had seen his intimate knowledge of things natural and local so well displayed before that I too began to strip for the wade, trusting to his guidance, and in a few minutes we were in the stream.

The water was awfully cold for the first few steps, and then our feet became so benumbed that we finished without any inconvenience, and felt as warm as toast a few minutes after we had put our clothing on again.

It was quite dark, and the stars were twinkling like fireflies among the branches when the boy halted, dropped the axe and pails and remarked, "Here she is."

A great elm tree rose into the darkness and its spreading branches ran 40 or 50 ft. from the trunk.

"Now, I'll tell yeh," said the boy, "you stay here an' I'll climb up an' cut off the limb—that big one there," he said, pointing upward.

"We got to chop the end off first, nen put the rope on her 'n' cut it again closer to the tree. Yeh see the bees are pretty well out in a holler place 'n th' limb 'n' hain't in the holler trunk 'tall. I found that out when I was up here before."

While he was talking he had taken a long rope from one of the pails and thrown it up over the limb. Throwing off his coat and shoes, he climbed the double strand like a monkey and swung himself up over the limb. Then I fastened the axe on the line and he hauled it up.

Standing on the fork with one foot and the main trunk of the limb with the other, he began chopping the end off.

"They're wakin' up," he said, laughingly, as the angered bees began to buzz in the hollow under his feet. "It won't hurt 'em 'n' they'll only git mad for nuthin', 'cause they don't sting at night; they juss crawl out an' fall off. Reckon I better keep 'em in, tho', tull I git the limb off," he continued, stooping down and stuffing his handkerchief into the small hole where the bees entered the limb.

Soon the limb fell with a tearing crash down among the bushes on the ground. Then the boy drew the rope up a d fastened it to the stump of the limb, throwing the end over another above him and letting it hang down to the ground.

"Now you take holt of the rope and git a half hitch around something, so'st you can hold her when I cut her off. We don't want to let her fall 'n' mash the honey all up, so keep her stiddy till I c'n help yeh lower her when I git her cut off."

I did as directed, and the blows soon sounded again, echoes in the gloom of the night woods, as the boy swung the axe with a will.

"She's a-goin'; hol' on now!" he said, as an ominous cracking was heard, and then a few more cuts left the limb dangling at the end of the rope.

The boy dropped his axe and scrambled down the tree trunk, and together we lowered the big section of wood to the ground.

"Bring the lantern 'n' pails now," said the boy, as he got his axe, and then listened with his ear against the limb to locate the length of the hollow by the noise of the bees inside. "Guess this'll about git 'em," he said, and began cutting a chip out.

Soon he made an opening in the log, and disclosed great combs of beautiful wild honey, over which the swarm of angry bees were writhing in a dark mass. As soon as the hole was open they began to crawl out, and the boy, by the aid of a splinter, flipped them out of the hollow by the handful.

"Look out now 'n' don't git excited," he said. "They won't sting at night 'nless yeh hurt 'em, 'n' if one crawls on yeh juss flip him off, so'st he won't have a chance. Yeh see—gee! I got it that time!" he said, as he pinched a place on one finger, squeezing it up from underneath until it was white and a tiny globe of amber stood out on the skin.

"'Tain't nothin' though, 'n' won't even swell up 'f yeh squeeze th' poison out juss as quick as yeh git stung, that way. Gee! it always makes a col' chill run up 'n' down my back, anyway, ever' time I git it."

"Hol' still, there's one crawlin' up towards yer neck. There, now yer all right. Yeh see, if yeh move right quick, er slap at 'em er hurt 'em er anything, they'll sock a stinger into yeh even at night, but if you 'member 'n' juss go easy yer all right. Guess I got most of 'em out now, so I'll git a bigger hole so'st we can git that comb out whole."

"Gee! that's nice-lookin', ain't it? Lots of it too! This tree is all right."

The axe rang again, and the hole in the limb grew larger, while the myriads of bees buzzed angrily among the leaves on the ground, helpless in the darkness.

"Guess that's all right now," said the boy, as he took the lantern and peered into the opening. "Gimme the pails."

I handed him the pails and he carefully lifted the great new combs out one by one and deposited them on end in the pails. He had four large ones full of the finest light-colored honey when he had finished, and then called for the fifth.

"They's a lot of old honey here, too," he said, "an' we'll take the clearest of it. 'Tain't as good flavor as the new, but it's good honey all the same. The rest of it I'm goin' to leave till to-morrow night, nen I'll come up 'n' get it 'n' the bees too, 'cause this is a dandy swarm, 'n' they'll stay here till they find a new hive, 'n' lug ever' bit o' this honey to it."

"I'll leave plenty, so they can't take it all away to-morrow, nen to-morrow night I'll come up with the boat 'n' some sacks 'n' a saw, 'n' I'll juss fasten 'em in again while they're asleep, nen I'll saw off the limb, both ends, 'n' take her home 'n' fix 'em up 'n' one o' my hives."

Here was more wisdom of the wild woods that was new to me, though I saw the simple reasoning in it and told the boy that I was glad the swarm would be cared for and not left to die of cold and lack of food after we had taken the fruits of their summer's labor.

In another hour we had forded the river again, and were on our way back to the buggy with our plunder, the boy having made two trips across the river in the darkness to land everything safely. "'Cause I know the bar better 'n' you do, nen I don't mind the cold water, anyhow," he explained.

The horse gave a little whinny as we reached the buggy, and he was soon spinning toward home, where we had to get the folks out of bed at 11 o'clock to sleepily view those beautiful combs and comment on the fruits of our trip.

Two or three days later the boy burst in on me with the information that he had "Got that swarm of bees over at the house, 'n' it's a dandy too."

EL COMANCHO.

Notes from Seminole Land.

THE Seminoles have not forgotten the wars with the whites, and any reference to Osceola or Old Billy Bowlegs is received with contempt. They are genteel in their manners and honorable in their dealings with the white traders, and they are shrewd in driving bargains.

Alligator hunting in the summer and otter hunting in the winter are engaged in by the men when they are not working their fields. An alligator hunt is generally made in parties, which supply themselves with plenty of ammunition and food for a trip to the cypress swamps, where the gator makes his home. The Seminoles use Marlin or Winchester rifles, and when hunting at night they use a bull's-eye lantern, with which they shine the gator's eyes. They are skillful with rifle and 6-shooter, and always shoot the gators in the eyes or at the base of the head, so that the skin will not show any holes.

When a gator's eyes show above the water they make a good target, but if the shot is not fatal a circus begins. The Indians are past masters in the use of the paddle and pole, and their cypress canoes are handled with ease, so by the time the gator gets over his surprise they are out of his way and ready for another shot. When the gators take to their holes or hiding places the Indians pull them out with a long pole, which has a steel hook or harpoon attached to it. When the gator is dead the Indians pull the head and front legs over the stem of the canoe and pole to a landing, where the canoe is tied, and then they proceed to skin the gator. They use a heavy knife which curves at the point, and a few minutes are all they need to have the skin salted and ready for the market. The average lengths of hides from the Everglades run from 4 to 8 ft., but occasionally a skin of 11 ft. is brought in; but these are very rare.

The Seminoles are not like the white hunters, for they do not kill off all the game, but always try to have some for the future. They do not kill any kind of game during the mating or breeding season, and when hunting for the market they do not try to make a record by slaughtering game, but kill only enough for their use or to sell to the traders to buy the few necessary groceries and other articles which they have learned to use. A conservative estimate of the hides shipped from the Everglades would be about 4,000 per year.

The otters are getting scarce, as the white hunters are getting many along the edge of the glades. The Indians trap the otter with a double-spring Sargent trap, and very often they shoot them. The otters, like the beaver, are getting scarcer each year, and soon will be rare.

In the early spring the manatee, or sea cow, come into the rivers to feed, and the Seminole who is fond of sport where a good feast is in sight grinds his harpoon and grains, and goes to the inlet and waits for the flood tide to come in; and when the manatee rises to the surface to blow the harpoon is thrown, and the hunters rarely miss landing the game.

Of late years the manatee have been protected by the laws of the State, and at times large numbers can be seen spouting at the inlet, and very frequently they come up the rivers for miles, where the manatee grass grows on the bottom. The manatee are not dangerous, and will get into the deep water as soon as they can when the hunter tries to approach them.

Of the other game which can be found in the Everglades, among which are panthers, bears and wildcats, there is none which is so hard to find as the panther. A few have been killed by Northern hunters who have been fortunate enough to secure the services of an experienced guide. A huge black bear was killed by Tom Tiger on Cypress Creek last fall, and the hide is at the trading store on New River. A great many bear stories have been told and written, but they cannot be compared to Tom Tiger's story of this bear. It cannot be written to do it justice, but when Tom is in good humor it is a

great entertainment to hear him recite the adventure. Hunting in the Everglades is very dangerous, on account of snakes, of which the rattler and moccasin are most common. The Seminoles do not have any fear of snakes, but hunt barefooted and barelegged, and no fatal cases have been heard of among them.

The hummock islands in the Everglades form a natural refuge for the deer and turkeys, and they are not hunted by the white hunters to any great extent; there are many of them, which is a credit to the unwritten law of the Seminole. The quail are plentiful, but the pot-hunter has scattered them so that they are following the Indians back to the hummock islands in the glades, and the hunter who can stand the walking and wading from island to island is the only hunter who comes in at night with the game.

J. W. S.
FORT LAUDERDALE, Fla., January, 1898.

Reminiscences of an Old Sportsman.—IX.

EARLY in the 50s I took a trip West, and brought up in Davenport, Ia., about Dec. 1. I wanted to see the great West and get some shooting at the different varieties of game to be found there. At this time our New England shooting was of the best, but I had enjoyed this for some years, and longed for something different. Obtaining employment in the extensive lumber works of Burrell, Gillett & Co., with the privilege of an occasional day off for shooting, I settled down to learn something of the ways of the people, and to gather what information I could about the game of the country and the best places to visit when I should be ready to go. Tom, the big sawyer, heard me say shoot, and he took to me at once, and as he was the first person that I had met who appeared to have any ideas upon the subject, I took to him, and within the first half hour of our acquaintance we had made an agreement to go deer hunting, the first snow that was suitable. It was not many days before we had a snow that Tom said was just right, and we made preparations to start the next morning.

Tom owned a rifle and was a very good shot, and he persuaded me to leave my shotgun and take a rifle instead. Now, I had never fired a rifle in my life, and knew nothing about it, but not wishing to appear to be behind the times, I said nothing to Tom, but hired a rifle at the gun store, and the next morning we took the stage for Hickory Grove, nearly twenty miles north. I took along my pointer, old Flora, for somehow I hate to go shooting without a dog. There were no other passengers, so we had the whole coach to ourselves. About three miles out of the city a small boy stopped us and bade the driver go up to a house that stood some twenty rods from the road and take in a lady passenger. The driver did not like the looks of the lane that led up to the house, and I heard him say, under his breath, that he would be tetotally something (I could not hear what) if he took the coach up that crooked path; and while he was thinking what to say, I let down the window and told the boy that this was the United States mail, and that it would be violating the law to drive off the regular post road. This settled it, and the boy started for the house, and soon after the lady made her appearance; but she did not like walking through the 5 or 6 in. of snow, and when she reached us her temper was not in its normal condition, if we could judge by the spiteful tone in which she accosted the driver and gave him her destination, which we were very sorry to find would give us the pleasure of her company for nearly the whole of our journey. The driver dismounted and opened the door, and she was about to get in, when she spied old Flora, and starting back, declared that she would not ride with a dog, and demanded that it be put out of the coach. The driver was mad by this time, and he told her that she had better go back to the house and wait until some day when he had no dog aboard, as he did not propose to turn out a passenger that had paid fare. But the lady said that she must go, and with much sniffing and turning up of her nose she finally got in, and seating herself in the corner furthest from the dog, drew her skirts close around her and never said a word nor moved a muscle, so far as we could see, for nearly an hour. Then she unbent so far as to request me to tell the driver to stop at the first house, as her feet were freezing. Upon my stating the case to the driver, he said that there was no house within three miles. This appeared to disturb her very much, as, with a deep-drawn sigh, she declared that her feet would surely be frozen before we could get there. I saw that she was really in distress, and told her that if she would allow the dog to lie in front of her and would use her as a footstool, her feet would soon be warm. But she said that she was afraid of dogs, and very much disliked to have one come near her. I finally prevailed upon her to consent, and calling Flora over I bade her lie down; and with fear and trembling the freezing feet were soon resting upon her, and in a few minutes the lady gratefully acknowledged that they were rapidly getting warm. When we arrived at her stopping place, she gave me her hand and very gracefully apologized for her behavior at the commencement of her journey. Then, turning to Flora, she coaxed her up, and putting her arms around her she kissed her and told her that she would never again have anything but the kindest thoughts and words for any of her race; then, turning to me, she added: "And above all, I will never again object to one riding with me in a coach."

Arriving at our destination some three hours behind time, on account of the bad traveling, a few minutes' walk brought us to the home of Tom's friend, Mr. Allen, who greeted us cordially, and ordering dinner for us, proposed that we go out and try our rifles while it was getting ready. So we went a short distance from the house, and while Mr. Allen nailed a G. D. cap box cover to a tree, Tom and I loaded up. I was a little dubious about loading, as I had never even seen the operation performed; but by closely watching Tom I flattered myself that I passed through the ordeal quite creditably.

After fixing the target, Mr. Allen stepped off twenty good, long paces, and made a mark in the snow. All was ready, and Tom toed the mark and blazed away, putting his bullet into the lower edge of the target. Mr. Allen then took a shot and made his mark about midway

between Tom's bullet hole and the center. It was now my turn, and with a confident air, but with inward doubts. I took my position and did my best to comprehend the use of the sight; but it was of no use, so I just guessed at it and pulled trigger. We never found the mark of the ball, for I did not even hit the tree. I was disgusted, and laid the blame to the rifle, but Tom said that the piece was one of the best, and wanted to try it; so he loaded up and came within a hair's breadth of driving the nail. Then he wanted me to try his, which I did, and as I pulled trigger I saw the target drop to the ground; and when we picked it up, there was the hole as squarely in the center as it could be. "There," said I, "that rifle hangs to suit me; I can shoot that one." Whereupon Tom offered to exchange, which I was perfectly willing to do, as one was as good as the other to me. A call from the house that dinner was ready put an end to our practice, much to my relief.

In the evening Mr. Allen's son came home, and two or three of the neighbors came in, and my famous shot was talked up, and the cap-box cover with the bullet holes in it was passed from hand to hand, while I received no little praise for my excellent shot. Tom was pleased; he had quite a liking for me, and I overheard him whisper to one of the visitors that I was one of the best shots in New York. Of course, I could not go back on Tom, and I did nothing to dispel the illusion. Meantime, under pretense of cleaning the rifle, I had furtively examined the sights, and thought I had learned their use and could perhaps line them up to some purpose when I came to try it again. At least I could not fail to hit so large a mark as a deer.

The next morning we started out, with Mr. Allen's son as guide. We had gone but a short distance, when I saw a quail sitting on top of a small pile of brush some ten rods squarely to the left of our course. There was a rise of the ground back of the bird, and I thought it a good opportunity to put to the test my ideas of rifle shooting, as I could find where the bullet struck in the snow, and be able to form an estimate as to where I ought to hold; so I proposed taking a shot at the quail, but they laughed at the idea of shooting so far at so

small a mark. I took careful aim and let go, when the bird jumped off the bush to the ground. Claiming that I had hit it, I went over to see where the bullet had struck, and found that I had shot about 3 ft. too low, and right into a bunch of quail that were huddled under the brush heap, and had killed one and taken the wing of another off close to the body. Pushing the dead bird under the snow, I picked up the wounded one, and as I joined my companions I showed it to them and carelessly remarked: "I thought I held pretty close to that fellow."

To say that they were surprised does not more than half express it. They examined the bird, and it was with no small share of amusement that I noted the reverential air with which they regarded me, as they expressed their wonder and admiration of the very successful shot. As I have before mentioned, in those days I actually thought that the reputation of being a good shot was the next best thing to the reality, so I took in their words of praise and really enjoyed it, and felt quite elated to see my stock booming so high.

We had gone about two miles from the house, when we struck a trail where five deer had recently passed. Allen said that the tracks were fresh, and pointing to a scattered growth of low-growing oak shrubs with the leaves still on, that were on some uneven ground a quarter of a mile to the left, he said that they had gone in there to lie up for the day. He then proposed that while he kept the trail Tom should move some 30 yds. to the right and a little in advance, while I should in the same order keep to the left; and in this manner we proceeded, and had passed some little distance into the shrubby growth, when upon coming to a little knoll that was covered with a dense growth, Allen found that the deer had separated, three going to the right of the knoll, while two branched off in my direction. Silently waving his hand for me to follow the two, he and Tom took the other trail.

Now, I had not experienced any feelings of any nature worth mentioning, having only a hazy and indistinct consciousness that we were hunting deer, with but little prospect, so far as I could see, of even getting sight of the game; but when I found myself all alone with the

two distinct tracks staring me in the face, and remembered the caution and stealthy manner with which my companions faded from sight, there came to me a feeling that I cannot well describe. I distinctly remember the creepy sensation along my spine and that every hair on my head possessed an individuality of its own. I also remember cocking my weapon and gripping it with my best grip, as I pointed it to the front, and in a stealthy manner that put to shame the efforts of my companions, stole along the trail, keeping both eyes wide open. In fact, there is a faint impression that they were bulging out rather more than was consistent with personal beauty. But this did not count just then, as I had waked up at last to the reality of my situation, and realized the possibilities that might come to me.

Following the trail, getting more awake at every step, and crouching still lower, I had gone but a few rods, and was keyed up to the utmost tension of the strings, when out from the snow, not 6 ft. in front of me, something bigger than the whole world beside flashed into sight and was gone. When the apparition first materialized, I was so scared that involuntarily my grip upon the rifle tightened, and as my finger was on the trigger, of course the gun went off. I do not think that I had an attack of "buck ague," as I have read and heard much of this disease; but no published or oral description of the symptoms that accompany the malady fits my case at all. So I think that it must have been something else. Mechanically loading my rifle, I was just putting on the percussion cap, when I heard my companions just in front of me.

By this time I had somewhat recovered, and when I heard Tom shout and excitedly say, "I told you he'd get him," I was in my normal condition, and started toward them. Just then Tom's rifle cracked, and as I stepped into the little opening, there lay the apparition, with Allen just putting his knife into its throat. It was a goodly buck of two years, so Allen said; and as they shook hands with me and patted me on the shoulder, I could not help thinking that so far as I knew this was the first case of the kind that had ever happened, for this deer had actually shot himself; I had no part nor

lot in the matter. It is true that I had the gun in my hands, but I never fired it, and I will stick to it to my dying day that the buck alone was to blame. But I said never a word of my thoughts, and to all appearance I was as cool and collected as though this had been my hundredth deer instead of my first. Upon examination we found that my bullet had entered close behind the ribs and passed out through the opposite shoulder, and that he had taken but a few jumps before he fell. As my companions came up he raised his head, when Tom put a bullet through it, for fear that he might not be mortally hurt. Fastening a bush to the neck of the buck, Allen took charge of the other end, while Tom and I each grasped a horn, and we drew him to the house.

In the evening there were quite a number who came in to see the game and talk over the hunt, and I received quite an ovation, as both my companions had sounded my praise. I tried to appear modest and free from pride, and believe that I succeeded fairly well; but when the crack shot of that section, who was jealous of his reputation, offered to shoot against me at a 3in. target at twenty steps, best two in three, for half a dollar, I abandoned the modest role, and straightening myself up, I took a \$20 gold piece from my pocket, and looking him squarely in the eye, told him that twenty steps was for boys, but if he really wanted a match, that I would shoot him one at the size of the gold piece, at twenty rods, for \$20 a shot; the one nearest the center to take the stakes. This settled his hash, and I came off with flying colors. Two years later, after my return East, I received a letter from a friend who had been up to Hickory Grove shooting, and he said that several times he heard me quoted as the very best shot that had ever been in those parts.

About two weeks after our deer hunt Tom and I took an early start one morning and drove to the banks of the Wapsipinicon River, some four or five miles from its mouth, in pursuit of turkeys. Tom was an old turkey hunter, and had often had lots of sport in this locality. Leaving our team at the only cabin in the vicinity, we started for the timber on the bank of the river and worked our way up stream, looking for fresh sign. We found old tracks in abundance, but nothing that suited Tom until we had traveled nearly two miles, when we found the footprints of a gang of eight or ten that Tom said had not been made an hour; so we turned short to the left and followed them to the edge of the timber, where I saw my first wild turkey; in fact, several of them, but was greatly disappointed to see them all in the air more than twenty rods distant, flying toward some heavy timber that was some quarter of a mile to the right of where we were standing. Tom, however, said that it was all right, and that we would have some fun with them.

Following on their course, we entered the woods and continued on for fifty rods or more, when we found a place that Tom said could not be better. There was quite a large open space, and just beyond us was a narrow strip of hazel that jutted out from the timber some 50ft., and nearly at the end of it was the fallen trunk of a tree 3ft. in diameter that lay in and parallel with the thicket of hazel. Carefully working our way through the thicket at the root of the fallen tree, we took position in front of it, Tom some 20ft. beyond the station he assigned me just at the root, where the growth of hazel in front of me was not nearly so dense, allowing me a very good view of the open ground in front as well as the edge of the timber. Tom had whispered instructions to me before we entered the thicket, and I knew just what to do and what to expect, so I carefully pulled off from the tree a piece of bark and sat down on it with my back to the tree, taking care that my head should not show above it. Tom found a projecting limb that suited his purpose, and sitting astride it with his rifle across his knees he appeared to be taking it easy.

We sat thus about ten minutes, when Tom, putting his turkey call to his mouth, gave two or three faint yelps. Then we had another waiting spell, an hour it seemed to me, but Tom said fifteen minutes, when we heard a single anxious call from the edge of the timber in front of us, not more than ten rods away. Straining my eyes in that direction, I soon saw the stately form of a large gobbler as he slowly passed an open space, coming nearly toward me. Never was I more sorely tempted to shoot, but remembering Tom's instruction that the rifle was to have the first shot somehow by gripping my gun and holding on I managed to keep it from coming to my shoulder. Glancing at Tom, I plainly saw that he was at concert pitch, and every second I expected to hear from him, but he afterward explained that there were too many twigs in the way to risk a shot.

Sitting thus all keyed up for a few seconds, I heard a slight noise to my right, and without moving I turned my eyes in that direction and saw not 15ft. away the head and long neck of a gobbler. Tom's instructions and everything else were all forgotten, and in less than the tenth part of a second the top of that gobbler's head was blown to atoms, and as I heard the swish of wings behind me I whirled and caught sight of another one in the air and gave him the other barrel, and with feelings impossible to describe I saw him pitch heavily to the ground. Just then I heard the crack of Tom's rifle, and glancing in the direction of the big gobbler I saw him 20ft. in the air, evidently mortally hurt, as he was turning and twisting and beating the air with his wings; but I had no time to attend to him, so I tore around the root of the tree and struggled through the dense thicket and found my prize. Picking him up, I carried him to the tree and laid him on it, and then went to gather the first one. When I stooped to pick him up I was never more surprised in my life than I was then, for there close beside him lay another one with his head also riddled with shot. I was about as full as I could hold, and when this was sprung on me I boiled over and gave a yell that Tom said I ought to feel proud of, for he did not think that it could be beaten.

Just as I had laid the three beauties side by side on the log and stood admiring them, Tom came back with the big one over his shoulder, but no sooner did he spy my layout than he dropped his bird and tried his best to beat my yell. Then we joined hands and danced. Tom said I sang, but this I stoutly deny, as I can't sing, so of course he was mistaken. But we had a good time,

even if I did try to sing, and so long as life shall last the memory of my first turkey hunt will remain a perpetual joy.

Natural History.

Elliot's Game Birds.

Most sportsmen will recall with pleasure the volume entitled "North American Shore Birds," by Daniel Giraud Elliot, which was reviewed in these columns about two years since. At that time, or soon after, it was intimated that a companion volume would appear before very long, and we now have from the pen of the same author a work on the "Gallinaceous Game Birds of North America," a book, as the title page tells us, "written for those who love to seek these birds afield with dogs and guns, as well as those who may only desire to learn the ways of such attractive creatures in their haunts."

Mr. Elliot is the author of very many works on birds and mammals, some of them sternly scientific, and others, like the present, popular in their form. He has been the President of the American Ornithologists' Union, and is to-day one of the foremost of our ornithologists. To the readers of FOREST AND STREAM, the group of birds which he has chosen for this volume is perhaps the most attractive that could have been selected. In his preface the author says of them: "As articles of food they are of inestimable value, and the birds enter largely into the various accounts of trade. But besides the commercial aspect, which is important enough, the species present other attractions that appeal most strongly to those for whom this book is especially written, the sportsman, viz., the pleasure they yield in the chase and the incentive they provide for action and effort when in the leafy aisles of the whispering forest, or in the thicket, and along the banks of the leafy streams, or on the open, sky-encircled prairie, man in his quest for these game-like creatures, aided by his faithful dog, finds renewed health and strength to wrestle with the toils and troubles of his daily life."

Mr. Elliot's Shore Birds was well received, and he has done a service to sportsmen in constructing the second volume on precisely the same lines. Few sportsmen realize how large is the number of species and subspecies of gallinaceous birds to be found in North America, and not a few will be surprised to learn that in the present volume forty-six different forms of quail, grouse and turkey are described and figured. Of these thirteen are partridges and ten are ptarmigans—some of these latter differing so slightly from their closest relations as scarcely to be distinguishable, except by the trained eye of the ornithologist.

We have said that the present volume is constructed on lines precisely similar to those of the volume on shore birds. In considering any species, first is given the common name of the bird, then follows an account of the habit, dispersion and nesting, a brief life history, and after this follows the Latin name, the geographical distribution and the description of male, female and young.

Each species described is illustrated by a full-page figure, from the pencil of Mr. Edwin Sheppard, an artist long known for his excellent portrayal of birds and bird life.

Quite apart from the high interest and value of this work as an ornithological volume is its especial worth to the sportsman. It is provided with a key to the families, genera and species of the group included in the work, and also with a full color chart, showing precisely what is meant by the various colors which are named in the text. With the aid of this key, and of the color chart, there is no reason why any sportsman should fail to identify any species of gallinaceous game bird which he may find in North America. Besides this, Mr. Elliot has for very many years been a sportsman, and has himself seen and shot most of the species described in the regions which they inhabit. He is therefore able to speak of the pursuit of these species from actual experience, and he does so very entertainingly. We could wish that he had done so at greater length, since the present volume contains only about 220 pages.

As an example of these life histories we quote what the author has to say about Mexican turkey, the progenitor of the domestic fowl. He says:

"From this bird came the domesticated race of turkeys. It is a common species on the table lands of Mexico, and within our borders is found in southern and western Texas, New Mexico and Arizona, at an altitude of from 3,000 to 10,000ft. above the sea. It is a bird of the highlands and mountainous regions, and is rather larger and heavier than the wild turkey of the Atlantic States. The light rump, with the broad white borders to the feathers, makes it conspicuously different from all its allies, and is one of the characteristic marks of the domestic bird. I found this species very abundant upon the highlands in southern New Mexico, near the borders of Arizona, and met with them in flocks of considerable size. They had all the habits of the Eastern bird, and were wary and difficult to approach. It was late in the autumn, and the piñon nuts were abundant, and the birds kept closely to the groves of the trees which were covered with these nuts, and apparently fed exclusively upon them. Their flesh was so highly scented by this food that when the turkeys were over the fire they perfumed the camp with a most appetizing odor, and I know no better dish than a roasted Mexican turkey that has been fed on piñon nuts. About three miles from one of our camps was a place where the turkeys were in the habit of roosting, and we visited the spot several times. On the first occasion I left camp about half an hour before sundown, and came near the roosting place just at dark. The turkeys had selected a grove of lofty pines, the first branches of which were too high for any missile to reach and do execution upon so large a bird, save a bullet from a rifle. As my companion and myself quietly sat upon the ground a quarter of a mile away, waiting for the daylight to leave the sky, we heard the turkeys flying into the trees, and gobbling at intervals

as they settled themselves for the night. Soon darkness spread her veil around us and all sounds from the roost ceased, and we commenced cautiously to draw near our objective point.

"Soon we could distinguish the trees in which we knew the birds were, but the branches were so far from the ground that at first nothing could be seen that resembled a turkey. Gradually we drew near until we stood beneath the overspreading limbs and close to the trunk of the tree each had selected. No movement or sound from above indicated that we had been observed by the watchful birds, and now to our eyes, grown more accustomed to the obscurity, some clumps and bunches appeared upon the branches toward the sky. It was almost impossible to tell what these were, whether turkeys squatting on the limbs or masses of moss or foliage. But the only way to find out was to shoot at them, which we did. At the crack of the rifles came numerous pits and a stray gobbler as the aroused birds moved upon their perches and questioned this unusual uproar. Their movements disclosed their forms without mistake, and soon there was added to the noise of the firearms the calls of the now thoroughly startled birds, the crash of the falling turkeys, striking the limbs as they descended, and then the heavy "thump," as the body reached the ground. For a short time confusion reigned. Unharmful birds began to leave the trees, and the whir and beat of their wings sounded above the various cries they uttered, and occasionally one wounded, but not entirely incapacitated from escaping, would drop to the ground, and the rapid "pats" of its swiftly moving feet could be heard upon the dead leaves as it ran quickly from the scene. The roost, however, was very extensive, and continued a long way up the cañon, and the birds not in the immediate vicinity did not desert their posts. Picking up the dead birds, a few of which were quite a heavy enough load for two men, we were glad when we could transfer them from our own backs to those of our horses, which were waiting for us about a half mile away. This turkey is very strong upon the wing, rises without difficulty, and continues its flight for long distances. It alights either upon the ground or in the trees, but, if the former, runs with great speed until a place of concealment is gained. While not uncommon in the districts named within our limits, this species is much more numerous in Mexico, where it goes as far South as Vera Cruz. The hen attends solely to the hatching of the eggs and rearing of the young, hiding them away from the male, who cannot be trusted either with them or a knowledge of their location. The nest is a depression in the ground, lined with grass, weeds and leaves, and carefully concealed among the bushes or grass. The eggs are creamy white, finely and thickly dotted with reddish brown. The food of this bird consists of acorns and various nuts that are found in those southern latitudes, especially those of the piñon tree, also insects of all kinds, and grain when it happens to be grown in the vicinity of their habitat.

"This turkey was carried to some of the West Indies Islands early in the sixteenth century, and then to Europe, especially England and France, and in 1573 had become quite numerous, and was freely used as an article of food. In the days of the Emperors of Mexico Montezuma possessed extensive zoological gardens, and many of these birds were given to the wild beasts for food. Certainly they had no fault to find with the fare served to them. The Mexican turkey, as I have said, is possibly a somewhat larger bird and exhibits a good many of the metallic tints of its Eastern relative, yet it can hardly be regarded as equally beautiful, as the white on the rump detracts from the general brilliancy of its appearance. Still it is a magnificent game bird, and is worthy to be compared with its rivals of the eastern and northern portions of the United States."

Much speculation has been indulged in as to the origin of the turkey named, and one of the explanations given, if not true, has at least a most plausible sound, if all the facts are as stated. It is this:

When this bird was first brought to Spain it was called Indian peacock, or Indian hen, and this name remains in the French words *pauon pavon*, *poule d'inde* and *dinde*. At that time it is said that in Spain the business of dealing in poultry was almost universally in the hands of the Jews, and as they did all the buying and selling of this fowl they naturally came to call it by the Hebrew name for peacock, which is *tukki*. Gradually this name came to be generally adopted, and from its similarity in sound to the name of the land of the Turks the bird came to be called turkey, and the belief grew up that the species had come from that country.

Elliot's Game Birds is likely to prove even more interesting to sportsmen than its predecessor, successful as that was, and we are told that the first edition of the last-named work was exhausted shortly after publication. Besides the usual style of these books, issued at \$2.50, the publishers have printed limited editions of 100 copies each of Shore Birds and Game Birds, numbered and signed by the author, on fine hand-made paper, with illustrations on a special paper, and printed with great care, at \$10 a volume. The less costly edition is handsomely bound in linen, with a fine illustration in colors of the wild turkey as a cover stamp.

Birch Bark Camps.

I NOTICE in your editorial in issue of Jan. 22 an account of building birch bark camps. When a boy I saw dozens at a time of these camps set up, and also when the Indians went away they sometimes left them at my father's for safe-keeping, so that I had a chance to examine them closely. These camps were for summer use, and the Indians carried them in their canoes when they went to "salt water," as they always called going to the bay to shoot seal and porpoise.

They had eight or ten small spruce poles not over 10ft. in length and 1½in. in diameter at the butt. These they set up in a conical form, so as to have a diameter of 10 or 12ft. The bark was cut in rolls, as you describe, for the very good reason that it could never be unrolled without breaking, unless first having been soaked several days. It was in sections some 4ft. long and 2ft. wide, with thin cedar splits on both sides of each end, sewed

into spruce roots, as you describe. These were for the lower tier, and were placed round end to end, so as to form a circle, only leaving room for a doorway. The next tier was shorter and overlapped the lower a little. The third was shorter still, and then a cap completed the whole. This cap was some 2 ft. in diameter at the lower end and a foot at the upper, like the lower part of a cone. This was slipped over the top of the poles, and the hole in the upper end served as an exit for the smoke. The bark used was the thick bark such as is used for canoe building.

The camp was set up when the bark was green, and thus each piece fitted in its place and when dry retained its proper curve. When taken down the pieces rested inside of each other and occupied but little space in the canoes. When set up a deerskin or blanket served for a door. I do not remember certainly how the bark was fastened to the poles, but think it was tied with strings, which were permanently attached to the sticks at the end of each sheet of bark.

M. HARDY.

BREWSTER, Me.

A Captive Eagle.

COUNCIL'S STATION, N. C.—I have a large live gray eagle. I suppose it is either the male or female of the bald eagle, as we caught a bald and a gray one at the same place before we got this one. These birds kill and carry away lambs, kids, pigs, and sometimes kill young calves. They are rarely seen here now, where they were once comparatively plentiful. What are they worth?

We have plenty of deer and wild turkeys now, the result of a five-year close season by common agreement between land owners. We opened up three years ago, and killed about 180 deer up to date. Our territory is about ten miles square and kept posted. Went out turkey hunting with a party of five on Jan. 22. I killed one, Henry Farrier one, Tom Jones one, Louis Maultsby three, T. H. Gillispie two; total, eight.

J. P. COUNCIL, JR.

[There is no market for live bald eagles. One has to find some one who wants such a pet.]

Strutting Woodcock.

IN confirmation of Shadow's story, I can tell a somewhat similar experience. One day when hunting along the banks of the Little Otter Creek and occasionally flushing a woodcock and trying to shoot at him before he had dropped into the impenetrable jungle of hackmatack, or cropper brush, as it is more commonly called here, one of these birds walked out into an open space a few yards before me and went through exactly such a performance as Shadow describes, spreading his tail, drawing in his head, dropping his wings, and in that attitude whirring and strutting as proudly as any turkey cock. I was hunting without a dog, finding birds by chance and then taking snap shots, with a result of frequent misses. If Shadow will only miss now and then it will make us, who did and do so often, feel a little more reconciled to our failures.

A friend who was shooting in a swamp near Little Otter saw a woodcock that he had wounded strut as above described.

I am glad enough to hear again the episodes and pleases of our beloved Old Hickory, and hope for many more.

Game Bag and Gun.

Adirondack Guides' Association.

SARANAC LAKE, N. Y., Jan. 27.—*Editor Forest and Stream:* The fifth annual meeting of the Adirondack Guides' Association was held in the village of Saranac Lake, in the town building, on Wednesday evening, Jan. 26, 1898. The large hall was well filled with guides representing Saranac Lake, Paul Smith's, Saranac Inn, Fulton Chain, Blue Mountain Lake, Oswegatchie, Childwold, Tupper Lake, Indian Lake, Lake Placid, Newcomb and other Adirondack sporting resorts. There were many associate members present, some of whom were I. Ludlum, of Red Bank, N. J.; F. G. Paddock, Malone, District Attorney of Franklin county; John Harding, of Algonquin; Dr. Carter McV. Toby, Boston; Chas. H. Kendall, J. C. Little, Esq., A. I. Vosburgh, and many others of Saranac Lake and elsewhere. A goodly number of women also were noticeable in the audience.

The hall was appropriately decorated, and upon the platform were seated the officers of the Association, several representative guides, some of the prominent associate members and the speakers of the evening.

The meeting was called to order by Warren J. Slater, president of the Association. A brief address of welcome was made by Dr. Russell, who then proceeded to read the following letter from Hon. Verplanck Colvin, of Albany, who is the honorary president. This letter was listened to attentively, and the reading was followed by hearty applause:

State of New York, Office of State Land Survey, Albany, Jan. 25.—Warren J. Slater, Esq., President Adirondack Guides' Association, Saranac Lake, N. Y.—Dear sir: I have received the polite invitation to be present at the annual meeting, to be held at Saranac Lake, Jan. 26, and regret that my official duties will prevent my absence from Albany at this time. I must beg leave therefore to tender to the guides my kind regards and earnest wishes for their welfare in their field of duty in the great forest preserve of New York.

Your Association is in some respects one of the most remarkable organizations in this country. You and your associates alone, among the similar organizations in America, have chosen as honorary trustees those who are prominent as your employers, proposing to consult with them in regard to your mutual interests in the Adirondack forests.

"In this way, as it were, you have brought about as far as you are personally concerned the preliminary steps toward that combination of capital and labor which has been the dream of some political economists and

the hope of patriots who desire the preservation of free institutions by free men; but you have only made the preliminary steps toward that combination of the two essential forces which can be made so potent for the good and happiness of mankind. That you have made the attempt, however, to march shoulder to shoulder—as far as opportunity offers—with those who are relatively as strong in fortune and high education as you are in woodcraft and physical ability, shows that your minds have been aroused and your intelligence quickened to the advantages which may be derived from such a combination among men. But you ought not to consider merely your own advantage, for such a combination involves reciprocity on your part, as you have responsibilities and cares which I know you feel to be not merely satisfied by physical labor, but involving more or less moral duties.

"You men of the mountains and lakes, almost alone among those who depend upon skilled labor for existence, are associated more intimately with your employers, their families and their friends than any other similar body of men with which I am acquainted. Some of you have not only carried the knapsack of Agassiz and conversed with him relative to the secrets of geology and zoölogy, but have also listened to the poetry of Lowell, of Holmes, of Street, and can recall the voices of those authors, and have harkened to the words of wisdom of world-famous orators, the learned presidents of universities, great clergymen, lawyers, physicians, discoursing at your camp-fires, or seated with you day by day in your boats, or with you following the forest trails, or climbing mountains; you have joked and laughed, fished and hunted, with men whose millions are the marvel of the world; you have shot at targets and at deer and bears side by side with generals who have commanded great armies; you have cooked for them, eaten with them and camped with them, and more than all through many long years you have had the care and custody of their loved ones, their wives, their children and their property, and have been esteemed as their friends. Rarely indeed has any one classed among you as a true guide been found wanting in these great trusts, and you have learned to appreciate the manhood and intelligence of the people with whom you have thus become so closely identified. Your opportunities for intelligent and personal advancement have been great; of those among you who have appreciated these great opportunities many have become wealthy, some have reached affluent circumstances, and all have been more or less benefited by contact with the cultivated people whom it has been your pleasure to know. Thousands of your fellow citizens would have given much to have had the opportunities which have been granted to you, but in saying these words it is my purpose to call your attention to the great advantages which you ought yet to attain from these relationships, and the return which is in your power to make, and to the satisfaction, if not glory, which you can obtain by the development of these kindly relations between the employer and the employed, leading you into a higher and happier life, and those who help you, to the satisfaction and pleasure of feeling that they have been useful and helpful to you.

"A guide traveling with learned and intelligent men, such as those whom I have mentioned, can acquire from them day by day, without effort, great stores of rare and useful knowledge if so disposed. From the naturalist you can learn the history of the rocks, of plants; and in return you can add from your own observations facts which will increase the world's store of knowledge.

"From the business man, even while you fish and hunt with him, you can learn the lessons of thrift and economy and industry which will be important to yourself and the welfare of your family. From the clergyman you can learn the duties of life and the manner in which prophets and sages, saints and martyrs have met the trials and temptations of this world and found the path to a better one. You as guides should know the rocks, trees, the winds and waters scientifically as far as opportunity offers, for you can tell to the young, to the children of your employers, these great truths which you acquire, being in your turn instructors and men esteemed, as you are esteemed, as having more than ordinary intelligence for those in such employment. I have myself learned many things from the guides of what they have observed during their long lives in the forest. It is pleasant to hear from your tongues by the blazing camp-fires stories of what you have seen in remote sections of the forest, the kinds of trees and plants which are to be found on this mountain side, or in that valley; the region where the black sable or the brown sable is found; of the white deer; of the panthers that cry aloud; of panthers that are voiceless; of the great timber wolves that once rendered the forest dangerous, and of the smaller kinds of wolves; of the habits of the fox and the fisher, the beaver, the otter, the mink and ermine, and of the rare birds and their habits—every fact that is in itself absolutely true—is of great value in this world, and it is in your power to add much to the world's knowledge.

"There are many who find in the slaughter of deer and other game, beyond the necessities of camp, a fierce pleasure, which you, as dwellers in the forest, drawing upon them for your store of food, ought to restrain. The slaughter of animals merely for the sake of killing is something upon which you should frown and prevent. The glory and beauty of the forest is its free wild life, which should only be taken when the welfare of humanity is involved, as when food is needed for the camp, for health, for vitality or for purposes of scientific investigation. Slaughter merely for bloodshed is cruelty and should be discountenanced. The majority of people who come to the mountains find more pleasure in the sight of the wild creatures moving before them uninjured and unharmed than in the sight of broken bones, blood, and the glaring eyes of animals unnecessarily killed. People seek in the woods rest, health, recreation, the beautiful pictures of forest landscapes, views of lakes and rivers, grand mountains and rich autumnal foliage. These, with the pure atmosphere, restore life to worried men and women, and lay a foundation for the young of healthful years. To make

the days which your employer passes in camp cheerful and comfortable, with a gain of forest knowledge, with memories of beautiful forest scenery, is more to him and to you than the destruction of the deer of the Adirondacks, upon which your livelihood depends. As to yourselves the cultivation of these kindly relationships between employer and employed, the extension of a helping hand and kindly word to those among you who are less fortunate than yourselves, the extension of financial help to those who are poor or in ill health, the recognition of the branch associations in a broad, generous spirit, whether they be at Saranac Lake or St. Regis, at Keene Valley or the Fulton Chain, on the Sacandaga or the Oswegatchie, is a matter which deserves your earnest and serious attention.

"I am sorry that I cannot be with you at your meeting, but at this season of the year my presence is necessary at the Capitol, so that I can only express my regrets that I cannot shake each of my old guides by the hand and wish him bon voyage on his future journeys. To me in fancy I can almost see your bronzed faces, and cannot but think of you as soldiers of the forest; veterans of the woods and waters; and I hope that you may stand together faithful soldiers of humanity, who though so often isolated from mankind, will ever strive to be both gentle and brave; as thoughtful, true, kind, and considerate to others as you have always been to me.

Very sincerely yours,

"VERPLANCK COLVIN."

The minutes of the third annual meeting were read and accepted, and the reports of the secretary and treasurer were listened to and approved. The next thing on the programme proved that the genius of these men sometimes runs into very different channels than that of guiding, for a male quartette rendered the following song, which was composed by Mr. George Garwood, a Saranac Lake guide. This song was followed by two others later in the evening.

A Song of Welcome.

We welcome all, both great and small,
And friends from all about.
We're glad you're here; you bring good cheer;
We greet you with a shout.
From Racquette far, and Paul Smith's near,
Childwold and Tupper Lake;
For once a year we gather here,
To have a good hand-shake.

Chorus:

Welcome to all, welcome to all,
A cordial welcome to all.
And now if you'll wait
While a few facts we state,
You'll be welcome to supper and all.

There's Long Lake and Blue Mountain, too,
Included in the list;
With Fulton Chain and Newcomb boys—
We welcome with the best.
Os-we-gatch-ie, Lake Placid, too,
And boys from Upper Lake,
And friends of all the guides in town,
Come help us celebrate.

In '91 we had a meet,
With Colvin in the chair,
To organize and self secure,
And boom these forests fair.
There's men of wealth and men of fame
Who've joined us in our plans,
To help make laws, protect the game,
Preserve State forests, lands.

Chorus:

But we ought to have hounding again
Through the month of October, I'm sure;
So let's try with our might
To get what is right,
For we ought to have hounding again.

An address by the Rev. Clarence Milner, pastor of the Methodist Episcopal Church in this village, was then made. Mr. Miller spoke in a particularly pleasing manner, and told several funny reminiscences of his early life, which kept the crowd in a happy humor. He spoke of the beauty of the mountains and lakes, of the pure air, and said to the men that their mission of guiding tourists and sportsmen through this country of gorgeous scenery, and to places where dwell the graceful deer and handsome trout, giving them pleasure and recreation, in taking the sick and careworn where they may obtain rest and health, is a noble and honorable one, and he wished them every success in their calling.

District Attorney Paddock, of Malone, followed Mr. Miller. He said in a large body like this Association, with its branches reaching out over such a vast territory, it would be strange indeed if some conflicting issues did not arise now and then to mar the serenity of their proceedings, but he wished them to discuss all matters in which there was a difference of opinion calmly, giving due respect to each other's views, so that in the end they could make wise decisions and thus avoid impairing their usefulness. He advised the younger members to strive to become more proficient in the art of entertaining their employers; to be equal to any emergency, so that their sportsmen could place implicit confidence in their ability to arrange and carry out the details of a trip, etc. Mr. Paddock told of some interesting experiences of his in the woods of Canada, and of the remarkable ingenuity of the guides in that country. He also touched upon the law. He spoke of some of the amendments to the game laws that have been presented to the Legislature this year, and in regard to the anti-hounding law he advised the Association that it was unwise to attempt to change any law until it had been on the statute books a sufficient length of time to allow one to judge intelligently of its virtue.

Mr. John Harding, postmaster at Saranac Lake, and proprietor of the Algonquin Hotel, was called upon for remarks and he gladly responded. He explained the value of the recent Adirondack exhibit at the Sportsmen's Exposition at Madison Square Garden, New York, to this section and to the guides; of the number and extent of the press notices which had been given the guides through this exhibit. Mr. Harding read

an extract on the subject taken from the New York Mail and Express, and said that the amount of advertising they had thus received could not have been purchased for \$1,000 if at all.

The president called on several gentlemen present for remarks, and among those who responded was Mr. I. Ludlam, of Red Bank, N. J., who has been coming to the Adirondacks for years, and who knows the country probably as well as any guide. Mr. Ludlam urged the members to live up to their by-laws and the game laws; to perfect themselves in a knowledge of the country, and to strive to please their employers.

The secretary's report contained some interesting facts and practical suggestions, and was as follows:

Mr. President, Gentlemen of the Association:

"Since my report of one year ago, the Adirondack Guides' Association has made rapid strides in the line of advancement. It has become known not only among the protective forest and game associations of the State, but of the United States. The guides and sportsmen of Maine, Pennsylvania, Illinois, and even of the far West, have noticed us, and nearly all of the leading sporting magazines of the country have given us favorable comment. The little money that has been expended for advertising has brought about good returns. It has made the name of our organization familiar to the sporting fraternity throughout the land, and it has made it understood that to be a member of the Adirondack Guides' Association is in itself a credential and a guarantee of competency and trustworthiness. All the localities have been equally advertised, and the names and addresses of all the members have been published frequently in New York and Chicago sporting publications, as well as in the local town and county papers.

"I have received a complaint from some of the branch associations to the effect that they do not feel that they ought to put their annual dues of \$1 into the general treasury, but place it in a local treasury for their own private use and benefit. I can state with authority that each locality receives more than double the amount of advertising, stationery and other benefits that it could possibly obtain did it not belong to the general association, and that in the smaller branches the sum of \$1 for each member does not pay the actual expenses which the Association assumes for them. I believe each branch should have a special local treasury, just as has the Saranac Lake branch, but it would be folly to accept anything less than \$1 per year from each member to help defray the general expenses of the Association. I will add for the benefit of the members of the different localities that none of the money from the treasury of the Association is used by or for the benefit of the Saranac Lake branch, only as it is expended in the interest of all the members generally throughout the Adirondacks, and that each member, no matter where he may reside, has an equal right and privilege with every other member in all that the Association owns or does.

"We have an active membership of 248, a gain of thirty-two from last year, and the associate list has more than doubled, having increased from fifty-two to 107. The largest gains in the active membership have been made at Paul Smith's, Long Lake, Blue Mountain Lake, Fulton Chain, Oswegatchie, with eleven members, is a new branch which entered the Association last season. None of the localities have fallen behind materially, although out of twenty members at Childwold last year only fifteen have asked for the 1897 card.

"I regret to state that one of our members at Long Lake, Mr. Cyrus Palmer, has passed from earth since our last meeting. A request from his friends has come to the Association that it assume the burial expenses, and this matter should receive the attention of the board of directors at this time.

"The financial condition of the Association is even better than last year, although the expenses have been greater. In the first place, stationery, constitutions and by-laws, application blanks, rules and instructions for local committees, and all other matters of like nature had to be purchased this season, while enough was left over to carry us through the previous year. In addition, the board of directors ordered drafts drawn to pay for advertising the Association and the country, and although the expense account was thus largely increased, I believe the money was wisely expended. These items include \$50 to Dr. Tobey for advertising in New England, \$31.95 to Mr. Paddock for preparing and filing in Malone and Albany the papers of incorporation, \$15 for local advertising, and \$80 for space in Madison Square Garden for exhibit during the recent Sportsmen's Exposition held there. All of this of course increased the amount of postage necessary to be used. Notwithstanding these extra items of expense, however, the funds of the Association are greater than they were at the last annual meeting.

"I attended the Exposition in New York in the interest of the general organization, and will state that the Adirondack exhibit was a grand success and attracted much attention. Five hundred folders containing the name and address of each member belonging to the Association were distributed among tourists and sportsmen from all over the United States. I believe that it will be of inestimable value to the Association and to the country, and that it will be the cause of a greater number of sportsmen than usual coming to the mountains next season. I might also incidentally add that neither the Association nor any member will be asked or expected to pay any part of the expenses of my trip.

"I can assure you the work of the Adirondack Guides' Association is being felt throughout the country, and that this organization has already become an instrument for good in the Adirondack wilderness. Respectfully submitted,

E. E. SUMNER, Sec'y."

The meeting was then adjourned to the parlors below, where a sumptuous banquet was served, in which about 150 persons participated. After supper the guides returned to the hall, the meeting again called to order, and the officers elected for the ensuing year. Warren J. Slater was re-elected president, and O. A. Coville treasurer; F. M. Sheldon was chosen secretary; Verplanck Colvin, of Albany, was unanimously chosen honorary president. A vote was taken to hold the sixth annual meeting at Saranac Lake, on Jan. 26, 1899, and the convention adjourned.

SEAFER ASBURY MILLER.

In the Rockies.

A four weeks' hunt in the Rocky Mountains as narrated by Dr. David McReynolds and written by Alfred B. Wingfield.

MEMPHIS, Tenn.—The other day our hearts were gladdened by the arrival from Boise City, Idaho, of Dr. David McReynolds, accompanied by his good wife. Dr. McReynolds is now a resident of Boise City, Idaho; but four years ago he lived with the writer in Chattanooga, Tenn. Both of us were on a two months' hunt in Jackson's Hole, Wyo., in 1893, and an account of this trip has been published in FOREST AND STREAM. You can imagine how delighted our household was when Mr. and Mrs. McReynolds arrived in Memphis to make us quite an extended visit, before going on a visit to their old home in East Tennessee. There was the recounting of many familiar scenes under the somber shadows of the grand old Teton Mountains, the exchange of experiences since we parted on Snake River, in Jackson's Hole, in the Teton Basin, the thousands of questions, and the examination of the many beautiful photographs which the Doctor has secured in his rambles through the West. But I will leave all these pleasant reminiscences and follow the thread of the story the Doctor is now telling me of his last hunt. In fact, he came right off this hunt and started East, as he got back to Boise City about Nov. 10.

It was on the morning of Oct. 10 that Dr. David McReynolds and Hugh Fulton, of Boise City; Sam Calloway, of Pine Grove, Idaho; William Wilson, of Mouse Creek, Tenn.; John Isbell, of Mouse Creek, and Scott Pierce, of Riceville, Tenn., accompanied by the comical John Ling Chang, a Chinese cook, started on a hunt. The object of the hunt was winter meat for the Idaho men and sport for the Tennesseans. The objective point was the headwaters of Smoky Creek and South Boise River about 150 miles northeast of Boise City.

The first day was without incident, except for the constant importunities of John Ling Chang to "shoot heap jacky labbit." Chang thought the crowd was hunting "jacky labbit," and could see no sense in constant traveling when the whole face of the earth was covered with his favorite meat. Forty-two miles were covered that day, and aside from a few chickens shot just before dark, and a fine string of trout from Cañon Creek,

ON THE TRAIL.

Photo by Dr. David McReynolds.

upon which camp was pitched, no sport was indulged in. John Ling Chang was an excellent cook, and would have served the party well if the boys had not tormented the life out of him. The coyotes annoyed him very much, howling at night, and it was evident at this early stage of the game that Chang was no woodsman.

The second night the party reached Pine Grove, which is a mining camp on the South Boise River. The third day they traveled up the South Boise River until noon, then turned across to Skeleton Creek, a tributary of South Boise; camped on this stream that night, killed many grouse and caught plenty of trout. The rest is told as related by my friend: The fourth day we turned our course northeast to the headwaters of Smoky Creek; traveled a half day up the creek, then turned west over the divide to our hunting ground. We are now in the Saw Tooth Mountains, a short range belonging to the Bitter Root Range of the Rocky Mountains. These mountains are very rugged. One-third of the distance from the top they are granite bluffs, almost inaccessible to man, and the habitation only of goats and sheep. The day is growing old, and we are following up a large creek, looking for a suitable camping place. All at once the outfit halts. Chang sets up an unearthly noise, as with dilated eyes he points to the breaking brush and yells at top of his voice: "Lookee! lookee! bullee! cowee! mulee!" Chang did not know what the animal was; but it soon dawned upon the old hunters that a big bull elk was crashing through the thicket in his frantic efforts to escape. Immediately rifles are snatched from their saddle scabbards, bridles thrown over the horses' heads, men are on the ground. So, as the lordly elk plunges up the hill on the other side of the creek and comes into plain view in passing through an "ash park," he is greeted by a volley, then another, and another. The .50-110s bellow, the .45-90s roar, and the spiteful little .30 barks malignantly. All at once the great beast staggers, then rolls in his gait a few steps further, and comes to earth with a thud, never to rise again.

Up to this stage of the affair no one had paid any attention to Chang; but now the game was down, and the excitement in some measure allayed, all eyes were turned upon him. There he sat on his cayuse, brandishing an ante bellum horse pistol and yelling at the top of his voice: "Me killee! me killee!" Calloway went up to him and jerked the pistol out of his hand, and removing the cylinder, placed it in his pocket, then returned the frame to Chang with the remark that when he got back to Boise he would give him the cylinder. Chang had fired four shots out of the pistol, and two loads were still in the cylinder, as the old caps had failed to explode.

It was a wonder the half crazy celestial had not shot some one in the back. All of Chang's remonstrances and pleadings for his "lebolber" were of no avail, and

finally Calloway threatened to cut his cue off. The threat seemed to paralyze him, and he was as docile as a lamb the balance of the day. Camp was soon put up near the elk, and some attended to erecting tents, gathering wood and unpacking and hobbling the cayuses, while others skinned the elk and dressed the meat. Upon examination it was found that the elk had been struck five times—two .50-110s, two .45-90s, one 30cal. bullet, in more or less vulnerable parts of the body. No wonder he went down in a hurry. It was agreed that, with one exception, every man had hit him, so he was called everybody's elk, and they cast lots for his magnificent head.

That night the cats and beasts of prey feasted off the offal, as the numerous snarls and snaps around the carcass attested. Calloway lay out by the carcass nearly all night, and toward morning we were awakened by the boom of his rifle. In a few moments he came in, dragging a large gray wolf. Chang was now beside himself with fear, as he had lain awake all night, listening to the small animals fight over the remains. He plead still harder for "lebolber"; but Calloway was inexorable. Calloway would laugh at Chang and tell him to pray to his Joss to take care of him. Chang would moan and say he had left his Joss in Boise.

Next morning we packed up early and moved up the creek about three miles until we came to where another creek joined it. Here we made a permanent camp in a beautiful fir forest on the neck of land embraced by the two bold mountain streams. We fixed ourselves up comfortably, and for two days did not get one-quarter of a mile from camp. The horses needed rest and feed, and the men were not averse to like treatment. We soon found that both streams abounded in speckled, or, as they are called in that country, salmon trout. Their meat is of a golden color, and they have scarcely any bones. The fish are as gamy as any I ever caught, and were in fine condition.

Dr. McReynolds on his second day in camp fished three hours and secured 39lbs., or about 13lbs. per hour; or, say, 100lbs. per day. That is what I call excellent fishing with fly rod. It was enough fish for two or three days' use, so the Doctor threw back all under 8 or 10in., for Chang would have thrown them away. The photograph taken of the string of packhorses with their packs on was taken in the foothills some ten miles back on the trail. This is the home of the blue grouse, and our boys bagged about twenty brace while the outfit was resting and having their picture taken.

On the third day in our present camp we decided to leave all the horses at camp, and to hunt on foot, to see if any bulls could be shot near camp. The six men divided in pairs and started in different directions at break of day. When bulls are running and whistling, about sunrise is the best time to locate one, as he is sure to bellow until some cows join company with him, or a rival bull hears him and comes to drive him off. About noon all excepting Wilson and Calloway returned empty-handed. Dr. McReynolds and Hugh Fulton reported having tracked a band of elk some distance, but finally lost the trail in one of those terrible pieces of down timber, where the ground was hard and the travel exceedingly difficult. In about an hour Calloway came striding into camp with his long, moose-like gait. He sat down and began to eat, as lunch was being served by the faithful Ling Chang. He evaded all questions until he had finished his repast, then acknowledged that he had a big bull down about one mile from camp. Calloway is very reticent, and we did not receive an authentic account of the kill until we repaired to the spot with the camera, to take the old fellow's picture. Then Wilson told us how it was. Calloway was the guide of the party, and the trade made with him was that he was to have all the meat taken home, excepting what the others wanted for immediate use. In addition to this, Calloway received a small compensation, and of course the supplies were furnished by the others. This accounts for his hunting so hard. William Wilson, of Tennessee, the next best hunter in the party, now gave us the story.

Calloway and he hunted along, carefully looking for sign, and making as little noise as possible. About 8:30 A. M. they came to a piece of fallen timber which lay across their line of travel. They plunged into it, and after proceeding about a quarter of a mile came to a marshy place all grown up with willows, and matted with the fallen trees. They could not penetrate this thicket, but were glad to note numerous and recently made tracks of both elk and deer. They sat down on a log to rest and listen, and in a few moments heard a bull elk whistle on the other side of the thicket, apparently not over 400 or 500yds. from them. Calloway got up, and directing Wilson to go to the right, he turned to the left, so that the man who started the game would be apt to drive it to the other. They both had to go around the edge of the marsh, and neither knew how far it extended. Wilson says it seemed to him that the marsh was as big as the Dismal Swamp, in which he has hunted in years gone by. He could hear the elk, every now and then, give his harmonious notes, sounding exactly like a bugle at long distance. Wilson almost ran over a bull that had a very good head, but paid no attention to it. The bull dived into the thicket and was gone. He was now nearing the end of his journey, and could hear the elk very distinctly. What a disappointment it was to him when he heard Calloway's old .50-110 roar once. Then followed a moment of silence, while the echoes played hide-and-seek in the cañons below. Then—boom!—again the echo reverberated and bounded from bluff to bluff, and finally died in the distant pines. Wilson's heart sank, for he knew the deed was done. When he reached the point he found Calloway sitting on a log, smoking, and the great elk stretched out dead.

Calloway said he shot him at about 150yds., while he was in the act of whistling, with his neck extended and mouth open. He said it was a grand sight; but he was afraid to wait on Wilson, as he doubted if he could kill the beast after it started to run, at that distance. Thus the second bull was killed. I will tell you more about this hunt in next issue.

[TO BE CONTINUED.]

H. W. MERRILL, of New Smyrna, Fla., caught a few days ago with hook and line a bass weighing 32lbs.

Game Protection in Congress.

THE new game law measure (H. R. 2,524), amending the present law of the District of Columbia, was discussed in the House on Monday of last week. The most important change is one forbidding possession or sale of game in the close season. A clause forbidding the possession of any unlawful "trap, snare, net or illuminating device" for the purpose of taking game was in debate cut out. We give the discussion of the clause relative to sale and possession of game in close season, as reported in the Congressional Record:

Mr. Ray, of New York.—As I listened to the bill it seemed to read as providing a penalty against killing or having in possession certain game or birds "within the District of Columbia," or having in possession such birds and game when killed, and yet it may not be an offense to kill such birds or game in the States of Virginia or Maryland adjoining. Why should you place a penalty in bringing them into the District of Columbia? Is that not rather a rigorous provision of law? Suppose there is no law in Virginia against the killing or having in possession this class of game; yet a man bringing them into the District would be guilty of an offense against this law and be subject to the provisions of the law.

Mr. Curtis, of Iowa.—I would suggest to the gentleman from New York, as I have already suggested to the gentleman from Illinois, that the only purpose is to make this provision of law as efficient as possible, and any amendment will be considered which will tend to promote the object for which the bill was drawn. We have no objection to any reasonable amendment.

Mr. Ray, of New York.—I wished to ascertain from the gentleman if the bill is as broad as I have suggested.

Mr. Fleming, of Georgia.—It is absolutely worse than the gentleman has suggested.

Mr. Curtis, of Iowa.—With the permission of my colleague, I would state that this law conforms practically to the law of the State of Maryland. The State has a county law as well as a State law in reference to the killing of game out of season, and the gentlemen who framed the bill endeavored to conform it as nearly as possible I think with the Maryland law, which has I believe been shown to be efficient.

Mr. Jenkins, of Wisconsin.—If I may be permitted a moment, it is suggested by a gentleman sitting near me that you cannot protect game in the District of Columbia if no protection is afforded in the adjacent States. For that reason the bill has been drawn in this form, because in the judgment of the Commissioners it is necessary to have it as stringent as possible, while at the same time as nearly as practicable in accordance with the laws of the adjacent States.

Mr. Ray, of New York.—But how can you protect game in the District of Columbia unless you could also provide that a man may not shoot it in Virginia or Maryland, just across the line, where there is no law? How are you to prevent him from bringing it here and cooking it?

Mr. Curtis, of Iowa.—The gentleman from New York understands how difficult it might be under certain circumstances to enforce a law of that sort.

Mr. Ray, of New York.—That may be, but this seems to be a conspiracy, practically, in favor of the dealers in food in this city to increase the cost of living. I do not know what other purpose it can possibly serve. If you prevent game which has been killed in Virginia or Maryland (and the law does not prohibit the killing) from being brought into the District and sold, I would like to ask what other purpose the bill can have than to enhance the cost of such provisions?

Mr. Curtis, of Iowa.—With the permission of my friend, the provisions of the bill were thoroughly advertised in the papers. Ample opportunity was given to the citizens of the District of Columbia to examine the matter and object to it if they saw fit.

Now the fact—and it is quite enough for the committee to know—in respect to the provisions of this bill is that they are approved by the Commissioners of the District of Columbia, by the district attorney, by the Game and Fish Protective Association, composed of some of the best citizens of the District, all of them having urged the passage of the bill.

The amendments suggested here were considered by those gentlemen, and when presented to the committee no member of the committee could see any objection to them, it seeming to be the desire of the people of the District that this proposed legislation should be enacted into law. I will say to my friend that in my opinion any amendment such as he suggests would be dangerous, and might destroy the efficiency of the bill.

Mr. Shattuc, of Ohio.—I want to say that this law is just about the same as the laws in the various States. This very issue has been tested recently in a decision by the Supreme Court of Illinois. Ohio and Illinois have similar provisions. I am quite sure that Texas has it. Arkansas has it. I do not know as to West Virginia, but being a sportsman myself I know that the proposed enactment is similar to the laws of almost every State in the Union. If you cut out that clause and allow them to bring in game from States where it is legitimate to shoot it at a time when it is illegal to shoot it in other States, you cannot after the game has been brought into the District separate that which is legitimately killed from that which is not.

Mr. Curtis, of Iowa.—The law is just the same in the neighboring States.

Mr. Fleming.—Suppose game is legally killed within the time provided by the law of a State, and a hotel keeper or a restaurateur in Washington buys that game, it being legal for him to do so in the State in which he buys it, and puts it on cold storage in order to preserve it for a few weeks, to be sold later to his customers in the District.

By the provision of this bill he will not even be allowed to serve in his hotel or restaurant a partridge or pheasant, or wild duck, or wild turkey, or anything of that kind that he may have bought legally, that may have been killed legally, and which he has preserved by cold storage. It seems to me, Mr. Speaker, that this bill goes too far. I know that these gentlemen who are fond of hunting, and who look after game, get together sometimes and frame these measures and seek to get

us, who are supposed to be men of common sense, to indorse and vote the measures through, but it does seem to me that this bill is a sort of an outrage not only on every hotel man in the District, and every keeper of a restaurant in the District, but is a sort of an outrage on every man who has to eat in the District.

If a partridge or a wild turkey is legally killed in Georgia and a restaurant keeper or hotel keeper in Washington wants to buy it and put it on cold storage and then sell it to his customers, why should he not be allowed to do so?

You cannot hit upon any dates that will fit every State in the Union. You can kill deer at some periods in Georgia when you cannot kill them in some of the Northern States, and vice versa. You may kill partridges in some of the Western States when you cannot kill them in other States. Now, when game is legally and properly killed under the law of a State, why should not a hotel keeper or a restaurant keeper in the District of Columbia be allowed to bring the game here, put it on cold storage, and sell it out to his customers as occasion demands?

Mr. Jenkins.—I want to ask the gentleman from Georgia if any restaurant keeper or hotel keeper in this District has been to the gentleman from Georgia to make any complaint against the provisions of this bill?

Mr. Fleming.—I have no doubt that if you will go and call upon the restaurant keepers and hotel keepers in Washington and ask them if they indorse this bill not one out of a dozen will do so.

Mr. Jenkins.—Then why have they not come to the committee and made some complaint?

Mr. Fleming.—They are busy about their own affairs, not supposing that the National Legislature would put such an obnoxious provision upon the statute book.

Mr. Jenkins.—If any one had come to the gentleman from Georgia, and he had referred him to the committee, the committee would have given him a hearing.

Mr. Curtis, of Iowa.—Mr. Speaker, there is no desire on the part of the committee or the distinguished gentlemen suggesting this legislation to impose hardship upon anybody. It is represented to your committee on the District of Columbia that Washington has been made the storehouse for "pot-hunters" throughout the country, and that legislation here is not sufficiently restrictive.

It is represented that very mature deliberation has been given to the subject, and that this proposed bill has been compared carefully with the laws of the adjoining States, and that the majority are fully as rigid in their provisions as this proposed measure. Now the committee will have no objection whatever to any amendment which does not destroy the true intent of the measure.

Mr. Fleming.—Now, Mr. Speaker, I wish to offer an amendment which I think will best come in on Section 8. The section reads as follows:

Sec. 8. That wherever in this act possession of any birds, fowls or meats is prohibited, the fact that the said birds, fowls or meat were killed or captured outside the District of Columbia shall constitute no defense for such possession.

I wish to add:

Provided, That this act shall not apply to any game brought into the District and which has been killed or captured not in violation of the law of the State or Territory where such killing or capturing was done.

Mr. Jenkins.—I would say to the gentleman from Georgia that this amendment is not necessary, for I submit to him that this law is in harmony with the laws of Virginia and Maryland.

Mr. Fleming.—But there are forty-five States.

Mr. Jenkins.—The prohibition applies here as well as in those States.

Mr. Fleming.—But bear in mind there are forty-five States in the Union. Venison is shipped here from all over the West and North.

Mr. Jenkins.—That is true; but this law is in harmony with the laws of these two States.

Mr. Fleming.—And only perhaps with these two.

Mr. Jenkins.—I do not think it is in harmony with all legislation of all the States.

Mr. Fleming.—Of course it cannot be.

Mr. Jenkins.—But it very seriously impairs the usefulness of this bill. Now I want to say that this bill has been very carefully considered by the committee, and gentlemen largely interested in this question were heard in reference to it, and to accept an amendment like this will demoralize the entire bill.

Mr. Fleming.—Is it not true that venison is kept three, four, five, and sometimes six months in cold storage, and even dried?

Mr. Jenkins.—Oh, I do not know; but I do want to say that the people interested in the question as presented by the gentleman from Georgia have never made any complaint whatever. We submitted it to the people of the District who are interested in it, but no one has been complaining.

Mr. Fleming.—They do not know what we are going to do. I have seen bird and game laws put upon the statutes that are perfectly ridiculous, some of them. They put numerous game laws on the statute books of Georgia while I was a member of the Legislature, and every time the Legislature met we have had to change them, and the change had to be made simply because the members refused to subject bills to their investigation and to their common sense judgment. They allowed some man who was a hunter and fond of game preserves to draw a bill, and they would bring it in and indorse it. They passed such bills there, and we are doing the same thing here.

Mr. Curtis, of Iowa.—I am willing to admit that the State of Georgia makes some bad legislation, but we do not want to repeat it here.

Mr. Fleming.—You are doing worse. We only had one State to subject to bad legislation, and you are trying to subject forty-five States to it, and to do something worse. The man that wants to put game in cold storage—game taken in season and sold out of season after being put in cold storage—is not allowed to do it. You do not allow a man to have game in his possession in close time, even if it was legally killed in season. You put a penalty on it. He cannot sell it; he cannot preserve it; he cannot keep it; he cannot serve it in any

way, notwithstanding it was legally killed and has been kept in cold storage.

Mr. Greene, of Nebraska.—I ask for information. Suppose game was killed in some of the Western States in season; as I understand, this bill would prevent anybody from handling it in this District in close time. It was lawfully killed, brought into this District here from the State where it was killed in season, and yet under your bill it is out of season in this District, and any party having it in possession can be fined.

Mr. Fleming.—It is well known that the restaurant keepers frequently take venison and keep it in cold storage for several months. The longer you keep it the better it is; and here is game and meat preserved for the very purpose of putting it in better condition, and you refuse to allow them to serve it in the restaurants.

Mr. Cowherd, of Missouri.—The only way to enforce the game laws is to stop the man who hunts for the market. He is the man that destroys the game, and the only way to destroy the market-hunter is to close the markets. If you leave the market open, you provide for keeping the market-hunter going. For that reason the game laws in nearly every State that I have had occasion to examine close the markets. The game laws not only provide that game shall not be killed in certain seasons, but they say that it shall not be shipped out of the State, it shall not be shipped in the State, and it shall not be sold in the markets, and it is a crime to have game found in the possession of anybody during the closed season.

It is true they do put game in cold storage and sell it. It is true this law would close the open market, and that is the only way to stop the market-hunter. If the gentleman's amendment should prevail it would destroy the whole efficacy of the law.

Mr. Fleming.—Well, if that kind of a provision would destroy the efficacy of the law, I think it should be destroyed to that extent.

The Speaker.—The question is on the amendment proposed by the gentleman from Georgia [Mr. Fleming].

The question was taken, and on a division (demanded by Mr. Fleming) there were: ayes 19, noes 46. So the amendment was rejected.

The bill was ordered to be engrossed and read a third time, and it was accordingly read a third time and passed.

On motion of Mr. Curtis, of Iowa, a motion to reconsider the last vote was laid on the table.

The Right to Bear Arms.

Editor Forest and Stream:

Somehow or other a copy of your paper dated Dec. 11, 1897, drifted into my hands, and as an old hunter I was greatly interested, but I think "The Man in the Clock Tower" made an error in that number, and I want to go on record as objecting to some of his constitutional reasoning regarding the right of citizens to have and to carry arms.

The reference to a well-regulated militia is simply an excuse or preamble, and the amendment was put in to allow the people at all times to be prepared to resist encroachments upon their liberties from within more than from without. It was put in so that the people could not be cowed by any would-be dictator or usurper who might somehow get control of the regular army; it was put in there that each of us might be, as my old commission says that we are, by the grace of God, free and independent. It was put in there to give to us, to each of us, the proper power as sovereigns that we are.

He says that the carrying of arms as commonly understood and practiced is not a right at all! Oh, isn't it? Well, if it isn't, how long do you think our political fabric would hold together? Until some military leader or political rascal saw fit to gobble us up.

As for the various local laws or regulations how weapons are to be carried, they do not amount to the paper they are printed on when taken before our highest court. Whether it is illegal to carry a weapon concealed, as far as I know, has never been decided yet by our national court.

THE COUNTRY DOCTOR.

OLAMON, Maine.

The Maine Deer Limit.

BERWICK, Me.—Editor Forest and Stream: I have noticed in the papers lately that considerable talk is being made about making a law limiting the shooting of deer to one for each person. I am not in favor of such a law, and don't believe that any sportsman is. I was down East on a hunting trip this fall, and made a few observations while there. One is that the law is repeatedly broken by the guides. One of them told me that he had killed twenty deer this year, some of them in close time. The sportsman who can't shoot a deer, but wants one to take home with him, can have it furnished by the guide for a sum of money, more or less. The sportsman of course claims to have shot the deer himself. Some sportsmen who perhaps have a tender conscience cut the deer's throat after it has been shot by the guide, and thus "kill" a deer.

Another observation was that deer are killed by the farmers, who use jack-lights, dogs, traps and snares, and kill a deer whenever they can, be it in June or December. Deer are killed by the men in logging camps from early fall till spring. The wardens don't seem to know anything about this law-breaking unless somebody turns informer and "blows" on the violator of the law. Then woe betide the informer.

Stop this destruction of game by the guides, farmers and lumbermen and there will be no need of limiting the sportsman to one deer.

SPORTSMAN.

North Dakota's Mild Winter.

GALESBURG, N. D., Jan. 14.—Herewith is money order for \$4, renewing my subscription to your good and great paper for 1898. I cannot keep house without it, and wish to miss no numbers.

Lots of mink and foxes here this winter, but rabbits and chickens very scarce. Last winter was very hard on them. This winter so far is very mild, with no snow at all, and weather little below freezing.

W.

Prairie Chicken Alpha.

In the spring of 1857, four years almost to a minute prior to the shot and shell storm on historic Fort Sumter, my father, mother, three "kids" and "hired girl," the latter a family fixed quantity from the cradle age of the youngerlings, jumped their claim, a fertile farm, but short on acres, in Kalamazoo county, Michigan, to journey westward to "grow up, young man," where land was as cheap as dirt, to be bought per acre at the price of a laundered shirt, as laundered shirts may go other than the 50-cent sweat-shop excuse. They rode by rail to where the rail quit—Galena, Ill., renowned for its lead mines, its lazy, slow-creeping river, and later as the home of Grant. There a shift to lumber wagon, seven with the driver, who, for nearly 100 miles, jolted to two as stiff-timbered axles as ever wheeled load of brick or hay rack.

Dubuque, a city of bluffs and lager beer, had barely disappeared from view when evidence of the "wild and woolly West" was made manifest by the sight of a prairie chicken that went ambling down the road ahead of the team. I was then fourteen years old, the age of teasing curiosity and intolerant jabber. A new world we were in. Everything different but the air and sky, and that annihilating space by its clearness. A river seemed but a brook to be hopped over; a ridge but a few moment's walk—to reach, a half day's journey. The booming of the wild fowls of the prairies in the dusk of the morning and evening was as lonely as the croaking of frogs in a swamp, for be it known the spring is the season when the gentleman chicken invites his lady love to "come into the garden, Maud," where he plays a petit tambour rhapsody on a pair of drums "hipped" just below the ears. It is in the night time, moonless the better, that the prairie fires, in all directions, like the cannon at Balaklava, casting their reflections on the sky, put the whole world ablaze, as thrilling a sight as a carnival of vomiting volcanoes. While far from spectacular, the mad canter across the sloughs to save the wheels and animals from cutting through the spongy sod, and the fording of the streams, afforded game sport, though by no means relished as a steady diet. And not the least in the newness was the desolation from sod houses, like scattering adobes of muskrats, where to-day, by the way, are palaces of contentment and independence.

The new home was a story and a half log house, cast on the west bank of the Wapsipinicon River—"Wapsie" for short—built in advance. The loneliness of the outlook was heart-breaking to one trained to social comforts. Neither schools nor churches, except at long range, and neighbors whose hospitality was principally to "git the loan" of anything from the kitchen stove to the family Bible. The breaking of the acres, planting sod corn with an axe, watching the cattle from raiding the fields and "going in swimming," was about the sum total of the summer's programme. With fall came the gathering of wild fruit—plums and crab apples and hazelnuts—through trips made to distant groves, ten and fifteen miles into the next county. Four-horse teams comprised the outfit that cantered over the wild prairie, with no regard for beaten road, and a gun or two to bag any chicken that might be so imprudent as to get in the way. But the prairie wolf, or coyote, was a different kind of bird. Driven out of the high grass, he would lope to the summit of the ridge, where distance lent enchantment, etc., and there at his leisure look the party over. The circling henhawk, the wailing note of the prairie snipe, the cry of the sandhill crane, so far heavenward there is a rivalry as to who will sight him first; the yellow foliage of the great sea of grass, wild weeds of all tints, the mellow autumn haze and brisk south wind, with the laughter and chatter of the voyagers, lent a charm to the scene well up to the standard of charms.

With winter fairly settled down to business came the climax of hardships. An Iowa winter is as nearly the whole thing as can be found any place between the Arctic Circle and the Tropic of Cancer. Those who have made a careful analysis of the subject maintain that an Iowa blizzard will blow snow through a Carnegie armor plate; that is Iowa snow, every piece of which is as sharp and piercing as the tooth of slander. Jack Frost has no difficulty in sticking his nose down 6 and 7 ft. into the ground and remaining there until the middle of next July without sweating a hair—fact attested to by the evidence of post-holes.

Winter caught the family shaking and burning with fever and ague. It was a lively species, healthy, not trained too fine, fully developed, and able to take any amount of punishment, born and nourished on the thousands of acres of decomposing sod—so said the doctors. It was as systematic and precise as the rules of a training ship going into the ring at prompt 8 with a freezing passage in tremolo. The only escape from a knockout in the early stage was to crawl under the kitchen stove, an old-fashioned cooker with two long hind legs, giving it the shape of a giraffe tother end to, while the hired girl—bless her Irish heart!—would haul the bed next the fire, where, between two feather ticks, the Fabian policy was adhered to through sufferance. The hot stage would come ambling along about twelve meridian; with the thrille thrown wide open, as regular as a hired man at his victuals, and just as gamy and persevering as a red ant, never failing to put the victim to sleep, who would invariably awake in a terrible sweat from the thoroughness of the nagging. It took three successive days of hammering to satisfy this triple alliance, leaving four to get in condition for another siege.

The living that winter was frozen potatoes, bran and cornmeal bread, frozen salt pork and burnt corn coffee, and Perry Davis's Pain Killer. The poultry froze stiff on their perches, and only by diligent exercise were the animals saved from going into cold storage.

It was at this stage in the proceedings that there came a hungering for prairie chicken, a shift from salt pork. The ague-shaking colony hankered for chicken broth. In the treetops of the river bottoms on clear and quiet arctic mornings hundreds of these birds would gather for their breakfast of buds, and presumably to discuss the latest henhawk raid and call the roll. How to get at them was the problem, for they were as wild and erratic as a Kansas populist. In some way possession had been got of a cheap cast-iron, single-barreled shot-

gun, a weak piece of furniture with no aims in life beyond a bare existence, and so racked by kidney complaint and rust in the gambrel joints it took two and three blows of the hammer to explode the cap. A conspiracy had been concocted by which position was to be taken at the foot of a tree before sun-up, and wait for the chicken to come and be shot, if you please. It was one of the regularly scheduled ague days and a morning of sun-dogs and high-pressure barometer. As the sun came peeping over the treetops a lone chicken now and then went sailing by. At last one more accommodating than the rest settled on a limb directly overhead. Would he remain long enough to get the piece of ordnance into position? was the soul-harrowing question of the moment. He seemed to be all right, for he went at the buds as if he were really hungry, and apparently oblivious of the fact that there was a cast-iron cannon right under him that might accidentally explode, or possibly he may have come in contact with the thing in the past and been advised of its physical decay. You can't always tell what a prairie chicken is thinking about. The ague fit was getting up steam, and what with the shaking and fingers stiff and numb, the cocking of the poor, decrepit thing became a problem, solved by placing the butt on the ground and pressing back the hammer with the foot. Taking good aim, the trigger was pulled with difficulty, but she didn't go. Her record was still unbroken. The bird hopped to another limb, evidently suspicious, and he had reason to be, for danger lurked in the air at either end of the gun. Again the butt of the blunderbuss went to the ground, again the foot essayed to press back the hammer, but this time she slipped, and a report like a cannon tore through the brittle air. There was a moment of innocuous desuetude by the closeness of the muzzle to the head, but Richard was himself once again; there lay the chicken a-putting in the finishing fufflers of life.

It was a plain case. If the old, kidney-racked and bone-savined piece of cast-iron had gone off the first time, that chicken might have lived to die a natural death.

E. P. MILLS.

A Woods Tragedy.

Editor Forest and Stream:

YOUR note the other day about a Canadian outlaw who had been taken in recalls a tragedy that took place last fall on Lake Tilton, a part of the Mattawa River, about seven miles from the village of Mattawa. As many of your readers have visited that section, they will remember the locality, and as one of the parties has long been noted as a prominent guide after moose, they may have met him.

A hunting party was organized at Mattawa in October to make a trip up the river to Lake Tilton and Pemissa Bay after deer. The party consisted of Sam Tongue, the guide; William Bell and J. Deacon. They spent several days on Lake Tilton, Pemissa Bay and Lake Champlain, and were very successful. The last day of their stay they had the misfortune to lose two of their dogs. After searching for them they returned to the village on Saturday without finding any trace of them. On Monday morning Sam Tongue and Bell took a small birch bark canoe and proceeded up the river in search of the dogs. They arrived at Pemissa Bay about 2 o'clock. As they were crossing the northeast arm they saw a man in a canoe coming up the bay. Thinking he might have seen their dogs, they turned their canoe in that direction. When they were within 300 yds. of him he rose up, and taking aim at them, fired a shot that just missed the stern of the canoe. This shot was followed quickly by two more that were very close, one striking the water about 6 in. in front of the boat. The wind was blowing quite fresh, and they started for a point on shore about 600 yds. away. They paddled for all they were worth, and the shooter also made for shore, but about 100 yds. above them, Tongue thought that if the shooter reached the beach first he could conceal himself in the bushes, and they would be at his mercy. Both canoes were now bounding toward the point, but Sam reached the shore first, and picking up his .38-55 Winchester, he brought it to his face and fired just as the other canoe was passing the other side of the point. They listened, but could hear nothing, and were afraid to go around to investigate. After hiding for some time they jumped into the canoe and made their way home, where they told the story. The next morning the authorities sent the chief of police with a party to investigate. On arriving at the spot the canoe was found on the beach, and the man hanging out of it in the water. Sam's bullet had passed through him just above the heart and killed him instantly. The body was brought to Mattawa and an inquest was held, which exonerated Tongue, deciding that he had acted in self-defense. The party killed was I. McConnell, who had for a number of years been an outlaw. Several warrants were out for him at this time. He was also noted as one of the worst pot-hunters and poachers in the upper Ottawa Valley. Tongue thinks he thought they were constables in pursuit of him, and as he had always boasted he would never be taken, he fired on them. Sam is a first-class guide, a good cook and an expert canoe-man.

W. H. LEAVITT.

Ducks and Hawks.

PORT ARTHUR, Can., Jan. 22.—*Editor Forest and Stream:* On account of the mild weather this winter we have quite a number of wild ducks that are wintering along the north shore of Lake Superior. This is something unusual. Duck shooting this fall was very poor with us in this section. If you sportsmen south would shoot a few of the many thousand hawks you would have thousands more ducks to shoot in the fall, as the hawks are very destructive to the young ducks. I have seen old ducks flying about in pairs in July that have had their brood of young ducks destroyed. A hawk will stay with a brood until the young are all killed off. Our shooting on prairie chickens and ruffed grouse was very poor this season; the wet spring and the hawks are to blame for this. If I could induce some of your sportsmen to waste a few cartridges on the hawks, instead of shooting at so many bluerocks, you would reap the benefit hereafter.

JOHN E. NEWSOME.

CHICAGO AND THE WEST.

Denver Game.

Jan. 29.—In Denver, Col., the State warden advertised in advance that he would interfere with the barbecue of the National Stock Growers' Association if any attempt was made to serve illegal game. The Stock Growers' Association advertised in advance that it would serve buffalo, elk, antelope, mountain sheep and quail. The despatches from Denver of Jan. 27 advertise that at the barbecue the Stock Growers' Association did serve buffalo, antelope, mountain sheep and quail "in large quantities," and that "hundreds of waiters were kept busy for hours." It would appear that Warden Swan, while a little late to prevent this serving of the illegal game, now has all the evidence necessary to prove that it was served. We should rightfully hope to hear something drop before long.

The Denver hotel keeper, F. W. Bailey, who was arrested for having "smoked antelope" on his bill of fare, evaded conviction in a shrewd if rather babyish and not very honorable way—or at least in such a way as leaves doubt of his business candor. He swore and had others swear that the antelope was not antelope, but mutton, smoked mutton from Omaha. The judge fined him for putting the name on his bill of fare, but under the Colorado law he could not be convicted of actually selling the game.

Illinois Lively.

Things are not so bad in Illinois. Last week I mentioned the case of Allen Ferris, of Lower Illinois, who was fined \$3,000 for killing and shipping some 500 illegal quail. Judge Grundy imposed the fine. What Mrs. Grundy says may be inferred from the comment of the Morrisonville Times, which hopes that Mr. Ferris will jump his bond since he can't pay his fine, and not stay to board out his little bill with the county.

Last week the hustling Deputy J. E. Slocomb arrested Wesley Bros., of El Dorado, Ill., for shipping game to Chicago. They got \$100 fine. On the day following he did the sensational work of arresting a fellow warden, Deputy Fred Smith, of Gallatin county, alleging that Smith was conniving at the illegal fish trap fishing on the Saline River.

Deputy Slocomb was aided in his recent work by Commissioner Bartlett and State Warden Loveday. Mr. Loveday wrote me from Harrisburg, Saline county, as follows in regard to his success, over which he has great reason to feel satisfied:

"I am in the heart of the violators' camp, and I have got them on the run. By the time the State Sportsmen's Association meets to see about protecting the game of our State I will have rolled up over 500 convictions, and will have struck terror in the hearts of all violators. But it's a good thing to have them wake up.

"I arrived in this city only yesterday noon, and have tried and convicted three; one sent to jail and two paid their fines. Every constable the sheriff has got is now out for to-morrow's grist. I came here from Jasper county, where I had five convicted and filed papers for four more.

"Mr. J. E. Slocomb, my South End deputy, the best in the State, is assisting, and we will run two courts on Monday. Yours in haste, H. W. LOVEDAY."

I like the closing phrase, "Yours in haste," and hope Mr. Loveday will keep himself and the law-breakers both busy for a while. He has been making the hotbed of violations pretty hot.

Ohio Rabbit Law off.

The Ohio game law was during the past week changed by the passage of Senator Decker's bill removing the close season on rabbits. The rabbit clause of the Ohio law was not of special importance, but it was made coincident with the quail law, to protect the quail against men who would pretend to be out rabbit hunting and would really be shooting quail in the snow. Here we have the case of the loop-hole again, just as we have in the woodcock and wood duck laws of Indiana. The shooter says he is after woodcock in July and August, but really is hunting flopper ducks. Thousands of such loop-holes in statute or the "construction" of statutes attest the wisdom of broad, simple, sweeping and concurrent measures in those State laws seeking to protect the State's game or fish. Now the Ohio men may shoot rabbits in February, and they will shoot quail then. It is so easy to track them in the snow.

Florida Quail.

Dick Merrill, of Milwaukee, is spending the winter in Florida, on the Homosassa River, West Coast. He reports the weather too warm for hard work, but is getting a few ducks and very fair quail shooting.

One hotel at Ocala, Fla., reports 2,252 quail shot by its guests this season.

The Circle Hunt.

Usually the "circle hunt" is well named. Its net results are ordinarily represented by a circle—O. At Kersey, Col., last week 600 horsemen and 100 dogs held a circle hunt, covering sixteen miles of country. They got nine coyotes and three wolves, and are so encouraged that they are going to do it again next week, with 1,000 men in the lines. The results of such hunts are often disproportionate to the energy shown, but if a man wants to ride and holler a lot, a circle hunt is just the thing.

The big jack rabbit hunts of the West, more especially Colorado and Kansas, are not circle hunts, though systematically conducted. The hunters walk abreast in the drive and shoot the game as it starts ahead of them. Jack rabbit hunting as a matter of solitary and individual enterprise may be more prolific of results than a big circle hunt. In one way or another they are killing lots of jacks in Kansas. Sumner county, Kan., paid bounty on 19,171 scalps last Thursday.

Pet Squirrels.

A busy warden at Cleveland, O., arrested W. J. Phillips for having two squirrels in possession in close sea-

son. Phillips showed they were pets, but the justice fined him \$25. He appealed and the Circuit Court has acquitted him.

Rabbit Murrain in Iowa.

In Emmet county, Ia., the rabbits this month are dying in hundreds of some strange disease which seems epidemic among them. No one has as yet found out the nature of this disease, but its effects may be seen in the dead rabbits which line the hedge rows and field fences.

Cumberland Lodge Tax Sale.

The property of the Cumberland Club, of Chicago, known as Cumberland Lodge, and situated near Lowell, Ind., is this week advertised for sale for delinquent taxes. The amount is so small that it may be an oversight, and no doubt the taxes will be paid before the tax sale, Feb. 14. This club was in the palmy Kankakee days one of the strongest and most popular of Chicago and numbers to-day on its lists some of our best known shooters.

Protective.

The Sioux City Rod and Reel Club, of Iowa, was organized at Sioux City last Saturday with a good stiff membership. The purpose is to stop illegal net fishing, more especially and immediately. Officers elected were: Jas. C. Neill, President; Chas. Hamilton, Secretary; David Hottenbach, Treasurer.

The Tri-County Fish and Game League failed to get a quorum at its annual meeting at Detroit, Mich., last week. The old officers hold over: Messrs. A. R. Avery, President; John J. Speed, Vice-President; Geo. A. Johnson, Secretary-Treasurer. The League by its deputy H. L. Avery last year confiscated \$593 worth of illegal game, fish and nets.

Col. C. W. Doubleday, a millionaire of Cleveland, O., was recently arrested by a plain man named Wenger, and was last week fined \$25 for shooting ducks out of season. This is well. The law was made for the rich and the poor alike, and it should have no loop-holes through which a rich or a poor man can escape its proper penalties. It is time the game laws ceased to be considered as rococo parlor ornaments and ormolu bric à brac used merely for the purposes of display. What we want is a plain blue china cooking-law which shall measure out to violators with what measure they have meted.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Three Remembered Shots.

THE expression "lynx-eyed" or "hawk-eyed" is supposed to convey the idea of being sharp and far-sighted. The lynx, as with the whole cat family, is sharper sighted than the dog, or perhaps all other four-footed animals. The hawk, the eagle, the raven, the crow, and many other birds must take precedence as to power of sight. I believe the dogs are a rather dull-sighted race, especially the bloodhound. Almost everyone knows that the collie, the shepherd and the greyhound can see better than the bloodhound. But I suppose that his powerful keen-scented nose is given him to make up for the deficiency in sight.

Once I accidentally or incidentally learned that the otter had the power of sight beyond what I had ever expected of that animal. I was watching a runaway on the upper waters of the Alleghany, where the deer forded the river occasionally in passing down from the mountain over to a swamp on the other side. Here the river was about 200yds. wide and not very deep. It was a clear morning, a little after sunrise, and as I sat on the bank against a tree I discovered on the opposite side of the river an otter lying lengthwise on a log. The log lay in a slanting position from the bank, reaching into the river and pointing diagonally up stream, so that the otter lay quartering toward me. Otherwise I might not have noticed him at all, and he must have got there while I had been sitting motionless under the tree. But simultaneously with the first motion I made toward raising the gun from my lap, that otter slid off that log into the water and was out of sight.

I began to think the chance of shooting at him was pretty slim, and the chance of killing him much slimmer. But, as Nessmuk used to say, I got a good ready when I saw his head come up several yards up stream, and as quick as thought he made a dive, and as his head went under his body rolled up, so that I could see most of his hinder part above water; and when he repeated the maneuver the second time I took a snap shot at him, which stopped his diving any more. While I was loading (which was done in short order) he had worked along on to a flat rock (which I found later on) lying 8 or 10 in. under the surface. Here he stopped, head and shoulders showing up pretty straight, while I made a dead shot that seemed to lay him out flat. To load again was only the work of a minute. When his head showed again above water I fired another shot and the head dropped.

It has taken some time to tell the story of three shots, which I suppose were made in less than three minutes. After stripping off my outer covering, I started in to wade across. The water was nearly waist deep some parts of the way and most uncomfortably cold. But I found the otter lying on the rock and barely covered with water. There was one bullet hole through the body well back toward the hip; another was through the shoulders, and another through the head; and why the animal lived long enough to get the third shot was more than I could account for.

In those days it was seldom that we used raised sights on our hunting rifles. The rifle which I used at that time was level-sighted—that is to say, the sights were set for about twenty-five rods—and for long range the reader will readily see the necessity of calculating the distance and fall of the bullet, and how to hold over accordingly.

During my time I suppose I have made several hundred close shots at game, and perhaps some hundreds of poor shots. But somehow those above mentioned I have remembered as the three consecutive pet shots of my life.

ANTLER.

GRAND VIEW.

The Maine Cow Moose and the Boys.

Jan. 31.—The famous case of the two boys who shot the cow moose at Canquimacgomac Lake last July was brought before the Maine Governor and Council last week. The question was on the application of County Attorney Hayes, of Piscataquis county, for extradition papers to bring the boys back from Pennsylvania. It will be remembered that Fish and Game Commissioner Carleton permitted the boys to escape to their own State after they were arrested last summer, on the fact of their confession of the shooting, and on account of their youth. The question is as to whether Mr. Carleton has a right to take the law into his own hands and decide who shall be punished and who shall not. The hearing was an exciting one. The case of the boys was stated by W. E. Parsons, of Foxcroft, while County Attorney Hayes put Lawyer Sprague on to the stand as a witness. The lawyers soon accused each other of not telling the truth, and there was a pretty warm discussion. The case was finally adjourned to give Mr. Carleton time to prepare an argument, he being absent in Florida. The impression is pretty general in Maine that the extradition papers will not be granted. It is mentioned that there is considerable politics in the matter.

The Sportsmen's Exhibition here in March is promising much. Dr. Heber Bishop has secured a live moose or two, with a loup cervier and other big game. It is proposed to wake up a live bear a month too early, to bring him to Boston for this exhibit. Dr. Bishop knows where he is denned.

SPECIAL.

A Deer in Oil City.

WHEN the Adirondacks, the Maine woods, and other deer regions can supply deer for the youngsters to those through town streets, they may compete with Oil City. Here is a note from to-day's Blizzard:

"Oil City claims the distinction of being the only city of 20,000 inhabitants on the streets of which a wild deer has been captured alive by schoolboys. A few days ago Billy Condren saw one in Hasson Park, but did not catch him. This morning a boy by the name of Downey discovered a young one in the alley between Hoffman and Harriott avenues, in the Seventh Ward. He tried to corner the fawn near his father's barn, but the deer and dogs bounded away, knocked the boy down, and in the shuffle one of the dogs nipped his hand. A crowd of schoolboys, in the vicinity of the Seventh Ward school-house, joined the chase and had more fun than a little. The deer ran across Hone avenue, over the cemetery property, with several dogs and a score or more of boys in hot pursuit. In jumping across the street railway cut just above Hone avenue the deer took a tumble, and in less time than it takes to write it the dogs and boys were on top of it. Some men, who were employed near by, went to the assistance of the boys, and with ropes bound the deer and placed it in Mr. Hadley's barn. It will probably be added to the menagerie at Smithman's Park."

This can be verified by numerous people on the hill where it happened.

C. G. C.

Man Wardens in Order.

IN view of the alarming increase in the number of deaths from the unreasonable carelessness of hunters it would appear that men are in greater need of protection than game. Therefore would it not be well for our State legislators to provide for the appointment of a corp of man wardens, composed of woodmen of sufficient intelligence and experience to enable them to distinguish a man from a deer, and without one of whom in attendance no inexperienced or careless hunter should be permitted to go into the woods, nor when there be allowed to shoot at any object without permission of the attendant man warden? Something of this kind or the institution of boards of examiners empowered to grant licenses to such persons only as can satisfactorily prove that they never shoot until they know what they are shooting at must be adopted, or else those who have any regard for their own safety will keep out of the woods during the shooting season.

AWAHSOOSE.

Sale of Game in Close Season.

NEW ROCHELLE.—*Editor Forest and Stream:* I should be much obliged if you could inform me as to the law governing the sale of game during the close season. The game dealers of this village are openly selling and exposing for sale quail, woodcock, ruffed grouse, prairie chickens and rabbits. I want to stop it if it is a violation of the statute, but want to be sure of my ground before moving in the matter. I will spare no pains to compel compliance with the law, at least in my own neighborhood, if I find I can make out a case against these men.

P.

[The law permits the sale of game the year around, provided it comes from outside a 300-mile limit beyond the State.]

Scarcity of Quail.

By some the scarcity in counties below here is laid at the door of the flea, which is said to have killed the young and sitting birds; others claim that the birds perished for water during the long drought last summer and fall. In my opinion the case is a combination of circumstances, of which I think the negro dogs play no small part. I drove over one plantation of about a thousand acres on which were fifteen families of negroes, and each family had from two to five half-starved dogs—cur, fice, etc.—all of which were allowed to run at large. This seems to be a fair sample of the condition all over that country, and you can imagine what a difficult matter the mother bird finds it to secure her nest against the ravages of this starved army of curs. Oh, for a dog tax!

The Trouble with Indiana.

BEDFORD, Ind., Jan. 25.—*Editor Forest and Stream:* Indiana has no such officer as a game warden. Indiana has a very able and energetic commissioner of fisheries, to whom she pays a yearly salary of \$300 and an allowance of \$500 for expenses. Indiana is one of the United States, and the center of population is within her borders, if it has not been caught in a trammel net or blown out with dynamite since the last census. Indiana makes it part of the duty of her road supervisors to enforce her game and fish laws. Indiana probably has not one such officer who knows what those laws are, and not one in twenty of such officers even knows that he is expected to enforce them. Indiana is sleeping. Cannot FOREST AND STREAM help to arouse her?

HOODOO.

Ohio Farm Game.

AN Ohio reader writes us: This mild winter is just the thing for our quail. There are three flocks of about eight each on my farm. I have had to chase off Cleveland hunters all the fall. They are a lawless set, and think they can do anything they have a mind to.

Most of the farms are posted, and the farmers take more interest in game protection than of old. Rabbits are very plenty and the laws are well observed. Ruffed grouse, or partridge, as we call them, are very scarce. Coon and skunk are hunted very much and there are not very many of them.

FRANK E. NEWTON.

Sea and River Fishing.

Fishing Up and Down the Potomac.

Occoquan River.

Great wooded hills piled high on either side,
Whose million hues with Joseph's robe compete;
Dark pines and giant oaks, with arms spread wide,
And plane-trees, gums, both maples, soft and sweet.
The dogwoods fling their blossoms to the wind,
And underneath a carpet rich of ferns
(With wildflower patterns) woos the tired mind
To take that rest which honest labor earns.
No sound is heard save now and then a break
Where, in the pool, some bass in midair leaps.
While Occoquan's sweet murmurs music make
Her mimic torrent seaward foaming sweeps.

THE bloody fields of Bull Run, where the battles were fought, still pour with every storm their red flood into the Occoquan, and thence into the Potomac, two dozen miles below Washington.

The red clays upon the ragged hills about Manassas that border on Bull Run are seeking their level in the sea, and the impatient angler who has waited a whole season in vain, as we did last season, for the waters of Occoquan to clear enough to cast a fly, thinks it will not take many cycles to reach bed-rock.

The Occoquan River is formed by the union of Broad Run and Bull Run, but it is the latter which is blamed for all the mud. We have gone there at evening, when the stream was crystal, and found it in the morning a seething torrent of brickdust and soapsuds.

The waters subside rapidly, too, but leave every boulder in its rocky bed covered with 1/2 in. of the clay that yellows as it dries. If the wader with his wet sandals steps on one of these his heels are apt to "kick at heaven," but worse than this, long after the water has been coming down clear, if a wind springs up, the waves lap the sides, or over the tops of the kalsomined stones, and without a shower the water will get too cloudy to fish with a fly.

It may be a matter of wonder why one should lose sleep over so difficult a stream. The reason is easy. When Occoquan is just right, as it sometimes is for weeks at a stretch, it is the prettiest bass stream in the world, bar none. There is no trout stream of the mountains more romantic, no tributary of the Potomac where the fly-fisher can spend a quieter, happier day or find harder work.

Its station on the Potomac shore road toward Richmond is Woodbridge, named from the highest trestle on the road, which here crosses the turbid mouth of the Occoquan 60ft. above.

It matters not how clear all the other streams in the country may be, this always looks muddy at its outlet, several miles below the Falls. The clay, which has been coming down for ages, covers its bed, and if the water was perfectly transparent it would still have that same appearance, that heart-breaking yellow with a dash of red. Last summer at the end of the long drought it threatened once to nearly clear, and the local agent at the little station above took a boat under the high bridge, and skittering a spoon, caught twenty-seven fine, large-mouthed bass up to 4lbs. in weight. Such a thing had never happened here before, either that the water was in condition to permit a bass to see a surface bait, or that any one should try in this impossible place for bass at all, especially with an artificial lure. But the last twelve months have developed several progressive anglers in this vicinity whose success and local fame thereby acquired has made them converts to advanced methods.

At the station the angler bound for Occoquan village, where the fishing begins, is met by the host of the only inn with a "fix," as any light vehicle is called here, and a not too pleasant drive of 2.65 miles over a hilly, unkept road brings him to the hotel.

For some unexplained reason, though only a few feet above the river, which flows at the foot of the street, a few rods away, we have never found a mosquito here at any season.

The little village is nestled among the hills with hardly a rod of level street, but somewhere up or down the valleys there seems to be always a breeze, and we have found it altogether so comfortable as to have grown quite fond of the quaint old town, the inn and the motherly landlady who has kindly cared for us so many times.

A mile stands a little way up the river, and past this we climb from the street, up some rude steps, over the

race, in its last plunge to the wheel, and walk for a half mile up the path on the race bank, plastered against the face of the side hill far above the river. It is beautifully wooded, and has long been a favorite picnic ground. The venerable steamer, the Mary Washington, in days long gone used to carry regular excursions here from the capital, but more fashionable resorts, with superior artificial attractions, have lured the crowds in other directions, and on our fishing days this is always matter of self-congratulation to us. We reach the dam, and here the fun begins. If it is during the spring run of fish, we clamber out over the huge granite ledges and peer cautiously over the edge into the shallow basins in the rock below, where the waters are tumbling with a roar and scattering into millions of bubbles. Here we nearly always find a bass or two and hundreds of mullets a foot long, for as there are no fish stairs over the dam, this is the head of navigation for them. In the pools a little further down the natives and professional fishermen, with long-handled hoop nets, dip bushels of shad, herrings, mullets, lampreys and large-mouthed bass.

Bass as a rule are not migratory, but the efforts the gravid bass make to get up this stream, in company with and dipped in the same net with herring and shad, seem convincing evidence that, with all other life, environment would change an otherwise fixed type. The Potomac gets brackish as far up as this, and while the adult bass thrive below, they evidently prefer sweeter water in which to spawn. That they find some place good enough is easily established by the fact that increasing quantities of young bass are taken here every year. The bass above the Falls are mostly small-mouthed, but lately some large-mouthed bass have been introduced above, and both kinds may be expected throughout its course hereafter.

At low water one may cross the river on the ledges in scores of places, and easily fish the whole stream, but at ordinary stages only one side of the great pools may be reached, and fording is only possible at one or two points.

Wolf Trap, Shoal and Sandy runs, with one or two smaller tributaries, are feeders, too small for bass and too warm for trout.

Our usual trip is a five-mile fish up the river and back again, devoting most of the time to favorite pools. One trip our host drove us twelve or fifteen miles, a round-about road to a point on the stream far above, and we worked down; but there was so much new water and so many new rocks that we were wofully tired at night—one of the party, indeed, in a state of collapse before we reached the inn.

The pedometer only registered fourteen miles, but it felt like forty. There are places where you walk a full long to advance a rod, and the stones are piled in such confusion as to resemble nothing so much as a worked-out hydraulic mine. It takes effort, but it is worth it. There is no house in sight; you may hear a wild turkey call, and when they are within hearing the maddening crowd is not apt to disturb you.

Our first year here we caught a few bass on any but a black fly, raven, crow or hawthorne. The next year the Parmachenee Belle was so much more successful than anything else that we would have risked a trip with no other fly in our books.

This last year the water never came into condition, and our fishing was mostly done in lakes, where the Yellow Sally was the only certain killer, though silver tinsel on any fly seemed to make it more attractive for the pickerel.

We are not close enough students, or at any rate have not stumbled on any plausible explanation, why one fly should be better one year and some other the next, but we are firmly convinced it is true in Potomac waters. We use two flies, and when we catch all our fish on one pattern cannot resist the conviction it is something more than accident. We certainly tried a hundred flies last year, and as certainly caught a score of fish on the Yellow Sally to one on any other fly, and this whether it was used as a dropper or at the tail of the cast; whether bass or pickerel; from early spring to frost; with the water clear or cloudy.

Experience has established a fact; some Newton must formulate a theory of explanation. We have seen the apple fall, and that's all we know about it.

In one particular our experience was different from that of Cholmondeley-Pennell, of blessed eyed-hook fame, who says: "For some reason which I have not succeeded in fathoming, the yellow fly always seems to kill best in the position of dropper or bob-fly." We found it equally as good as tail fly, and as either better than any other, all of last season.

But to return to the dam. This has been until now the dividing line between the small-mouthed and large-mouthed bass in this river. Some thirty years ago a consignment of bass from Cumberland was sent around by the Relay and Ellicott's Mills through Washington for the Kanawha River. On arriving at Clifton it was noticed that lots of them were dying, and at the bridge this side of Manassas so many were found to be dead that the intelligent engineer took the responsibility of dumping them into Bull Run, and thus Occoquan was accidentally stocked, for which we are not yet done thanking that engine driver.

The lower river was stocked with large-mouthed bass from Illinois, at least one consignment of which was discharged from the High Bridge on to a thin skim of ice, which deservedly lost the attendant his job.

Bait fishers find their best sport among these fish of the lower river, at the Mullet Hole and other pools below the Falls. The water is deep, the fish move about, and the still-fisher may spend his day on any of the great rocks with a fair chance of success. But the fly-fisher goes above, and from the dam up every pool may harbor a giant, every stone may hide a hungry bass.

Bass may be found in very shallow water, hardly enough to cover his dorsal, but he will always be in easy reach of some big pool. Our favorite spots are the Big Rock, a half mile from the dam; Selectman's Ford, a mile beyond, and the Rapids, another mile further. But the bass are everywhere—only as we have taken most at these points we like them best. A single fly has captured nine fine fish from one of these pools at the Rapids, and such a record will endear it to the heart of

the angler who owned the fly, the one lucky enough to be a witness, and indeed to any sportsman not too incredulous

HENRY TALBOTT.

Among the Fly-Casters.

THE nine days of fly-casting which ended on Jan. 22 were very large days for most of us who are interested in that sport, for it was a sort of reunion of those who took part in similar events in Central Park years ago. I saw each of the seventeen contests, and judged, or refereed, in the afternoon, part of them, and each day there were dozens of old friends who dropped in for that occasion only, as well as those who sat out the game; and my arm felt sore from handshaking before the tournament was half done. Of course I enjoyed it beyond measure; but I don't want to be President of the United States and have to shake hands with a procession not of friends, but of uninteresting people, as he does, and I reached that conclusion on the evening of the third day. At least, I resolved that if I accepted the nomination for the job, it would be upon a platform of "no handshakes."

The first contest was black bass casting, open to those who never cast more than 75ft. The distance had a charm for the committee, for when there was a limit of distance, as on Jan. 14, 8 P. M.; 15, 3 P. M., and 18, 3 P. M., it was open only to the 75ft. class. It struck me that a class for those who have never cast 60ft. would bring in a new lot of young casters. Of course there must be a limit in some classes in order to keep out the experts who have won in former contests, and I would suggest that next year the committee publish the records of all men who have public records. The question of records came up when one man entered for a class, and the committee very unwisely referred it to me for a decision.

"Where did he make a record?"

"At the Club."

"Was it 'open to all,' or merely a club tournament?"

"Just a club affair, but it was published in FOREST AND STREAM."

"Then, gentlemen," said I, assuming as judicial a look as I could do without a wig and a make-up box, "the man is entitled to enter here. A club record is only valuable for club purposes, and is a private record so far as we are concerned. The Central Park tournaments, the Chicago, and other tournaments which are open to the world, are the only ones which we can recognize. Yesterday in some practice casts Reub Leonard cast 115ft., but it can't go on record, and if we attempt to keep records of all club contests, even though some are reported in FOREST AND STREAM, we will probably miss many, and have more on our hands than we can get off with all the soaps which the magazines advertise. As you have left this question to me, I will decide that only the contests which are open to all are public records."

This was the greatest effort of my life, and after its delivery there was such apparent exhaustion that my old friend, T. B. Stewart, applied some restoratives and the game went on.

The casting took place on a platform made over the first tier of raised seats, and was about a dozen feet above the main floor. The great Garden is roofed by iron arches made in the usual truss form, with supporting columns on the side. At 80ft. from the casting platform a column stood, and Reub Leonard was practicing with a frog for the coming bait contest, and gradually getting the batrachian a few feet further at each cast, when, nerving himself for a supreme effort, he landed the frog over the arch at 80ft., and fully 40ft. above the tank! If there had been no ironwork there, that frog would have gone through the upper tier of boxes, and only stopped at the eastern wall of the Garden. When Leonard cast in the bait contest on the evening of the 19th, his 5 casts were: 97, 88, 106, 87, 82. A man can always make greater practice casts than he can in contests. Reuben won, and the best casts of his 4 competitors were: Goodsell 95, Levison 92, Peet 86, Bellows 79. Last week I scolded the committee for complicating this record with one for accuracy at 60ft. and adding points for accuracy with distance. Under the rule the winners were: Leonard, Levison, Bellows, Peet and Goodsell. There should have been two contests.

A lady said to me: "I came up to see some gentlemanly sport, but this is horrible."

"I beg pardon, madame, but to what part of it do you refer? Is it to the delay in getting entries and the consequent lack of promptness in calling the events at the advertised hour?"

"Not at all! It is to the casting of those frogs, and while I am surprised to see men who appear to be gentlemen engage in such a barbarous contest when they are not fishing, I wonder that the Cruelty Society does not stop it. How can you do it?"

Leonard's frog had somehow been brought down from its lofty perch, and I brought it to the lady. "Madame," said I, in my society voice, "if you will please look at this frog, you will see—"

"But I do not care to see the poor, mangled beast; take it away."

"I was intending to add, that you will see that the frog is made of rubber, and the Cruelty Society—"

"Oh, thank you ever so much; now I will enjoy the contest this evening."

I had said to Mr. Thomas B. Mills: "This practice on the tank sometimes scares a man from entering the contests; he sees what the other fellow can do, and declines to enter."

"That's one point of view," he replied, "but the people come up and sit in the chairs and are interested in the practice, as you see. The management grows because there is no more money coming from entries, but they entirely overlook the money taken at the door from those who only come to see the casting."

Mine ancient antagonist, Mr. W. C. Harris, came up, and after shaking hands, as the Marquis of Queensbury rules require, said: "Fred, let's you and I go on the platform and have a friendly set-to; I believe that I can beat you."

"No doubt of it; but I will cast with you for a cold bottle, and I'll pay for it whether I win or lose."

That seems to be a tolerably fair offer, but many generals have lost battles because they did not grip the key before it was turned in the lock. Harris merely said: "We will talk about that when the Press contest comes on." For a score in this contest, see the report last week. I withdrew after a couple of casts.

The platform for the casters was about 4ft. square and 1ft. high, as I guessed it, and it suggested the old controversy about the advantage of an elevation. In the old days of great records in Central Park, our English brethren, who were astounded at the records, thought that the elevation was a great advantage. A consultation with Leonard, Hawes, Mills, Levison and others resulted in their united opinion that they would as soon stand on a level with the water, if that was the rule. Reub Leonard said: "There is no advantage in an elevation; your cast is against the resistance of the air, and that's all there is in it."

I suggested that next year a contest be held in lake-casting, where the caster shall sit as in a boat, and it was approved. The late Reuben Wood once challenged Harry Prichard to cast in that manner and keep his elbow on his knee, as we sometimes do for casting short distances; but the trial never came off.

A friend asked: "How is it that the records of the experts now exceed their scores of ten years ago? Is it improved rods, practice, or indoor casting where there is no wind?"

"Wind," I replied, "often helps a cast as well as hinders one, and as for indoor casting, watch that man on the platform; he does not snap off a fly on the back cast, in fear that it will catch in the grass behind him. He gives it full time to settle down on the floor, from which it is easily lifted. If there was water behind him, he would be careful about letting 60ft. of line into it, for he would not lift it and make such casts as he is making now of 90ft. To lift a line from water and from the floor are very different things. It is not the absence of wind that makes the improved records, although the floor behind the caster may help in a way; but there is another reason."

"What is it?"

"Improved casting; for there has been no marked improvement in rods within the past ten years. In our old Central Park days the trick of shooting the line was hardly known, and while Leonard, Hawes and Mills did a little of it, they had not perfected it, and few attached any importance to what they did with their left hands."

My friend thought a moment, and then remarked: "I know the old Patrick's Day song which had for a chorus:

'T's down Broadway I marched so gay,
Wid Cornelius, Barney an' Pat;
An' the geurils would cry, as I passed by:
Will you ever shoot that hat?"

"And I've heard of shooting rapids and shooting craps. Well, go on; I'll bite at your bait. What is shooting a line?"

"My dear boy!" (he is some months younger than I, and months begin to count on both ends of a fellow's life) "there is neither bait nor shot on the line when an expert fly-caster shoots it. There goes Hawes to the score. Watch him. Wait till he gets out about 80ft., and see him shoot the line. There! After a cast he pulls in about 10 or 15ft. with his left before he lifts the line from the water; he retrieves, and has that much less line on his back cast. Now, as the line is hurled forward, see how his left hand lifts the line from the floor and it is shot through the rings; a portion of line which never went behind him. That is shooting the line, and is quite a late practice, and is perfectly legitimate. It differs, of course, from shooting craps, rapids and old hats, as much as those things differ from each other."

The ladies' contest pleased all the old boys. It is a neat, clean game for ladies, and I dearly love to see a woman handle a rod, but am a little shy of her when she takes to the gun. It may be womanly to shoot—it is womanly to fish. The distinction may be a fine one, but it is based on the difference between the killing of animals with cold or warm blood. I could not love a woman who could kill a deer, and to better illustrate the feeling I will tell you a story. Two friends stood at the roadside when a man went by, driving a hard-headed, high-spirited horse which taxed his strength and skill. Said Jack: "That's more'n I'd want, to drive that hoss."

"Oh, I dunno; I know a woman that ken drive that hoss."

"That's all right, my boy, perhaps she can; but I'll tell you—I wouldn't like to marry a woman that can drive that hoss."

But fly-casting is really, from my bench, a sport suited for womanly women, and next year let us hope that there will be more entries in this class, or rather in several classes, for Miss Leonard's cast of 73ft. will scare many, and she should go into an expert class. The cast of 62ft. by Miss Stoddard was a good one, long enough to catch a trout from the farther side of an Adirondack spring-hole in July; and she was roundly applauded for it, and Mr. H. W. Martin presented her with a reel in token of her skill.

There was one feature of the Exposition which longer lingers in memory than some others. Mr. Robert B. Lawrence was asked how he enjoyed it. He shrank his thought beneath its dome, and after concentrating it, replied: "The fly-casting is the great attraction, with its gathering of old friends. We miss, however, the silence of the Harlem Mere, in Central Park, because when that blaring brass band is not tooting, and its members go out to beer up, there is another thing, just opposite the horseless carriage, that wakes up, and that is a horseless piano, which iterates and reiterates the same old tunes over and over again. It goes with a spring, or like a chainless bicycle, and if by chance it stops before the band begins again, we get a chance to hear the moose-call, the only melody that is to be found in the Exposition."

An Adirondack guide, who, having no moose in his region, and consequently not caring for the moose-calls from the Maine camps, said: "I think that the moose-call is the most mournful sound I ever heard, but I love that band and the piano."

A moment of silence fluttered over the Garden; even the "gramophone" had ceased to torture that truly pathetic song, "Massa's in the Cold, Cold, Ground," and I asked the veteran, H. L. Leonard, to give us a moose-call on a rolled programme. He did, and several moose hunters declared it to be the best they ever heard. Mr. Leonard used to live in Maine, and could and can yet call moose with the best of them.

The switch, or "Prichard style" of casting came on. (In honoring Harry they should not have put a "t" in his name; but that is a minor thing.) This cast is well known in England under different names. It is the most valuable cast for an angler, because it does not need that he shall swing his line behind him more than 20ft. But we have proceeded on the old lines, and have not yet got beyond the old rules that a line must be "retrieved." There should be no class for "switch casting." A man should be allowed to get his line out in any way that he can do it best, without restriction. If the object of fly-casting tournaments is to develop practical fly-casting, then let a man use the best method; if it be to retrieve his line and throw it as far behind him as he does in front of him, then the shooting of the line should be barred. But why should a line be retrieved when a switch cast will send the fly where it is needed?

The only reply that seems possible to this question is the conservative one of: "That is the way we used to do it." Now, when we are fishing we do the best we can; we retrieve or we make the switch, or "hoop-snake cast"—and it is the best cast in the business. What matter, as long as we get the fly there?

And now comes the question of a man holding the butt of his rod in his sleeve. In a class open to all who have never cast over 96ft. Mr. Brandeth cast 94, which would have won first, but a protest was entered that he held the butt of his rod inside his sleeve, and there was much arguing as to the regularity of such casting. The judges were not agreed, and it was left to the referee, who ruled that the cast was not regular. I did not agree with him, for these reasons: Other men have cast in this way, and there was no protest. In actual fishing many men hold the butt of the rod in that manner, and if it helps a man, let him do it in order to get his best record. Thomas B. Mills said that he could only cast in this way, because his wrist is weak, and added: "I only put the end of the butt in my cuff, while Brandeth had it up his sleeve to the elbow." Mr. Mills said it only helped in picking a long line from the water, while Mr. Cooper Hewitt thought it helped on the forward cast. It is certain that there is no rule against the practice, and I don't think there should be one, although Mr. Devine, the referee in this case, said: "If you allow that, you might allow a man to hold the butt by a strap on his arm." It surely helps a man with a weak wrist, and enables him to cast against powerful men like Reuben Leonard.

Our English friends at first discredited our records, until Reuben Wood and Thomas B. Mills went across the damp spot which separates us, and cast in their tournaments, and then they claimed that we used rods that were made especially for casting, and which were good for nothing else. Messrs. Hewitt, Hawes and Leonard each used several rods, and surely the contest on the afternoon of Jan. 21, where "the rod must not exceed 40z. in weight," in which the record was: Leonard 92ft. 6in., Hewitt 90, Hawes 88.6, Bellows 81, and Goodsell 76ft., cannot be called rods especially made and good for nothing else. Many men call a 40z. rod a toy, and it was wonderful work for toys. The next day Leonard cast 101ft. 6in. with a 50z. rod.

The wind-up of the tournament was grand. Six entries of the best distance casters, with Leonard to come last, in the hope that he would beat all records with a single-handed rod, and he did. When about half of his allotted five minutes was gone he made the tremendous cast of 120ft., and the enthusiasm was great. Men cheered and shook hands with him and with each other. The world's record was beaten! The rod with which he did this was 11ft. 7in. long and weighed 10½oz. I saw it weighed and measured.

Speaking of rods, I have several, the lightest being a split-bamboo of 6oz.; but my favorite is one 10ft. 9in., weighing 10½oz., and that is heavier than many stronger men use to-day.

FRED MATHER.

Boston Winter Sports.

BOSTON.—The little red flags are in order, and pickerel fishing has taken a fresh start. In the first place there has been some glorious pickerel weather for January; the sun bright, with a south wind, enough to make any country boy hate to chop wood or go to school. But little snow on the ice in this State has made it easy to reach the pickerel grounds, and on some ponds the boys have taken their skates along and taken up the time in graceful curves while waiting for the little flags to fall. Live bait has been at a premium in the vicinity of many of the best pickerel ponds, while here in Boston they have been hard to get at any price, either because the usual quantity was not preserved in the fall or because of an extra demand. Oren Smith and W. H. Clark bought a whole bucket of shiners the next day on a pond up in New Hampshire, but the morning they started they found their bait all dead. They went with the dead bait, however, and returned with a dozen good pickerel. They believe that they could have easily doubled the number with live bait. The Sudbury River, the Charles River and the Concord River each have been considerably fished for pickerel of late, with some good strings. Mr. Oscar Hosmer, with Mr. Doane, of Newton Center, are getting interested in pickerel fishing, and with some new rigging they will try the Charles and some of the ponds near at hand. Mr. W. J. Donovan has just returned from a trip to Winnepesaukee and the pickerel ponds in that vicinity. He had good weather and plenty of pickerel. The ponds in the vicinity of Templeton are being well fished. A Boston fisherman was up there the other day and caught a fish 13in. long, his only fish for the day. It had a square tail and red spots. The fishermen called it a dace, but he was careful to conceal it under some brush, so that the other fishermen on the pond should not see it. He says that the fish was nearly dead when taken from the hook; no good would have

come from putting it back into the water. It is fair to presume that a great many trout are thus destroyed by this ice fishing, though it is illegal to catch them. They get upon pickerel hooks baited with live bait, and very honest is the fisherman who will return them to the water, especially if they are killed in being taken.

Mr. Walter L. Hill has just returned from his winter shooting trip to the home of the Ragged Island Club, Currituck Sound. In the shooting party were also Mr. C. A. Woodward, of Norfolk, and Mr. Leroy Davis, president of the club. They shot for several days, getting canvasbacks and plenty of other ducks. Mr. Hill thinks that the Currituck Sound shooting has improved under the better protection including the "rest days," when nobody shoots, giving the birds time to gather! On the rest days they went across the Sound over to Creed, Va., for quail shooting. Mr. Hill says that the shooting was the finest he ever dreamed of. It seems that the section has been under special legal protection for some time, and that the close time is just off; doubtless one reason for the extra good shooting. Mr. Hill shot a swan, his first one, at the club preserve, and taking in his success with quail over two excellent dogs he is greatly pleased with his trip.

SPECIAL.

Sundowners in Maine.

ON the afternoon of Aug. 23, 1897, four members of the Sundown Fishing Club left New York bound for eastern Maine. Together they had fished the streams of Sullivan county, New York; the lakes of the Dead River country in Maine, and the Peribonca River in the Lake St. John region of Canada, and the Belle River country, also in Canada. They had camped out and gone through all the experiences of rainy weather and black flies, and had traveled many miles all for the hopes of one day finding a place where trout were plentiful and of good sizes. Some months previously one of Maine's guides had been communicated with regarding the prospects of sport, and in every answer he had said that he could promise good fishing. "But do not come until late in August, on account of black flies." As we had all had experience with those pests, we impatiently waited through the summer at our several homes, overhauling dozens of times our rods and flies, and all the impedimenta that an angler treasures, always hoping that a day will come when he can close his roll-top desk with a snap and once more seek the woods loved so well by all.

After a night spent in Boston, the next day found us journeying through Maine to Bangor; there we changed cars to the Bangor & Aroostook R. R., going through many miles of forest. Our intention had been to leave the train at Norcross, but the conductor told us that by continuing with him about a mile further we could find good accommodations at Griffith Camp, at North Twin Dam. So there we were dropped at about 5 P. M. We found good beds and bountifully supplied tables, and after a well-served supper it was a pleasure to smoke the pipe of peace before the large log fire in the office, to listen to Griffith's stories of the quantities of moose, caribou, deer and bears that were roaming the woods, only waiting to be shot as soon as October should come. Not many fish stories were told, although Griffith did say he thought some good fishing might be had up near Mt. Katahdin; and we four Waltonians had thoughts in our minds that perhaps we were in for our usual experience of being told we were either a month too early or two weeks too soon for the best fishing. So we turned in, not any too confident of finding the 2lb. fontinalis that we had always fished for, but never brought to net.

On the morning of Aug. 25, after we had got into our beloved old camping togs, our guides (five of them), headed by Ingsley Daisy, appeared and said they were ready to load canvas and camping truck on the little launch Gypsy, which had been chartered to take us through North Twin and Panadumcook lakes to the west branch of the Penobscot. The sail was a lovely one, particularly so to the four of us who had left the heat and noise of New York only twenty-four hours before, to find ourselves enjoying the fresh, cool, bracing air and the prospect of the wooded shores, and away in the distance old Mt. Katahdin raising his granite head above it all. After luncheon at the end of the first carry on the Penobscot, evening found us paddling our canoes up to Indian Joe Francis's camp at Debsconeag. We were welcomed by Joe and 40,000,000 mosquitoes, rather more than less. Joe says the mosquitoes come on snowshoes in the spring and go away the same way about Christmas. He has many marvelous moose and fish stories to tell, and has told them so many times that now he believes them himself. The evening of Aug. 26 found us in camp at the mouth of the Sourdnamunk stream. Good balsam beds had been boughed down in our tents, a fine supper had been enjoyed (and, by the way, brother angler, if you should ever go up Norcross way and fully appreciate a good cook, try to secure Charley Priest, who can cook trout to the nicest kind of a turn), and 9 P. M. found us buttoned into our sleeping bags and snuggled down for a comfortable sleep, many miles away from railroads and civilization, and too far away from our creditors for them to bother us.

Next day we had early breakfast, for a long carry was to be made up stream, where our permanent camp was to be. Everything was to be toted, so it meant an all-day carry for the guides. We sports trudged along the tote road through the grandest of woods imaginable, seeing an occasional deer, but hearing no sound except the stream and the chattering red squirrels, who resented our visit to their homes. About three miles up stream is a lumber dam, and under that dam are deep pools with many trout in them—broad-shouldered, square-tailed fellows, 14 to 18in. long, that lie there in ranks, headed up stream, in water as clear as crystal and as cold as springs can make it. Of course, rods had to be put together here, leaders put on and the old reliable Beaverkill & Wickham's fancy fly tried for a first cast. And what a pleasure that first cast was; it seemed as if the trout had been hungry for just that cast of flies all their lives, and had only just found them. You could see them rush for them two or three at a time; every cast secured a fish, and a fine one. I will not say how many we killed

that afternoon. You would call the report fishy, and brother anglers would be envious. We reeled up after two or three hours of perfect sport, and found, on arriving at the end of the carry, that our men had made us a fine camp and that dinner was ready, which was followed by a trout supper at night that would have made old Epicurus wish he were alive again.

Here we were in the heart of Maine's beautiful wilderness, about a quarter of a mile from two of the prettiest lakes that lie out of doors—Dacey Pond and Rocky Pond. Lots were drawn very early next morning to find who should fish, which pond. To my tent-mate and myself fell the lot of Rocky Pond. Canoes were shouldered by our guides, and a tramp of a quarter of a mile through the woods brought us to Rocky Pond just at daybreak. Imagine a lake three-quarters of a mile long by about one-quarter wide, deep and clear, with granite and gravel bottom; surround it all with a dense forest, with Mt. Katahdin in the background as guardian or sentinel, and you have it. But, best of all, imagine trout breaking everywhere over the lake—not little fellows, such as you are only too glad to bring to creel along Sullivan county's Beaverkill, or on the Neversink and other Catskill streams, but big fellows, 1lb. to 2½lbs., and all good fighters, fish that give your rods all that they can do to kill; and any quantity of them, so many, in fact, that one stops fishing after a while, so as not to kill for the mere sake of numbers. Such a morning comes to very few anglers. I know it never had come to me before. On our return to camp we found that the others had had fine sport at Dacey Pond, killing not so many trout as we did, but bringing in larger fish from 1½ to 2½ and 3lbs. Dacey Pond fish are larger and fewer than those caught in Rocky Pond.

We had a full week of this, with no rainy day to break the charm, fishing early morning and evening, loafing and looking at the deer during the middle of the day. Then we turned our faces homeward with regret, feeling that after three years' wandering we had at last come upon a veritable fisherman's paradise. Everything was as the guides told us it would be. They promised us fine fishing and gave it to us. The weather was perfect all the time. No one in camp grumbled a bit. The food was all that could be desired, and the guides were hard-working, willing and capable men who earned what was paid them. Ed York, Ingsley Daisy, Charles Priest, Jack Hathaway and Alvah Reed can be found at Norcross or Medway, Me., and the man who engages them as guides will be pleased with them. New York saw us again after about two weeks' outing, more than satisfied with our trip, and certain that there is a place where any fair angler can catch more large trout than he will know what to do with; and he will lay up a stock of good health that will more than repay him for the expense. We found the Beaverkill & Wickham fancy fly the most killing. I hope that 1898 may see me again allowing my line to fall in the pleasant places about Rocky Pond, with the same pleasant companions, and that once more we may each fish and talk and smoke together in the earnest wish of one of the

BIG 4 SUNDOWNERS.

An Appeal to Correspondents.

THE following extract is from an editorial which recently appeared in the New York Sun:

"Strange as it may appear to the uninitiated, it is in small streams where the water is clear that the long cast is necessary. The angler who moves along the banks of a stream, keeping close to the water, is bound to come home with an empty basket. Trout are as wary as snipe, and the sight of a fisherman or any other man sends them to cover with lightning-like rapidity. The cunning and artistic angler always stands away back from the stream and casts a long line, which must fall upon the water as gently as a hair from a lady's locks."

I have been a close reader of FOREST AND STREAM for many years, and am one of those cranks who read everything written about angling. I have even followed the iridescent scintillations of that genius who wore out the English language in describing the fishing of the North Shore; but I have never read anything about trout anglers standing rods away from some small stream and casting their flies over the intervening shrubs, trees or whatever it may be, so that the fly may alight upon the water without the trout seeing the angler. Why is it we do not have some descriptions of this style of fishing? I call upon contributors to FOREST AND STREAM to shed some light upon this important matter. A few illustrations thrown in, showing how the angler does it, would add greatly to the value of the contributions.

ABERDEEN.

ST. LOUIS, MO.

American Fisheries Society.

CAPE VINCENT, N. Y., Jan. 24.—*Editor Forest and Stream:* Will you kindly permit me to use the columns of your valuable paper to correct a mistake which I made in a contribution sent to the Florida Fisheries Congress.

The article stated that the American Fishculturists' Association (now the American Fisheries Society) was organized in the year 1871. This is a mistake. The association was organized Dec. 20, 1870, at a meeting held in New York city, and on Jan. 20, 1871, the secretary issued the first official publication of the association, being a circular letter addressed to fishculturists and fishermen, asking them to assist Prof. Agassiz in the preparation of his projected work on the American *salmonidae* by sending him specimens of live fish to study and to make drawings from. The first annual meeting of the association was held at Albany, Feb. 7, 1872.

Dr. Edmunds, then Fish Commissioner of Vermont, and the writer are, I think, the only persons now living who attended the meeting of organization held in New York in 1870.

LIVINGSTON STONE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

CHICAGO, Ill., Jan. 22.—Time was when fishing through the ice was thought to be a coldly virtuous pursuit against which nothing could be urged but lung balsam. Nowadays professionalism has taken hold of this ancient and honorable amateur method of taking pickerel and colds. At Minnetonka Lake, Minn., this week two market-fishermen at Brown's Bay, one of the arms of that great inland sea, caught 900 lbs. of crappies in four days with hook and line. The slaughter of fish has been a sad one. The State plants fish, for instance, crappies. The market-fishers locate the crappie beds and catch the schools out to the last fish. Thus also with the pike and bass. The result is that Minnetonka is not so very much of a place to go fishing in the summer time, not nearly so good as it used to be. The loophole in the law does the business. It is legal to use one hand line through the ice on Minnetonka, hence all the market-fishers use all the set lines they want. Again, up in Lake Winnebago, in Wisconsin, another inland sea whose fish product far outweighs that of Minnetonka, the ice fishing matter meets us. Warden Johnson summoned the county sheriffs to aid him. He burned many miles of nets. He sent one offender, Chas. Lucas, to prison, then went to his house and cut up and burned his fishing smack. Relentlessly the war was waged on those who had been relentless—the prettiest fight in the whole West, where no "concessions" were made, where neither side asked quarter, but both got together and scrapped lovely—and what is the result? The market-fishermen take to night fishing with set hooks and lines through the ice. Their catches are very large—and very legal too as it happens. So long as there is a fish swimming unsold our friend the fish dealer wants him and must have him.

It is all right that fish should be caught and sold for food, for there will always be people of a certain class who care to eat soaked and flabby fish such as you buy in the markets; but there are two systems of market fishing. You may see them both employed in the Lake of the Woods, which is half in the United States and half in Canada. Here the Canadians caught all the sturgeon they wanted, and used nets of 4½ in. mesh, up to 1893. The American fishermen began to use pound nets of 3 in. mesh, which killed many fish smaller than the sturgeon. In 1895, 258 pound nets were in this lake, to say nothing of gill nets. Caviare is 75 cents per pound now and the sturgeon is traveling the same road taken by the wild pigeon. The destruction of game fish is equal. It has been proved that the largest waters can be fished dry. The best stocked covers can be shot out, not in a neighborhood only, but in a State, in a region. Why then do we not go to the barnyard and put to the axe all our chickens, selling them at once for the immediate market. Why set eggs under a querulous hen, having an eye to other fowls and other days of market? Let us abolish the setting hen! Let us realize on veal. Let us forgo the thought of seed time altogether, it is so annoying! Let us continue only to harvest! That is the American spirit in regard to fish and game. I am no Canada-phobic perhaps, but we must all admit that the Canadian view on fish and game has been less marked with generous lunacy than ours.

From such somber themes turn we to merrier and more lightsome matters. Thus, I have news of a great draught of bullheads up in Wisconsin and Beaver Lake (many miles from Kekoskee), where last month one express company carried to market 20,000 lbs. of dressed bullheads, and this month, in ten days, as much more of this succulent product, or some twenty tons of prepared, expurgated, or smileless bullheads from one lake. And bear in mind that the bullhead, shorn of his smile, is foreshortened about one-half. And oddly enough too methinks this is all happening on the lake where, a couple of years ago, the market-fisher and others wanted to save the lives of the bullheads from freezing to death in the lowered waters of the lake—such saving to consist of their seining, skinning and shipping. At the time I said that we might give the benefit of the doubt to the bullhead and let him wrestle with his own problems of ice and low water. Give the bullhead the benefit of anything, even of a doubt, and he shall amply repay you; as witness twenty tons of him smileless, but toothsome.

But about laws and problems and things, how is the following for an explicit editorial statement? It is from the editorial page of our valued contemporary the News, of Geneseo, Ill., which does not believe that our fish laws should be "tamely submitted to" by the market-fishermen of the State, and approves of the recent organization of such fishermen to fight the law (I suppose the law is "unconstitutional"). The News says in part:

"They never bite a hook, these buffalo fish that form 90 per cent. of these food fish. But they must be let alone, because there is here and there a board of trade man or some spindle-shanked dude who wants to fish with a pole and line for supposititious fish that no longer exist in any appreciable numbers in our streams. Men will supply the farmers and citizens with good fresh fish every summer for 5 cents per pound. They are good and wholesome and a relief from a meat diet in the hot weather. The people want the fish; but the law says that they can't have them because a few dudes want to play the waters with hook and line, men who do not own the land nor have any financial interest in the rivers and ponds.

"It is a fine thing, isn't it, when the owner of a sheet of water, the man who bought and paid for it, and who pays taxes upon it, is forbidden to take his own fish, that some spider-legged dandy from Chicago can loll in a boat one or two summer afternoons and 'angle'?" The stranger, the man from town, who pays no taxes on the property, gets the benefit of it.

"Now these fishermen, mostly men along the Illinois River, will meet in Peoria and organize for their own protection and the sensible protection of fish. A good many of these men are in the business for big money, and they have good big money to put up if necessary. All they want is sensible legislation."

I do not know the name of the editor of the News, but he writes with an earnestness which carries with it con-

viction as to the size of his own legs if not of the size of his anything else. I shall not accuse him of small-mindedness, because that wouldn't be polite to a member of the perfish. To the contrary, I should say he very likely had about a 28 in. calf to his leg and was disposed to be proud of it. He is not the first man to mistake fatty substance for argument-producing tissue, and so may peace go with him. And yet, speaking of legs—but perhaps it were as well not to institute odious comparisons.

Over in Grand Rapids, Mich., they have this week raised the salary of the county game warden from \$1 to \$150. This is encouraging, as on a salary of \$1 a year a man could not travel or improve his mind as he should in these progressive days.

Over in Ohio the anglers' club known as the Middle Bass Club has this week concluded to fight the State law which allows gill nets to be set in the shoals in Lake Erie, where the black bass angling was formerly so fine, near Middle Bass Island. Hundreds of tons of black bass were netted last year.

Over in Iowa State Warden Delevan has appointed H. D. Carbee deputy at large, with headquarters at Des Moines. Central Iowa is a country that I know like a book. I have seen its history from plenty to poverty in matters of fish and game. If Deputy Carbee will stop seining, dynamiting and all that sort of thing, so that a man can catch one bass a week in our old fishing stream, the crooked and once prolific Skunk River, he shall have sincere thanks from one who knows every stump of it for many miles. We used to catch fish there.

In Michigan the spear is legal on inland waters, it seems, during December, January, February and March, the time such waters are usually covered with ice. "Through the ice" will be held to mean "through the water" also, as the law is held to mean that the spear may be used then, ice or no ice. About the last two weeks in March, when the spawning bass begin to run, won't the spearers be busy!

Warden Osborne, of Michigan, says that over 3,000 miles of nets are in use in Michigan waters. Enough to fence in the State.

As it is in Arcadie.

Jan. 29.—At Arcadia, Wis., the market fishers have been living in a blissful dream of simple, illegal delights, until last week a harsh German warden by name of Chris Voeght jarred them out of their dream. Some of the ice fishers had runs of sixty to 100 set lines out, but now they have more.

On Winnebago waters, also in Wisconsin, Warden Johnson had a little sleigh ride last week. Results: sixty-four gill nets, twelve spears, 700 lbs. of fish and five law-breakers.

Out in Iowa, on the beautiful and once prolific lake called Clear Lake, such a thing as respect for the law has been long unknown. The Commercial Club, an organization of business men, has secured the appointment of Deputy Warden Jas. Price, who is expected to check the illegal practices of the past.

In Missouri the work of protection is great and growing. In December and January 118 convictions have been obtained in Taney county alone for violations of the fish laws. The White River, which was recently full of fish traps, has now been cleared out. In doing this the novel but efficient means was adopted of bringing action in the United States courts for "obstruction of navigation" of a navigable stream. When Uncle Sam gets after them the law-breakers are not so contumacious.

The Waterloo, Ia., Gun Club last week secured the arrest of Gillie Barnes and John Markham for spear-fishing, and will push the case to the limit.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Iowa Fish Stocking.

CHARLES CITY, Ia.—Beyond a doubt Gov. Shaw will reappoint Geo. E. Delevan, of Estherville, fish warden. The following figures show the good work accomplished in 1897. The marked success in the distribution of small fry was largely due to the new fish car constructed at this place last winter. Fish were sent: Spirit Lake 155,000, Okiboji 155,000, Des Moines River 250,000, Clear Lake 125,000, Maquoketa River 115,000, Wapsipinicon River 125,000, Buffalo River 63,000; total, 1,088,000.

November—Storm Lake 250,000, Clear Lake 125,000, Wapsipinicon 125,000, Clear Rapids (Cedar) 125,000, Waterloo (Cedar) 125,000, Osage (Cedar) 150,000; total, 900,000; grand total, 1,988,000.

The Cedar River at this place was overlooked this year; however, we are quite content with the 25,000 wall-eyed pike placed in our stream one-half mile below the city mills in 1896. No doubt the coming summer their presence will be "felt."

The bays, bayous and lagoons along the Mississippi have furnished nearly the whole of the output of '97, and best of all, a large percentage will be ready for the hook next season.

VANE SIMMONDS.

Florida West Coast.

TARPON SPRINGS, Fla., Jan. 22.—I see it reported that John Gomez, of Panther Key, celebrated his 120th birthday on Jan. 4. He and his venerable wife went to Everglade to attend a Christmas tree entertainment. Mr. Gomez is probably the oldest man in Florida. He and his wife are in excellent health, and have the promise of a long life yet.

I expect to start in about two weeks for an extended cruise south. I shall endeavor to call at Panther Key, and will inform FOREST AND STREAM of the result.

We are having delightful weather; the fish are biting well, while the hunters are getting good returns for their time and shells. Quite a number of deer have been gathered in by local sportsmen, and the visitors are well pleased with the quail shooting.

We have about recovered from our scare at the recent cold wave, and have concluded we were more frightened than hurt. Nothing but the most tender plants were injured, while most of the oranges had been gathered.

TARPON.

"The Same Gentleman."

From the Martinsburg (W. Va.) Democrat.

BETWEEN the hours of 8 and 9 o'clock on Tuesday night last people residing in the neighborhood of King and Raleigh streets were startled by a war of words between George M. Bowers and his brother, John S. Bowers, who are not on amicable terms. This wordy contest soon resulted in a fisticuff, in which a severe wound was inflicted by George M. Bowers upon his brother, extending almost from ear to ear. So severe was the injury that the services of Dr. Morison were required to dress the wound, as the injured brother bled profusely. No arrests were made.

This is the same gentleman who is a candidate for Fish Commissioner of the United States.

The Kennel.

Fixtures.

BENCH SHOWS.

Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.

Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.

March 15.—Northwestern Kennel Club's dog show, St. Paul, Minn. C. E. N. Howard, Sec'y, St. Paul, Minn.

FIELD TRIALS.

Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

F. T. A. Stake.

THERE were eight starters in the contest for championship honors in the Field Trial Champion Association's stake, which commenced on Jan. 24 at New Albany, Miss. The judges were Messrs. Edm. H. Osthaus and S. C. Bladley, well-known experts, who have officiated before most satisfactorily as judges of field trials. Mr. W. W. Titus had also consented to act as one of the judges, but owing to illness of some of his dogs he was not present. The competition was skillfully conducted, as might be anticipated under such experienced management.

It was decided that in the first series two heats would be run each day, for the reason that there was insufficient ground on which to run four heats in one day, and on the other hand, if three heats were run, the dogs running on the following day would be at a disadvantage when brought against competitors which had rested. By running two heats on each day, the dogs were brought together on equitable terms on the third day.

Tony Gale won first. He made a most excellent competition. He ranged fast, wide and with spirit. He found successfully, and his pointing had but little of the false work which so often has marred his pointing in other competitions. However, it may be mentioned that the cool and damp weather conditions were most favorable for good point work. He competed with great dash and industry.

The four dogs retained in the second series were the strongest competitors in the stake. Tony most effectually defeated Pin Money. He was more successful than she in finding, was sharper in his work on single birds, and ranged entirely on his own judgment. Pin Money at times in crossing his trail would follow it by scent till she caught up, then would cast out to the right or left some yards from him, keeping him in sight and guiding her range by him. Again she would work quite independently. She also much of the time was frivolous in her seeking, and her ranging was lacking in good judgment.

Cincinnatus Pride and Marie's Sport were fast and dashing rangers. Pride displayed pronounced superiority on birds. His last heat was run in part through some very unfavorable grounds.

We thought a final heat between Tony and Pride would have made a more definite conclusion.

The attendance of spectators was not large. Mr. H. B. Ledbetter, Mr. Edw. A. Burdett, Mr. Hobart Ames and wife, Boston; Dr. Russell and wife, Keene, N. H.; W. B. Stafford, the secretary; Dr. M. F. Rogers, C. A. Draper, and many local sportsmen.

The competition was conducted with rare skill. The dogs were handled quietly in most instances. There was a most commendable improvement in the professional handling as compared with prior professional events. It would seem that the day of scrambling and noisy handling is gone, for which all should be thankful. The noise and rush belonged to an old school which does not fit into the new conditions, hence the sooner the loud and constant bawling and senseless whistling is entirely discarded the better.

The dogs were drawn to run as follows:

Edw. A. Burdett's b. w. and t. setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), George Richards, handler, with Charlottesville F. T. C. Kennels' b. b. setter bitch Pin Money (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

Edw. A. Burdett's b. w. and t. setter bitch Ann of Abbottsford, George Richards, handler, with H. B. Ledbetter's b. w. and t. setter dog Marie's Sport (Gleam's Sport—Marie Avent), George Gray, handler.

Fred Kennels' b. w. and t. setter dog Tony Gale (Antonio—Nellie G.), D. E. Rose, handler, with Charlottesville F. T. Club's l. and w. pointer dog Tippoo (Rio Rap—Monterev), C. E. Buckle, handler.

Charles B. Pineo's blk. and w. pointer dog Young Rio Rap (Rio Rap—Pearl's Dot), George Gray, handler, with Ashford & Odom's l. and w. pointer dog Von Gull (Kent Elgin—Fanny V. Croxteth), J. M. Avent, handler.

This stake was for pointers and setters which had been placed in any public field trial. First forfeit, \$15; \$15 additional to start. Entries closed Dec. 15, excepting for dogs which won a prize in a field trial after that date. The prize was a sweepstake of entry fees, less the expense of judging. The heats in the first series were two hours in length; in the second series, one hour.

Monday.

The morning was delightfully cool and clear, the sun

shining bright, and all the weather signs indicated a warm day. However, toward noon the sky darkened, the atmosphere had a feeling of rain, and birds were difficult to find. There was but a limited number of spectators following the trials.

Cincinnatus Pride and Pin Money were cast off at 9:32. The horses flushed a bevy which one of the dogs should have pointed; Pin passed close by it. Pin pointed twice in the open; Pride backed; nothing found. Sent on. In the open field Pride, in attempting to locate a bevy which was scattered about feeding, flushed a single, then pointed the bevy. Sent on. Pin found and pointed three bevies. She roaded up wind on the last one and pointed. After she moved on, Pride took up the roading in the same places and pointed. He drew on and lost the trail also. Both dogs were roading on the back track. Pin further down wind found and pointed the birds in some light cover. Pin made one point on scattered birds; Pride made two. He showed greater steadiness of purpose and better judgment in ranging than did Pin Money. The latter followed him at times and seemed to be frivolous in her ranging, though finding well. Both went wide and fast. Pin outfound Pride in the search for bevies, and displayed steadiness on point. Both were going well at the end of the two hours.

An interesting trap-shoot, in which nearly all the shooters participated, whiled away pleasantly the mid-day hours.

Marie's Sport and Ann of Abbottsford were cast off at 1:50. Nothing can be said in praise of Ann's performance. She was unreliable and sloppy in her point work, and her range was poorly conducted. Sport pointed a bevy in open sedge; Ann went by him and pointed the same bevy. Ann pointed a rabbit and Sport backed. Sport flushed a single. Ann made two flushes on singles, one being made after she pointed the bird. Sent on. In sedge, the conditions being favorable for point work, Ann flushed part of a bevy and was unsteady to wing. A moment afterward she flushed the remaining birds. Soon she flushed a single. Sport dropped to a point in the open field; then he roaded to a point on the running birds. Ann further ahead a few yards pointed some of the same bevy. Sport did thus a fairly good piece of work. The find was Sport's. Sent on again in search of bevies, Sport found and pointed one; Ann soon after pointed on the same bevy. A lot of unfavorable ground was then worked without finding. Ann was tiring toward the close of the heat and her range and speed were reduced. Sport also was covering less ground and required ordering sometimes to keep him working outward. He dropped to nearly all his points. On point and back he was reliably steady. All Ann's work was done in a slovenly, unreliable manner.

Tuesday.

There was a heavy rainstorm during the night and morning. Torrents fell. There were signs of clearing up toward 10 o'clock, and a start was made for the grounds, which were found to be very muddy in places. A high wind set in later, the sun shone forth clear and bright, and the grounds dried up rapidly. Birds were found at times in fairly good numbers, but the finding in most instances represented diligent work.

Tony Gale and Tippoo began at 11:14. The heat was a very one-sided competition, Tony excelling in every respect over his competitor. His heat would have been one of remarkably good work had he not marred it by some false pointing. He first made a point and moved on. After ranging a while he made a good point on a bevy in woods, and next made four good points on singles; Tippoo made one. Sent on. After ranging awhile Tony was lost. After some searching he was found dropped on point, to which Rose flushed a bevy. He had not gone off the course to make the find. Sent on. Tony found and pointed a bevy nicely and Tip backed. Each got two points on the scattered birds. Tony next made two firm points, to which nothing was found. In woods Tony next flushed or pointed a bevy. When the judges reached him he was on point, but the birds had flown. Tippoo pointed a single bird. His range was middling and he had poor success in finding. Tony dropped on nearly all his points.

Von Gull and Young Rip Rap were started at 2:12, immediately after lunch. Their work was largely out of bounds and abounded in errors. Both were fast, staying out at their work, but they showed little interest in working to the gun. In the beginning Von showed unsteadiness on a single bird. Soon afterward he was lost in woods, and when found was pointing a bevy. His working alone secured three points on the scattered birds. Rip was worked on the scattered birds and he made a good point. The handlers were brought together and the heat was more formally resumed. Von flushed a bevy. Next in a wet bottom Rip pointed a single at the same time it flushed. Next Von flushed a bevy and Rip flushed a single. Next Von made two single bird points, Rip joining in one. Rip flushed a single. Sent on. In weeds, both dogs close together, a bevy was seen to flush close by Rip, and Von showed a bit of unsteadiness in one closely passing single bird. No part of the heat ran smoothly. There was more or less trouble in keeping the dogs to the courses. The point work in quality was partly good, but there were many bad errors in it. Neither dog was running in good field form so far as working to the gun and clean point work are concerned.

Wednesday.

The weather was cool and cloudy at the start, but soon the sun shone betimes, producing a comfortable warmth. The work was commendably good. All the dogs cast wide. There was a pleasing finish to the stake, in that the competition was well sustained in the closing heats.

Third Round.

Tony Gale and Pin Money began at 9:34. Both dogs ranged fast and wide. Pin following Tony at times instead of ranging independently. Tony pointed a bevy nicely and Pin backed. Sent on, Pin was lost for a few minutes. When found she was pointing a bevy well. Sent on. Tony made a firm point, Pin backed; nothing found. They were again sent on to search for bevies. Tony found and pointed a bevy well and Pin backed.

On the scattered birds Tony pointed a single nicely and Pin, in thick cover, made two points, presumably on footscent. In thick weeds Tony pointed a single and Pin coming in close by pointed the same single. The heat ended at the end of the hour with everything in favor of Tony excepting the matter of speed.

Cincinnatus Pride and Marie's Sport were cast off at 10:42. Pride pointed in weeds by narrow strip of cover; then he drew about, showing every sign of being on game, but he failed to locate. Sent on. A long stretch of unfavorable ground was worked. Pride pointed a bevy in cornfield, and Sport backed unreliably. Sport dropped to a point on a single in sedge. Pride pointed some birds of the bevy or a new bevy. Sport pointed a sparrow. Sent on. Pride made a good point on a bevy in pines; next he made a point on a single and Sport backed poorly. The dogs were ordered up at 11:43 to cross some unsuitable ground. The heat was resumed at 11:54. Sport dropped to a point on a bevy in open sedge; Pride backed after passing close by the birds and taking a circle about Sport. The heat ended at 12:12.

New York Show.

NEW YORK, Jan. 29.—In addition to the special prizes already forwarded you we have received the following:

The Poodle Club of America offers \$10 each for the best poodle bitch over 35lbs., and the one over 20lbs. and not exceeding 35lbs.; \$5 for best under 20lbs.; open to members only.

Mrs. C. F. Stead offers a cup for the best American-bred poodle dog (black) sired by Emperor, exhibited by a member of the Poodle Club.

The Brunswick Fur Club offers \$10 for the best American foxhound; open to all.

The American Pet Dog Club offers silver cups for the best sporting dog and best non-sporting dog, and a trophy for the best greyhound; open to members only.

William Gould Brokaw, Esq., offers four cups, value \$100 each, for pointers born on or after Jan. 1, 1892, the property of members of the Pointer Club. The cups, which will be known as the Brokaw challenge cups, are to be competed for annually at the Westminster Kennel Club shows, and must be won twice by the same exhibitor, not necessarily with the same dog, before becoming the absolute property of the winners. The disposition of the cups is: For the best heavy-weight pointer dog, heavy-weight pointer bitch, light-weight pointer dog, light-weight pointer bitch.

Mr. E. A. Woodward, of Middleton, O., formerly of Chicago, will judge bulldogs.

Feb. 5 is the date of closing entries.

JAS. MORTIMER, Supt.

Kansas City Show.

REGARDLESS of the controversy regarding the dates, the Kansas City Kennel Club will hold its bench show on the dates first claimed, i. e., March 15-18, and now has its premium list on the press, and it will be ready to mail in about ten days.

Besides a great number of specials, it will give \$1,568 in cash and an additional \$100, divided 50, 25, 15 and 10 per cent., for the agent or exhibitor making the largest number of entries.

While our judges have not yet been entirely decided upon, we expect to have Mr. James Mortimer, of New York; Miss Anna Whitney, of Lancaster, Mass., and Mr. James Graham, of St. Louis.

When we open the show we will have a cash guaranty and cash on hand of about \$2,000. It will certainly be plenty to meet all obligations, regardless of weather or conditions.

St. Paul has taken St. Louis dates, which will make up the Western circuit of St. Paul, Kansas City, Cedar Rapids.

A. E. ASHBROOK.

A Massachusetts Fox Trick.

THE East and West Longmeadow Fox Club has a limited membership of a half-dozen men and as many hounds. They have captured twenty-six foxes since October. Answering a question recently from the village blacksmith as to what the hounds were doing the day before on the railroad track, the Senator, one of the club members, replied: "We got a fox up soon after putting out the dogs at the foot of the hill by the sulphur spring. They started east on Mill Hills, but soon came back and on to the meadows and away over the river on the ice, while we kept them in hearing most of the time from the bluffs. Returning, however, an hour or so later, and being pushed pretty hard by the dogs, the fox—for he was an old chap and a cunning one—coming to the railroad again, took to the rail to bother the dogs and kept that course for more than a half mile without leaving a track in the snow, as far as we could discover. On the iron rail, you know, the fox leaves but little scent, especially after a train has passed over it. That is when you heard the dogs. They were just figuring out where the fox left the rail. The dogs found it themselves at last without being caught up by a train, as the old fox no doubt wished, and as we were afraid. That old fellow is now through with his little games. We got over on the river bank in his way and bowled him over just before noon, as he was making for over the river again, where he belonged. He was a fine, dark red fellow, elegant brush well tipped with white—would weigh a dozen pounds easy!"—*Springfield Republican*.

POINTS AND FLUSHES.

While running in the U. S. F. T. C. trials Pin Money injured her tail severely on a barbed wire, a wound several inches in length being made near the end. It was so serious that it was thought for a while that amputation of the injured part would be necessary. Her owners, on account of this injury, decided not to run her in the Continental Club's all-age stake and the stake of the Champion Association.

Mr. Charles Tucker's string of dogs became infected

with distemper at West Point, Miss., leaving only one of his entries free from the attack. As the disease might be conveyed to other competing dogs if he ran, he decided not to start. Count Gloster had a severe attack, but we are pleased to say he was improving, according to last reports.

The Verona Kennels have purchased Count Gladstone IV., the price being \$1,400.

Mr. John Davidson has been engaged to judge all classes at the forthcoming bench show of the Western Canada Kennel Club. Entries will be received by E. R. Collier, Hon. Sec'y, Box 562; up to Feb. 5. Everything promises favorably for a successful show.

The matter of correct detail in the French bulldog's ear bids fair to rank with such international matters as the Cuban rebellion, the sealing question, the annexation of Hawaii, etc. The French Bulldog Club has abandoned the Westminster Kennel Club to its fate, and the latter will now have to struggle along as best it can without the newcomers. The French Bulldog Club will hold a show of its own, where the ears will have the true conventional consideration. This function will be held at the Waldorf-Astoria.

Mrs. Hobart Ames, of Boston, and Mrs. B. Russell, of Keene, N. H., were enthusiastic followers of the trials at New Albany, Miss., they proving to be the better halves in their unflagging interest in the competition and resolute riding across the good and bad of the grounds. Some of the ditches, ragged, soft and more or less filled with water from the heavy rains, and the soft fields also, were not of the easiest to negotiate with horses of a conservative turn of mind.

Prof. Edm. H. Osthaus goes to Florida some day this week, where he will enjoy the climate and the good shooting, painting good pictures between times.

Answers to Correspondents.

No notice taken of anonymous communications.

Harold, Pittsburg, Pa.—We cannot advise you as to selection of a gun. We own three of different makes, and they are all good. And there are others.

J. E. H., Waterbury, Conn.—We can give you no idea as to how sparrows are caught. Write to Mr. H. T. Hearsey, secretary of the Limited Gun Club, Indianapolis, Ind.

L. H. C., Albany, N. Y.—Entries must be made on or before March 17, by sending \$10 as forfeit to John L. Lequin, secretary Hazard Powder Company, 44 Cedar street, New York city. Post entries call for \$5 more. Programmes will be out about Feb. 10.

S. P. L., Scranton, Pa.—The magautrap was invented by Arthur Jenkins, of Norristown, Pa., not by Paul North. The Cleveland Target Company has, however, made several improvements on the original design. The correct pronunciation is magautrap, with the emphasis on the "mag." The word is a compound one, coined, we believe, by Mr. North, and is made up of the italicized syllables of the words *magazine*, *automatic*, *trap*.

* The rig shown in the sail plan measures as follows:

Mainsail.....	211sq.ft.
Jib.....	66sq.ft.
Mizzen.....	60sq.ft.

Total..... 337sq.ft.

The construction and arrangement are clearly shown in the detailed drawings. The hull is very strongly built for rough sea work and hoisting, handling in locks, etc. The cockpit is small, but 4ft. square, not merely to give as much room as possible in the cabin, but as an additional element of safety in rough water. Though the floor is below the l.w.l., a powerful pump takes care of any water that may find its way below. The fixed thwart outside the door forms an extra closet in the cabin. The house has four windows, one on each side and two in the fore end, and with a mushroom ventilator in the roof is well lighted and aired. Extra ventilation is provided for by the holes, marked VVVV, in the sides of the tabernacle, the after end of the lid being slightly raised; but this was not needed. The rudder is strengthened by a doubling piece of lin. stuff on each side of the main part, extending down to the l.w.l. In order to clear the mizzenmast, the tiller is built with a very wide crook, which is double, forming an oval ring around the mast.

The tabernacle, a necessity for bridge work, is a strongly built box, of 1½in. oak, projecting above the deck and open on its fore

side. The mast pivots on a shaft, G, and is supported by the forestay. The heel is fastened by a stout iron wedge, M, and the iron band, E, thus keeping the heel from swinging forward. The mizzenmast steps in a plain wooden mast box. The roller jib is shown in detail. The roller is of pine or spruce, 1½ in. in diameter. It is ploughed out to form a circular groove at the center, and a movable slip, H, is fitted to fill the remainder of the groove. This slip is held in place by the lashing of the sail. At the lower end of the roller is a brass reel, on which is

wound the rolling line. The roller and reel are shipped on the wire forestay, which is shackled to the bowsprit iron; the sail is lashed to the roller, holding the slip, H, in place, and the rolling line is made fast to the reel. The line must lead fairly from the reel to a fairleader on the bowsprit and must always be kept rather taut; by slacking the jib sheet and hauling on the rolling line, the jib rolls neatly around the roller and may be reefed to any required size or stowed entirely. By slacking the rolling line steadily and at the same time hauling on the jib sheet, the sail may be set.

The mainsheet block is of a Dutch pattern, the toe, D, being used to hook the fall under, in place of a fixed cleat. There is no opportunity to use a fixed traveler, and the sheet is made fast to the thwart. The mast ring or traveler is shown in detail. A jointed iron ring with lugs forged on to form a block; a loop on the lower side takes the upper end of a flexible wire pendant supporting the heel of the yard. The yard is fitted with a strap of copper, lashed to it with wire, in which is pinned a metal block, A. At the masthead is a double block for the two parts of the halyard, the hauling part, 1, and the purchase, 2, the latter being seldom needed. The mast ring and also the jaws of the mizzen yard are leathered and greased.

The yacht handles well under every combination, of three sails, main and mizzen, mainsail only, or mizzen and jib. She is sailed a full inch below the designed l.w.l., with the amount of inside ballast given in the table. She carries 25 fathoms of 5-16 in. chain, galvanized; a 2¼ in. warp and two anchors—one of 20 lbs., long in the shank and broad and sharp in the flukes, and an extra one of 30 lbs., seldom used. A 12 ft. sweep is carried, with a crutch on the starboard side, as shown, and one on the port quarter, for sculling. The bowsprit and boomkin are ordinary handspikes, of American hickory, very tough and strong. The tender is a 7 ft. dinghy, of 3 ft. 6 in. beam, designed by Mr. Holmes, and rejoicing in the name of Snig.

Measurement Rules.

Editor Forest and Stream:

With the abolition of time allowance, the measurement question is simplified. Two questions only remain—classification, and regulations to insure the building of safe and commodious yachts.

To be fairly matched against each other, yachts in the same class should have the same sail spread; and this is sufficient classification.

Whenever the members of a club can agree in defining a desirable type of yacht with respect to safety and accommodation, in terms of length, beam, draft and displacement (and this is the easiest way to define it), the building of such yachts may easily be enforced.

The writer's present purpose, however, is not so much to restate this view in these columns as to cite a modern instance. It has been objected that it is both wrong in principle and impracticable to make arbitrary restrictions the basis of measurement rules. It is now announced that the race committees of the Royal St. Lawrence Y. C. and the Seawanhaka Corinthian Y. C. have arranged a race for the international challenge cup under the following measurement rule:

"There shall be no time allowance. Sail area shall not exceed 500 ft. L.W.L. length shall not exceed 17.76 ft. Draft shall not exceed 5 ft."

This is the whole thing; and it promises to give an interesting race.

Manatee, steam yacht, formerly Mischief, has been sold by A. C. Box to W. R. Ellison, J. H. Carstairs and A. M. Taylor.

Through the Sound in an Oyster Sloop.

(Continued from page 54).

DURING our walk along the beach, Stanley and I saw many snipe and plover. They were so wild, however, that there was no chance to get a shot at them. We stopped awhile and examined the lifeboat, which lay on the beach in front of the station. As we saw no one whom we could question, we continued our stroll. Soon Stanley spied a large flock of plover, and while he was trying to stalk them I lay down on the sand.

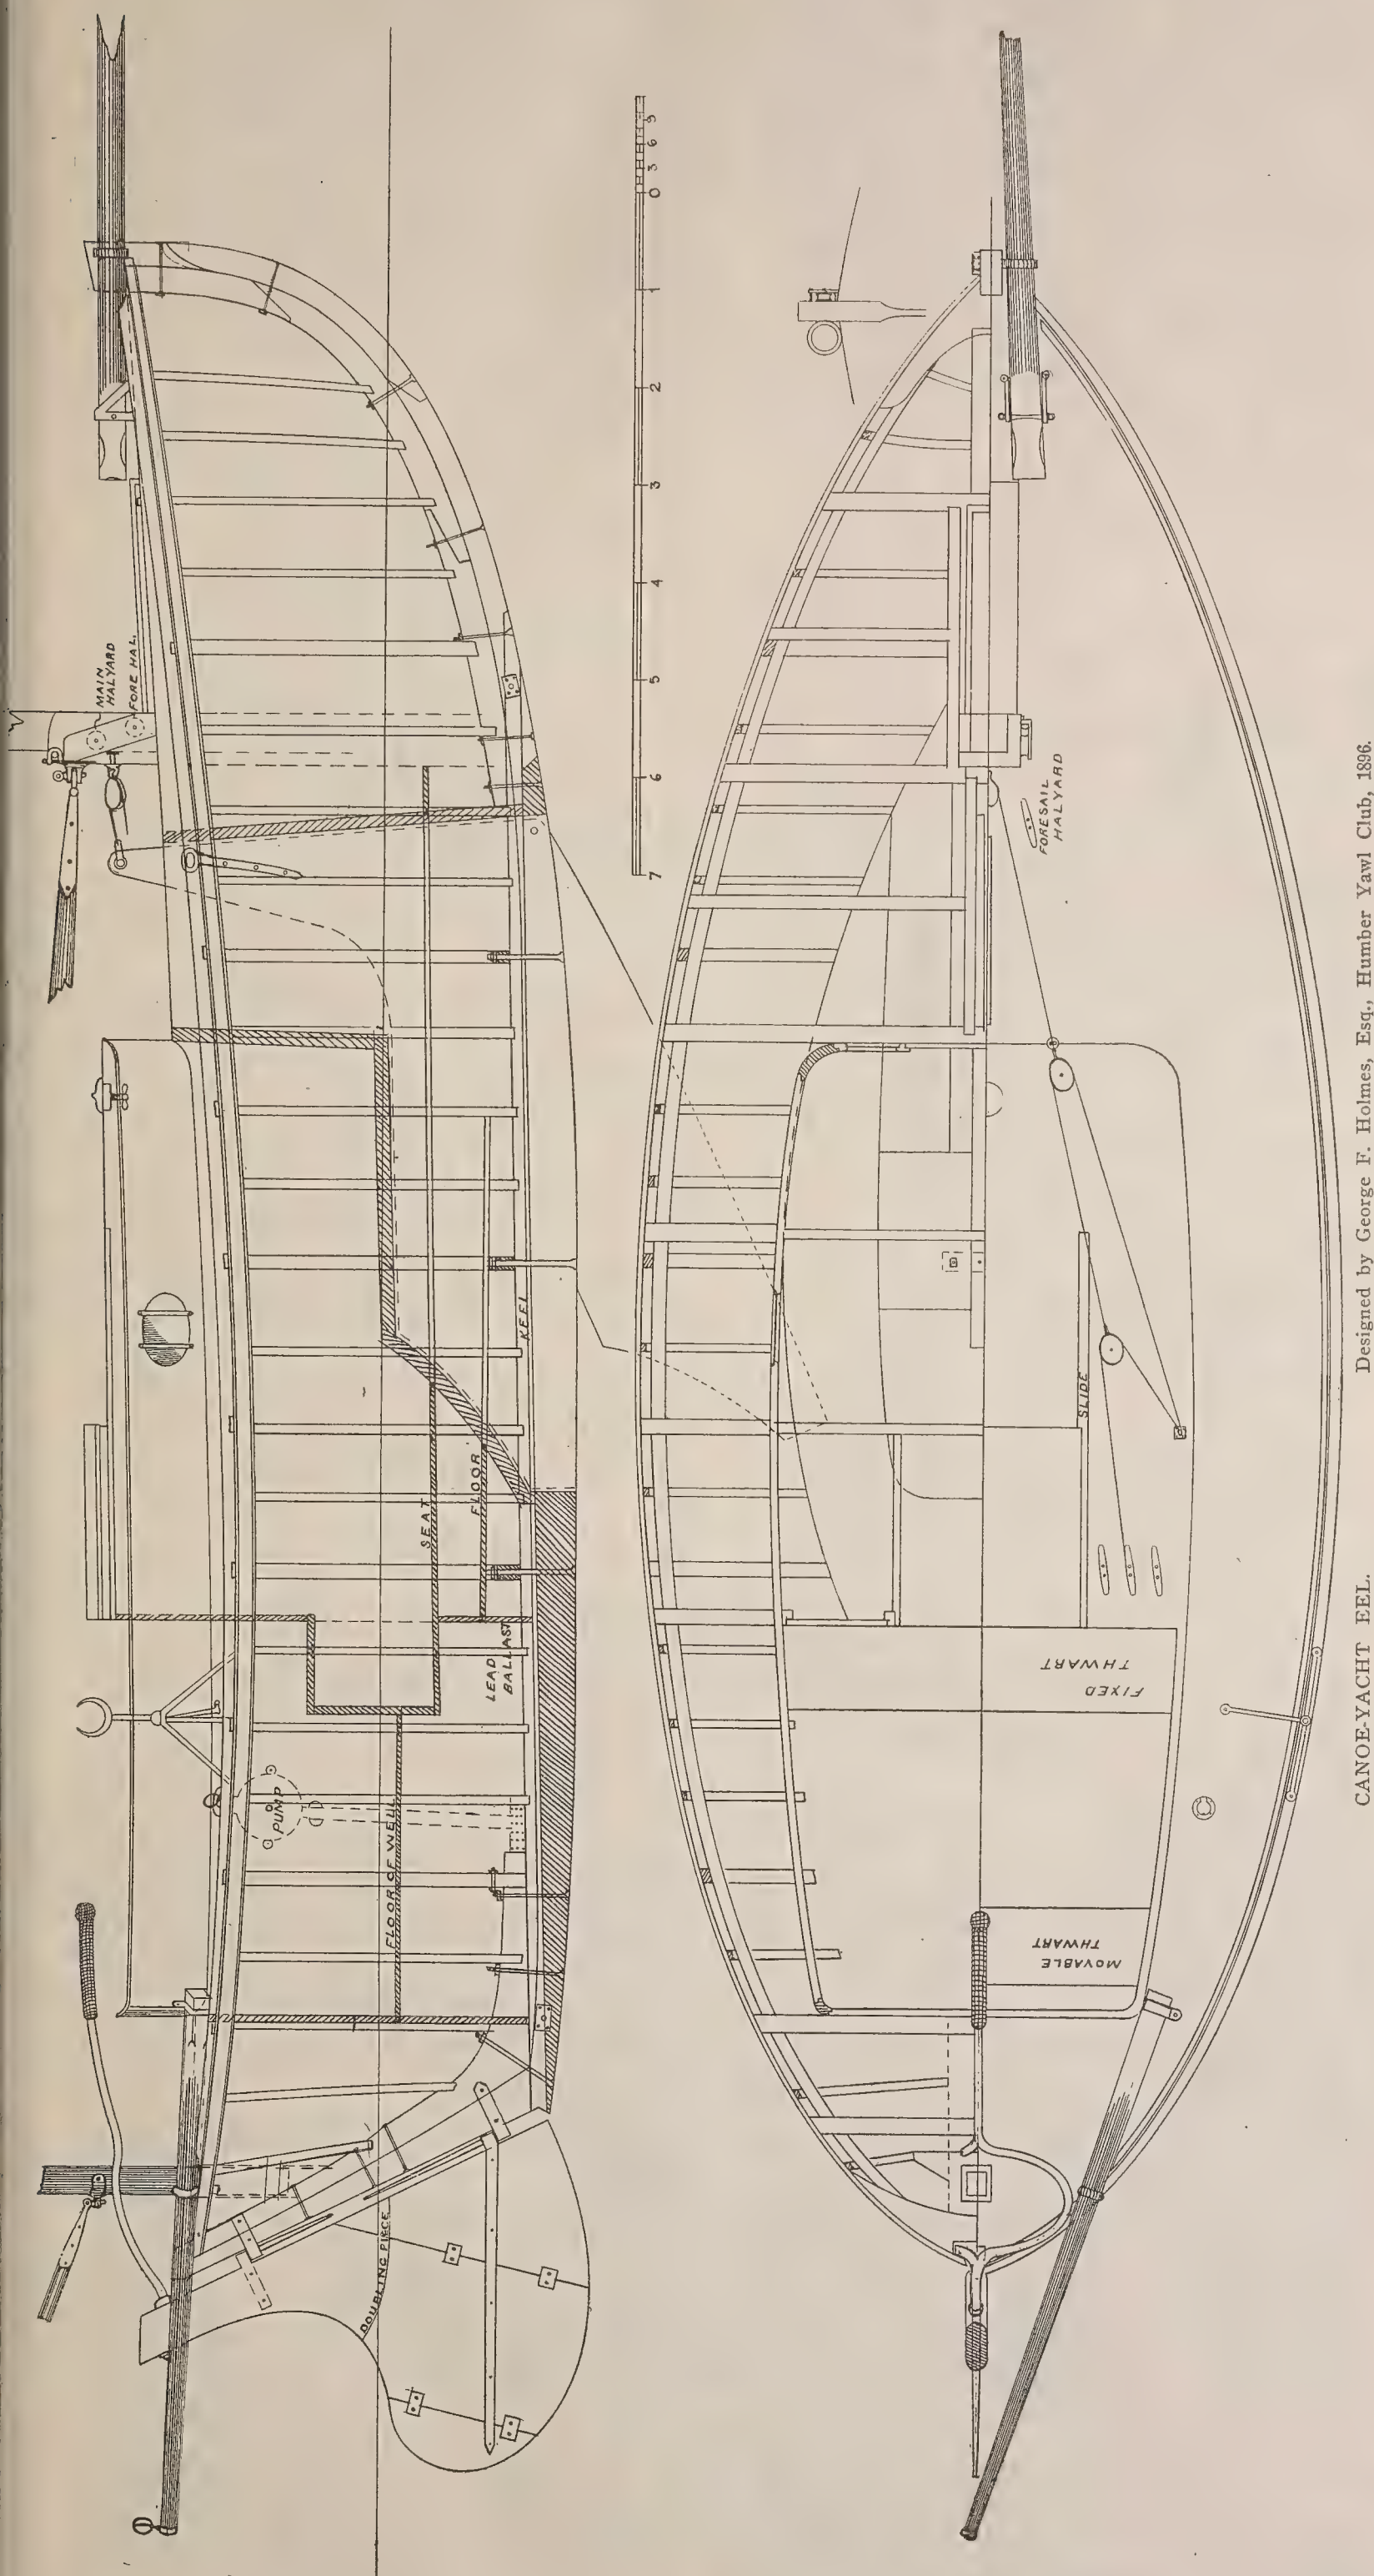

What a privilege thus to lie—free from worry and care, and the sound of clanking hammers, and the rush, whirl and grind of machinery. What a blessing to bask in the golden rays of the evening sun, falling in warm, mellow bars aslant the snowy beach, and scintillating on the sapphired sea. What sublime awe fills the soul while listening to the solemn voice of the mighty deep, thundering on the sands. How grateful to drink deep drafts of the delicious, sea-scented air beneath the cloudless heavens. What charms abound in the woods and mountains, and on the plains; by mirroring lakes and rushing rivers; on the banks of singing brooks, and by the sides of brawling torrents. But, priceless as are these charms to me, they dim and vanish when compared to the enchanting beauties and deep, solemn grandeur of the boundless sea.

A sudden shot awakened me from my dreaming, and I glanced in the direction Stanley had taken. He was standing erect, gun in hand, about 300 yds. away. A thin, blue streak of smoke, trailing away to one side, showed that he had been burning powder. That he had burned it in vain was plainly evident, for he soon dropped the butt of his gun to the sand and gazed wistfully after a flock of plover that were flitting through the misty curtain which overhung the surf. He watched until the plover faded from view, then slowly walked to the side of a dark object imbedded in the sand. He examined the object for a moment, then motioned to me.

When I reached Stanley's side I found him examining the timbers of a wrecked schooner, which were partly buried in the sand. She had been a large vessel, and the sound appearance of her timbers showed that she was nearly new when wrecked.

The sun had set when we left the side of the wreck and started over the sandy hills in the direction where Susie was anchored. In a hollow between two hills we found the whitened skeleton of a whale. It puzzled us somewhat to account for its presence there, as sandhills fully 50 ft. high lay between the bones and the ocean. We agreed that it might have been carried there piecemeal by the fishermen. I carried one of the bones, which was fully 10 in. in diameter, a short distance, then I dropped it. I have always felt sorry since for not having saved it.

After wading through sand, mud and water for a distance of two miles or more, and nearly being devoured by clouds of voracious mosquitoes, we finally arrived at a point opposite Susie. We felt

Designed by George F. Holmes, Esq., Humber Yawl Club, 1896.

CANOE-YACHT EEL.

grateful indeed when "Bub" rowed over to us and set us aboard, for it was nearly dark, and the anchor light was burning.

Above the scent of burning yellow pine, which created a smoke so dense that it was utterly impossible to enter the cabin, we could smell steaming clams. Sam had dug them with his hands out of the mud. They proved to be very large and tender, and helped materially in supplying us with a very bountiful supper. When we had paid tired and hungry mariners' respects to the meal, all hands betook themselves to early rest, and we were soon deep in the land of dreams.

We were astir bright and early next morning. The indications for clear weather were not the best. It was cloudy and a light fog covered the water's surface. After breakfast, however, the fog lifted and drifted away, although it still remained cloudy. Under such conditions it would be impossible to obtain a picture of the fishermen going out in their boats through the surf; therefore my trip to the beach with my camera had to be abandoned. I regretted this exceedingly, as I would have liked very much to have obtained some views of that interesting section of Long Island.

As the wind was southwest—therefore fair—we decided to make a start for Shagwong Reef. Sail was soon hoisted, and, after getting under way, we were not long in passing out of the harbor. We noticed that the fishing sloops seen by us the afternoon before had gone out ahead of us. As the tide was lower than when we entered, the reefs showed so plainly that it seemed as though we would surely strike before reaching deep water. Nothing of the kind happened, however, and when the last bush was passed the sloop was squared away on her course for the reef.

Trolling lines were brought on deck, and as the breeze was about of the right strength, two or three were allowed to trail over the stern. On account of the almost countless number of lobster buoys, a sharp lookout had to be kept on the lines. Natty-looking fishing sloops were also very numerous, and when we were off Fort Pond Bay we noticed a large fleet of them fishing in the vicinity of Shagwong Reef. Although we trolled over the whole distance from Napeague Bay to the reef, still we caught nothing.

We were somewhat disappointed at our failure, thus far on the trip, to catch any fish or to get even a strike. Sam's father and youngest brother had taken the trip a month before, and in the twelve days they were away they caught over a ton of fish. We therefore had absorbed large ideas as to the number and weight we would catch, and from what I had heard and read I had almost come to believe that they would be glad to jump aboard of their own accord. We never dreamed we would troll nine or ten miles and not get so much as a nibble.

By the time the reef was reached, deep-water lines had been overhauled, and clams and winkles had been brought on deck from the hold. Then hooks were baited and we eagerly awaited the time to begin fishing. It came at last, and after running the sloop well up to the bell-buoy which marks the north end of the reef, we rounded her into the wind. Jib-sheet was then cast off, and Susie was allowed to drift with the flood tide along the edge of the reef.

Our lines were no sooner in the water than the fish commenced to bite, and we were kept busy hauling them in. They proved to be mostly porgies, but now and then a stray blackfish or flounder would be hauled aboard. By the time the sloop had drifted to the end of the reef the fish stopped biting. We then sailed back to the buoy and made another drift.

Susie rolled and pitched on the long, swinging ocean swell, and the jaws of the gaff and boom groaned and squeaked. The jib-boom swung wildly back and forth across the bows, while the sails rattled, and the cordage beat lively tattoos against the mast and rigging—and we fished, and fished, and fished. We made half a dozen drifts along the reef, and wiggling, flapping fish covered our decks. The thought then occurred to us that we were fishing for sport—not slaughter. We had more fish than we could possibly use for the present, so we decided to try for a bluefish or two, then give it up for that day.

The fleet, which we had thought was fishing on Shagwong Reef,

we found was farther in shore than it had looked to be. We could also see that the boats were after bluefish. Two sloops had been sailing back and forth near the reef while we were fishing, and we saw their crews take bluefish after bluefish. Try as we would, however, we couldn't get even a strike. It was extremely exasperating to see those two sloops trailing four lines each astern, and taking fish which made the water fly as they were hauled in, and not be able to catch one ourselves. We finally became disgusted, wound up our lines and squared away for Block Island.

Montauk Point was abeam at 12 o'clock, and the wind was so light that we hardly had steerage way. A long, unbroken, bluish-gray swell rolled out of the south, and Susie rose and fell in a really quail-inducing manner. The sun was still hidden by clouds, and there was no sign to indicate that it would shine that day. Away down in the east, what appeared to be a dim, low cloud showed where Block Island lay. To the north, the sound of rumbling paddle wheels told of a steamboat hidden by the haze in that direction. On every hand fishing sloops and schooners rode the glassy undulations; and scattered far and near over the surface of the sea, lobster-pot buoys twinkled and vanished like smouldering embers in a dying fire. Soon there was no wind, not even a breath, and we were at the mercy of the tide.

Truly, "it's an ill wind that blows nobody good," but here we were without any wind at all. There was one consolation left to us, however—if we could not sail, we could eat; and eat we did, and in a manner that was truly shocking. Fried to a crispy brown, porgie after porgie disappeared in rapid succession. It may seem a big story, still four of us managed to store away over 10 lbs. of fish at that meal.

"We'll have the wind notheast, if we should be lucky enough to get any at all," said Sam, when he came on deck after filling up on fish. "It may possibly come southeast at first, but it'll haul notheast before it blows an hour. Then we may be compelled to lay in harbor at Block Island for a week, before it lets up."

"Notheast or no notheast," replied Stanley, "Susie starts for

and a good Winchester with which to thin it out.

Supper over, Stanley and I started for the post-office. We landed at the steamboat wharf and clambered up the stone work at its shore end. We walked a mile and a half over a road as dark as the jungles of Africa before we found the post-office. After posting the letter, we crossed the street and entered a large, old-fashioned grocery store. Here we tried to get bread, but they had only pilot biscuit. We then asked for bluefish jigs. "We haven't any, and I don't know of a place on the island where you can get them," answered the clerk. Had we wanted bloomers, corsets, cowhide boots, teething rings, or a horse bridle, we could easily have been supplied; but bread or fishing tackle was entirely out of the question. We purchased 5 lbs. of pilot biscuit, and tramped our way back to the wharf.

We were about to climb down into our skiff, when we noticed a stout old fellow who sported a pair of goat-like chin whiskers, holding a lantern a short distance away. The lantern's rays fell on another, younger man, who was pitching fish out of a small, open sloop on to the wharf. We walked to where they were.

"Well, Bernie, you made quite a haul to-day, and no mistake," said the man with the lantern, as he critically viewed a huge pile of bluefish lying at his feet.

"Yes, sir; quite a haul, for one man, sir. But I earned 'em all—every one on 'em, sir."

"Right you are, Bernie, my boy. You earn every fish, and all the pennies you can get for 'em." Then, noticing us, he continued: "Bernie goes out alone in that old trap of a boat, and he brings in as many fish as any on 'em. How in the world he does it, I can't see. Lord! I wouldn't no more knock around on these waters, the way he does, than I'd try to swim to Europe. How many d'ye say ye got to-day, Bernie?"

"Twenty-nine bluefish, sir, 'n' a barrel o' flounders."

"Twenty-nine bluefish 'n' a barrel o' flounders. Jest think of it! Not a livin' soul to help him, neither. That's more'n \$7 fer ye to-day, ain't it, Bernie?"

"Yes, sir. But there's no tellin' how much it'll cost me to get the leak stopped. It was so dark comin' in that I slapped the

YACHTING NEWS NOTES.

The nominating committee of the New York Y. C. has reported the following nominations, to be voted on at the annual meeting on Feb. 10: Com., J. Pierpont Morgan, steam yacht Corsair; Vice-Com., Lewis Cass Ledyard, sch. Montauk; Rear-Admiral, August Belmont, cutter Mincola; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M. D. Regatta Committee—S. Nicholson Kane, Chairman; Chester Griswold and Irving Grinnell. Committee on Admission—Edward M. Brown, Chairman; C. Oliver Iselin, Lewis Cass Ledyard, W. Butler Duncan, Jr., and James A. Wright, Secretary to committee. House Committee—Tarrant Putnam, Chairman; C. L. F. Robinson and Frank M. Cronise, Secretary to committee. Library Committee—Fordham Morris, Arthur H. Clark and Theodore C. Zerega. Committee on Club Stations—No. 1, Bay Ridge, William H. Thomas; No. 2, New York, foot of Twenty-sixth street, East River, Frederick H. Benedict; No. 3, Whitestone, N. Y., F. Augustus Schermerhorn; No. 4, New London, Conn., L. Vaughan Clark; No. 5, Shelter Island, N. Y., Tarrant Putnam; No. 6, Newport, R. I., Frederick P. Sands; No. 7, Vineyard Haven, Mass., Harrison B. Moore; No. 8, Atlantic Highlands (lower bay, New York), John P. Duncan; No. 9, Ardsley (Irvington-on-Hudson), Amzi L. Barber; No. 10, Glen Cove, N. Y., Edward R. Ladew.

The American Y. C. held its annual meeting on Jan. 18, the following officers being elected: Com., C. A. Gould, steam yacht Neaira; Vice-Com., W. R. Hearst, steam yacht Bucanear; Rear-Com., W. H. Butler, steam yacht Forget Me Not; Sec'y, T. L. Scovill; Treas., W. P. Allen; Fleet Surgeon, C. L. Pardee, M. D.; Meas., C. H. Haswell; Consulting engineer, George W. Magee, U. S. N. Trustees, to serve three years, J. Howard Wainwright, Charles I. Pardee, M. D., Thomas L. Scovill; to serve in place of F. R. Lawrence, resigned class of 1900, Edward Litchfield. The club has a membership of 235 and a fleet of seventy-one yachts, including twenty-eight steamers, twenty-five sailing and eighteen naphtha yachts. The following amendment to the by-laws was adopted: "Any member who is absent from the United States for an entire calendar year shall be exempt from dues for such year, provided he gives notice of his absence to the secretary prior to the first day of April of such year."

The club house of the Jersey City Y. C., at Communipaw, was burned at 3 A. M. on Jan. 18, its contents, including models, pictures, furniture, etc., and numerous sails, being totally destroyed. The loss is estimated at \$5,000, insured for \$1,800. In the basin were the yachts Forsythe I. and Forsythe II., both owned by Alexander Rowe; the yawl Eleanor, owned by P. W. Figuero; the yawl Bessie, owned by Garret Van Horn; the sloop Elphin, owned by F. W. Babcock, and the catboat John, owned by Paul Babcock. All were more or less damaged.

The old story of a large steel steam yacht for James Gordon Bennett is once more afloat, Mr. Watson being named as the designer. The details given are a length of 310 ft., with 7,000 H. P. The story is quite likely to be true and at the same time quite as likely to have no better foundation than in previous cases.

At the annual meeting of the Plymouth Y. C., held at the club house on Jan. 18, the following officers were elected for the ensuing year: Com., Horace P. Bailey; Vice-Com., George D. Bartlett; Fleet Capt., John T. Stoddard; Sec'y, Alfred L. Barnes; Treas., Will T. Eldridge; Meas., C. F. Bradford. Executive Committee—Arthur L. Bailey, Thos. S. Diman, Otto Loring, Ichabod Morton, Horace P. Bailey. Regatta Committee—Myles S. Weston, Jr., John T. Stoddard, Geo. D. Bartlett. Delegate to Y. R. A. of Massachusetts, Com. Horace P. Bailey. It was voted to indorse the action of the Y. R. A. of Massachusetts in abolishing time allowance in racing.

At the annual meeting of the stockholders of the Cleveland Y. C. on Jan. 12, the following officers were elected: Com., Geo. H. Worthington; Vice-Com., Percy W. Rice; Rear-Com., W. R. Huntington; Sec'y-Treas., A. R. Landreth, Jr.; Measurers, A. D. Macbeth, J. T. Ratcliffe; Surveyor, Henry Richter; Fleet Surgeon, Dr. E. E. Beeman. Board of Directors—Geo. H. Worthington, Percy W. Rice, W. R. Huntington, Horace Foote, J. E. Hannon, Frank Overbeck, Jos. Kerbel, G. H. Gardner, R. Carleton, J. R. Miller, J. L. Gobeille, Burton D. Munhall, A. R. Landreth, Jr., W. L. Otis, John Barth.

The Tarpon Springs Y. C. still holds its weekly regattas. It has suspended all rules of time allowance and now has a go-as-you-please race every Saturday. The club gives a monthly entertainment, the first of the series being a ball at the Tarpon Springs House on Jan. 27. To-day is regatta day, and as the wind is blowing half a gale, it promises to be a lively one. **TARPON.**

The new steel steam yacht Dorothea, built for Thos. McKean, of Philadelphia, was launched at the Cramp yard on Jan. 22. The yacht, which has a "gazelle-like" look, is expected to surpass even Columbia and Thespiea. She is 215 ft. over all, 178 ft. l.w.l., 23 ft. 3 in. beam, 15 ft. hold, and 10 ft. draft. Her engines are 18, 27 and 42 by 24, with two Yarrow boilers to carry 200 lbs. It is expected that she will make 14 knots (not miles) under natural, and 16½ knots under forced draft. She will be schooner-rigged.

Britannia, cutter, recently purchased by John Lawson Johnstone, has just been sold by him to Ernest Terah Hooley, the "millionaire speculator," as he is described by the cable despatches.

Miranda, schooner, has been sold by James V. Coleman to Chas. N. Nelson, who will cruise in her next season.

Nahma, steam yacht, Robert Goellet, sailed from New York on Jan. 22 with her owner on board, accompanied by Mrs. Goellet, Francis B. Riggs and Dr. Knapp, of Newport. She is bound to Bermuda and thence to the Mediterranean.

The Winthrop Y. C. held its annual meeting on Jan. 18, the following officers being elected: Com., George E. Leighton; Vice-Com., Arthur W. Chesterton; Sec'y, Charles G. Bird; Treas., Luther T. Harrington; Meas., Harry Hutchinson; Directors: Clarence H. Billings, Edgar A. Cook, Lyman S. Weston, Charles A. Henry; Regatta Committee: Arthur T. Bliss, Harry M. Frost, Aaron Sanderson, Joseph L. Rankin, Edgar A. Cook; Membership Committee: Harry W. Hall, Albert Partridge, William W. Fordham, Franklin H. Richardson, William H. Mirick, Minot H. Beacham, John G. Cuthbertson, Albert S. Richards, Joseph L. Rankin. The club passed the following: Resolved, that this club favors "no time allowance" as being in line of progress, and that the extension of the class limits is desirable for many reasons. That we heartily approve the Massachusetts Yacht Racing Association's action, and that we hereby approve their efforts to encourage and improve yacht racing.

Mayflower, steam yacht, has been sold by the estate of the late Ogden Goellet to Henry Sharpe, an English yachtsman. Messrs. Tams & Lemoine, who have charge of the yacht—the sale having been made by their London agents—are now fitting her out at the Erie Basin dry docks, and she will sail for England in a few weeks. The price paid is reported as \$400,000.

The Yale Cor. Y. C. has elected the following officers: Com., Bruce Clark, Chicago; Vice-Com., C. A. Goodwin, Hartford; Rear-Com., Augustus Davis, Hartford; Sec'y and Treas., Fred M. Davies, New York; Governing Board: Gouverneur Morris, Jr., L. L. Lorillard, C. A. Brayton, Alfred Gwynne Vanderbilt, Forsyth Wickes, and F. Havemeyer, all of New York. The club will have a house at Morris Cove.

Fancy, cutter, has been sold to E. M. Whitney and A. S. James, of New Bedford. Fancy was the last and one of the best 30-footers designed by Mr. Burgess.

Wasp, schooner, has been sold by W. S. Jones, of Buffalo, to Dr. A. Brower, of Utica. Wasp was built on fresh water, originally cutter-rigged and owned in Chicago. She was brought to Lake Erie a few years ago by Com. G. W. Gardner, of Cleveland, who rebuilt and altered her. She is 78 ft. over all, 70 ft. l.w.l., 19 ft. 10 in. beam, 7 ft. lin. depth, and 6 ft. 8 in. draft.

Nourmahal, steam yacht, J. J. Astor, has been out at Downing & Lawrence's railways. She has been fitted with a promenade deck during the winter. She is now fitting out for a cruise to the Mediterranean.

The Roberts Safety Watertube Boiler Co. is now running its shops at Red Bank, N. J., continuously day and night, and has a large number of orders in hand for boilers for yachts and commercial vessels.

Yampa.

The new owner of Yampa, the Emperor of Germany, has cabled as follows to her former owner:

"Richard S. Palmer, New York city: As the new owner of Yampa, I take pleasure to inform you that I am fully satisfied with her excellent condition after her three voyages across the Atlantic within one year. I am happy to possess the handsome schooner, and thank you for the liberal manner in which she was handed over. Her last performance in crossing to England was really astonishing."

WILLIAM I. R.

Greenwich the day after to-morrow. And she'll get there, too; that is, if she stays atop of the water, and I'll bet she does."

"Very well, you're captain, and I guess it won't take any more water to drown me than it will to drown you."

"I hope your northeaster 'll hold off until after we fish Southwest Ledge," I said.

"We'll fish it to-morrow, if there's any chance to do so," replied Sam.

For over two hours there was no sign of wind; then a light air came out of the southeast. The clouds, much to our satisfaction, drifted away, and the sun shone forth. The wind came stronger and stronger, and slowly but surely hauled to northeast. By 6 bells the sea was all a-tremble with sparkling light, and the blue swells were faintly fringed with white. Fluffy clouds with dim, misty edges drifted across the southern sky-line, while off in the northwest a very emphatic thunderstorm was under progress.

This was Aug. 13, the day when the waterspouts made lively times for those who resided in the vicinity of Jamaica Bay. We therefore wondered afterward if that squall, working in the southwest and northwest, had anything to do with the Jamaica Bay commotion.

The wind held steady northeast, and seemed not to increase. By 8 bells we were four miles to the northwest of Southwest Ledge, and drawing up rapidly on the land. The white houses, against the treeless, emerald background of rolling hills, shone out clear and distinct. Southwest Ledge was alive with the white-wings of the fishing fleet, and we vowed that Susie's would mingle with them on the morrow.

It was nearly 5 o'clock when Susie's bowsprit was even with the end of the breakwater at the entrance of Great Salt Pond. While beating into the harbor through the narrow channel which connects it with Block Island Sound, we met the steamboat New Brunswick on her way out. As the wind was puffy and blowing hard, it was close work passing her, especially as the tide was running strong against us. We, however, managed to pass in ship-shape style; and that our seamanship was fully appreciated was manifested by the way in which hats and handkerchiefs were waved as Susie shot from under the steamer's bows and sped off with buried scuppers on the starboard tack.

The beat from here across the harbor to the steamboat wharf was delightful sailing and full of vim. The pond was covered with nervous little waves, which Susie's bows churned into creamy foam. Just as the sun's last rays were gilding the roofs of hotels and other buildings nestling among the rolling hills, Susie came to anchor among a lot of yachts and fishing smacks off the end of the steamboat wharf.

While Sam prepared supper I sat on deck and wrote a few lines home. This was a rather difficult achievement, as, between the asthmatic wheezings and miserable squallings of a consumptive accordion, with which a lively son of Ham was murdering "The Bowery" on a nearby sloop, and the giddy squeaks, cackles and guffaws of a gaudily attired, big-bellied, ancient-looking female on another dilapidated sloop, it was difficult for one to keep one's wits about him long enough to write anything. About that particular time I longed for an "open season" on such game,

sloop right atop of one o' them breakwater rocks. It was done afore I knowed I was anywhere near the rock. I tell ye what, but it was hard work gittin' her off alone, but I managed it after awhile. Le's see—I guess that's all the bluefish."

Bernie felt around in the bottom of the boat a moment, then climbed up on the wharf. He proved to be a tall, well-made, light-complexioned fellow about thirty-five years of age. Oilskin overalls were drawn over his blue breeches, and he had on a blue sailor shirt. A common stiff-brimmed straw hat sat on the back of his head. "Now, sir," said he, addressing the man with the lantern, "if ye'll be kind enough to carry the lantern, I'll take these fish to the fish-house, and 'll not bother ye any more." He then filled a bushel basket with fish and carried it down the wharf to a small building on the left; the man with the lantern opened the door and Bernie carried his fish inside. A number of lanterns hanging about cast dim rays over huge piles of fish, and the floor of the room was wet and slippery. Many yachtsmen and other persons were crowded in the room, buying fish. I noticed two or three purchasers who hadn't the exact change with which to pay for what they had bought. These handed bills to the ones who sold to them, and in every instance they had to look sharp after their change, or they would have lost it, as the sellers were forgetful, but always in their own favor.

We stayed in the fish-house until all of Bernie's fish had been deposited there. We then returned to our boat with the old fellow who carried the lantern. We took him to be one of the islanders, so we asked him where we would be able to buy bluefish jigs. "Bluefish jigs? Lord! ye can't buy one on the island fer love nor money. These blamed islanders won't sell 'em to ye. If ye want bluefish, and hain't got any tackle, ye've either got to buy 'em from the fishermen or pay some on 'em fer takin' ye to the fishin' grounds, when they go out."

"Then I guess we won't do any bluefishing, after all," said I.

"Where ye from?"

[TO BE CONTINUED.]

Gilberts Bar Y. C.

WAVELAND, Fla.—Results of races sailed Jan. 8:

First Class.

Barracouta, steam yacht, has been sold by Mrs. Sarah Drexel Fell to D. P. Reighard, of Pittsburg, Pa., who has ordered her to fit out for a West Indian cruise this month.

Canoeing.

Toronto C. C.

ONE of the most interesting and pleasing functions ever held by the Toronto C. C. was its annual dinner, which was enjoyed on Jan. 20 at the cozy club house by a host of the canoeists and their friends. The home of the paddlers was most artistically decorated for the occasion with sailing ensigns of all descriptions, while the trophies won by the club were used to help brighten the place for the evening.

Com. C. H. Wilson presided at the dinner, where about 300 guests enjoyed the excellent viands provided. Representatives from sister clubs and other athletic organizations were present, the Buffalo C. C. being represented by Com. S. A. Lansing, F. B. Matthews and J. P. Pears; Brockville C. C., W. S. Jones and J. H. Richardson; Don R. C., J. O'Neil; Royal Canadian Y. C., Geo. McMurrich and A. Stewart; Argonaut R. C., A. E. Thompson. The Toronto R. C., Queen City and other clubs' representatives were also in attendance. Many letters of regret were read from clubs unable to be represented.

The fine entertainment provided by the Toronto C. C. was heartily enjoyed by the hundreds present, and included a duet by Stutchbury and Wenborne; song, W. N. Hayes; comic song, Chas. McReath; banjo trio, Kidner, Taylor and Kidner; comic song, Harry Brown; bayonet contest, Ptes. Stewart and Wasson, won by Wasson; song, Dr. Richardson; boxing bout, Hathway boys; song, H. Shaver, and comic selections by Bert Harvey.

The dinner was certainly the finest ever given by the Toronto C. C., the proceedings terminating about 3 o'clock this morning.—*Toronto Mail and Empire.*

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the *FOREST AND STREAM*.

Atlantic Division.

John A. Pollock, Ridgefield, N. J.
C. B. Rowley, New York city.
William H. Holden, New York city.
Addison Wilmurt, New York city.

Eastern Division.

Freischner.....	66 69—135	Rueger.....	36 46—82

A friendly match has been arranged with Our Own Rifle Club for Wednesday evening, Feb. 9. The match will take place at the Our Own's range, Springfield avenue.

H. REINHARDT, Sec'y.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Feb. 10-11.—Indianapolis, Ind.—Tournament of the Limited Gun Club. First day, sparrows; second day, handicap race at targets; handicaps 100 to 110; \$10 entrance, targets extra.

Feb. 12.—Hackensack, N. J.—50-target race for silver cup; unknown angles; open to all; no handicap. C. O. Gardner, Sec'y.

Feb. 18-19.—Hot Springs, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. \$1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Feb. 18-20.—Davenport, Ia.—Merchandise tournament of the West End Gun Club. L. Haneman, Sec'y.

Feb. 22.—Atchison, Kan.—Tournament of the Atchison Gun Club. Live birds and targets.

Feb. 22.—Bullawa, N. Y.—Invitation target shoot of the Bison Gun Club.

Feb. 22.—Sistersville, W. Va.—Tournament of the Sistersville Rod and Gun Club.

Feb. 22.—Pawling, N. Y.—Tournament of the Pawling Gun Club.

Feb. 22-23.—Buffalo, N. Y.—Second annual midwinter tournament at Audubon Park, under the management of E. W. Garoe. Targets. \$50 added.

Feb. 22-23.—Henry, Ill.—Tournament of the Henry Live Bird Club at the Big Four Driving Park. Targets and live birds.

March 15-18.—Uuca, N. Y.—Tournament of the Oneida County Sportsmen's Association. Live birds and targets. Open to all. Henry L. Gates, Pres.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, \$25, birds extra; \$1,500 guaranteed to the three high guns; \$600, \$500 and \$400; all surplus added.

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association; under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

April 5-8.—Baltimore, Md.—Annual spring tournament of the Baltimore Shooting Association. Geo. L. Harrison, Sec'y-Treas.

April 7-8.—Platte City, Mo.—Annual spring tournament of the Platte City Gun Club. S. Redman, Sec'y.

April 13-15.—Atchison, Kan.—Manufacturers' fourth annual tournament. Added money later. Jack Parker, Manager; Lou Erhardt, Sec'y.

April 19-22.—Des Moines, Ia.—Charley Budd's shoot. First three days, targets; \$350 added. Fourth day, live birds; 25 birds, \$25, handicap, \$50 added.

April 27-28.—Peru, Ind.—Second annual amateur tournament. Jack Parker, manager. Address all communications to J. L. Head, Peru, Ind.

May 17-20.—Tournament of the New Jersey State Sportsmen's Association. T. H. Keller, Sec'y.

May 18-19.—Crawfordsville, Ind.—Tournament of the Crawfordsville Gun Club. C. E. Lacy, Sec'y.

May 18-20.—Waterloo, Ia.—Annual tournament of the Waterloo Gun Club.

May 24-27.—Omaha, Neb.—Twenty-second annual tournament of the Nebraska State Sportsmen's Association. F. S. Parmelee, Sec'y.

May 30.—Canajoharie, N. Y.—Decoration Day shoot of the Canajoharie Gun Club. Targets. Charles Weeks, Sec'y.

June 7-9.—Sioux City, Ia.—Fourth annual amateur tournament of the 000 Gun Club. Three sets of traps. W. F. Duncan, Treas.

June 8-9.—Findlay, O.—Annual tournament of the Magastrap Gun Club. O. B. Marvin, Sec'y.

June 8-10.—Parkersburg, W. Va.—Second annual tournament of the West Virginia State Sportsmen's Association. Address all communications to Ed O. Bower, Sec'y, Sistersville, W. Va.

June 14-15.—Indianapolis, Ind.—Annual tournament of the Indiana Trap-Shooters' League of Indiana, on the grounds of the Limited Gun Club.

June 14-15.—Stillwater, Minn.—Tournament of the Stillwater Gun Club.

June 15-17.—Cleveland, O.—Fifth annual tournament of the Cleveland Target Co. Bluebirds thrown free of charge. Professionals and manufacturers' agents barred from programme events.

June 20-24.—Rochester, N. Y.—Annual tournament of the New York State Association, under the auspices of the Rochester Rod and Gun Club. Live birds and targets.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to *Forest and Stream Publishing Company*, 346 Broadway, New York.

The following item in the *Courier*, of Ottumwa, Ia., is clipped from its issue of Jan. 22: "It is said that the great John L. Brewer will be backed against Gilbert while he is in the East. For the last ten years or more Brewer has reigned the king of all pigeon shooters, and rightly, too. But the Brewer of to-day and the Brewer of even five years ago are different men. He should let Gilbert alone now, for Gilbert is shooting as good and possibly a little better than Brewer ever did, and certainly better than Brewer is now. Charlie Budd beat Brewer, and didn't have to kill 'em all either, and that was when the Captain was in his prime. Gilbert would have an easier task now than Charlie did then, and he is probably a little better prepared to do the work than was Budd. Brewer in refusing to shoot Gilbert a match for \$250 and wanting to make the stake \$1,000 showed that he wanted the larger sum simply because he thought that amount of money might rattle the Iowa boy a little. He reasoned that it might make the country boy a little too careful, therefore a little slow. But if John L. Brewer tackles Fred Gilbert when he (Gilbert) is not stale from incessant work, he'll get beat, as will any one else now known to the trap-shooting world." Like many other people, the Ottumwa writer makes a mistake when he thinks that Gilbert ever offered to shoot a match for \$250 with Brewer. The facts are these: Brewer has some friends in Philadelphia who are anxious to see whether, as the Ottumwa gentleman asserts is the case, "the Brewer of to-day and the Brewer of even five years ago are different men." It is probable that the Ottumwa writer who makes the above statement bases his calculations on the fact that Brewer is five years older now than he was five years ago; in that he makes a mistake. It's an unpleasant fact that we all have to recognize sooner or later, whether we live in New York or Ottumwa. Until, however, the two men meet, on even terms, mind you, it must always be a moot question as to who is king pin. We would also call attention to the fact that Brewer is not in a position to back himself; he has to do what his friends tell him to do. They say, and we know that they mean what they say, that they will find sufficient money to make it interesting for the backers of that really fine shot, Fred Gilbert, provided the match can be shot somewhere near Philadelphia or New York, so that they can see the two men come together. It seems to us that a good chance to bring the match to a head and do away with a lot of talk that means nothing would be to arrange a match, or a series of matches, between the two men, to take place at Baltimore during the coming tournament of the Baltimore Shooting Association, April 5-8. Mr. H. P. Collins, of the Du Pont Powder Co., is a prominent member of this association, and we hope that he will see if something can't be done in this line. But remember this: Gilbert has never challenged Brewer. The latter, however, has challenged Gilbert for a match for cash, but was told to challenge for a cup, and that then the side bet would be forthcoming. That means that the match would have to be shot in Chicago; at least, that's the way it looks to us, judging from precedents. But Brewer's backers want it somewhere nearer home.

The following from the *London Field* of Jan. 22 is interesting: "There is every likelihood of a team being organized to pay a visit to America in July or August, to shoot against some of the American club teams. Judging by the scores published in the American papers, the home team would seem to have little chance of success, especially as only one barrel is used. There is a strong opinion, however, that the flight of the bird is not so difficult as it is here; but whether this be so or not, the fact remains that the extraordinary scores that are of such frequent occurrence at American clubs have never been repeated this side of the Atlantic. If the American clubs could send a team over here to take part in an international contest at the championship meeting, to be held in June or July next, it would be certain to create a large amount of interest; and our American friends may rest assured they would receive a very hearty welcome. Once started the contest would probably become an annual affair, and lead to a very interesting series of matches. If it is not possible to arrange for a visit for the coming championship meeting, the fact of an English team journeying to America would probably act as a stimulus for one being organized for the succeeding year." An international match such as suggested above would be highly interesting, but as the quality of the birds on the two continents is so entirely dissimilar, there is every reason to believe that Americans would win at home and meet defeat in Europe. It would be very hard to get really representative teams together to cross the Atlantic, and we must confess to being rather sceptical about these team races ever being brought off. Anyway, July and August are poor months for trials of skill on pigeons; October to April would be better. For the information of the *London Field* we might add that Americans as a rule possess double-barreled guns, and need and use the second barrel quite often!

A friend in Boston, Mass., sends us the following account of the annual meeting and dinner of the Boston Shooting Association: "The annual meeting and dinner of the Boston Shooting Association was held Monday evening, Jan. 24, at the United States Hotel, President Capt. E. B. Wadsworth presiding. The usual routine of business was transacted and the following officers elected: President, Capt. E. B. Wadsworth; Vice-President, William Pray; Secretary, W. A. Sanborn; Treasurer, C. A. Ellsworth; Captain, O. R. Dickey. The Board of Directors is made up of the above-named officers, together with Dr. Bell and Wm. Allison. At the close of the business session the party proceeded to the banquet hall, where a pleasant hour was passed in disposing of the good things with which the tables were weighted, followed by two hours of social enjoyment. Amid the popping of corks and the smoke of the cigars the several events of the year were again shot over, and on this occasion every man made a clean score. After the traps had all been pulled and the last bird thrown, the members dispersed, each with the new adage uppermost in his mind—'Twere better never to have lived at all than to have lived and not belonged to the Boston Shooting Association.'

We have been asked to define more accurately just what was meant by the resolution, passed at the recent meeting of the Interstate Association, prohibiting paid experts, manufacturers' agents, etc., from competing for cash at the tournaments held in 1898 under the auspices of the Association. The following classes of shooters are affected by the resolution: The expert or semi-expert who is paid to shoot a certain gun, powder and shell; the "manufacturers' agent," a peculiar class—that is, the men who receive their shells or guns free of charge, in consideration of their services as advertising agents by the work they do with the said shells or guns; also in the latter class are the men who go to tournaments for the sake of looking after and advertising the business of their employers. We take it that the latter clause includes "all those who are connected with any firm that manufactures guns, powder, shells, targets or traps," who are especially referred to in the resolution mentioned above. The casual gift of 250 shells or 5 lbs. of powder, "just to try it," would not, in our opinion, constitute a man a manufacturers' agent. Were that the case, there'd be very few left to shoot for the purses!

We learn that a change has been made in the list of officers and directors of the Limited Gun Club, of Indianapolis. Mr. Royal Robinson has resigned as secretary and director. The vacancies have been filled by Mr. John M. Lilly as director and Mr. H. T. Hearsey as secretary.

The discovery of gold in the valley of the Yukon has robbed the East of more than one good trap-shooter. The last departure for the far West is Hood Waters, of Baltimore, Md. Mr. Waters is, however, not going to Alaska, as we understand it, but is to be connected with the Dyea & Dawson Transportation Co. at that company's office in Seattle, Wash. Hood—for that was the name he shot under—will be a distinct loss to the trap-shooting world on this side of the Alleghenies, and no tournament of the Baltimore Shooting Association will seem complete without the blond mustache, the blue eyes, blue sweater and gray slouch hat of Hood, one of the very best amateur trap-shooters in this part of the States. As a note of warning to our Seattle friends of the trap, we would say to them: "Take him to your heart, but don't try to beat him on targets, for the odds are more than 10 to 1 that you can't do it."

Paul North was discussing the probable programme for the Cleveland Target Co.'s shoot the other day. He told us that, as announced, it was his intention to bar paid men, manufacturers' agents, etc., from competing for the amateurs' money. The company will, however, throw targets free for this class of shooters, and will also most probably run a separate cashiers' office for sweeps for the barred classes, giving them a chance to get up a little excitement among themselves. Any amateur, too, who felt like it could enter in the "professional sweeps" and the "amateur sweeps" at the same time, his one score in that event counting for both. Of course, this plan may be modified considerably, but when we saw Paul North last the above was about what his idea was on the subject.

Our Pawtuxet, R. I., correspondent writes us that, as a result of a flying trip paid to Providence, R. I., recently, the trap-shooters of "Little Rhody" will have a chance of seeing a magastrap shoot shortly. He also tells us that there will be two new championship contests started in his State this spring, viz., a two-men team championship and an individual championship. The trophy for the latter contest will be presented by the C. F. Pope Co.—that is, by Messrs. Root and Rand. Both contests will be open to all residents of the State, just as the "five-men team championship pennant" now held by the Rhode Island Trap-Shooting Association is open to all clubs in that State.

W. Fred Quimby will now be glad to talk to you on the subject of the new target that he will handle for its manufacturers. This target is to be known as the "White Flyer," deriving its name from a clearly defined ring of white in place of the usual yellow circle that marks other targets. The target is manufactured by the Western Target Co., of East Alton, Mo., and is ready for the market, and Fred Quimby promises us that we shall soon have a chance of testing its breaking qualities. Without having seen them actually thrown from a trap as yet, or having tried them with 1½oz. of No. 7½, we cannot say much about them; but they look decidedly "gamy."

The Apgar benefit shoot at Orange Lake, Newburgh, N. Y., was a decided success, both socially and financially. There might have been more shooters on hand had the weather been at all favorable, but we doubt if there could have been more shooting or more fun. The 8 in. of snow that covered the surface of Orange Lake put a stop to all ice-boat racing; this in itself was a great disappointment, but it was not sufficient to put a damper on the enthusiasm of those who gathered together at Pine Point to shoot targets and live birds on Jan. 26-27.

The Magastrap Gun Club, of Findlay, O., held its annual meeting early in January and elected the following list of officers for 1898: President, Frank Gillespie; Vice-President, William Prescott; Secretary-Treasurer, O. B. Marvin; Assistant Secretary-Treasurer, John Livingston; Trustees, A. E. Dow, J. M. Steel, John Reimund, M. P. McGee and William Boynton. The club has decided to hold its annual tournament on June 8-9, and will throw bluebirds from a magastrap at 1 cent each. All purses will be divided on the percentage system. No one barred.

Mr. H. T. Hearsey, secretary of the Limited Gun Club, of Indianapolis, Ind., writes us under date of Jan. 28 as follows:

"In our programme for our February shoot, recently issued, we had a line to the effect that our rate might be improved. We are now glad to say that our rate is \$22.95 for the round trip, good for ten days, sold only on Feb. 12. Therefore our special parlor car will leave Feb. 12, at 11:45 A. M., and reach Hot Springs the following day at noon. Kindly mention this reduction of rate in your valuable columns."

The Brooklyn, N. Y., Gun Club has made two new departures in its programme for the ensuing twelve months. It will donate a prize to the high man in the handicap club shoot every month, these shoots being held on the second Saturday of each month. It will also enter in the Grand American Handicap of 1899, free of charge, the man making the best average in eight out of the twelve club shoots. This new programme will be inaugurated on Saturday week, February 12.

The list of fixtures for 1898 is growing fast, now that the month of February is upon us. The absence of large tournaments is distinctly a feature of such lists nowadays, and it looks as if the day of big tournaments had gone by for good and all. Knoxville has not yet given up all hope of entering the field once more, with one of its old-time gatherings, but such a gathering will not occur this year, the hint being that the season of '99 will be the appointed time. In thus referring to "big tournaments," we must be understood as meaning those with \$2,000 or \$3,000 added money.

The main event on the programme of the Bergen County Gun Club's shoot at Hackensack, N. J., Saturday, Feb. 12, is the 50-target race, unknown angles, for a silver cup donated by the president of the club, Mr. G. P. Griffiths. The entry fee for this race is only \$1.50; that is, \$1 for the targets and 50 cents to go to form a fund to be divided 50, 30 and 20 to the second, third and fourth high guns. Sweepstakes for merchandise and cash prizes will be arranged both before and after the main event. The cup race is open to all; no handicap.

The programme of John Sumpter's shoot at Hot Springs, Ark., Feb. 15-19, gives promise of a good five days' shoot for those who journey to Arkansas for the purpose of shooting targets and live birds in that winter resort. The added money in all the events, and the average moneys for each day and for general averages, should draw the experts; while the daily tax on the experts and manufacturers' agents ought to act as a drawing card for the regular amateurs.

The programmes for the Grand American Handicap are now in the hands of the printer, and will be ready for distribution about the middle of the month, perhaps a day or two sooner. These programmes will be printed as usual by John M. Welsh, of Pittsburg, Pa., the printer who has always gotten out the Interstate Association's programmes in the past. Those programmes were described by Irby Bennett at a recent meeting of the Association as "the neatest and most attractive programmes ever issued."

We understand that W. S. King, of Pittsburg, Pa., who is generally conceded to be the best shot among the many good ones that shoot in and around Pittsburg, has gone to Europe and will take part in the proceedings at Monte Carlo. Mr. King is a really fine shot and should give a good account of himself, as his nerve is all right. He has shown, too, that he can kill fast drivers, something he'll meet pretty often over the traps at Monte Carlo.

Ed Taylor was missing at Newburgh on Jan. 26-27; his absence was a forced one, the effects of a severe cold having completely knocked him out of time. Mr. Taylor writes us that for not attending the shoot he "was called down by the Laffin & Rand Powder Co. and fined \$5. As a compromise, however, the fine was remitted pending good behavior, and a crisp V-spot sent to swell the benefit fund."

From letters received lately, we can say that Maine and Vermont will both send entries to the Grand American Handicap. We are also told that the West will have a larger delegation on hand this year than it had in 1897. How about the 200 mark? How far will the entry list fall below that number? We feel like starting a guessing contest, but haven't energy enough.

On Friday of this week, Feb. 4, Charley Zwirlein will have a live-bird shoot at his grounds, Yardville, N. J. The conditions will be 10 birds, \$5, birds included, 2lyds. rise, 50yds. boundary, one barrel, gun below the elbow until the bird is on the wing. Other events will be made up to suit shooters.

The New Utrecht Gun Club, of Brooklyn, N. Y., has elected the following officers for 1898: President, W. F. Sykes; Vice-President, A. A. Hegeman; Secretary-Treasurer, E. G. Frost. At its next live-bird shoot the club will have a prize miss-and-out similar to that decided on Saturday last, Jan. 29.

So much has been said about the sparrow shooting at Indianapolis and elsewhere this winter that two of our correspondents have written us asking how the birds are caught. Cannot some one enlighten us on this matter?

The Nebraska State Sportsmen's Association claims the dates of May 24-27 for its twenty-second annual tournament. The shoot will be held at Omaha on the grounds of the Omaha Gun Club. Frank Parmelee is secretary of the State Association.

The regular monthly club shoot of the Boiling Springs Gun Club will be held at Rutherford, N. J., on Saturday of this week, Feb. 5. The semi-monthly prize shoots of this club are held on the first and third Wednesdays of every month.

John S. Wright's invitation shoot at Dexter Park on Thursday of this week, Feb. 3, is one of the main events on the programme just now. All John wants is a fine day; should he be favored in that respect, he says he'll "show them a shoot that is a shoot!"

The Burnside, La., Gun Club issued a very neat little invitation card for its target shoot on Saturday afternoon last, Jan. 29. At the top of the card is a target in colors, while underneath are the letters B. G. C. in gold characters.

Arthur Bunn, of Singac, N. J., has postponed his 25-bird shoot set for Feb. 3 until Tuesday of next week, Feb. 8. As stated last week, the race will be at 25 birds per man, \$10 entrance, birds extra, class shooting. The shoot commences at 12 sharp.

The Platte City, Mo., Gun Club will hold its annual spring tournament April 7-8. All communications in regard to same should be addressed to S. Redman, secretary of the club.

FEB. 1.

EDWARD BANKS.

At Monte Carlo.

The Concours Internationaux Opened.

The international pigeon shooting season opened at Monte Carlo on Jan. 10 with the Prix Orangers, for which there were thirty-three entries. Among the entries were Count L. Gayoli, M. Journu, Mr. Roberts, Mr. Harding Cox and Mr. Kennedy.

The conditions of the event were: Prix des Orangers, of £40, added to a sweepstake of £2 each; second received 30 per cent. of the entries; third received 20 per cent.; 26 meters all. At the end of the fifth round there were only four straights—Mr. Harding Cox, Mr. Curling, Mr. V. Black and Signor Quierolo. After killing four more straight the above quartet divided the purse of £102. Scores:

Mr. Harding Cox, divided £102, 9; Mr. Curling, ditto, 9; Mr. V. Black, ditto, 9; Signor Quierolo, ditto, 9; Mr. Roberts, 4; M. Journu, 4; M. Taczanowski, 4; Count de Robiano, 3; Count L. Gayoli, 3; Mr. Cholmondeley Pennell, 3; Mr. Kennedy, 3.

Missed third bird: Count de Lambertye, M. Duperron, Mr. Watson and Signor Carrara.

Missed second bird: Hon. F. Erskine, Signor Bellusci, Mr. St. James, Signor Mainetto Ghido, Signor Bianco, Mr. Sam and Signor Mazancini.

Missed first bird: Vicomte de Paris, Mr. Ker, M. Henri, Mr. Rogers, M. Bégule, M. Carl Jeppe, M. R. Gourgand, Signor Randi, Signor Capellini, M. A. Poizat and Mr. Seaton.

Prix des Citronniers.

Jan. 12.—Mr. H. Roberts beat out 31 competitors to-day in the Prix des Citronniers Handicap, winning the first prize of £69 with 13 out of 14. At the end of the 10th round only Mr. Roberts and Signor Bianco were left in. On shooting off both missed their 12th birds; continuing, Mr. Roberts killed 2 more, the Italian losing his 14th bird. Signor Quierolo, who divided the Prix des Orangers on Jan. 10, took third money with 9 out of 10. Scores:

Prix des Citronniers Handicap of £40, added to a sweepstake of £1 each; second received 30 per cent. of the entries, third 20 per cent.; 32 subs.: 28, Mr. H. Roberts, first of £69, 13; 25, Signor Bianco, second of £19, 12; 25½, Signor Quierolo, third of £13, 9; 25½, Signor Marconcini, 8; 24, Baron de Montpellier, 7; 25½, Signor Carrara, 6; 23, M. Brasseur, 6; 24½, Count de Lambertye, 4; 21, M. Bégule, 4; 27, Signor Mainetto Ghido, 3; 25½, Mr. V. Black, 3; 25, M. Duperron, 3; 24, M. Miéville, 3.

Missed third bird: Signor Bellusci, 28; Mr. Kennedy, 26½; Mr. W. Blake, 26; Mr. W. Rogers, 25½; Mr. Harding Cox, 25½; Signor Randi, 25½; and Mr. Watson, 25½.

Missed second bird: M. A. Poizat and Comte de Robiano, 25½; Mr. Seaton, 25; M. Sibick and M. R. Gourgand, 24.

Missed first bird: M. Journu, 23; Signor Briasco, 26; Hon. F. Erskine and Mr. Sam, 25½; Mr. Cholmondeley Pennell, 25; Mr. Curling and M. Taczanowski, 24.

Prix des Oliviers.

Jan. 15.—Mr. Roberts, who is shooting in very fine form, again won the first prize to-day by killing 12 straight in the Prix des Oliviers Handicap, beating 43 competitors, and being the limit man of the 44 entries. There was no wind, everything being in favor of the guns. Scores:

Prix des Oliviers Handicap of £40, added to a sweepstake of £2 each; second received 30 per cent. of the entries, third 20 per cent.; 44 subs.: 28½, Mr. Roberts, first prize £80, 12; 24, Baron de Montpellier, second prize, £26, 11; 25½, Signor Carrara, divided third prize, £18, 10; 23½, Mr. Watson, ditto, 10; 25, Sir J. Willoughby, 9; 24, M. Miéville, 8; 24, M. R. Gourgand, 7; 28, M. Journu, 6; 24, Mr. Curling, 6.

Missed fifth bird: Mr. Sam, 25½, and Mr. Ker, 24.

Missed fourth bird: Count Salina, 26; Mr. Black, 25½; Mr. Bullets, 25; Capt. Vernon, 25; and Mr. St. James, 24.

Missed third bird: Signor Mainetto Ghido, 27; Signor Bianco, 26; Mr. Harding Cox, Hon. F. Erskine, M. Moncorgé and Mr. Rogers, 25½; Signor Asti, 25.

Missed second bird: M. Drevon and Signor Bellusci, 28; Mr. Kennedy, 26½; Signor Quierolo and Mr. Blake, 26; M. A. Poizat and Count de Robiano, 25½; Mr. Sutcliffe, M. Taczanowski, Mr. Skirving and Signor Piatti, 24.

Missed first bird: Signor Briasco, 26; Signors Rande and Marconcini, 25½; Mr. Seaton, Mr. Rossiter and M. Henry, 25; Mr. Newton, 24½; M. de Sarogne, 24; M. Brasseur and M. Pontz, 23.

Prix des Mandariniers.

Jan. 18.—To-day was more like April than January. The sun has been powerful, the air soft and the sky a deep blue. In fact, the weather has been exceptionally fine, and it is no wonder that the ranks of the pigeon shooters are being swelled daily.

To-day there were 53 entries for the Prix des Mandariniers, more than 20 of them being Englishmen. The birds were a mixed lot; at times there were many really excellent birds, while at others they would scarcely rise from the traps. Eleven of the 53 entries killed 6 straight, but 3 out of the 11 missed in the next round. Mr. Fitroy Erskine dropped 1 in the 8th round and Mr. Poutz and Prince Victor Dhuleep Singh in the 9th; Mr. Foxhill fell in the 10th. Thus four men were left in at the commencement of the 11th round, but only three survived that round, Mr. Henry, a left-handed shooter from Ireland, losing a bird that dropped dead in the sea.

Prix des Mandariniers of £40, added to a sweepstake of £2 each; second received 30 per cent. of the entries, third 20 per cent.; distance, 27 meters; 51 subs.: M. Drevon, divided first and second of £99, 16; M. R. Gourgand, ditto, 16; Mr. H. Roberts, third of £38, 15; Mr. Henry, 12; Mr. Foxhill, 10; Mr. Bullets, 9; Mr. Poutz, 8; Hon. F. Erskine, 7.

Missed seventh bird: Baron de Montpellier, Count Salina and Mr. St. James.

Missed sixth bird: M. Journu, Signor Carrara and M. Moncorgé.

Missed fifth bird: M. A. Poizat.

Missed fourth bird: Signor Randi, Signor Marconcini, Mr. W. Blake, Mr. C. Pennell, Mr. Ker, Mr. W. Rogers and Signor Briasco.

Missed third bird: Sir J. Willoughby, M. Desflanges, Baron de St. Trivier, Vicomte de Paris, Mr. V. Black, M. Miéville, Mr. Robinson, Mr. Izzard, M. Léon, Signor Oliva, Signor Crespi, M. Cantagruel.

Missed second bird: Signor Quierolo.

Missed first bird: Mr. Kennedy, Signor A. Cesari, Signor Bianco, M. Lindes, Signor Piatti, M. Taczanowski, Count Trauttmansdorff, M. Duperron, Signor Mainetto Ghido, Mr. Seaton, Capt. Vernon, Count de Robiano, Mr. Watson, Mr. Harding Cox, Mr. Newton and Mr. Curling.

Prix des Palmiers.

Jan. 19.—The weather to-day was as summerlike as that which prevailed yesterday, and the birds, which were a moderate lot, had no wind to help them. Consequently, with 49 entries, the Prix des Palmiers Handicap was prolonged until sunset. At the end of the 7th round no fewer than 13 had killed all their birds, and although their ranks were gradually thinned, 5—M. Duperron, Signor Oliva, Mr. Draff, Signor Briasco and Mr. Henry—were still left in at the commencement of the 13th. In this round Mr. Draff was put out, but the four others killed 4 more, and it was only in the 17th round that M. Duperron had the bad luck to drop his bird just beyond the boundary. The 3 others killed in this and the two following rounds, and it was not till the 20th that the contest was brought to a close by the failure of Mr. Henry to stop a very fast bird, whereupon the two Italians, Signors Oliva and Briasco, agreed to divide first and second moneys. Scores:

Prix des Palmiers Handicap of £40, added to a sweepstake of £2 each; second received 30 per cent. of the entries, third 20 per cent.; 49 subs.: 26½, Signor Oliva, divided first and second prizes of £113, 20; 26, Signor Briasco, ditto, 20; 24½, Mr. Henry, third prize, £20, 19; 25, M. Duperron, 16; 26½, Mr. Draff, 12; 24, Signor Piatti, 11; 25½, Mr. Harding Cox, 10.

Missed tenth bird: Hon. F. Erskine, 25½, and Mr. Curling, 24.

Missed ninth bird: Mr. Watson, 23½.

Missed eighth bird: Mr. Robinson, 26½; Signor Quierolo, 26, and Mr. Poutz, 24.

Missed seventh bird: M. Moncorgé, 25½; Count de Robiano, 25½, and Mr. Cholmondeley Pennell, 24½.

Missed sixth bird: Mr. W. M. Clarke, 27; Sir John Willoughby, 26½, and M. Miéville, 24.

Missed fifth bird: Mr. W. Blake, 26; Baron de St. Trivier, 25½, and Signor Casapiccole, 25½.

Missed fourth bird: Count Trauttmansdorff, 27; Signor Carrara, 25½; Capt. Vernon, 25; Signor Crespi, 25, and M. R. Gourgand, 25.

Missed third bird: M. Journu, 28; Signor Mainetto Ghido, 27; Mr. Kennedy, 26½; Mr. C. Seaton, 25, and M. Lindes, 22½.

Missed second bird: M. Drevon, 27½; Signor Bianco, 26; Mr. Rogers, 25½; Mr. Hudley, 25; M. Taczanowski, 24; Mr. Bullets, 24, and M. Desplasques, 22.

Missed first bird: Mr. Roberts, 29½; Signor Asti Cesare, 27½; Baron de Tavernost and M. Léon, 26; M. A. Poizat, 25½; M. Lonhienne and Baron de Montpellier, 25; Count Salina, 24½; Mr. Ker and Mr. St. James, 24.

The Riley Handicap.

KANSAS CITY, Mo., Jan. 24.—*Editor Forest and Stream*: It was with great pleasure that I perused your comments on the Kansas City handicap, which appeared in your issue of *FOREST AND STREAM* dated Jan. 22, and I hope to hear from others on the same subject in your next issue. I note fully what you say in regard to the various weak points in the system; and I will take up the weak points as you mention them, and endeavor to smooth over some of their rough points.

First: You state that the system does not take into account the 27 or 28yds. man. My reason for not doing that was that in making up my illustration of the handicap I went upon my own judgment that a distance handicap is no handicap until the shooter goes beyond 29yds. Most of our shooting at live birds is done at a distance of 28 or 30yds.; and in my opinion no shooter should be placed on a handicap roll under the 28yds. mark. My reason for arriving at the above conclusion is that in placing a shooter under the 28yds. mark you give him the double advantage of distance and the use of a gun bored for close range shooting. The last-named advantage is no small one to a man who can use a modified-choke right barrel, with 1½oz. No. 8 shot, at 27 or 28yds.

However, if we must let the 27 or 28yds. men in on a handicap, we will open our 25-bird race at 27yds., and handicap for every three birds shot at. In this manner the score would be as follows:

27. 222 28. 222 29. 222 30. 222 31. 222 32. 222 33. 222 34. 222—25

It will be seen that the man killing 25 straight would finish with the last four birds from the 34yds. mark. This is handicapping the experts pretty fast, and I doubt if a straight score would be made in such a contest.

Now, in taking up your second weak point, wherein Mr. 31yds. has a large advantage over Mr. 29yds. Taking your own analysis of this, that each contestant has killed his 10 straight, we don't wonder at Mr. 31yds. doing so, as that was to be expected. But isn't there just the slightest suspicion that Mr. 29yds. has been misplaced by the handicapping committee, or else that he is shooting in exceptional form that day, and therefore deserves more of a handicap than he would ordinarily be able to carry? As I look at it, the matter stands this way: Mr. 29yds. has no right to a handicap over Mr. 31yds. as long as he stands at the same score and kills the same number of birds as Mr. 31yds. As soon as Mr. 29yds. shows his weakness by dropping a bird, Mr. 31yds. is handicapped in his next division to give Mr. 29yds. a chance to pull up even.

In summing up this matter: This handicap will equalize a majority, or the great mass of shooters; and these 31, 32 or 33yds. boys are well known; they can be counted on the ten fingers of your hands, and, if necessary, can be placed 2 or 3yds. behind the masses. But the 29yds. fellow who belongs at 31yds. is the chap that this handicap will watch with unfailing vigilance.

Thanking you for allowing me the use of your valuable space, and trusting that something may come out of my suggestions, I am, etc.,

R. S. ELLIOTT.

[As we said in our note referred to, and which Mr. Elliott replies to as above, there are men who are easily 3yds. worse than some shooters and 5 or 6yds. worse than some others. That is to say, we believe that there are men who rightly belong at 26 or 27yds., while others should be placed at 29, and others again at 31 or 33yds. Mr. Elliott dismisses the latter by saying that they are well known, few in number, and can be placed a couple of yards or so behind the weaker shots. Let us, then, give him an example of what would be the probable and logical outcome of a race between a 27yds. man and a 29yds. man at 25 birds under his latest system of division:

Mark: 27 28 29 29 29 29 30 30 Total.

Mr. 27yds. 222 222 220 220 202 222 220 202—20

Mark: 27 28 29 30 30 30 31 31 32

Mr. 29yds. 222 222 222 202 222 220 222 202—22

Unfortunately, like Mr. Elliott, we can only give a supposititious case for an example, but we believe that the above explains what we wish to demonstrate.

Taking Mr. Elliott's criticism on our "second weak point": To quote his own words, "As soon as Mr. 29yds. shows his weakness by dropping a bird, Mr. 31yds. is handicapped in his next division to give Mr. 29yds. a chance to pull up even." Yes; Mr. 29yds. has dropped a bird, as might be expected, and Mr. 31yds. has a lead of 1 on him. Now let them go on and shoot it out. As soon as Mr. 31yds. drops a bird Mr. 29yds. must kill all his "to pull up even." In other words, Mr. 29yds. must be in exceptionally good form to even tie Mr. 31yds., who is only shooting in his usual good form. In other words, the handicap seems to us to fix matters so that the poorer shot can possibly tie his superior, but can only beat him in exceptional cases.]

Mr. Shaner's Opinion.

PITTSBURG, Pa., Jan. 26.—*Editor Forest and Stream*: In your issue of Jan. 22, under the head of "A Novelty in Handicapping from Kansas City," I note that Mr. R. S. Elliott asks for my views on the suggestions offered. After careful consideration, it is my opinion that while the handicap proposed might prove satisfactory where all the shooters taking part were known to be better than 29yds. men it would be clearly out of the question to use it where the great majority of shooters are known to be 29yds. men and under. I so fully coincide with all that is said in the editorial note at the end of Mr. Elliott's article that anything I should say on the subject would seem superfluous.

In my opinion the Kansas City Handicap could not be used with satisfactory results in the Grand American Handicap, as the great majority of the entries are known to be 29yds. men or under. We will take last year's Grand American Handicap for the sake of illustration: Of the 146 men who made entry, 120 were placed at 29yds. or under, while but twenty-six, who were known and classed as the best men in this country, were placed at marks over 29yds. It would indeed have been a great injustice to those 120 at 29yds. or under to have allowed the twenty-six, who are rated the world over better than 29yds. men, to start in at 29yds. And it would have been a greater injustice to have compelled the 120, known as 29yds. men or under, to start in at 29yds., and keep them there or put them back further. It would have been a decided advantage in favor of the twenty-six.

Personally, I can't say that I am very much in favor of a sliding scale handicap at any time.

ELMER E. SHANER.

Trap Around Pittsburg.

Crossland versus Denny.

PITTSBURG, Pa., Jan. 20.—One of the best and most exciting races that has ever been shot here was decided to-day on the grounds of the Hazelwood Gun Club. The contestants were John Crossland and J. O'H. Denny. A strong wind prevailed and made good scores rather doubtful. Denny made a very poor start, scoring only 41 out of his first 50, the match looking at this stage as if it was going to be as runaway an affair as the recent match between these two shooters, when Denny retired at the 90th round, being shot out. Crossland shot a steady gait and scored 46 out of his first 50, having a lead of 5 at the half-way mark. Then Denny settled down and did some great work indeed. Out of his last 50 birds he scored 49, Crossland losing 5, the match ending in Denny's defeat by one bird. The detailed scores were:

J O'H Denny 112022222220021022222221—21

Paterson Accepts Morgan's Challenge.

CHICAGO, Ill., Jan. 31.—Special to *Forest and Stream*: I hereby accept Morgan's challenge for the E. C. cup, naming Calumet Heights as the grounds on which the match will be shot. I will name date as soon as convenient and will give you style of race later.

A. C. PATERSON.

ON LONG ISLAND.

Rockaway Park Gun Club.

Jan. 24.—The Rockaway Park Gun Club (Cuckoos) held a big shoot to-day on its grounds at Rockaway Point. The occasion was a team shoot between members of the Hudson Gun Club, of Jersey City, and a team of the Cuckoos. The visitors were defeated by a good majority, the scores standing 143 to 118 in favor of the home team. Scores were:

Rockaway.		Hudson.	
C F Dudley	22	G E Loeble	19
L S Waldeck	18	Chas Banta	17
J J Tiernan	18	Henry Bock	14
H P Scott	16	W W Wright	12

Jac Stoney	12	Geo Brewer	12
Frank Coleman	12	Fr Thommy	9
Richard Woods	12	Jos Whitley	8
Wm Wagner	12	Jos Doran	8
E F Bourke	8	Fr Boothroyd	7

143

118

Both before and after the team race sweepstakes were shot, over 2,000 targets being trapped before darkness called a halt. The averages for the day were as below, Dudley being in the lead with 71.9 per cent., a total that looks small, but which is easily accounted for by the extremely high wind that swept over the sandhills of the point.

Shot at Broke. Ave.		Shot at Broke. Ave.

J. JONES.

Hell Gate Gun Club.

Jan. 25.—The Hell Gate Gun Club's regular monthly live-bird shoot, held this afternoon at Dexter Park, was well attended, thirty-five shooters being on hand. The snow squall which started during the last half of the race, bothered the shooters a good deal. Col. John H. Voss was the only one to score 10 straight. Scores:

Class A, 30yds., 7 points: Voss 10, Trostel 9, Doeinck 9, Weber 7, Nowak 7, Forster 7.

Twenty-eight yards, 7 points: Belden 9, Sands 9, Woelfel 5.

Twenty-eight yards, 6½ points: Metz 9, Schlicht 9, Rabenstein 8, Peterson 7, Steffens 6.

Twenty-eight yards, 6 points: Garms, Jr., 8, Muench 8, Dannefelser 8, Lang 7, Stuetzle 6.

Twenty-eight yards, 5½ points: Valenti 9, Regan 6, Himmlsbach 5, Schaefer 5.

Twenty-eight yards, 5 points: Newman 8, Kessler 7, Richter 6, Linck 5, Geipel 4.

Twenty-eight yards, 4½ points: Wigger 8, Briet 7, Koch 5, Brennan 5.

Class B, 26yds., 4½ points: Marquardt 4.

Twenty-six yards, 4 points: Guy 8, Wehler 7.

Phoenix Gun Club.

Jan. 26.—Nine members of the Phoenix Gun Club were present this afternoon at the club's shoot in Dexter Park. A heavy wind blew across the traps from left to right. A. Botty was high with 14 out of 15. Scores:

D. Freleigh 11, A. Botty 14, Dr. Burnett 8, E. Madison 12, John Henry 10, M. Brown 9, J. Akhurst 10, J. Smith 12, D. Gardner 8.

New Utrecht Gun Club.

Jan. 29.—The New Utrecht Gun Club inaugurated a new feature at its live-bird shoot at Woodlawn, L. I., this afternoon. This was a prize miss-and-out, all at 29yds.; Class B allowed one miss as a no bird; Class C allowed two misses as no birds. W. F. Sykes won to-day's event. Both Greiff and Sykes missed in the 8th round, and all were let in again, but did not stay long. The birds gave out at the end of the 9th round, and all agreed to make it a 9-bird event, instead of 10, as usual. Gus Greiff won in Class A; F. A. Thompson in Class B, Adams and Frost tying in Class C.

John Sumpter's Programme.

THE programme for John Sumpter's shoot, Feb. 15-19, at Hot Springs, Ark., shows that the boys are going to be given a good shoot down there. For each of the four target days, Feb. 15-18, there is a programme of 7-target events, \$2, \$25 added to each purse, and a 25-target event, \$40 added to the purse. The five high guns on each day will be given \$4 each for average money; \$60 will also be given to the 10 highest general averages for the four days. This money will be divided \$10, \$9, \$8, \$7, \$6, \$5, \$4.50, \$4, \$3.50, \$3.

From the programme itself we extract the following, which is based on the lines of the Cleveland Target Co.'s tournament:

"Experts.—All known professional shooters, and all who are known to receive their ammunition free, will be required to pay 50 cents extra in each of the eight events each day, and all those who shoot 90 per cent. or better on one day will be required to shoot in this class until they fail to reach that average, when they can again enter in the amateur class.

"Amateurs.—All the extra money contributed by the professional shooters will constitute a fund to be divided among all the amateurs who shoot through the entire target programme for the four days. This will be divided equally among all, regardless of what average they make. No amateur who gets a part of the general average money can share in this division. I estimate that at least 25 men will have to pay \$4 extra each day, and for the four days this would amount to the snug sum of \$400, all of which will be divided among the amateurs who shoot through."

In all 20-target events there will be five moneys; six moneys in the 25-target event. The six moneys will

The Appar Benefit Shoot at Orange Lake.

THE weather on Jan. 26-27, the dates chosen for the Appar benefit shoot at Orange Lake, Newburgh, N. Y., might have been more favorable for trap-shooting on the ice, but it was of a character known as "seasonable," so we can't raise much of a kick about it. Despite the weather there was a good crowd present on both days, and the shoot was a success. There was one disappointment, however, caused by a heavy fall of snow that commenced on Tuesday afternoon, Jan. 25, and lasted well on to mid-day on the 26th. Of course it was not falling heavily all the time, but still when it stopped there was 5 in. of clean, white snow concealing the 12 in. of ice that covered Orange Lake. This put a stop to all ideas of iceboat racing, one of the promised attractions, but that couldn't be helped.

The first day was devoted exclusively to target shooting, a magatrap being used to throw the bluebirds out over the snow. The background was all right until the targets rose to a level with the heavy fringe of timber that clothes the northern border of the lake; then things went wrong, and targets were lost and signs were sighted. Some of the curving right quarterers, with a quartering wind behind them, caused the retirement of some good men. Toward the close of the day the wind came up and asserted itself boldly; it was bitterly cold, too, at that time. Then the misses came fast and furious, and 7 out of 10 was far easier to make than anything else.

Among those present from the distance were: J. A. H. Dressel and John J. Halliwell, of the U. M. C. Co.; T. H. Keller, of the Peters Cartridge and King Powder Cos.; B. H. Norton, of the Hazard Powder Co.; Capt. Money, of the American E. C. & Schultze Powder Co.; Carl von Lengerke, of the firm of Von Lengerke & Detmold; Dutchy Smith and Sam P. Wilbur, of Plainfield, N. J.; E. C. Likely, Highland Falls, N. Y.; Jake Blendemann, New York City; Jack Halsted, Peekskill, N. Y.; Tom Greer and Sanders, of Albany, N. Y.; W. A. Wiedebusch, Scranton, Pa.; Blandford, Sing Sing, N. Y., etc. The sporting press was also well represented.

Newburgh, of course, was well represented, a full list of those who came from that city being too long to publish. Chief among the Newburghers were G. H. Taggart, H. C. Higginson, W. M. Stansbrough, Dave Brown, president of the West Newburgh Gun Club; Jake Gedney, from Gedney's Mills; J. W. Dickson, Capt. J. Wood, James S. Taylor, Carr, Leicht, Dr. Willett Kidd, a veteran iceboat man and a first-rate game warden; and a whole host of others. The trapping of the live birds was in charge of Gil, the West Newburgh Gun Club's trapper, one of the very best of his kind in the country, and one who does not believe in feeding straightaways when it comes to target shooting. The cashier's office was in charge of Sam Wilbur.

The results of the two days' shooting are given in detail below:

First Day, Jan. 26.

There was snow in the air and 5 in. of snow underfoot when shooting began this morning. Toward the middle of the day the sun came out at intervals, and then the glare from the rays of the sun on the snow covered surface of the lake was blinding. During the afternoon the sun went in, and a cold, penetrating wind came up that kept the shooters at the score extremely busy to preserve the requisite amount of circulation of the blood that is necessary for comfort; in short, it was awfully cold, and none but the very cranks would have gone out and shot targets with pneumonia staring them in the face.

The re-entry race was closed at 2:30 P. M., and the prizes distributed by lot. A curious feature of the drawing was the good luck that befell W. A. Wiedebusch. The 20 numbers, denoting the 20 straight scores, were put in a hat and were drawn out singly by Capt. Money. Wiedebusch had 2 straights to his credit, and although his name was not called twice in succession, Capt. Money drew out first and second choice for him. As there were only 19 prizes, with 20 claimants, Dutchy Smith withdrew all claim to any prize, making matters easy in that respect. Below is a list of the prizes:

W. A. Wiedebusch, Winchester "brush gun," donated by Wm. Wolstencroft's Sons, Frankford, Pa., and a framed photograph, donated by Jacob Pentz; John S. Wright, a case of ozone, donated by the Newburgh Ozone Co.; H. Held, subscription to Shooting and Fishing; W. R. Hobart, 5 lbs. of Schultze, donated by the American E. C. & Schultze Powder Co.; Scott Terry, 500 Empire targets, donated by W. Fred Quimby; Sanders, 5 lbs. E. C. donated by Am. E. C. & Schultze Powder Co.; W. Terry, 200 cartridges, donated by Peters Cartridge Co.; E. D. Miller, the same as W. Terry; A. Woodruff, subscription to Sporting Life; C. W. Billings, 100 Peters cartridges, donated by Peters Cartridge Co.; W. T. Kirke, subscription to the American Field; J. Goodman, J. S. Taylor, W. Lair, W. J. Skidmore, J. Swody and Jacob Pentz, all drew subscriptions to Sporting Review; J. B. Ogden, subscription to FOREST AND STREAM, (Paul North donated 1,000 bluebirds to be shot at during this tournament.)

The records of the tickets shot in this match, giving names of the proxies who shot the tickets, are shown below.

Second Day, Jan. 27.

With hardly more than a breath of air stirring, with the deep snow covering everything with a glare of dazzling whiteness, and with a temperature that was decidedly more chilly than was comfortable, it was no wonder that the birds did not fly as well as their quality warranted one in expecting. In the coop they were as wild as hawks, but as soon as they were trapped they became different articles altogether. There were some good ones, however, and naturally these generally called for ciphers on the score sheet.

Among the new arrivals to-day was Colin R. Wise, from Passaic, N. J., who shot at 29 birds, scoring 27 of them, 1 of the lost birds being a dead out of bounds. Tom Greer and Tom Keller duplicated Wise's performance by accounting for 27 out of 29. The winner in the 15-bird handicap race was A. J. Leicht, a beginner, and a member of the West Newburgh Gun and Rifle Club. He was placed at the 26yds. mark and scored 18 straight, winning the special trophy donated by H. C. Higginson. Blandford, another new man at the traps, also shot away up in this event, Leicht beating him out in the tie.

The other merchandise prizes added to the purse in this event were: Second class: A fishing rod, donated by Fred Divine. Third class: A solid leather case for a Winchester repeating shotgun, donated by Ben O. Bush, of Kalamazoo, Mich. Fourth class: Sole leather gun case, donated by Von Lengerke & Detmold; and 5 lbs. of Schultze powder, donated by the American E. C. & Schultze Powder Co. The ties in these classes were decided by lot. Wise won the fishing rod; Higginson got the Winchester gun case; Robby got the other gun case, while Blendemann drew the powder.

Below are the scores, Nos. 1 and 2 being at 7 birds, 35:

	No. 1.	No. 2.	No. 3.	Tie.

EDWARD BANKS.

The Hamilton Tournament.

Last week we were unable to give more than a brief account of the results in the live-bird events shot during the Hamilton, Can., tournament of Jan. 18-20, together with the outcome of the target team championship. This week we give the results in the different target sweeps shot during the three days.

From the records given below it will be seen that E. D. Fulford, who shoots a Remington gun and Schultze powder, U. M. C. factory-loaded ammunition, did the best shooting; he broke 153 out of 160 shot at, an average of 95. Next to him, and close up, too, was F. D. Kelsey, of East Aurora, N. Y., who broke 138 out of 145, averaging 95. Last summer, at the New York State shoot in Auburn, Kelsey was shooting a Smith gun and Gold Dust powder; at that time he shot away up on top, and we conclude he used the same combination at Hamilton, for Kelsey is not a man to change when he's got something to suit him. B. A. Bartlett was third in order of merit, breaking 147 out of 160. Bartlett's gun, of course, was a Winchester, his powder E. C. Scores follow (No. 4 was at reversed order; No. 7 at 15 singles, unknown angles, and 5 pairs):

Dansville Gun Club.

DANSVILLE, N. Y., Jan. 19.—The Dansville Gun Club held its second practice shoot to-day. The day was unfavorable for shooting. A strong wind sent the targets at unexpected angles, and it was a bit keen, too, at times for the shooters; but enthusiasm was rife, and the cheerful warmth of a nearby bonfire (we have not yet risen to the dignity of a club house), about which the shooters gathered when not at the score, held discomfort at bay and kept the boys in a cheerful state of mind to the finish. Twenty-two men faced the traps during the afternoon, with the following results, all of the events being at 10 targets each:

Events:	1	2	3	4	5	
---------	---	---	---	---	---	--

IN NEW JERSEY.

Riverside Gun Club.

Jan. 21.—The Riverside Gun Club, of Red Bank, held a live-bird shoot to-day. A fine lot of birds had been secured from Gilbert, of Philadelphia, and with a heavy northwest wind behind them they were scorers. The first event shot was a 5-bird race, \$5. The scores in this event were: J. Cooper, Jr., W. Watts and C. Zvirlein 4; A. L. Ivins and E. M. Cooper 3; M. F. Cornwell 2.

Four other events were also shot, with the results given in detail below. No. 1 was a 25-bird race, entrance \$5, birds extra. Nos. 2 and 3 were at 5 birds, \$3; No. 4 was a \$3 miss-and-out. Scores:

	No. 1.	No. 2.	No. 3.	No. 4.
H. C. White, 29.	12121112110111111111-23	01022-3	22021-4	11111

Union County Wins Again.

Jan. 24.—The return match between five-men teams representing respectively the counties of Union and Hunterdon, N. J., was held to-day at Campbell's Road House, near Plainfield, N. J. Hunterdon County's fifth man did not show up, so the team shot the race with four men on a side. The birds were an extraordinarily strong lot, and were aided by a strong wind that blew directly across the traps. As will be seen from the scores given below, Union County won easily, thus making it two straight for them. Scores:

Union County.		Hunterdon County.	
Scott Terry	1022200222-7	Henzier	0111*12020-6
C Smith	0*12100221-6	Stout	200002202-4

Ziglio	12022-4	Case	10
Woodruff	11222-5 221221		

GEO. W. SQUIER.

Targets at Paterson.

Jan. 25.—A large crowd went to Willard Park to-day to witness a team race, 10 men to a side, between the shooters of the Second and the Eighth wards of Paterson, N. J. Each man shot at 25 bluebirds from three expert traps, Sergeant system. The shoot was for suppers and expenses. Among the spectators were Alderman Wright, who acted as referee; Garry Hopper and his father, and Sergt. Summers, of the police force. There was also present a roofer from the Eighth ward, who rooted hard for the Second ward; the Eighth ward boys say they will get even with him. The outcome of this match will probably be another at live birds, as most of our shooters are better on pigeons than on targets.

There was considerable practice before the match, as many as 20 guns being at the score, and all wanting to shoot at the same time. During the last five birds of the team race it began to snow hard, making the shooting very difficult. The scores in an extra, 15 targets per man, were as below: Wright 15, Gallagher and A. Doty 14, J. Doty 13, Ray 11, Hopper 10, Wolf 8, Grundy 6 and Schuyler and Butterworth 5.

The team race scores were:

Second Ward:		Eighth Ward:	
Wm. Stalter	010111011111010111110011-18	Herman Mertel	1011101011101010101011-17

Hudson Gun Club.

Jan. 29.—The Hudson Gun Club, of Jersey City, held its last shoot for January to-day. The day was bright and cold, and snow on the ground was responsible for a good many ciphers in the scores. The main event of the day was at 25 targets, unknown angles, for a silver cup. This brought out a large number of the members of the club. The handicapping was done by a committee appointed by President De Long, and everybody seemed to think the committee did good work, considering all things. Mr. McElroy takes the cup for one month. There were six other events decided, all at unknown angles. Following are the summaries:

Pete (A, 0)	111100010111101010101010-15+0-15

* Guest.

O'Brien, Radigan, Nagle, Boothroyd, Goetz and Van Dyne did not shoot off their handicaps.

Bergen County Gun Club.

Jan. 29.—The regular monthly shoot for the E. C. cup was held to-day on the grounds of the Bergen County Gun Club at Hackensack, N. J. W. Everett won a heat for the cup, breaking 48 out of 60. Harold Money was right after him with 47 out of 59. The attendance was small, owing to the extremely cold weather. Scores:

E. C. cup shoot, 50 targets, unknown angles, handicap allowances: W. Everett (10) 48, H. Money (9) 47, Ed Taylor (6) 45, Dr. De Wolf (6) 31, H. D. Warner (14) 21, Edmann 8, Raymond 14.

J. BANTA, Captain.

The Meadville, Pa., Gun Club held its annual meeting recently and elected the following list of officers for 1898: President, Dr. E. T. Lashells; Vice-President, Edgar Huidekoper; Secretary, Charles Stein; Treasurer, William M. Yates; Captain, Fred G. Prenatt; First Lieutenant, L. H. Stem; Second Lieutenant, Frank Ehrigott; Directors, S. B. Clark, F. L. Hotchkiss and W. L. Kridger.

WESTERN TRAPS.

Reduced Fare to Hot Springs.

CHICAGO, Jan. 29.—Mr. H. T. Hearsey, secretary of the Limited Gun Club, of Indianapolis, Ind., announces that the club has been able to secure a good rate for all members of the shooting party who leave for Hot Springs at the close of the Indianapolis two days' tournament. This arrangement will be of benefit both to the Limited Gun Club tournament and to Mr. Sumpter's shoot at Hot Springs; and the shooter who can resist the double attractions offered by these enterprising managements must be one who does not want to travel or to shoot. Mr. Hearsey writes definitely as follows:

"In the programmes mailed some days ago we stated that our rate offered to Hot Springs and return might be improved. We are now much pleased to inform you that we can offer a rate of \$22.95 for the round trip, good for ten days, sold only on Feb. 12. "Our special parlor car will leave Indianapolis at 11:45 A. M., Feb. 12, arriving at Hot Springs at 12:15, Feb. 13."

Henry Live-Bird Tournament.

The Live-Bird Club, of Henry, Ill., will give a good two days' tournament, Feb. 22-23, at live birds and targets. The officers of this club are Mr. Albert Bacon and Dr. S. F. Forrest, and they are doing all they can to make the shoot a success. It will be a wide-open shoot, all the strings off, no one barred and no handicap. There ought to be fun for the cracks here, but a look at Mr. Bacon's record at the Illinois State shoot leads one to believe that some of the money will remain at Henry. The officers write as follows: "Please announce that we claim dates of Feb. 22 and 23, 1898, for a shoot to be held at the Big Four Driving Park, Henry, Ill., under the auspices of the Henry Live-Bird Club. We will use five expert bluebird traps, electric pull; have plenty of live birds. The club will spare no pains to make this the largest shoot ever held in central Illinois. Arrangements will be made for the comfort of the shooters regardless of inclement weather. No one barred, no one handicapped. Programmes will be out not later than Feb. 10 and will be sent to all the principal shooting clubs in the country. For further information regarding shoot address the secretary, and your inquiries will be cheerfully answered."

Not so Warm.

Gov. John R. Tanner, of Illinois, spent this week at Hot Springs, Ark., and on Jan. 25 engaged in a little sport at the live-bird traps. I regret to state that the records of the Governor's attempts at Hot Springs do not indicate that he is what is technically known on the circuit as a "warm baby." The scores show that he killed only 13 out of 25 birds, and still worse is the information of the dispatch which says vaguely that he "tied a St. Louis man." On Jan. 28 Gov. Tanner acquitted himself much better, killing 14 out of 15 birds. Of his shooting companions, Messrs. Gates, Drake and Elwood, Gates killed 8, Drake 8 and Elwood 4. Mr. Gates shot at 31yds., the others at 21yds., use of both barrels.

New Western Organizations.

Under the articles of incorporation of the Soo Gun Club, of Sioux City, Ia., the capital stock is made \$2,000. The following officers are elected: President, C. C. Hamilton; Vice-President, J. W. Boyd; Treasurer, W. F. Duncan; Secretary, E. R. Chapman; Captain, H. H. Hawman; Executive Board, H. H. Hawman, J. W. Gray, W. W. Harris and John Otten. The Soo Gun Club is one of the strongest and most active organizations of the middle West.

Many would be disposed to think of Idaho as a land of mountains and big game, where the scatter gun would be despised. Yet at Moscow, Idaho, a gun club of thirty members was lately organized with the following officers: I. G. Rees, President; J. M. Hibbs, Vice-President; W. E. Wallace, Secretary; E. E. Wright, Treasurer; W. G. Emery, Captain. Traps have been ordered and regular shoots will be arranged for soon.

A strong organization of trap-shooters, to be known as the Winnebago Club, was last week formed at Oshkosh, Wis. Weekly shoots will be held, beginning May 1. The membership is forty-three already, and the club promises very well. The following will be the officers for the ensuing year: President, C. C. Chase; Vice-President, W. W. Kimball; Secretary, John H. Thomas; Treasurer, Charles J. Maulick; Captain, John Steier.

The Warren Gun Club, of Warren, O., elects the following officers for the coming season: Z. F. Craver, President; E. A. Biery, Vice-President; T. G. Dunham, Secretary and Treasurer. The Redlands Gun Club, of Redlands, Cal., is one of the good organizations of the big golden State which has known a boom in trap-shooting for the past year. Last week the following officers were elected by this body: Gus Knight, President; W. H. Stewart, Vice-President; J. H. Stewart, Secretary. These officers, with W. T. Gillis, Silas Williams and E. B. Mallers, constitute the Board of Directors.

Coming Events.

The two rival cities of Peoria and Pekin, Ill., both hot shooting towns, have signed articles for a finish contest at live birds. The first of these intercity shoots is scheduled for Thursday of this week, the following being the teams: Pekin Gun Club: Jacob Hoff; Herman Becker, John Hoff, Mr. Reuling. Peoria Gun Club: Kit Sammis, J. M. Brown, "Dr. Nelson," W. F. Meidroth. A number of clubs have been formed this season in central and lower Illinois, and I presume that the June tournament of the Illinois State Sportsmen's Association, which will be held at Peoria, will show the largest number of clubs entered that we have known for some time. Great preparations are making for a big attendance of shooters from towns in the neighborhood of Peoria. The McLean County Gun Club is the latest to join the State Association as a new member, and will send a delegation to Peoria.

The Stillwater Gun Club, of Minnesota, is already in the field with dates of June 14-15, and claims for a tournament which it promises shall be one of the best ever held in the Northwest.

The Waterloo Gun Club, of Iowa, claims dates of May 18, 19 and 20 for its annual tournament. Messrs. Place, Coburn and Jones have been chosen as the handicap committee, and will have the nice job of trying to make amateurs and experts equal. This gun club has some good shots, and some of the visitors who go there looking for easy money may indeed find their Waterloo.

Recent Scores.

The newly organized gun club of Pipestone, Minn., held its first shoot last Friday, and the following are the scores of the beginners. It will be interesting to watch the improvement of the members from time to time over their first record: Ed Grun 18, C. Ridgway 17, W. B. Denhart 15, H. R. Harrison 15, Oswald Cass 12, P. McGorty 9, J. H. Nichols 9, W. Somerville 8, W. Frost 7, W. C. Briggs 4.

Wichita, Kan., has been given a warm shoot at Riverside Park, management of Mr. L. S. Peacock. Scores of the first day, 25 targets, four events, was as follows:

Events:	1	2	3	4	Total.	Events:	1	2	3	4	Total.
Bate	19	17	17	18	71	Dixon	15	18	19	20	72
Ford	21	21	20	23	85	Parkham	16	20	16	16	68
Wilson	22	19	23	24	88	Mellinger	23	21	19	18	81
Jackson	22	24	21	23	90	Nudd	16	17	17	11	61
Peas	16	18	20	20	74	Williams	22	20	19	19	80
Bennett	19	19	19	17	74	Clark	17	20	16	16	69

On the second day the following scores were made, strings of 25 targets:

Events:	1	2	Total.	Events:	1	2	Total.
Wilson	18	23	41	Ford	22	23	44
Williams	24	24	48	Dodds	17	21	38
Chain	14	13	27	Sickner	15	17	32
Galusha	15	16	31	Parkham	18	21	39
Eaton	7	10	17	McClees	15	16	31

A number of shoots on live birds followed the target events, the most important being at 15 live birds: Chain 3, Carey 9, Hull 7, McClees 11, Sickner 12, Galusha 9, Oliver 13, Eaton 9.

The Sterling Amateur Gun Club, of Sterling, Ill., last week held a little shoot with the following results:

No. 1, 12 targets: Forbes 9, Coe 5, Gerdes 5.

No. 2, 10 targets: Forder 9, Gerdes 6, McNeil 6, Allen 5, Miller 3, Hunt 2.

No. 3, 10 targets: Forder 8, McNeil 7, Allen 5, Gerdes 4, Miller 1.

No. 4, 7 live birds: Troop 6, Oppold 6, Hunt 4, Allen 4, Forder 3, McNeil 3, Miller 3.

No. 5, 7 live birds: Oppold 6, Forder 5, Williams 5, Gerdes 5, Coe 5, Troop 1.

No. 6, same: Allen 6, Oppold 6, Forder 5, Williams 5, Buell 4, Hunt 4, Daly 3, Troop 3, Gerdes 3, Coe 2.

No. 7, same: Forder 6, Oppold 5, Allen 5, Hunt 3, Troop 1.

A little team shoot was held last week on the grounds of the Mt. Vernon Gun Club, of Illinois, between Roy Stratton and Otto Patton on one side and Al Wolf and Neil Pavey on the other, the latter team winning by 5 birds in two strings of 25 targets. Score:

Stratton 16, Patton 20, Pavey 16, Wolf 21, total 73. In the second round the result was: Stratton 18, Patton 20, Pavey 22, Wolf 18, total 78.

At Douglass, Wyo., last week F. Rimington defeated Dr. Je-

surun in a match race at 41 birds at \$50 a side, with a score of 34 to 24. A match between Dr. Jesurun and A. Rice vs. Fred Remington and Fred Foxton for \$100 a side, 30 live birds, was won by Remington-Foxton by 1 bird, the score being: Jesurun 23, Rice 22, versus Remington 24, Foxton 22. A large crowd was in attendance, sportsmen from Theresa, Glenrock, Casper and La Bonte being present.

Elevating the Trap.

I appreciate the solemnity of Mr. John J. Sumpter, Jr.'s, announcement in his midwinter tournament programme:

"This is going to be a dead-square shoot, and I mean it."

"No pooling or dropping for place will be tolerated. Remember, this is NO BLUFF!"

No tournament programme is complete without these announcements of the earnest determination on the part of the managements to elevate the trap. Yet I am very often told that all this about dropping and pooling is mere fiction, for that no such thing ever happened among trap-shooters. I am pained to note Mr. Sumpter's apparent uneasiness as to the purity of that which is pure.

Only Man.

We continue to have bright, clear, live-bird weather in Chicago this week, and John Watson has still a dozen or so good birds left for the boys to shoot at, but outside of the club shoots of the Audubon, Garfield and Eureka clubs all these advantages seem to be wasted, and nothing is happening to jar the serenity of Chicago's trap-shooting slumber. Every prospect, please, and only man is tired.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Watson's Park.

Jan. 27.—The following scores were made to-day in a practice shoot on live birds at Watson's Park, Burnside Crossing, Ill. The ground was covered with snow, and the light was fairly bright, with mild wind:

W. Lewis	12212112*200212121011010122211-24
Fox	01121*21111212012020111220102101-24
W. Moore	011020120020112122111111201002-23
Claret	00212112112211011112122211111-28
Winchester	12120211*2211*1110211200121220-24

Garfield Gun Club.

Jan. 29.—The Garfield Gun Club, of Chicago, held its regular monthly contest at live birds at Watson's Park, Burnside Crossing, Ill. It was attended by a good number of shooters, among whom were quite a few visitors.

There was a strong sunlight during the entire day, which shone on the snow-covered ground, making a very trying light to shoot in. Considerable difficulty was experienced in finding white birds as they were liberated from the traps. There was a fresh wind from the right quarter, and the birds were quite regular in their flight. Some few soft birds were trapped, as well as many good hard ones.

Mr. E. S. Rice, who is one of the new members of the club, did himself proud when he shot his back score, making some good hard kills and going out with a score of 19 out of 20, with 1 dead out of bounds. Good shooting was done by other members during the day, Hicks, Kuss, Shaw and Von Lengerke dividing honors at first place with straight scores. The shooting of Workman, who is a new face at the live-bird traps this winter, was quite noticeable; he made many good, clean kills of swift flyers with the ease of an old shooter, but he can't hold his gun to his shoulder after shooting the first barrel.

The following are practice scores preparatory to the club contest: S. Palmer 5, O. von Lengerke 4, Dr. Shaw 5, De Maris 3, Patti 3, Hollister 4, Workman 4, R. B. Carson 3, Nusley 5, O'Brien 2, Wilson 3, Dr. Carson 5, S. Palmer 5, Kuss 3, Comley 2, Hicks 2.

The following are scores of the club contest, and are at 20 live birds per man, from five automatic ground traps, 30yds. rise: Dr. Shaw 20, T. P. Hicks 20, H. Wiley 18, A. C. Paterson 13, C. L. Richards 17, R. Kuss 20, O. von Lengerke 20, C. E. Comley 15, S. E. Young 16, N. M. Nusley 13, H. Wiley 19, De Maris 4, S. Palmer 14, Workman 17, E. S. Rice 16, D. Russell 17, *E. S. Rice 19.

*Indicates back score shot.

The following are scores of friendly contests and practice shoots of visitors on the grounds to-day:

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, FEBRUARY 12, 1898.

VOL. L.—No. 7.
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

THE FISH COMMISSION SCANDAL.

MR. LIVINGSTON STONE'S "Reminiscences of the Early Days of Fishculture," printed in another column, are written at an opportune moment. Read his tribute to Professor Spencer F. Baird, first United States Commissioner of Fish and Fisheries; recall the rare endowments and attainments with which that great man was equipped, his rare mental vision, his large grasp, his marvelous capacity for hard work, his unselfishness, devotion and enthusiasm—all these united with nobility of character and greatness of manhood—qualities which inspired, directed and controlled the work of the Commission in its formative stage; and then consider that on Tuesday of last week, yielding to the dictation of a West Virginia Senator, President McKinley nominated for the place once held by a Baird the West Virginia politician and office-seeker, George M. Bowers, an individual unknown in scientific circles and the realm of fishculture alike, but vouched for by Mr. Elkins as "a bright man who will catch on." By as much as the early annals of the Commission afford a record of patriotic zeal and splendid public service by the first Commissioner, in like measure this new stage in its history shameful and humiliating. The very fate apprehended by Professor Baird and which Professor Goode sought to provide against by statute—the prostitution of the Commission to political purposes—has come upon it.

Mr. McKinley's action of last week had long been anticipated. It was known that he had promised the place to Senator Elkins, as a reward to Mr. Bowers for services which that individual had rendered in the last campaign; and although numerous friends of the Commission, stirred by a sense of public duty, have protested in the strongest terms against the astonishing nomination, no one actually indulged a hope that the President would reconsider his expressed determination of handing over the place as spoils.

For reasons already set forth in these columns, the selection of Mr. Bowers for this office is contrary to the public interests and in violation of the law governing the appointment of a Commissioner. It is contrary to the public interests because the West Virginia appointee lacks the qualifications essential to the administration of the affairs of the Commission intelligently; it is contrary to the law because the statute expressly declares that the Commissioner must be "a person having scientific and practical acquaintance with the fish and fisheries." Mr. Bowers has no such scientific and practical knowledge; the newspapers say that he has been studying up on fish and fishculture as a schoolboy crams for examination; and Mr. Elkins says that he "is bright and will catch on."

It is charitable to assume that the President was ignorant of the law when he promised the place to Senator Elkins for Bowers. But having been apprised of the explicit terms of the statute, and recognizing that the Bowers nomination would be in violation of these terms, he should have had the courage to obey the law; to reconsider his promise; to repulse the presumption of an incompetent and legally disqualified aspirant for the position; and to protect the rights and interests of the people in the Commission by naming for its control a person legally qualified to administer it. Such a course might have meant for Mr. McKinley an unpleasant fifteen minutes with the Senator from West Virginia, but it would also have assured for him great credit with the public, and hearty popular indorsement of a righteous action.

There is a possibility, although it appears to be extremely slight, that the Senate may withhold confirmation of the nomination. If the President's selection of Bowers shall be approved, the event will mark the beginning of a new chapter in the history of the United States Fish Commission; and one which its friends may well view with apprehension and indignation. The

indignation will be all the more to the point if it shall take the form of an organized protest so powerful as in some way to discover and apply a remedy for the scandalous conditions which will prevail.

HE WOULD NOT GO FISHING.

It was the versatile, philosophical, reminiscent and statistical Podgers, if recollection be not at fault, who once figured out that the few paltry, immature, stunted and insignificant trout caught on an excursion to Canada had cost him somewhere near \$5 a fin for every little fin on every little trout. That might be well enough counted expensive fishing if no allowance should be made for the priceless boon which comes with the fish, the contentment of sleeping on balsam boughs and being lulled to sleep by the murmur of the brook; but even so, a creel of trout at this figure would not begin to compare in expensiveness with the string of fish which were not caught by a bank official in this town, and which, not being caught, cost the neat little sum of \$393,000. That was the amount of money loaned by the cashier of a New York bank foolishly on "rotten" security. When the bank's officers found it out, one day last week, they charged the sum to profit and loss, and accounted for the expensive vagary of the cashier by ascribing it to a breakdown caused by overwork and continuous, uninterrupted devotion to business, with never a vacation from one year's end to another. "He seemed incapable," said the president, "of getting away from his work, of putting it out of his mind and forgetting all about it. He could not be induced to take a summer vacation. Only last summer I personally urged him to go off for a vacation—not that I noticed in him any particular need of recuperation, but upon the general principle that every one should get a vacation during the year. He, however, declined all my urgings, and the only rest he could be induced to take was on Saturdays, when he pretty regularly absented himself from the bank."

In other words, here was a man who would not go fishing when he could, and could not be induced to go fishing when he should; not even when to go fishing would be to clarify a muddled brain and renew the poor head, which for want of a fishing line and a tumbling, roaring, dashing, foaming mountain brook to wet it in, went awry, grew befogged and parted with \$393,000 of other people's good money for wildcat collateral.

It is better to go fishing, even if the fish cost a small fortune when figured by ounces caught and dollars expended in the taking. The human make-up calls for a restful interval of vacation in the round of the twelve months, just as it does for a restful interval of sleep in the round of the twenty-four hours. The most prodigious fortune any man ever made at the cost of his health he would give to the poor or cast into the bottom of the sea, if only he might regain health once more. This is a mighty truth of which to thousands and tens of thousands the knowledge has come too late, and with it remorse and unavailing regret. With other thousands and tens of thousands, an annual vacation time, whether spent in fishing or shooting or yachting or wheeling or travel or what not, has its appointed place in a well-ordered life. The multitude of those who go afield, live in tents, sleep under the stars, constitutes a constantly increasing proportion of the community. We are not among those who would begrudge to the simple "vacationist," so called, the privilege of going into the woods. The forest wilds are wide and free and ample for the delectation of all who will prove their delights and rewards. One need not look along the rib of a shotgun nor through the sights of a rifle to see the beauties of nature. Rod and gun are, after all, means rather than ends. Their highest value is that they are agencies which lure us out into the open air, the green fields, the depths of the wilderness, leading us away from office, counter, shop, farm, for a play spell and a change, to find lightening of spirit, elasticity of step, brighter views of life, cheerier disposition; and if we happen to be bank cashiers, a keener judgment, which shall prevent us from putting \$393,000 in a lump sum into the profit and loss account.

There are men without number to-day going about their business, who, if interrogated, would testify that

they owe their health and strength, perhaps even life itself, to the days they have spent with the rifle, the rod and the gun, the wheel, the camera and the alpenstock. Every such a one, wherever you may meet him, is a living exemplification of the value of the vacation break in the round of business and labor. Gather these vacation hosts by squads and companies, mass them by battalions and brigades, and they would muster an army such as never was marshaled on the war plains of the earth, an army with banners, and on every banner the motto: "It is better to go fishing."

OHIO FARMERS AND GAME LAWS.

A MEASURE has been introduced into the Ohio Legislature entitled "A bill to protect the rights of the farmers and the game and the birds of the State from the gunners and gun club exterminators of the game and birds." The provisions of the bill are that "owners of land are given property rights in all birds, game, fish and game animals upon their land, and each hunter is required to secure the permission of the farmer upon whose land he hunts in order to proceed with the chase. The hunter is further required to inform the farmer who grants him permission to proceed with the chase what birds, fish or animals he intends to capture or kill, and as an evidence of good faith he must return after the hunt and exhibit to the farmer the result of his sport." Failure to comply with the law is punishable by forfeiture of gun or rod to the farmer.

The clause giving a landowner property rights in the game on his land is in conflict with the accepted principles of game legislation, and manifestly would involve all parties in interest in the tangles of inextricable complications. But as for the requirements that a person must obtain permission before entering upon land for shooting or fishing, that he must declare his purposes as to the kind of game he is seeking, and must report his luck and exhibit his game or fish, this is to demand no more than one who is duly considerate of the rights of others should be perfectly willing to do of his own volition. Hunting or fishing on private property is a privilege, not a right. The privilege is one to be asked for and granted; there is no right to be demanded and enforced. If the privilege be not accorded freely and willingly, in nine cases out of ten the reason of this will prove to be that other privileges have been abused.

There are old curmudgeons and dogs-in-the-manger who will not have any fun in their own fields nor allow any one else to have it; but as any sportsman tourist who enjoys a wide acquaintance with the American landowner will willingly testify, such individuals are the exception and not the rule. If there be found a community of them, the phenomenon has some reasonable explanation. It probably means that the people of that particular section have suffered beyond further endurance at the hands of gunners or fishermen who have lawlessly invaded their lands, betrayed their hospitality, taken advantage of their good nature, and at the last aroused their animosity. If the farmers in Ohio or in other districts are up in arms against the sportsmen and are appealing to the Legislatures to enact cast-iron laws for their relief, they doubtless have good cause for this. If we sincerely desire to discover the underlying agencies that have prompted such a hostile attitude, we may find them not in the "freakishness of the farmer," but rather in the impositions put upon him by hoodlum gunners and riotous marauders from the towns, who under the guise of sportsmanship have played the ruffian in his fields. If, then, the well-behaved sportsman finds his privileges restricted, let him put the blame where it belongs—not on the landowner, but on the lawless hordes who have incited him to devise more severe anti-trespass laws as measures of self-defense.

It is reported that a further provision of the proposed Ohio law constitutes the landowner constable, judge and jury to apprehend violators of the game laws on his lands, arrest them, try them and seize their hunting and fishing paraphernalia as forfeited. This provision also is in conflict with accepted principles of law and jurisprudence; as a remedy, however, for the "sooners," one might almost wish that whether or not just in accordance with sound principles of law, it might actually be put in working order.

The Sportsman Tourist.

Camp Talla-Quit.

NEW ORLEANS.—*Editor Forest and Stream:* It is so rare to find a contribution to your interesting journal from the far South that I am constrained to monopolize a portion of your valuable space with an account of a recent outing in north Mississippi, in which the late yellow fever epidemic in this city enabled me to participate. By way of parenthesis, however, I wish to add that it is remarkably strange that our Southern sportsmen are so lax in advertising to our Northern brethren, through such an excellent medium as the *FOREST AND STREAM*, the rare sport to be had in Southern waters, fields and forests during the fall and winter. I am not willing to believe we are selfish, for we are not built that way. I prefer to feel that our timidity and bashfulness prevent us from rushing into print to vaunt our advantages over other sections.

On Sept. 2 last I ruffled my plumage and took flight from the city of Orleans to the little village of Jonestown, Coahoma county, northwest Mississippi, for a two weeks' visit to my family. On Sept. 6 thereafter the daily papers announced the first genuine case of yellow fever. Before the expiration of my leave the fever had gained considerable headway, and although important official matters awaited my attention in the Crescent City I could not help feeling that I had a fifteen-year life insurance policy to outlive, to say nothing of a few suits of old clothes which I had not worn quite threadbare. Consequently I communed with myself

ELK IN JACKSON'S HOLE, DECEMBER, 1896.

and decided that inasmuch as I was away from my post and my official matters were in the hands of a jolly good soul by name of Fry (who didn't care a copper whether he had the fever or a lottery ticket), I would remain in the country and leave the other fellow to "hold the bag." The fever continued to rage in New Orleans, and I continued to enjoy the rare sport to be had with rod and gun in northwest Mississippi.

On Nov. 15 of each year an annual bear hunt takes place from the little village of Jonestown. This is not a local affair, and the boys are always glad to entertain their visiting sportsmen. I was so fortunate as to be a member of this little party, and a jollier gathering could scarcely be found in the entire country. Our party consisted of ten gentlemen and four ladies, all of whom—except, possibly, the writer—are as true sportsmen and sportswomen as ever trod the soil of fair old Mississippi. On the night of Nov. 15 at 11 o'clock we left civilization behind and became residents of the wilderness for about ten consecutive days. The weather was dark and threatening, and the temperature suggested snow, but I presume the weather prophet effected some kind of a compromise with the elements whereby we were furnished a cold rain during more than six hours of our journey. Our destination was the wilderness, Tallahatchie county, about forty-five miles from our starting point, and our camp was very appropriately designated "Talla-Quit" by Mr. M. R. Mitchell, who, among others, was taken in custody by the Quitman county officials and deprived of the fruits of his outing on the ground of trespass, the county of Quitman having passed laws prohibiting the hunting of game by non-residents. There being some doubt as to our exact location, Mr. Mitchell decided to "split the difference" between Tallahatchie and Quitman, and henceforth our camp was called "Talla-Quit."

We reached Boyce Lake the following morning about 10 o'clock, thoroughly drenched with the cold rain of the preceding night. Almost before one could realize it there were six tents pitched in cane such as I had not seen before. Needless to add, the ladies had everything shipshape in short order, and camp life didn't seem so bad after all. But it must not be supposed that the ladies are admitted on these occasions for convenience; on the contrary, they handle the rifle equally as well as they manipulate a venison steak, and are thorough woodswomen. I have reason to know that at least one of them is unexcelled, for on one occasion when I and my chum were hopelessly lost she piloted us safely to camp after wandering several hours in heavy cane. We had quite an army of bearhounds, and the first three days were devoted exclusively to bruin; and needless to add, we rolled in bear meat for more than a week, for the first day out crowned our outing a howling success. We succeeded in bringing to bay a fine, large black bear which was killed by Mr. Evans, one of the local sportsmen, through whose courtesy I secured the hide; and the yarns I have told since my return about how I killed it would fill a large book.

The next day, bright and early, found me on a stand in a strange and secluded spot, and the dogs heading directly my way. Being somewhat of a tenderfoot, and never before having encountered quite so large and vicious an animal as a bear, I must confess that I felt "kinder curious" as the dogs came nearer and nearer, till I could hear the cane cracking under the awful tread of this huge beast, as he came through the wilderness. One of the party in close proximity to me claims to have seen me making earnest efforts to ascend the top-most height of a small tree near by, but I am confident he exaggerated the true situation to some extent, though had I then known that it was a panther instead of a bear I am not so sure but that I might have discovered this little tree to be most conveniently located. Fortunately, however, for the panther (or for me), he suddenly changed his course and put back into the cane, just before reaching the open glade in which I was so anxiously waiting.

We were unsuccessful in bringing to bay another bear, though we forced more than one to protect his hide from the taxidermist by swimming the Tallahatchie River; so after the third day we unanimously decided to devote the remainder of our stay to stocking our larders with venison. It was an easy mark to start a deer within half a mile of our camp; but most of us preferred still-hunting. The weather was delightfully cool, and daybreak each morning found us scattered over the feeding grounds and anxiously awaiting the gay and festive buck. We were rarely disappointed on the evening's round-up, and each day brought fresh venison into camp. One bright morning just before breaking up camp I saw a monster panther, some 300 yds. distant, endeavoring to capture a small doe which had been wounded a few moments before. In my anxiety to add this valuable rug to my parlor floor I overlooked the fact that I had in hand a .44 Marlin of the latest pattern, and instead of elevating the sights and taking chances on a long shot, I at once set forth at breakneck speed toward the spot. Of course the panther quietly slunk away into the heavy cane, and I was left to meditate on the science of running down large game. On my relating this little experience on my return to camp that afternoon, some of the boys were unkind enough to suggest that it was probably a large fox squirrel. I resented this insinuation most vigorously, on the ground that it would in the natural order of things have been absolutely impossible for my vision to have become so distorted and my imagination so vivid as to manufacture a very large panther out of an ordinary old, everyday fox squirrel.

Our record at the end of ten days stood 1 bear and 8 deer, to say nothing of all kinds of smaller game, with which this country abounds. We were not without our little camera, and our friend Mr. A. V. Lane took some beautiful snap-shots at different stages, but as they are still in process of development I am unable to inclose them with this. In our daily rambles we had the good fortune to meet quite a number of jolly sportsmen from various sections of the country, among whom were Mr. Oliver Clay and Capt. Ban McKee, of Mississippi. As bear hunters these two gentlemen are without a peer, unless it be the great and only Bob Bobo, whose reputation is so well known that comment is unnecessary. There were also the Messrs. Matthews and party, of Tennessee, whose camp was located on Tallahatchie River, about seven miles distant from us, and about the same distance in another direction was the camp of Mr. Joseph Aycock, a most charming conversationalist as well as an accomplished musician. And last, but by no means least, Capt. James L. Bradford, of New Orleans, was at the same time only about six miles distant. Capt. Bradford is the envied possessor of Buck Rancho, and therefore needs no introduction to the readers of *FOREST AND STREAM*, as mention has frequently appeared in these columns of the genuine hospitality with

ELK IN JACKSON'S HOLE, DECEMBER, 1897.
Photo by S. N. Leek. See page 127.

which the Captain's guests are always greeted, and he who has not had the good fortune to visit Buck Rancho and its surroundings knows not the pleasure of a "touch of real high life" in a Mississippi wilderness. All the aforesaid gentlemen broke camp and joined our little party except Capt. Bradford, and our misfortune in not securing him, too, was due to no lack of effort on our part, but failure of our emissary to deliver our invitation.

To make a long story short, we broke camp about Nov. 25, after having consumed so much venison and bear meat that we were locking horns and climbing trees till civilization was again sighted. Every one was happy and glad he went, and I am very much in hope that something may happen to detain me in Mississippi again about the same time next November. In drawing the curtain on this camp hunt, I wish to add that I have never seen duck shooting quite so good as we found it in northwest Mississippi during November and December. It was an easy mark to bag more than we could carry of those large mallards in a very

short time. The feeding grounds were excellent and the ducks abundant, and the large consignments which "Brother" Lane and I made to our friends in Chicago and New Orleans were distinct evidences of the rare sport furnished us on the many lakes to be found throughout that part of the State.

WALTER S. GANONG.

Podgers's Commentaries.

SAN FRANCISCO, Jan. 10.—I have just finished reading the last number of the *FOREST AND STREAM*, and as I laid it down and relit my pipe I fell into a fit of moralizing, and asked myself whether the natural instincts of man are not savage, as illustrated by the apparent delight taken in the stories of your contributors in recounting the number of deer and birds that have fallen to their guns. I can never bring my mind to shooting a deer. I once owned a pair, which were caught young and domesticated, and were the pets of my childhood—affectionate little things that were my playfellows, and trotted after me to the schoolhouse door and came regularly to meet me when school was over. As we grew up together their devotion and affection never wavered, until one day, when taking their usual run in the woods close to the village, a man calling himself a sportsman shot them both, giving as an excuse that he supposed them wild, although both were provided with collars and bells. From that day to this I have never but once essayed to shoot a deer.

But what a bundle of inconsistencies is man! All my sympathies end with the gun. The weakness for the rod remains as devotedly as ever. I have read somewhere the assertion of a scientist that fish are insensible to pain, and have hugged that flattering unctious to my soul; and there would seem to be some truth in the theory, for do we not experience cases often where the fish

ELK IN JACKSON'S HOLE, DECEMBER, 1896.
Photo by S. N. Leek.

has first parted the line, and with the hook still in his mouth essays another bite? And I have seen a shark after being caught and, his belly ripped open, thrown back again, swim alongside the boat and grab at a piece of flesh thrown over, with his entrails trailing behind. So my conscience smites me not, and especially when I am landing a big trout or trying conclusions with a 20lb. salmon.

I confess that I do occasionally take a day off with

the mallards and canvasbacks; but therein comes a concession to the epicurean weakness and appetite. But I do not go in for extended slaughter. I never shoot more than I want, and generally not so many, and not always from choice. The birds themselves have views of their own on that question, all of which inconsistencies, I fear, utterly destroy my character as a philanthropist and a sympathizer with the birds and animals. I draw the line at the birds and animals named, but I do not include all. There are exceptions, and my sportsmen friends may whang away at such table delicacies as wildcats and skunks without incurring remonstrance from me; and I shall continue to read the stories of fish and fishing in the *FOREST AND STREAM* with unabated interest. Friends can borrow my guns, as I do not take them to bed with me now as I once did (metaphorically), but no man can touch my fishing rods, not even "mine uncle" in my direst straits, who so kindly takes contracts to keep the months out of our winter overcoats during the heated term.

I call guns and fishing rods my jewelry, and I never

miss flattening my nose against the show windows of the gun stores that I pass in my morning walk down town. If the spirit of evil ever tempts me to steal, it is this class of gems that will be missed. What offers a greater temptation than the display of the show window of the dealer in "sporting tackle"? And how cheap everything seems by comparison with prices a few years ago. I remember paying \$25 for my first split-bamboo, and now that amount will buy five as good. And how dainty and tempting they look, and what jewelry equal to those beautiful reels?

In one window a dealer displayed a lot of trunk rods. I know he did it just to aggravate me. I did not need a trunk rod. I had at home rods innumerable; yet no young woman ever envied the possession of a love of a bonnet in a milliner's window more than I one of those rods. But day after day I resisted, for I am not rolling in wealth. In this frame of mind I was turning from the window, and stumbled over a friend also staring in the window. "Hello, Charley, what are you doing here?"

"What am I doing? I was looking at those little trunk rods, and resisting the temptation to buy one, although I have rods and rods at home, and can't get away to go fishing once a year."

"Well," said I, "here is a pair of us. Let us put our heads together and see if we can't make \$5 each extra in some way. We are both newspaper men and yachtsmen—let us each write something to-day for the Examiner."

We did, and each owns one of those trunk rods to add to the collection, and which we will probably get an opportunity to use—the Lord only knows when—although trout streams galore are to be found within two hours' ride of the city. But I put mine together occasionally of a Sunday, go out in the back yard, make casts and in imagination fill a 10lb. creel, and in that way get my money's worth.

What an exasperating condition of things it is to have that "off" leg chained to the desk, and see your friends coming home from a day's shoot with a bag full of canvasbacks and mallards, or half a dozen salmon, and you not able to steal off for a day. And such bags as the boys are making! The season here has been exceptionally good. The markets are overflowing with an excess of supply of ducks, geese, quail and snipe. The market shooters are getting in their deadly work, snaring and trapping with impunity. We have game and fish warden, it is true; but they make a farce of doing their duty. In consequence all sorts of devices are at work to destroy. Men go about the streets with backloads of game, offering it from house to house. There are days when canvasbacks sell at 40 cents a pair, and mallards for 25 cents; quail and English snipe at 50 cents a dozen; honkers 30 cents, and so on. And yet there are people who will pay 75 cents for a skeleton chicken with a breastbone like the fin keel of the present day freak, rather than indulge in the toothsome canvasback at half the money. They are usually the same class of people who drench themselves with genuine mineral spring water made in the basement of the drug shop, instead of drinking pure nature claret at 50 cents the gallon.

Speaking of fishing, it is a wonder to me that an Englishman will take himself off to Norway and come home happy if he has taken half a dozen salmon in several weeks' persistent fishing, when in the same time and at no greater expense he could come to California and have such fishing as he never dreamed of. All along the coast, wherever a river reaches the sea, at certain seasons the salmon run in by the thousands, and a couple of hours' ride lands you on the banks or at Santa Cruz, just below us. Open sea fishing from a boat is rare sport, provided the fisherman has confidence in his stomach and can keep his boots from rising to the occasion. The "swells of ocean" have no respect for the swells of the city, with the result that the salmon themselves are fed instead of becoming food. It is astonishing in such cases how the fisherman loses his interest in piscatorial pursuits, and how much greater his admiration for the sea would be viewed from the shore. Man may propose, but the stomach indisposes. PODGERS.

The Chestnut Ridge

And Along its Foot.—XI.

DR. WILLIAM ELDER, a native of Somerset, in the Ridge region, in the preface to his book, "Periscopies," 1854, says: "The primitive piety and politics of my native mountains are, to my thoughts, the very blood and breath of their life. I wish they had a portraiture answering to their worth. I suppose somebody will be born in time for this use, but till his advent those who have the sense that feels this want must wait and wish." I am sorry that the anticipated "somebody" has not yet appeared, though a whole generation has passed away since the Doctor wrote.

Notwithstanding the somewhat severe characterization of the mountaineers by Dr. Jackson, as I quoted in my seventh article in this series, there were numbers of estimable and excellent men among them; fully as high a percentage as was to be found elsewhere. Still those who live isolated lives and commune much with themselves become more or less odd and angular, and are entitled to stand in the ranks of the "peculiar people."

I recall some queer specimens of the genus Ridger. One of them was a little old fellow who was a combination of the canal boatman and farmer. A personal peculiarity of his which I remember was that he was blind of one eye and wore a pair of spectacles that had but one lens, and the lens came over the blind eye. It is related that once when he fell over a wheelbarrow on the street he took off his spectacles to see what he had fallen over. He was a great controversialist on Scriptural subjects, and when being hot pressed his opponent quoted St. Paul as against him, he replied, "Dear man, no! St. Paul wasn't the man he ought to be. Dear man, no; whew!" this last being a prolonged half whistle, as Hamlet would say, a "windy suspiration of forced breath." In this estimation of the great Apostle he differed from the fine old Somerset man, Gen. Ogle, whose

character is excellently drawn by Dr. Elder. Gen. Ogle was famous in his day, a member of the State and national legislatures for forty years. He, his son and his grandson had the peculiar honor of representing in succession their district in Congress. On one occasion the General sent his compliments by a dying friend to St. Paul, with the assurance that he "approved his writings generally, and entertained for himself as a man the highest regard, affection and esteem." This, I think, was a unique act. I wonder if the message was delivered; and if so what St. Paul thought of it.

But Gen. Ogle deserves a more extended notice. He was a man of commanding presence, of great eloquence, and of a ready, homely, trenchant wit. His control over his rude constituency was almost absolute. His style of oratory was exactly fitted to the level of his hearers. "My dear fellows," said he, in the course of a speech, "you don't understand it, but it is as clear as light to the children of light that the Lord reigneth and the devil's a fool. Stretch yourselves up into the light. If you go nosing about in the dirt for a living and dozing in the mud for enjoyment the shadow of a leaf will hide the whole heaven from your sight. Idiots and drivelers think the world is coming to an end when worn-out forms and worn-out things are blown up; but such dotards are but first cousins to the beast that perishes. Such cattle have about the same right to scratch their heads for anything there is in them as so many monkeys, and very likely will make as much by the operation. Of all people in the world, fools have the least sense, and the best way is as good as any; and when I was a boy I discovered that nothing less than too much is plenty. That's the difference between a man of faith and the snobs that do all their traveling in a treadmill." I have ventured to quote these few passages, taken a little out of their connections, both to illustrate the manner of Gen. Ogle and the style of public speaking that used to take with our fathers.

I well recall another of the old-timers of our neck of woods who was somewhat of an oddity. One of his queer observations deserves to be put on record. He was a genuine Pennsylvania Dutchman, a man of considerable wealth, and a pillar in the church of which he was a member. When he was called upon to subscribe something toward putting up a lightning rod on the church, inasmuch as it was thought the spire offered a specially attractive point for the subtle fluid, he refused, saying, "It is the Lord's house, and if he wants to t'under on it, let him t'under on it." Sure enough the Lord did "t'under" on it: it was struck by lightning and considerably damaged; but I presume the honest old Dutchman considered the loss was the Lord's alone.

The early settlers on the Apalachian ranges in Pennsylvania—that is to say, the Alleghanies, the Laurel Hill and the Chestnut Ridge—were generally a patient, laborious, earnest race. There were of course among them, as in every community, some who were rather off color; but with these we need have nothing to do. The hillsides were and still to a great extent are covered with dense forests, and to clear away the timber and open up their farms, to build their humble cabins, and to fence and cultivate their rude fields, occupied most of their energies. Schools and books were for a long time practically unknown. They lived at remote distances from each other, so that much social intercourse was impossible. Yet they had frequent occasions for meetings—flax-scutchings, wood-choppings, log-rollings, house-raising and corn-huskings. They made the most of these opportunities, and all the neighbors for miles around were invited, and they all made it a point to be present. Whatever the nature of the gathering, it invariably ended with a "frolic"—that is, a dance and general merry-making. The "fiddler" was an important character in the early settlements, and his art was in frequent requisition.

"A blessing on the cheery gang
Wha dearly love a jig or sang,
And never think o' right or wrang
By square and rule,
But as the clebs o' feeling stang,
Are wise or fool!"

The means of growing rich in those days were very limited. Stephen Girard, with his 8,000,000 or 10,000,000, stood through a generation as the grand mogul of wealth. In these days of Vanderbilts, Astors and Rockefellers he would scarcely be noticed. Things are only relatively great or small. The Ridger was compelled by his environment to a life of toil and frugality. His fields, the forests and the streams furnished him with the bulk of his necessities. Whatever superfluity he might have was bartered at the country store for the few groceries he needed and the items of clothing which his own flock or flax patch did not supply. Tailor-made clothes were highly prized, and coats and hats were handed down as heirlooms from father to son. This frugality extended rigorously to the use of ammunition. There was then little reckless firing of guns. The practicing marksman selected for his target a tree or a stump, such that he could afterward cut out the flattened bullets and mould them over again. Bullets and fixed ammunition could not then be bought as now, but every man was obliged to mould his own bullets. I very well remember my father's ladle and bullet moulds, the latter looking something like a modern nut-cracker, by which one bullet at a time could be cast. Moulded in this way, every bullet had a long neck to it, which had to be cut off with a knife. Bullet-making was thus a slow and tedious performance, and few shots were recklessly thrown away. All guns were then muzzleloaders, few of them double-barreled; yet the advance by percussion caps upon the old-time flint-locks was so great that any further improvement in firearms was for a long time unthought of. I remember that my father had in his small "armory" a flint-lock rifle and a flint-lock horse-pistol, the latter, I believe, a relic of the war of 1812. The pistol, which was intended to be carried in a holster by a "horse marine," from its size and weight was entitled to rank with the heavy artillery. It required a strong man to hold it out at length and fire it with any steadiness or precision of aim.

In these observations I have tried to delineate the character and manners of our fathers, so far as my own

recollections and my reading go. To one looking back to those days of simplicity, there seems to hang over them a haze as of Indian summer, as though they were filled with romance and enjoyment; but in the passing they were no doubt heavy and dull and trying enough. But we honor the memory of the pioneers because they were patient and patriotic, hopeful and undaunted, in spite of their labors, their privations and their daily perils.

PITTSBURG, Pa.

Natural History.

The Red Squirrel Again.

SPRINGFIELD, Ill., Jan. 19.—*Editor Forest and Stream:* The red squirrel's portrait seems to be getting a pretty thorough retouching in FOREST AND STREAM just now, thanks to your correspondents.

Whichever way we may view it, it is certainly a very interesting subject.

What a pleasing reflection if some of those correspondents who only look upon our nimble rover as "vermin," "buccaneer," "Ishmael," etc., would be imbued with a little of that kindly spirit exhibited by "Hermit," whose contribution on the subject in FOREST AND STREAM of last week reads like a page from Thoreau!

Well do I know the squirrel's frequent transgressions, particularly a penchant for robbing birds' nests. But how about the bluejay, the crow, the various hawks, the owls, the eagles, the shrike, the pet cat of the household, the small boy, and many an old boy, who frequently lean in the same direction? I, for one, prefer to deal gently with the red squirrel. Fain would I begrudge his joyous existence. The old woods surrounding my native village in western New York, with its loved memories of boyhood days, would seem indeed empty and forlorn without the presence of these sprightly little animals.

For a certain pessimistic correspondent who designates our clean, beautiful red rover as "vermin," I have only a world of pity. He would exterminate one of the drollest, most interesting and most picturesque of little wood creatures.

The red squirrel's reputation as a pilferer is of a high order, and he sustains it well. But he goes about it in such an artistic, audacious, droll manner as to excite our admiration and wonder more than our wrath. One fall my brother and I gathered several bushels of butternuts and spread them on the roof of the woodshed to dry. A week later we noticed, with considerable trepidation, that our nuts were disappearing in some manner, as large, bare places here and there attested. Who was the depredator? Putting this and that together, we finally centered on the red squirrel, roving specimens of which occasionally strayed away from the nearest woods to visit the village. While we were not loath to divide our spoil with him, yet when it came to the question of the major portion, opposition set in. A few days later, while we were engaged in that pleasant (?) occupation, wood sawing, under a large apple tree standing beside the shed, we heard a slight noise above us, and looked up just in time to perceive a red squirrel run along a limb and land on the shed, where he quickly singled out a nut and started on his return. Instead of taking the tree route he ran down the shed, and with the greatest audacity came toward us. He passed me within a few feet, gained the woodpile with a leap, and with a few flirts of his tail ran along the entire length of five cords and then to the ground again. Having recovered from his astonishment, my brother gave chase—through the yard, across the street, through a neighbor's garden and then into a pasture, where, with another defiant flirt of his tail, red-dy gained a great oak, and the race was ended. He made a gallant dash for liberty, and I felt like cheering him. But never did a squirrel give fuller vent to his derision than upon this occasion. He exhausted all the snickers, chatters, laughter and jests in the whole squirrel category. His triumph was complete. And he further celebrated the event by ensconcing himself on a prominent limb, beyond reach of sticks and stones, and with his tail conforming to the curve of his back proceeded calmly to shell his nut and begin the sawing process.

After this occurrence we missed him from the neighborhood, probably from the fact that shortly afterward his rendezvous was discovered by chance. One of the neighbors had occasion to clean out the attic of his barn, where, strewn about, he found a bushel or more of nuts, many of which were rifled. Entrance was effected through a large knothole under the eave. T. M. S.

Wild Dogs of Juan Fernandez.

CAPT. DEWAR, the English yachtsman, in his Voyage of the Nyanza gives an interesting description of Juan Fernandez as it is to-day, and says that the wild animals on the island are goats, cats and dogs. Speaking of the dogs, Dewar says: "They are a kind of mastiff, descended from some which were turned loose by the Spanish for the purpose of keeping down the goats." The history of this race of dogs is a curious one.

This island was discovered by Fernandez in 1563, and on his second visit the discoverer turned ashore a few goats. These animals being undisturbed, increased rapidly, and by the latter part of the seventeenth century the island was well stocked. The buccaneers of that period going through the Straits or around the Horn for a raid on Spanish shipping and coast towns arrived in the Pacific with their vessels in a crazy condition and crews scurvy stricken. Fernandez was the first landfall tried for by these rovers, being well clear of the coast and giving them a chance to put vessels and crews in condition before proceeding to business. The goats' flesh was very acceptable; the old journals say that it was equal to good mutton, and salted down made good sea store. After a time the Spaniards realized what this open market was doing for their coast, and the dog idea followed. Lord Anson reached Fernandez

in June, 1741, and the journal of his voyage has this to say of the dogs:

"The great numbers of goats, which former writers described to have been found upon this island, are at present very much diminished. The Spaniards being informed of the advantages which the buccaneers and privateers drew from the provisions which goats' flesh here furnished them with, they have endeavored to extirpate the breed, thereby to deprive their enemies of this relief. For this purpose they have put on shore great numbers of large dogs, which have increased apace and have destroyed all the goats in the accessible parts of the country."

Don Antonio de Ulloa, a captain in the Spanish navy, while in command of a Spanish man-of-war, visited Fernandez soon after Lord Anson sailed (in fact, the Spaniard was looking for Centurion, Anson's flagship), and gives the Spanish side of the dog story:

"Here are many dogs of different species, particularly of the greyhound kind. The dogs owe their origin to a colony sent thither not many years ago by the president of Chili and viceroy of Peru, in order totally to exterminate the goats, that any pirates or ships of the enemy might not here be furnished with provisions."

Ulloa also says: "A great singularity is also observable in the dogs of this island, namely, that they never bark. We caught some of them and brought them on board, but they never made any noise until joined with some tame dogs, and then indeed they began to imitate them, but in a strange manner, as if learning a thing not natural to them."

I believe that the dog in a wild state does not bark, being a genuine still-hunter. How many generations were required to enable these Spanish dogs to pass from a state of semi-civilization to one of total wilderness is not now known. Ulloa while at Fernandez in 1741, in writing of the dogs, says they were sent here "not many years ago." Dampier was on the island in 1681 and again in 1684; commenting on the immense numbers of goats, he makes no mention of dogs. Selkirk was on the island from 1704 to 1709, and if my remembrance of Robinson Crusoe is correct, reports no dogs.

Judging from the numbers of dogs reported by Lord Anson, and the great decrease in goat supply, the original dog colony must have been planted on Fernandez not later than 1720.

A. C. STOTT.

Game Bag and Gun.

Farmer and Sportsman Again.

Editor Forest and Stream:

May I be permitted at this late date to recur to a brief discussion your New Hampshire contributor Von W. and I had respecting the country boy and his relations to the fish and the game?

Von W. wrote: "Your correspondent Mount Tom accuses a gentleman writing from Charlestown, N. H., of using the expression 'those cussed boys.' Now, as I know of no other correspondent from this village but myself, I protest against the quotation. I deny the allegation and defy the allegator."

Von W. is right. I misquoted him. What I really did say in referring to the destruction of game was this: "It is the cussed country boys." What I ought to have said was this: "The last of Mr. Ames's entertaining letters, 'In the Maine Woods,' leads me to say something which I have refrained from for a long while, and that is that this illegal destruction of game is not due to the visiting sportsman, but to the pure inherent 'cussedness' of the ignorant, envious country hoodlum." (FOREST AND STREAM, Feb. 25, 1892.)

Or this: "Nor is the much-pitied and sympathized with farmer's boy to be excluded from the list, for he is usually the chief of sinners. * * * Living out on the hills near the brooks, he usually spends his Sundays on them, catching anything that will bite as long as the season or the trout last, and driving in to the village tavern in the evening to sell those which are above the legal size, and I suppose eating the little ones at home, as they do the small potatoes!" (FOREST AND STREAM, May 19, 1894.)

Few people knew until they were told not long ago by hunters of the Middle West, that when the thousands of sportsmen, with repeating rifles, revolvers and blood-thirsty hounds, go up into Michigan, Wisconsin and Minnesota they kill nothing. They just pass hats full of money around among the farmers and pick huckleberries. It is the same old story from Maine to the Rocky Mountains, and from the mountains to the coast. The mossbacks with their hoes and their young ones with their pitchforks have killed all the game.

In referring to us, why do sportsmen so often use disrespectful names? Why not call us what we are? We are not ashamed of being farmers. Why do you so often call us natives, as you would the savages of a heathen land? You always refer to yourselves as gentlemen. Is it because there is more illiteracy in the country than in the cities? or because you wish to show the disrespect you have for us? This comes along often enough, together with the bad behavior of some sportsmen, to retard the feeling of friendship that must exist between sportsmen and farmers if the former expect to use our farms for a play-ground.

One writing from Boston says, in referring to a trout stream which some Boston sportsmen had purchased, that if a country boy caught a trout out of that stream again he would have to steal it. At that time there were farmers who tried to understand how it was that these boys would be thieves for fishing in a brook that did not belong to them, and that the city sportsmen that fished their streams at will and visited their orchards, their berry and melon patches, and if remonstrated with jumped the fence and told them to go to hades, were "gentlemen," always "gentlemen." It seems that some people think that a shiny shirt front, alligator shoes and superfluous airs are what makes a gentleman.

A few years ago, when the Iowa Legislature enacted the hunters' trespass law, sportsmen and city editors could not say enough about the farmers that was disrespectful. The State Game Commissioner, or the candidate for that office, advised sportsmen to pay no attention to that law. A sportsman in Chicago, in referring to it, said that when farmers got together to legislate, the laws they enacted had more "perpetration than penetration in them." Yet that law has done more for the protection and increase of game in this State than all other game laws put together. The rural legislators of this State have governed it in such a way that any State in the Union might be proud of Iowa's public institutions. She has not a dollar of bonded indebtedness, and has had to hang but four of her citizens. No one need be ashamed of Iowa; how is it with some States that are governed by the broad-minded citizens of the cities?

Last fall Mr. H. S. Dulog, in telling of a hunt that he took in northwestern Colorado during the season, said that there were plenty of does and fawns, but no bucks, the latter having been completely exterminated. He tells how he opened fire at a solidly bunched and swiftly running band of antelope, killing two of the band—one more than the law allowed. He thinks he killed the two antelope at one shot. Now a pot-hunting farmer might have a very good excuse for shooting into a band of antelope under those conditions, but a gentleman sportsman has none. Being equally interested with Mr. Dulog as to the welfare of the game in the Western mountains, I would be glad to know if he paid the fine. Then after telling how the tourist hotels sent "gentlemen" from all over the country into the mountains, and of the club houses at different places, he says, "But owing to the butcher-like and law-breaking tendencies of its rural population the game is doomed."

Now I like Mr. Dulog. I think he is a good sportsman. I enjoy reading his communications, but why, why, why, under the heavens, why, why in thunder could he not have gone into the mountains, and after his hunt have written about it without giving the farmers a kick.

According to his own tell, the mountains were full of farmers' game, pot-hunters' game! But the gentlemen sportsmen's game had all been shot out. Why did he not say that sportsmen from Berlin, Paris, London, Boston and New York, and the cities between them and Colorado had been hunting throughout the whole summer all through that section until there was scarcely a head of horned game left in that whole mountain region, and when it came time to hunt and the farmers went in they had to take the little end of it, the same as they do of everything else up in New Hampshire?

I suppose Mr. Dulog felt like kicking something, but why did he not kick his curbstone or his rifle that had been killing illegal game? I suppose he had too much respect for dogs to kick them, so he kicked the farmers.

I am patiently waiting for some broad-minded but unsuccessful hunter to give the reason why he could get no horned heads in the Jackson's Hole country late this fall. Will it be the brutish farmer? There are some "true" sportsmen" that would wholly ignore the fact that a "General from New York," a "Judge" from somewhere else, and a "Lord from London," with a party of 100 men and between 200 and 300 pack horses, were hunting there this fall.

Podgers, of San Francisco, says: "With all due respect for the popular idea that this world was made especially for the granger, and all things that militate against his sole interest must be sat upon and abolished, he being the Lord's anointed, I have the temerity to declare it is my firm belief and opinion that a more selfish, illiberal and narrow-minded specimen of mankind than this same class does not exist. If he had his way he would burn, sink and destroy every bird and object that pecked a few grains off his fields. I have seen this sweet specimen of all the moral virtues (if you believe the newspapers and accept their own opinions of themselves) sowing grain soaked in strychnine in his grape patch to poison quail and the singing birds that had the audacity to peck at a few grapes. He sadly needs such disciplining to bring him to a realizing sense of what constitutes his share of the things the Lord intended as much for birds and beasts as for him."

The above is what a "brother sportsman" says in discussing game interests in a sporting paper. Is it true? Are his expressions those of a gentleman? Not one word from beginning to end is true. Does it indicate that the writer is a broad-minded man? Such insults do not tend to make good feelings between farmers and sportsmen, but have a tendency to prop up the bars if a sportsman is on the other side trying to get them down. Podgers has seen a farmer sowing poisoned grain to kill the birds were eating his grapes, and he places all farmers at the bottom of the human race. In Chicago and other cities human beings put out the eyes of their little children, and break and deform their limbs that they may grow up to be good beggars. If in consequence of this I were publicly to place all people living in cities at the bottom of the human family I think it would be a good indication that there was a pretty small lump of gray matter within my skull; that I was narrow across my shoulders; that they slanted from my ears down, and that I was built on the narrow-gauge principle from my feet up.

I have seven cherry trees and I have never eaten a meal of cherries from those trees because the birds take them as soon as they begin to turn red. I don't destroy the birds and I know of no farmer that does; yet it has been but a few weeks since I have seen town boys with airguns shooting song birds.

A small flock of quail can do much damage in a short time in a vineyard; not so much by what they would eat as by what they would destroy. When a farmer sees the effect of his labor destroyed either by quail, hawks, skunks or other like means so as to lessen the comforts and advantages of his family, it is his duty to his family, to the community in which he lives, and to his Maker to stop that destruction. Podgers's keen intellect, that expanded and grew fertile among the debris and gases of the streets, alleys and sewers of a large city, holds in contempt a man who thinks more of his family than
